Objectors to Federal assistance for school buildings always conjure up and expand on the danger of Federal control.

When the people speak through their local and State representatives, everything is all right. But to aid education through their Federal représentatives cannot be but wholly iniquitous—so the argument goes.

We should keep our thinking clear on this

very important issue.

Federal control of education does not result from some mystical and evil forces which creep out of the night to seize control of our schools.

Rather Federal control of education and the avoidance of it depends primarily upon the nature of educational legislation.

If control is included in the torms of an educational act, then control is likely to result. When a series of specifications and requirements are contained in the legislation, when special Federal authorities are created, when Federal agents are given both supervisory authority as well as discretion as to how much money each State or locality is to receive, Federal control of education is foreordained.

We had a number of examples of the control type of legislation under the PWA the WPA and other agencies of the depression period, and one can cite other recent examples.

During the depression we came within an act of establishing a Federal system of secondary education to parallel the high schools in the States. The National Youth Administration was set up as a temporary agency to deal with problems which the high schools could have handled as well or better if they had had Federal aid. This agency attempted to perpetuate itself as a permanent Federal undertaking. Here we have another illustration of an ill-advised effort by the Federal Government to do what the States could have done if they had had requisite Federal aid.

On the other hand, we have shining examples of Federal aid for education which have not resulted in control.

Witness the endowment magnificent in our early history. This Federal land grant not only played a significant role in establishing our unique system of public education, It even today provides a part, although a minor part of school support. Has this Federal aid resulted in Federal control of public schools?

Again, witness the establishment of what has become a program of higher education, research and adult education by the Act of 1862. Do we think of our State land grant colleges as under Federal control? I will venture that the majority of the citizens of the States do not even know that these colleges, or universities as most of them have become, were established by the Federal Government, that Federal assistance helped them to get started, and that annually the Federal Government still appropriates some \$48 million a year for the support of these institutions and their related activities.

In the foregoing instances we have examples of highly significant Federal leadership and Federal aid in two major and continuing educational programs. Control has been avoided because the legislation did not specify in detail how the States were to use the funds in developing the educational undertakings established, and did not set up Federal authorities and officials with general supervisory and discretionary fiscal powers.

As a result, the people in the States took charge and went way beyond original conceptions as to the educational programs to be developed and the amount of support to be provided from State and local funds.

In these examples, we have illustrations of right relations in education between the Federal Government and the States.

This experience justifies a basic conclusion: Federal aid properly allocated to education in the States does not weaken Statelocal initiative, nor result in Federal control. Rather, it strengthens State-local initiative which is the surest safeguard against Federal control. If the National Government ever takes over public education in the United States it will likely be the result of continuing the discrimination against, and the fiscal starvation of the schools, which the Federal Government has been guilty of in recent decades. By such ill-advised practices, the schools can eventually be so weakened that the Federal Government will feel obliged to take over. This need not happen, but it has happened enough in the past, so that the possibility is far from remote.

One of the surest safeguards against Federal control of education is the vigor of local and State interest in their schools. interest has continued throughout our history. And so long as the people retain their faith in education and have the wit to in-sist upon properly drafted Federal legislation, our schools will be safe from centralized

The fear that some supplementary Federal aid for such an essential purpose as school buildings will result in loss of local initiative in this area of expenditure finds little basis in past experience. Local communities have traditionally shown the liveliest of interest in their school buildings, and these structures are a source of special local

Most of the States now have well organized offices in their State departments of education qualified to provide overall leadership and assistance in developing local schoolbuilding programs. This provides an addi-tional means of resistance to possible Federal domination.

Furthermore, the area of school building is one of the least open to the dangers of Federal control. Even if some Federal control were exercised in this area it would not lead to the capture of public education by the central government.

If centralized political control of public education comes in the United States, it will be the result of placing the appointment of teachers on a partisan basis and the dictation of the curriculum from Washington. There appears to be little likelihood that this would be tolerated by the people of the United States on any basis, and least of all as a result of providing a reasonable amount of school-building aid to supplement that of the States and localities.

Our whole history is testimony to the fact that Federal interest in and Federal aid for a fundamental educational undertaking leads not to a slackening of local interest and support for the undertaking, but the opposite. The States and localities not only readily take over the control and administration of an educational activity originated the Federal Government and substantially supported by it in the initiatory stages, but soon appropriate substantially more than the Federal Government for its financing.

In these past experiences, we find the considerations and principles which should govern Federal-State relations in education.

It should be a cooperative relationship. The Federal Government should promote and financially aid educational activities which are of fundamental national concern. Legislation to bring this about should be the type which inhibits centralized, bureaucratic control, but which places the expenditure of the supplementary Federal aid in the hands of the legal educational authorities of the States and localities.

Federal aid for school construction is fully justified in the light of the foregoing considerations. It is a matter of major and general national concern. Every State in the Union has a serious problem in this regard. None of them have been able to deal with it adequately solely on their own resources. This is true even though the so-called federally affected areas have received substantial school-building aid.

The prospects are that the school-building

situation will worsen rather than improve unless Federal aid is forthcoming to supplement State and local appropriations.

The time has come for prompt and substantial action on the part of the Federal Government. The legislation adopted to bring this about should be the best that past experience will permit. It should avoid the temptation of setting up a new bureau or authority in Washington and the appointment of Federal officials. They are not needed

The allocation to the various States from the Federal appropriations for assistance to school construction should be determined in the legislative act according to an objective formula of need. The formula should be one which anyone who can do arithmetic can calculate, and which can be verified by anyone else with similar qualifications.

By these means we could eliminate the school-building shortage in from 5 to 10 years. This would not solve all the problems of education, but it would be a major and desirable step in this direction.

As citizens interested in providing the kind of education needed in the future, we should see that this step is taken in the 84th Con-

For more than a generation I have endured, not without some protest to be sure, the specious arguments which have been made against Federal assistance to education in the States. During this period the position of the United States, both as to its role in world affairs and as to the complexity of its own civilization, has been transformed almost beyond belief. This "big change" as Allen has called it has witnessed no comparable response by our State and local school systems. Today, the public schools are less able to meet the needs of our dynamic society than they were a generation ago.

When President Eisenhower stated that today we face grave educational problems in his recent message, he greatly understated the situation. It is not only the shortage of teachers and school buildings that should give us pause, although these shortages prevent us from providing a fair educational opportunity for all. What is less dramatic, but far more serious, is the fact that the gap between the obvious educational needs of the Nation and the funds needed to meet them is an ever widening one.

By this colossal bit of stupidity we endanger both national progress and national security.

Let us look at some of the consequences of a generation of almost criminal educational neglect.

A recent publication, with the arresting tle "The Uneducated" contains these shocking conclusions:

Footnotes at end of speech.

"The millions in the United States who can neither read nor write * * represent too large a proportion in our society to permit some property (p. 27)

mit complacency" (p. 27).

"The outstanding finding that emerges from this study of the illiterate and poorly educated population is the scale of the problem" (p. 225).

"The magnitude of the problem of the totally uneducated and the poorly educated is a striking phenomenon" (p. 226).

"In the struggle in which the United States and other free nations are currently engaged * * our strength lies in the quality of our human resources. * * We can no longer ignore the wastage of our human resources * * *" (p. 246).

The study which came to these startling

The study which came to these startling conclusions was organized by General Eisenhower when he was president of Columbia University because he had been impressed with the striking evidence of the wastage of manpower revealed during World War II.

This is only one of a series of studies which

This is only one of a series of studies which have emphasized the frightening fact that we are far from fully capitalizing our most basic source of strangth

basic source of strength.

The report of the Commission on Human Resources and Advanced Training is the result of the collaboration of four national councils. This careful study grew out of the serious shortages of highly trained personnel revealed by World War II.

After extensively studying the present sit-

After extensively studying the present situation, this Commission comes to this conclusion:

"The United States wastes much of its talent. * * * Society fails to secure the full benefit of many of its brightest youths because they do not secure the education that would enable them to work at the levels for which they are potentially qualified" (p. 269).

Looking toward the correction of this situation, the Commission further concludes:

"The brains of its citizens constitutes a nation's greatest asset. From the minds of men will come * * * all future progress.
* * * the practical problem becomes one of devising the best means of nurturing the talent which exists in the population. A nation which has had the ingenuity to conquer the air, to eradicate age-old diseases, to send radio messages around the world, to achieve a higher standard of living, than has ever been seen elsewhere in the world can surely overcome the barriers of doubt, of unequal opportunity, of financial handicap, and of inadequate motivation and education which interfere with the fullest development of the industrial, educational, intellectual, and moral leadership which our kind of society increasingly requires" (p. 283).

Certainly we will not overcome these barriers if we fail in such a relatively simple matter as that of housing all our children and youth in school buildings which are

reasonably decent and safe.

We will fail in this and in other even more difficult educational matters unless we find practical means of allocating the necessary financial support for education from our abundant economy. We will fail unless the Federal Government accepts its share of responsibility. It can take a wise step in this regard by providing Federal assistance for school construction to supplement State and local funds.

We should not let the sound and fury which rages about this whole question blind us as to the basic issue which is involved. It is not a new issue. It has arisen over and over again throughout our existence as a nation, and even before.

Two forces are in contention. On the one hand, we have those who, because of selfisnness and narrow vision, would make education the privilege of a limited class. They resent and fear the education of all the people. They think of money first and the education of children last or not at all.

On the other hand, there are those who believe that where there is no vision the people perish. They believe in the improvability of mankind through education, and that education should be the right of all. They believe that equality of opportunity is a noble ideal, and that without equal educational opportunity this ideal is but an empty phrase.

Winston Churchill has referred to the period in which we now live as "the terrible 20th century." The term is justified by the events of its first half. What will the second half bring? The future is not foreordained. It will be determined in considerable degree by the wisdom with which the United States uses the resources, human and otherwise, which providence has placed in our hands.

It is not enough in this dangerous world to keep our powder dry. We must also keep our human resources at the highest level of development. The quality, rather than the quantity, of our manpower will determine whether the second half of this century is to be terrible or glorious.

The pertinence of these considerations to the matter under consideration today is too obvious to require further elaboration.

Let us never forget that nothing is so important as providing every future citizen with the fullest educational opportunity that his capacity and diligence will permit him to capitalize. In the past this policy was justified in the name of simple social justice. Now it is demanded as an essential ingredient of national security.

Defense of Formosa and Adjacent Areas

EXTENSION OF REMARKS

HON, HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES
Wednesday, January 26, 1955

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an able and important statement by the distinguished Senator from Missouri [Mr. Hennings] concerning President Eisenhower's message requesting a congressional resolution on the defense of Formosa and adjacent areas. This statement was issued by the Senator from Missouri on Monday, January 24, 1955, and I should like to call it to the attention of all Members of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HENNINGS CONCERN-ING PRESIDENT EISENHOWER'S MESSAGE RE-QUESTING CONGRESSIONAL RESOLUTION ON DEFENSE OF FORMOSA AND ADJACENT AREAS

I had intended to speak today in the United States Senate concerning the constitutional implications of the President's message on the Far Eastern situation. Since, however, the Senate adjourned earlier than usual and will not meet again until Wednesday, at which time the Committee on Foreign

Relations most probably will present its report on this matter, and since I feel it is essential that certain factors receive public consideration, I am issuing the following statement:

President Eisenhower has requested that the Congress adopt a resolution that in his words would "clearly and publicly establish the authority of the President as Commander in Chief to employ the Armed Forces of the Nation promptly and effectively" to protect our interest in Formosa and its environs if in his judgment it becomes necessary. I believe that the President under the Constitution already has this authority, although others may contend that he does not. In any case, I am certain that if he does not have such authority the Congress cannot constitutionally give it to him except in a declaration of war which, in this case, the President has clearly not requested. On the contrary, he appears to be requesting that Congress delegate to him the authority to conduct military operations at some future time if in his judgment such should be necessary.

I am seriously disturbed by the issues raised by this request. As a lawyer and as a member of the Judiciary Committee, I am most concerned with any matter which touches the keystone of our constitutional distribution of governmental power. And it is in my role, too, as a member of the Judiciary Committee of the Senate, that I am apprehensive on this subject.

The public will recall that less than a year ago the Senate discussed at considerable length a proposed amendment to the Constitution that would have effected a revolutionary alteration in the office of the President, and, in my opinion, would have cut down the President's great historic powers in foreign affairs. I refer, of course, to the so-called Bricker amendment. The public will also recall that the debate was arduous and continued, and, in the end, the proposal falled to receive the required vote in this body. Some Senators fought to sustain and protect the President's historic constitutional powers and authority. Our efforts were ultimately successful.

Today the President in his message asked the Congress of the United States to take an action that seems to raise again the issues we decided in the Bricker debate. He has asked the Congress to approve in advance actions which he may take as Commander in Chief of the Armed Forces of the United States; actions, if you please, which he may take at some indeterminate time in the future in the light of events which have not yet occurred; and the nature of which admittedly cannot be predicted at this time.

I am concerned lest this constitute a tacit acceptance by the President of the principle he opposed at the time of the debate on the Bricker amendment.

If the President's intention is to spell out in detail, for all the world to see, the fact that America is united in opposition to Communist aggression, he is to be commended for such intent. But is this not already known to the world? I believe so. But in choosing this manner of acting to demonstrate our unity, is the President not taking a step which may, in the future, react unfavorably for our country?

The action of the President is heavy with fearful possibilities. For what one President chooses to do, another Chief Executive may be required to do. While the situation today is such that the President has the opportunity to consult with Congress, in future years, indeed, in future months, the President may not have such time. And if President Eisenhower feels he must get the approval of Congress in this instance, will not he and his successors be required to obtain such approval in all instances? I do not know, but I am concerned lest this may prove to be the case. We must remember that we

act not merely for today. Our action may well serve as a precedent binding upon fu-

ture generations.

Therefore, while I will support the adoption of a resolution which would give President Eisenhower the moral support he desires, I think the resolution should be adopted in such a manner that the great historical powers of the Presidency will not be in any way limited for future generations. We who have inherited the blessings of our great constitutional system are at least under the obligation to hand down to our political heirs this constitutional office unimpaired in strength.

Why has the President asked Congress to formally support his contemplated action?

I must confess I do not know.

Does the President have the authority to act in this matter in the absence of congressional approval? I believe that he has. And while some will contend that he does not have this authority, I can say with certitude that if he does not have it. Congress cannot give it to him. Under our Constitution, each branch of the Government has certain powers entrusted to it. And just as congress cannot delegate to the President the authority to declare war, so the President cannot delegate to Congress the powers he possesses as Commander in Chief of the Armed Forces.

If the President is merely requesting our moral support by means of this proposed resolution, we will gladly give it to him on the basis of our faith in his integrity and purpose and out of respect for his high office. If he wishes us to assume responsibility for any action he may take, I submit that we cannot properly do so because we do not have the information on which such action must be based. We do not have access to the intelligence services of the State Department, the Department of Defense, the National Security Council, the Central Intelligence Agency, and the myriad channels through which information flows to the President. He has all the facts, the Senate virtually none. And since the President has all the facts, the responsibility for action must be his-as it is already his responsibility under the Constitution.

It is, therefore, obvious that if the President desires the Congress to share his heavy responsibility, he must give Congress the necessary information. And if he is not willing, or is not able, for reasons of national security, to give the Congress this information, then can we act intelligently or share his responsibility? I think not. I can speak only for myself as one Senator, and I do so speak. Before the Congress can assume responsibility for a course of action which very well may result in all-out war, I think the Congress has the right, and even the duty, to request all the information on the basis of which action may be contemplated.

I have the highest faith in the President's sincere desire to avoid world conflict. know he will act in the manner which he believes will be most salutary for our country's future. I am willing and I am desirous of putting myself on record as having such faith. But I do not know if I can 80 further. If the President feels that the information which Congress would need in order to share his responsibility cannot be made public, then should the Senate not invite him to address us in executive session? And if this matter is so delicate that he cannot risk the leaks which might conceivably come from such a session, then I do not know if we can do anything more than give him our moral support.

I make thees remarks will the full awareness that they may be misconstrued as either an attack on the President or a suggestion that we abandon an Asian ally. Such is not my intention. I am concerned lest the President's message be misinterpreted as a confession that the most powerful Nation

in the world does not have the ability and the intention of taking immediate and firm action, through the unquestioned constitutional power of the President as Commander in Chief of our Armed Forces, to protect our interests whenever and wherever these are threatened, until such time as the President and the Congress are able to jointly agree on the details of a course of action. must make it clear to the aggressive forces of communism that we are ever ready to hasten to the defense of freedom. I shall support the President of the United States as the Commander in Chief of our Armed Forces in any action, which he, in that capacity takes for the safety and security the United States in the fulfillment of our obligations under any treaty including, of course, the United Nations Charter, and in the protection of the interests of the free world anywhere.

In Commomoration of Ukrainian National Independence

EXTENSION OF REMARKS

HON. WILLIAM A. PURTELL

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES
Wednesday, January 26, 1955

Mr. PURTELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement I sent to Mr. John Teluk, chairman of the Ukrainian Independence Day celebration which was held in New Haven, Conn., on January 22, 1955.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

IN COMMEMORATION OF UKRAINIAN NATIONAL INDEPENDENCE

I deeply regret that due to a prior commitment I will not be able to join with you and my many other friends of Ukrainian descent in the celebration commemorating the 37th anniversary of Ukrainian independence. Permit me, however, to send this message of greeting on this significant occasion.

It is undoubtedly difficult for Americans to appreciate, much less to comprehend, the frustrations of suppressed nationalism. Free and independent since 1776, Americans have had an unhampered opportunity to fulfill their national aspirations. Not all peoples of the globe have been so blessed; and certainly foremost among those who have not been free from the depredations and tyrannous rule of an imperialistic foe are the Ukrainians.

In past centuries it was imperial Russia of the tsars that stifled and frustrated Ukrainian national aspirations; in our own lifetime it has been the imperialism of Soviet Russia which has done everything imaginable, even committed genocide, to destroy the spirit of Ukrainian individuality and sense of nationhood.

Ukrainians have, however, a long tradition of national consciousness, born in ancient Kiev and nurtured through many centuries. Thirty-seven years ago the hopes and aspirations of decades were realized. National independence was finally accomplished; the Ukrainian National Republic was proclaimed; the Ukrainian people had at long last asserted their inalienable right of self-determination.

However, Ukrainian hopes for the continuation of a form of national independence faded as the strength of the Central Powers receded, and the power of the Bolsheviks increased. Caught in a power struggle between Russia of old, as exemplified by the White Russian forces, and the new Russia, as manifested in the Bolsheviks—both of whom sought to destroy it, the Ukrainian National Republic, which had gathered into its fold most of the Ukrainian people from the areas formerly ruled by the Austro-Hungarian and Russian empires, could not sustain its continued independence. And thus, with the victory of the Russian Bolsheviks, Ukrainian independence was doomed, and the Ukraine fell once again under Russian domination.

From the wreckage of those troubled times something real had emerged, however, which ought not to be forgotten by Ukrainians: They had actually established an independent national republic; and thus, after many centuries of subjection, they had created a concrete tradition of national inde-

pendence.

Celebrations commemorating the establishment of the Ukrainian independent Republic throughout our Nation and abroad, wherever Ukrainians may be, serve the noble purpose of sustaining this tradition. May you kind people of New Haven in your commemoration this evening contribute to this tradition; and may your example serve to kindle in the hearts of all our Ukrainian friends a true spirit of love and high regard for the land of their origin; the Ukraine.

Tribute to Hon. George L. Radcliffe

EXTENSION OF REMARKS

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES
Wednesday, January 26, 1955

Mr. BUTLER. Mr. President, on Monday evening, last, a very distinguished former Member of this body, the Honorable George L. Radcliffe, was honored by a prominent group of Maryland citizens, in the city of Baltimore. Upon that occasion our able and learned Governor made some very fitting remarks, which I ask unanimous consent to have printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD,

as fellows:

Tribute to Hon. George L. Radcliffe (Address by Gov. Theodore R. McKeldin, of Maryland)

It is the American custom to assess the value of a man by four standards of measurement, which I list in what I regard as the ascending order of their importance: First, and least important, what he has; second, what he knows; third, what he does; and fourth, what he is.

Some men are important as measured by one standard, some by another, but it is the distinction of George L. Radcliffe that he is an exceptional man when measured by

al four.

In the first, it is true, he does not rank among the wealthlest men in Maryland, but he has made a career in business that commands respect in all circles; and while he was not the heir to a great fortune, he did inherit the immensely valuable tradition of a Maryland gentleman.

In the second, he carries his learning so modestly that many people overlook it, and are astonished to hear that he is the possessor of three earned degrees, including a doctorate of philosophy won at the Johns Hopkins in 1900, when the requirements for a

Hopkins doctorate were the stiffest in America. He has been a student all his life, and is still learning at an age when most men's intellectual development has long since come to a stand.

In the third, what he has done, I cannot go into detail for the simple reason that even a short account of each of his activities would make this speech intolerably long. In preparing it I made a list of his more important services, giving a single line to each; and that mere catalogue filled three pages of

ordinary letter paper and broke over into the fourth. He has held two high governmental offices, Secretary of State of Maryland under Governor Harrington, and for 12 years a Senator of the United States; but those were mere incidents in a career of public service that began with the principalship of the Cambridge High School and that has

continued, usually without pay, for 55 years. For more than half a century no important project for the general welfare has failed to receive his active support, and he has headed so many that I have lost count. From 1919, when he was chairman of the campaign for the Memorial Dormitory at the Johns Hopkins, to 1952, when I had the pleasure of naming him chairman of the celebration at the opening of the Chesapeake Bay Bridge, George Radcliffe has been chairman of practically everything. I am inclined to list him as the greatest chairman in Maryland history. But I call your attention to one important exception in this list-never in his life has he been chairman of a movement to enrich George Radcliffe at the expense of his fellow-citizens. That is one great reason why his fellow-citizens honor him today.

But the fourth measure of a man, what he is, counts most in the final analysis. As for that measurement of this man, perhaps I can express it best by a personal reference. In 1922 when I began the study of law it was necessary to present the school authorities with two character references, and the names on my certificate were those of Stephen W. Gambrill and George L. Radcliffe; and if you would know what manner of man he is, let me testify that after 33 years I regard that name on my certificate not with less, but with many times more pride than I regarded it then. I do not know how to say more for the character of a man.

It seems to me, though, that the circumstances of his life have given him a distinctive and very gracious role in the history of our times. A native of Dorchester County spending most of his active life in Baltimore, he has been a link between two sections of the State binding us into a unity that has profited both. George Radcliffe brought to Baltimore all that was finest in the culture of the Eastern Shore; and I think he has reflected back to the Shore much of the best in Baltimore.

It is a service all too little appreciated in a highly competitive urban civilization. Industrialism is essential to the general welfare, but we must face the fact that it operates against certain human values. Courtesy and grace do not flourish in an industrial environment unless care is taken to cherish them, and an exemplar of these

values is doubly important where they are in danger of being lost,

It is a matter of common knowledge that the best element on the Eastern Shore has cultivated these values to a degree rarely attainable where the tempo of life is more hurried and competition more ruthless. Nevertheless, if we lose them something irreplaceable and of immense value will have gone out of Maryland. What shall it profit a man to make a luxurious living if, in the process, he has forgotten how to live? There are values that are never entered in the ledgers of the countinghouse and preserving them and reminding the rest of us of them has been one of the great contributions of the Eastern Shore to the history of this State.

George Radoliffe is conspicuous among the shoremen who have brought them to us and this is a contribution that I regard as at least equal in value to anything he did in the Senate, or in the guidance of great business enterprises, or in his leadership of the Maryland Historical Society, although this last was, in fact, part of it.

Is it a question of the preservation of some quaint memorial of a vanished way of life, such as the Shot Tower? Who is better fitted for the task than George Radcliffe? Is it a question of a guide to show the Queen Mother the relies of days when Annapolis was an outpost of the British Empire? Who so competent as George Radcliffe? Is it a humanitarian task like raising funds for the long fight against infantlle paralysis? Could anyone be more devoted year in and year out, than George Radcliffe? Is it any occasion on which it is needful for Maryland to be represented by a gentleman to the manor born? George Radcliffe is obviously the man for the job.

Yet, I have not encountered in Maryland a man who is less of a snob. He has conversed amiably with the Pope, he has enjoyed the friendship of Presidents, and received the attention of monarchs without losing the capacity to understand and enjoy the companionship of the man in the street. We have some among us who have never been of us, who erect invisible walls around themselves and hold the mass of mankind at arm's length. But not this man. He is a learned doctor, he has been a Senator, he is definitely one of the notables of our State; yet to an astonishing number of the people of this city he is neither doctor, nor Senator, nor even Mr. Radcliffe, but simply George.

Well, he has been with us a long time. He is not old. No man is old until the time comes when he is sure that there is nothing around the corner that is worth seeing. That may happen at 21, and then the man is old when he casts his first vote; or it may not have happened at 91, and then he is not old, regardless of his years. It has not happened to George Radcliffe. Without having asked him. I know that he sits here tonight serene in the faith that all sorts of new and delightful things may happen tomorrow or next week and he looks forward to seeing them. His whole life is evidence of his conviction that Maryland, far from being finished, has only just set out on the long road that leads upward to a higher and nobler civilization than she has ever known.

Such men never grow old, and to the end of their days remain the envy of many whose years are fewer but whose hearts are withered while their faces remain smooth. Yet, when a man has passed the psalmist's threescore years and ten what he has to look back on grows more and more important; if they are years full of honors it is good, but it is better when they are years full of service to his fellow men, whether or not those services were requited with worldly tribute.

Our friend can look back on that sort of life, and since that is true it can be argued with great force that whatever his bank balance he should be ranked among the wealthiest men in Maryland. For he has piled up treasure where moth and rust do not corrupt nor thieves break through and steal—in, the affectionate esteem of his fellow citizens who know that he has served them well. So we delight in hailing him tonight as statesman, as philosopher, as businessman, as civic leader, but first of all, and best of all, as a Maryland gentleman of the finest type,

"Not making his high place the lawless perch Of wing'd ambitions, nor a vantage ground For pleasure; but through all this tract of years

Wearing the white flower of a blameless life."

Proposed Promotion of Gen. Douglas MacArthur

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 26, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Recorn an editorial entitled "Honor Due MacArthur," published in the Los Angeles Examiner of January 23, 1955; an editorial entitled "General MacArthur Rates the Honor," published in the Los Angeles Times of January 23, 1955; an article entitled "Why MacArthur Said; 'I Shall Return,' " written by Gen. Carlos P. Romulo and published in the magazine section of the Los Angeles Examiner of January 23, 1955; and an article entitled "MacArthur at 75," written by George Sokolsky and published in the Washington Post and Times-Herald of January 26, 1955.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Los Angeles Examiner of January 23, 1955]

HONOR DUE MACARTHUR

The resolutions introduced into the Senate and House to accord Gen. Douglas MacArthur the rank of General of the Armies of the United States should have the bipartisan support of Congress.

We think they should be acted upon immediately so as to award this honor to a great American, already an almost legendary figure, on the occasions of his 75th birthday this coming Wednesday.

In our thinking there is no reason why General MacArthur should not be proclaimed General of the Armies by then, an honor held only once before in our history, by Gen. John J. Pershing.

For this is not a matter of partisan advantage or legitimate partisan dispute.

This is an honor which we are certain the great majority of Americans overwhelmingly endorse, whatever their political affiliations, as due a brilliant and courageous soldier, a farsighted and judicious statesman, who never swerved from devotion to his country regardless of the humiliation heaped upon him by littler men.

We are glad to see that the movement in Congress to confer the rank of General of the Armies on General MacArthur already has taken on a bipartisan aspect.

The movement began in the House with twin resolutions by Republican minority leader, Representative Martin, of Massachusetts and Representative Hillings, of California, also a Republican. But in the Senate it acquired strong Democratic support as a similar resolution, spearheaded by Republican Senator Welker, of Idaho, was supported by Senators Smathers, of Florida, and Daniel. of Texas.

A denial of this honor could not possibly, of course, impair the luster of General MacArthur's fame, nor his place in the hearts of Americans. He has become a vital symbol of devotion and courage. But such a denial would, we think, cast a reflection on Congress. For surely there can be no reasonable argument against General MacArthur's right to the honor.

So we hope the men and women of Congress will speed it on its way, in time to make Wednesday a truly memorable birthday for a truly great American.

[From the Los Angeles Times of January 23, 1955]

GENERAL MACARTHUR RATES THE HONOR

The bills of House Minority Leader Martin and of Representative Hillings, Republican, of California, authorizing the President to Promote Gen. Douglas MacArthur to the rank of General of the Armies of the United States, should by all means be passed.

This rank has been held only by the late Gen. John J. Pershing, World War I commander. The five-star rank created in World War II is General of the Army, and General

MacArthur already holds this.

Representatives MARTIN and HILLINGS hoped that the bill could be passed in time to give the honor to America's most distinguished living commander on his 75th birthday, which is next Wednesday, January 26. But it is thought there is not enough time. However, the commission could be given retroactively, to date from the anniversary. General MacArthur will be a guest of Los Angeles at the time.

It is unnecessary to retell the story of Douglas MacArthur's great services to the United States; the facts are familiar. He won high honors in World War I as a division commander, served as Chief of Staff for a long period, furnished masterly leadership in the Pacific Ocean phase of World War II, reconstructed Japan, and commanded the United States and other U. N. forces in Korea, only to have victory snatched from him by diplomatic maneuvering. That he suffered shabby treatment at the hands of the Truman administration is known to all the Dublic.

The promotion could hardly add to his military reputation; that is already firmly established. But it would atone in some measure for the unjust humiliation of his summary remeval from the command during the Korean war.

[From the Los Angeles Examiner of January 23, 1955]

WHY MACARTHUR SAID "I SHALL RETURN"

(By Gen. Carlos P. Romulo, special and personal envoy of the President of the Philippines to the United States)

(EDITOR'S NOTE.—General Romulo was a member of General MacArthur's staff during World War II. In 1942 he won the Pulitzer Prize for distinguished correspondence. He was President of the Fourth General Assembly of the United Nations, 1949-50.)

Immediately after the fall of the Philippines to the Japanese in World War II, when allied strategy forced him to leave Corregidor for Australia, Gen. Douglas MacArthur delivered his historic pronouncement, "I shall return." In some quarters he was criticized for using the vertical pronoun.

He deliberately personalized his promise because he was addressing himself to the Filipinos, knowing that they would receive his words not as in the plan of a strategist, but as the promise of a friend. For to us Filipinos MacArthur's personal pronoun "I" carried a force that endured throughout the long agony of waiting.

Especially to the guerrillas who had fought under his command, who had felt the magnetism of his person and who were sure of his loyalty, the famous words became the magical stuff upon which the resistance

movement sustained itself.

To have simply said that America would return (after the United States fleet had suddenly left Manila Bay following the tragedy of Pearl Harbor and after America had failed to send relief to Bataan and Corregidor) could not have been as convincing as for MacArthur, himself, to give his word of honor. We knew that his word was his bond and this was the clarion call we needed to galvanize us into action against the enemy.

Later, when victory made MacArthur virtual ruler of all Japan, it was in his power to undermine a throne that had thrived on fanaticism. With his deep understanding of oriental psychology, the Allied Powers' Supreme Commander chose instead the course of honoring the Emperor, thereby winning the gratitude of his subjects. He reduced the Emperor to human dimensions, with the right to preside over the destinies of a people but no longer to be worshiped as a son of heaven. And so, by laying the basis for constitutional democracy, MacArthur, let us hope, has removed the danger of Japanese militarism in my part of the globe.

But new dangers have arisen since then and in one grave human crisis 4 years ago the peerless soldier was again called to duty. That time he had to fight an enemy more relentless and more cunning than any he had met before. As Supreme Commander of the United Nations forces in Korea it was his immediate assignment to stop the Commu-

nist aggressor in his tracks.

This he did, and more—he drove him to the Yalu River. There is little doubt in the minds of most men that the strategist who brought a proud empire to its knees could have executed his Korean mission with courage, skill, and honor.

Upon this 75th anniversary of his birth I bow in reverence to the soldier-statesman whose grasp of human problems might have averted many of the deadlocks that plague us at present, especially in Asia and the For Fost

It is one of the ironies of our time that his Government has not seen fit to use General MacArthur's experience to help solve the problems of the East, but I wish on this occasion to recall that, when he was relieved of his command, one of the first messages he received in Tokyo was from the President of the Philippines extending to him an invitation to live in my country.

Douglas MacArthur is an honorary citizen of the Philippines and we do not forget those who have served us well.

He returned, as he promised to do, and we should like to have him stay with us always.

[From the Washington Post and Times Herald of January 26, 1955]
MACARTHUR AT SEVENTY-FIVE

(By George Sokolsky)

The celebration of Gen. Douglas Mac-Arthur's 75th birthday will for many reopen the campaign in Congress to gain for the general the acknowledgment which he deserves by bestowing upon him the title of General of the Armies.

It is not astonishing that General Mac-Arthur's judgment concerning the Korean war should have proved to have been so correct. He has devoted so much of his long life to the Far East and to a study of the various peoples which compose the East Asian complex. Douglas MacArthur, as a soldier, could not understand fighting a war with the intent of losing it. That, in effect, was what he was instructed to do in Korea. He could not win that war as long as Manchuria remained a sanctuary for the Red Chinese who came in, not as volunteers, but as a thoroughly equipped and adequately led army. On this subject, MacArthur himself said, during the fighting:

"Never before has the patience of man been more sorely tried nor high standards of human behavior been more patiently and firmly upheld than during the course of the Korean campaigns. From the initiation of the North Korean aggression against the Republic of Korea until the total defeat of the North Korean armies, support from the Communist Chinese from behind the privileged sanctuary of neutral boundaries was open and notorious and all inclusive * * *.

"The existing situation under which the United Nations command is confronted with a new and fresh and well trained and equipped enemy of vastly superior and ever increasing numbers initiating an entirely new war to cover the North Korean defeat, results largely from the acceptance of military odds without precedent in history—the odds of permitting offensive action without defensive retailation. * * **

Despite his experience and competence, MacArthur found himself practically an outcast while he was engaged in the conduct of war. Frazier Hunt, in the Untold Story of Douglas MacArthur, tells of the gaging of the general.

"On December 6 (1950) 10 days after the disastrous turn of events, the Joint Chiefs of Staff dispatched a cable to MacArthur embodying a general Presidential order allegedly sent to all responsible officials. One paragraph read that 'No speech, press release, or other statement concerning military policy should be released until it has received clearance from the Department of Defense.' * * *

"There was nothing for MacArthur to do but to accept what he knew was a fullfledged gag.

"Meanwhile the Chinese Communist emissaries from Peiping had arrived in New York City and were arrogantly announcing that before they would enter into a discussion over Korea, the United States must be put on trial before the United Nations for its actions in entering the civil war."

It was no new thing for MacArthur to fight on two fronts—to fight an enemy army in the field and at the same time to fight against personal enemies in Washington. He had had to do that throughout World War II. His very presence in Asia was a diversion from the Roosevelt-Hopkins, Truman-Acheson decision that the Far Eastern war should be subordinated to the European war.

But MacArthur was right. No matter what is done by this country or by Great Britain or by the United Nations to minimize Asia as the central continent of this historic period, Asia reasserts herself daily and the Chinese Communists hold universal interest and attention. It has always been General MacArthur's concept that the next era of history is Asia's. Daily it is becoming clear that it cannot be otherwise.

Natural Gas Regulation

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 26, 1955

Mr. WILEY. Mr. President, I have received from the office of the city attorney of the city of Milwaukee a letter expressing apprehension that bills may be introduced in this session of Congress relating to natural gas reduction, and particularly with reference to exempting certain phases of natural gas from regulation. With the letter there was enclosed a very significant editorial from a recent issue of the Milwaukee Journal, which I ask to have printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PUBLIC BE DAMNED AGAIN

It's not new for the natural gas and oil interests to make highhanded threats. But the report of James R. Durfee, chairman of the Wisconsin Public Service Commission, that they actually served an ultimatum on State officials is a shocking thing.

Writing in the Public Utilities Fortnightly about the Phillips Petroleum Co. case, Dur-

fee says:

"[A] Phillips official warned Wisconsin representatives at the outset of the case before the Federal Power Commission that if they persisted in trying the case, the people of Wisconsin would freeze, that they would never get another cubic foot of natural gas. This ultimatum to the officials of a sovereign State was voiced by an official of a company which obviously felt that Wisconsin was at its mercy so far as natural gas was concerned because the company then held an almost complete monopoly of supply to the State."

Shades of William H. Vanderbilt. The public-be-damned attitude lives on. If Phillips still has in its employ an official with as little public conscience as this, it could wisely get rid of him.

Unfortunately, only a veto by former President Truman of a congressional gift of immunity from regulation and a Supreme Court ruling upholding regulation now hold the gas and oil interests in check. They seem well on the way to winning in Congress again.

And President Eisenhower's attitude on these matters holds little hope for consumers.

Currently the gas and oil interests are spending huge sums of money to try to convince consumers that they will be better off if there is no price regulation on production. It's like saying: Get rid of your police force and we'll be reasonable when we hold you up. Consumers will believe that at their

peril.

Regulate prices and you'll remove incentives for exploration, development, and production, the gas and oil interests say. Gas and oil come from the same wells. What more inventive do they want than the 271/2-percent depletion allowance tax loophole that they have now? That loop-hole has created a huge crop of multimil-lionaires. These men are among the few who find it possible these days to hang onto huge sums of cash after taxes.

No other class of businessman-big or

little-can do it.

The gas and oil interests may win this round in Congress. But their present atti-tude can't persist without arousing the consuming public. The public will never consuming public. The public will allow itself to be "damned" for long. that could mean worse than regulationit could mean Government ownership.

The Dixon-Yates Contract

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Wednesday, January 26, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article entitled "The 'Dixie' in Dixon and Yates." written by Thomas L. Stokes. and published in the Washington Evening Star of January 25, 1955. In my mind it states very clearly the issues involved in the Dixon-Yates contract.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

THE "DIXIE" IN DIXON AND YATES-TRAIL OF BIG POWER COMBINE'S "LOCAL" INTEREST LEADS FROM THE DEEP SOUTH TO WALL STREET IN NEW YORK

(By Thomas L. Stokes)

Beginning months ago with his description of TVA as "creeping socialism," President Eisenhower has defended his new power policy affecting that project and others—big and small, North, South, East and West—as a "partnership" in which local government and local private interests would participate to a greater degree.

Unhappily, as it turns out now, that became the defense of the now famous Dixon-Yates contract by which a private utility combination would supply power to TVA at Memphis in exchange for the TVA furnishing power for Atomic Energy Commission installations at Paducah, Ky. This was a installations at Paducah, Ky. This was a strange sort of deal, mixed up procedure instead of the direct way used heretofore of just adding facilities to TVA to provide

needed power.

And as for the Dixon-Yates being a "local interest"—that myth now is exploding publicly right in the administration's face through the detailed report by the Senate Judiciary Monopoly Subcommittee analyzing the testimony it took some weeks ago. subcommittee concludes that instead of being "local" the Dixon-Yates combination is nothing but an adjunct of Wall Street utility interests, with the policies of subsidiary com-panies being dictated from New York.

The New York domination is symbolized in the two chief figures in this deal-Edgar H. Dixon, president of Middle South Utilities. of which Arkansas Power & Light and Mississippi Power & Light and others are subsidiaries, and Eugene A. Yates, chairman of the Southern Co., another holding company for

Southern subsidiaries.

These two gentlemen hardly could be classified as southern gentlemen. Both were born in New Jersey. Both live in New York. Both have their offices in New York's financial district. In this, of course, they are not different from any number of carpetbaggers who have gone South continually since the end of the Civil War, some of them actually to make their homes there, to acquire southern accents and to adopt local prejudices with a fervor far beyond that of even a pro-

fessional southerner.

But the real story is not in the two New
Jersey gentlemen who have made good in the South by remote control. It is in the joining of their 2 holding companies, Middle South and Southern, under 1 tent—Mississippi Valley Generating Co.—subject to approval by the Securities and Exchange Commission. Thus will be created the local interest to satisfy the Eisenhower ideal of partnership. Or, as the committee report describes this local interest and its real purposes:

This combination will largely monopolize the electric power supply of the States of Arkansas, Louisiana, Mississippi, Alabama, and Georgia, and through many high-voltage interconnections by which contract power could be delivered to the Tennessee Valley Authority, start an octopuslike integration of that great public system into this privatemonopoly giant."

In short, swallow TVA. That's the plot, anyhow. Further, the report says that consummation of the Dixon-Yates deal will put together a holding-company combine serving aprpoximately 9 percent of the entire area and population of the United States.

Local Interest?

This superlike apparition stirred old memories in one who watched the Federal Trade Commission investigation a quarter of a century ago, with its picture of the private-utility monopoly and all of the evils that followed in its train for investor and consumer. We saw an aroused Congress pass a law to limit holding companies and integrate them on a geographical basis. That same memory stirred in old-timers connected with the

Senate Judiciary Subcommittee. And what did they find as they followed their instincts?

As they explored the southern companies in the Dixon-Yates combine, and saw how they operated, the trail kept leading back to New York where, it was discovered, the real decisions were made for local interests, including one rate increase imposed upon the people of Arkansas. The end of the trail was Electric Bond & Share, one of the big figures in the holding company story of a quarter of a century ago, and to Ebasco Co., an engineering affiliate so-called, which curiously enough was set up by Electric Bond & Share at the time it divested itself of affiliates to comply with the Holding Company Act. Now Ebasco has dealings, and has had dealings with the old Electric Bond & Share subsidiaries, including those in the South involved in the Dixon-Yates deal. The Senate subcommittee suggests that if Electric Bond & Share really is exercising control of its old affiliates through Ebasco. then the original holding company system may still be to a large extent intact. It then adds:

"Such centralized monopoly control would render the whole concept of private power companies as locally managed and locally regulated monopolies a hoax on the public.

From what it has learned in exploring the Dixon-Yates case, the subcommittee wants to go on to see if this pattern of revived monopoly runs again throughout the whole utility industry. That would be a public service. It has been a long time since we have had a good look.

Congress Does Excellent Job. Members Deserve Salary Hike

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Wednesday, January 26, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD comments by Roscoe Drummond in an article entitled "Congress Does Excellent Job, Members Deserve Salary Hike."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Washington.—It is time somebody stepped up and said a good word for Congress. cartoonists and columnists need a filler, we find it pretty easy to draw a short bow and let Congress have it. This permits us to attack everybody in general but nobody in particular. What I am saying is that while Congress is criticized more often than it deserves. it rarely gets the praise it deserves.

It seems to me that the 83d Congress does deserve praise, does deserve to be put down as a Congress with a record of accomplishment substantially above average.

I would cite two major attainments:

It has been a "do-something Congress." It has to its credit a sizable, significant budget of important legislation and it has worked hard to produce it. No Congress of recent memory has been as productive as the 83d.

Congresses as narrowly divided as this one, with a whisker-thin Republican majority in both Houses, have usually ended in legislative stalemate. To have avoided stalemate under such circumstances is a considerable achievement. Both parties deserve credit. On any comparative basis, the Democratic opposition conducted itself responsibly. It

disagrees on some bills, like amending the Taft-Hartley law. That makes a 2-party system. The opposition rarely voted captiously, seeking to block the administration merely as a partisan tactic.

It strikes me that on the basis of this record and after the midterm elections, Congress ought to come back and do something for Congress. I mean put something in the pay envelope as former Presidents Hoover and Truman, President Eisenhower, and a commission of distinguished citizens recom-

mended earlier this year.
You don't have to agree with everything Congress has done to agree that Congress has done a good job and an expeditious job. You may not like parts of this bill or that, or think, as I happen to think, that if serlously botched the anti-Communist law in a frantic partisan boxing match in the frenzied hours of preadjournment. But the solid accomplishments of the 83d Congress remain and are clearly visible. To mention only a

It approved the St. Lawrence seaway after

a 30-year delay.

It produced a 1,000-page modernization of the whole Tax Code—a careful, constructive, monumental streamlining of the whole in-ternal revenue structure for the first time in 78 years.

It enacted basic changes in the atomic energy law primarily to take account of the fact that we no longer have the monopoly We possessed when the McMahon Act was passed. The new law permits sharing of in-formation with our allies on the use of atomic weapons, offers private industry opportunities to develop atomic power.

It passed, with bipartisan support, the most wide-ranging social security and unemployment insurance measures since the early

days of the New Deal.

A pay raise for Congress is long overdue. The case doesn't rest on what Congress has done in any particular session but its record this year would make action by Congress to raise its salaries more politically graceful

Senators and Representatives are now paid \$15,000 in salary and expenses. The Commission on Judicial and Congressional Salaries recommended that the figure be in-creased to \$27,500. Such an increase would add only \$0.00717 to the budget and cost the country only 3.4 cents per capita. Members of the Cabinet receive \$22,500 and some ambassadors' salaries are \$25,000.

Congressional salaries have never kept abreast of inflation. Because of inflation Congressmen actually receive a lower compensation than they did in 1939 when salaries were \$10,000.

The Formosa Resolution

EXTENSION OF REMARKS

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Wednesday, January 26, 1955

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of today's RECORD the text of an editorial entitled "The Formosa Resolution," which appeared in the January 25 issue of the Baltimore Sun.

In my opinion, this editorial explains clearly and concisely the full significance

of the President's message.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FORMOSA RESOLUTION

President Eisenhower has apparently concluded that the threat to Formosa and the Pescadores so often voiced by the Chinese Communists is a real threat and that we must take the necessary steps to make them stop and think.

Because such necessary steps involve the risk of war with Red China and, however remotely, war with Russia as well, the President wants to be certain that the steps he proposes have the wholehearted backing of the Congress and the American people. has therefore outlined in some detail what he proposes to do and has asked the Congress to give him its assent in advance. Thus he keeps his pledge not to involve the country in war or the risk of war without advance consultation with the national representa-

What has just been said gives, in broad outline, the significance of the message sent to the Congress yesterday. To understand its full meaning it is necessary to review the

background in some detail.

In the first place, we must recall that the United States wrested Formosa and the nearby Pescadores not from China but from Japan. It takes no long memory to know that the island with its appendages, when in hostile hands, was a major threat to this country and its allies. Under no circumstances could we afford to turn it over to an unfriendly power, China, or any other. the peace treaty, Japan has given up all claim to it. No decision has been made as to its ultimate destination.

However, as the Chinese Reds advanced, it was natural and inevitable that the re treating Nationalists under Chiang Kai-shek should find refuge on this fertile and productive island, with its mainly Chinese population. Chiang and his armies and supporters are our loyal friends and allies. It was therefore our duty to help them as best we could to escape from their enemies. With the future of China and of Formosa itself uncertain, it was equally our obligation to maintain and supply them, within limits, and to defend them from possible attack from the mainland.

In their retreat, Chiang and his forces managed to keep control of a number of the small islands which are strung along the Chinese coast, sometimes almost within a stone's throw of the shore. Such islands were never Japanese nor can they be called appendages of Formosa. They are in fact as much a part of the Chinese mainland as Martha's Vineyard and Nantucket are part of the mainland of the United States. are legally responsible for Formosa. We are not legally responsible for those islands.

The chief reason the Chinese Nationalists sought to hold them was that they cherished a hope they might ultimately be used as bases for a return to the mainland. Today, as nearly everyone recognizes, there is small ground for such a hope. Thus the islands have little strategic significance for Chiang. Moreover, it is almost impossible to defend them against strong forces based on the continent and so there is every likelihood that the Nationalists will be forced to abandon them under attack. Mr. Eisenhower expects to use the United States Seventh Fleet in helping the deployment of the forces In this instance deployment on them. means withdrawal.

But, though the islands have little present use as a base for operations against the Chinese mainland, they would be useful to the Reds should they make a reckless attempt to carry out their threats against Formosa. Thus, as Mr. Eisenhower points out, it is important that this country prevent the concentration of any large forces on the islands or on the nearby Chinese mainland, the objective of which is the invasion of Formosa or the Pescadores. The President is determined to prevent such an undertaking by the Reds. Perhaps it is correct to say that the most important passage in this message was that in which he asked the Congress to understand and support him in this determination. This suggestion is called the most important because it could involve action against the Chinese on their own territory. The risks involved are clear.

This Formosa question has plagued our politicians and our military leaders since the end of the war. Its difficulties became acute with the retreat of Chiang and the victory of the Chinese Reds. Because opinion in this country was divided and because conditions were constantly changing, we have never succeeded in formulating a clear-cut policy. There was a period when the State Department itself seemed to deny the stra-tegic importance of the island. We know tegic importance of the island. We know better now and Mr. Elsenhower's statement of yesterday is the final statement of our settled determination not to permit an unfriendly power to seize it. We yield the small coastal islands, but on Formosa and the Pescadores we stand firm, come what may.

Mr. Elsenhower believes that this clear statement, if backed by an overwhelming vote in the Congress, will convince the Chinese Reds that they had better hold off. If his conviction is well based, it means that we shall avoid military struggle with the Reds for the time at least. Meantime, all of us will hope, along with him, that through the United Nations some more durable armistice may be worked out.

The Unconquerable Jews

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following illuminating editorial from the Lawrence Sunday Sun, Lawrence, Mass., September 26, 1954:

FOR 5,715 YEARS

In the forthcoming observance of the high holy days of the Jewish calendar there is a lesson for all the world to read. Over the period of recorded time the Jews have been the epochal targets for enslavement, persecution, butchery. Their people have been scattered to the four winds. But day after day, down the long, dim, and bloody cor-ridors of time, for 5.715 years, the sun never has set upon earth without lighting the face of the unconquerable Jews raised in prayer to Almighty God in humble penitence or in glorious thanks for that which God has given them.

Even in our time, the barbaric decimation of the Jewish populations of nations which were under the heel of a despot have written many a sanguinary page into history. First it was Hitler who sought to wipe out completely the Jews in Germany, and now we learn that in another corner of the world this same bloodthirsty pogrom has been re-peated. From behind the Iron Curtain the truth has finally leaked out that Russia, the "liberator" of the underprivileged peoples of this earth, has, during and since World War II, caused the unexplained disappearance of 3,390,000 Jews.

But, as it has for more than 5,000 years, Rosh Hashonah will come in at sunset tomorrow, and Yom Kipper will shine on the Jewish calendar again at sunset on October

And Jews by the millions all over the globe will pray as they have done through all the ages past; for God in his infinite wisdom has provided that no pogrom, no slaughter shall crush these people beyond their power to arise again, nor no scatter-ing of them in enslavement in distant lands has dissipated them beyond trace in the maw of humanity, as has happened to so many other races.

The estimate last week that the Soviet Government has been responsible for the disappearance of 3,390,000 Jews accentuates history, because the word "pogrom" is from the Russian tongue, and means an organized

massacre, especially of the Jews.

Those who govern Soviet Russia today may scoff at the precedents of history in which it is shown that every nation which has persecuted the Jews has fallen, in the good time of the designs of the Lord. The masters of brutality of the past are dust; their records are eyesores in the chronicles of

Wherever totalitarian government exists, there burns a fanatical belief in the invincibility of that form of government. Organized massacres in Russia are not a new story to the Jews. In the 19th century one is recorded where soldiers returning home from the Russo-Japanese War found their dwellings destroyed, their women and children slain. How many soldiers returning from World War II found loved ones gone, having disappeared in the mists of Communist police secrecy? How much of this historic memory remains in the minds of the uncountable thousands of Jewish men who are now serving in the Soviet armies?

The revelation of the more recent decimation of the Jews in Russia must be a bitter pill for the Soviet leaders to swallow, for it is propaganda which does not react in one nation of the world, but in all nations which today are being culturally benefited by the infusion of Jews into their populations. This global reaction only serves to strengthen the bulwarks of democracy and to cause thinking people to determine with greater vigor that this philosophy of rule by machinegun shall not spread beyond its present limits.

Periodically, for over 5,000 years, the Jews have endured this almost incredible reign of terror. From nation to nation, continent to continent, they have been forced to fiee to save their lives and to seek out liberty. no wanderings over the face of the entire globe have anywhere permanently sub-

jugated this enduring race.

Tyrants have lived who have brutalized and enslaved them; but no one ever lived who conquered them. They are an invincible people, and it is especially significant in this respect that they are a God-fearing people.

Yes, the Jews have taught a lesson world over the centuries. In the bitterness of their suffering, they have forged from the fire a great people—a people which can inspire al others in the knowledge that righteousness cannot be crushed.

Inaugural Address of Gov. Frank G. Clement, of Tennessee

EXTENSION OF REMARKS OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1955

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include the recently delivered inaugural address of the Honorable Frank G. Clement, Governor of the State of Tennessee:

Seven hundred and thirty-three days ago we assembled on this same spot in this historic capital city of the great volunteer State for the purpose of inaugurating a program of honesty, decency, and morality in the name of the people of Tennessee.

In accord with a prearranged understanding, constitutionally dictated, we agreed to a political audit, in the year of our Lord 1954, to determine whether the program had produced results and to ascertain whether the executives of this political corporation were managing the affairs of the people in accord with the public interest.

In the meantime, however, you, the owners of this corporate enterprise, determined with the advice and assistance of your board of constitutional delegates that henceforth you would extend to the chief executive a 4-year contract, and while it would be nonrenewable, the Governor would be assured of the opportunity of long-range planning

and uninterrupted service.

In this historic hour of political change in Tennessee we are witnessing the end of short-term planning and the beginning of the first 4-year term of uninterrupted service in our grand and glorious history. As history's humble agent in this hour of momentous change, I give grateful acknowledgment and thanks, on behalf of my wife and three sons, as well as the loyal, distinguished, and outstanding group of public servants comprising our official family, to you-the great citizens of the greatest State among Statesfor your generous expression of faith. You have been better to me than I could possibly

This is not a time for political debate; it is a moment for reverent expression of intent. It is not an hour to be used in boasting: it is instead a time for prayer and humble thanksgiving. This moment should not be used for statistical comparison; it must be a period of spiritual reckoning. Let us dedicate this hour to the purposes of the future and reaffirm

the policies of a people.

The youngest child and the oldest man; the poorest citizen and the richest corporation; the members of minority groups and those who constitute the majority; the humble in spirit and the poor in heart-all have the same right to expect the same consideration, the same fair treatment, and the same devotion to duty from the chief execu-

tive of this great State.

As the first 4-year governor in our history, I pledge you my word that whether it carries me to the heights of popularity or to the depths of desertion; whether it affords us the cheers of our friends or the jeers of those uninformed of our purpose; whether I am hailed as a success or condemned as a failure; I will during the years ahead while am your governor, act in accord with what I conceive to be the best interest of 31/3 million Tennesseans; I shall diligently increase my knowledge and my ability; and above all I shall kneel with you before an Almighty God with a prayer that He shall sustain us, forgive us for our past sins, bless us, and keep us until that time when all of us shall stand on equal terms before the throne of eternal justice.

Although none of us knows what tomorrow may bring, all of us have a duty to give thanks for the blessings of yesterday. Faith decrees that we recognize the truth of the forecast that the accomplishments of tomorrow are limited only by the doubts of today. No enduring prosperity can be engendered without confidence. There is a basis for confidence. Faith is the assurance of things hoped for, the conviction of things not seen. Confidence, assurance, and conviction are thrusts into the unknown produced by pull from a reality believed to be out there. A people grow if there is confidence, assurance and conviction.

To all of those who love the Lord and would with sincerity attempt to establish the human version of His kingdom upon the soil of Tennessee; to all who want good government for the benefit of all of our people; to all who in spite of political battle and the scars left thereby love God and Ten-nessee more than bitterness and revenge; to all who seek truth and would abide by whether or not the facts are as we would will them; to all who want the best government of men which frail humans are capable of establishing upon this old earth; to all who believe honesty, decency, and morality should be a practice and not merely a slogan; to all patriotic Tennesseans whose love of God and devotion to Tennessee transcend every other consideration-we extend with humility, hope, faith, and prayer an invita-tion to join in Tennessee's greatest era of progress for the next 4 years.

The Bible teaches faith, hope, and charity; the Constitution teaches obedience to law and patriotic devotion to government; it is to be determined during the days ahead what you and I will teach and practice.

John Sevier had the courage to recommend wagon road across the western mountains of Tennessee 159 years ago; James Robertson was brave enough to enter the savage wilderness of Nashville to establish this capital city; Andrew Jackson risked his life time after time in order to preserve and promote a way of life we now enjoy in peace and prosperity, depleting his own resources to pay his faithful soldiers; Sam Houston did not hesitate to surrender the governorship of our State and face hunger, exile, and death while remaining loyal to his country and his people; Andrew Johnson suffered the scorn of the uninformed and the partisan while valiantly striving to serve the interests of his persecutors; James K. Polk had the statesmanship to fulfill his promises to acquire the great Northwest Territory from a reluctant England and of winning Texas into the Union; Cordell Hull gave himself to the world in order to unite freemen and spread happiness and prosperity at home and abroad; Jim McCord willingly and know-ingly accepted political defeat for the children of Tennessee of whom he was blessed with none; and you and I have the grand opportunity to band ourselves together, 3 million strong, under the divine wisdom of Almighty God, beneath the broad canopy of heaven, in a cause as great as any of these—namely, the promotion of prosperity. the preservation of moral and cultural stand ards, and the assurance of a greater era of progress than any of these great men had an opportunity to promote.

Frank Clement is incapable of doing this alone, but the people of Tennessee have an opportunity to leave for all time the memory of their patriotic service by steadfastly refusing to become political victims of partisan and selfish interests but instead of rising to the heights of human service, unselfish glory, and nonpartisan cooperation.

Only the Almighty knows what an unprecedented 4 years of cooperation, un-selfishness and service to mankind political and citizen statesmen could produce. All of us know the pitfalls and human improbabilities that beset us in seeking such a glorious path of service—but God teaches and man must realize that if we do not hitch our wagon to a star, we can never climb that highest mountain nor even approach that political utopia.

With sincerity of purpose, humility of self, and with a soul free from bitterness I do promise that with God's guidance and your help I shall earnestly strive to promote within the Volunteer State the most progressive government, the most honest administration, the most decent public standards, and the most moral principles of which I am capable—always remembering that the alpha and the omega, the beginning and the end, must be the same in purpose. Therefore humbly and prayerfully let us start 4 years of hopeful toil and willing tribulation by once again saying with you, "Precious Lord, take our hand and please, Lord, lead us on."

Mr. Chief Justice, I am ready to take the oath of office.

Defense of Formosa and Adjacent Areas

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES
Wednesday, January 26, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "United States Intends To Back Its Pledges," written by David Lawrence and published in the Washington Evening Star of January 24, 1955; also an article entitled "A Wise, Firm Policy," written by Constantine Brown and published in the Washington Evening Star of January 25, 1955.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of January 24, 1955]

United States Intends To Back Its Pledges— President's Call for Stand Against Reds in Far East Expected To Have Big Impact on Rest of World

(By David Lawrence)

The American people will learn this week whether they have a divided or a united Government in Washington and likewise whether the free world is behind the United States in its forthright stand against Communist aggression.

For the President, in sending a message to Congress which requests authority to use American Armed Forces to protect the American defense line in the Far East, has taken a decisive step. It calls for support by the Democratic as well as the Republican Parties in both Houses. It calls also for support of the principle by Great Eritain, France, Italy, and the other countries of the free world to Whom the United States already has given a similar commitment in the congressional authorizations related to the North Atlantic Treaty. For in that area a future attack on any one of the member countries is to be construed as an attack on the defense line of our own Armed Forces.

Occasions in American history when a President of the United States has asked for the Passage of a joint resolution authorizing the use of the Armed Forces of this country are rare. Usually they arise when American military intervention already has occurred in an emergency and Congress is requested to ratify the step, or else when authority is requested to ratify a state of war already begun by some other country.

This time the President is asking for a contingent authority—the right to use the Armed Forces if and when an act of invasion of the Formosa area—defined as within our defense or security orbit—is committed by a heattle.

hostile power.

Actually, the United States for all practical purposes now is in a state of war with the government of Red China which has a million troops poised against the American and allied forces in Korea. An armistice is not a treaty of peace and hence a state of war continues in Korea.

Pursuing this realistic fact, the President now is really asking for authority to protect the troops in Korea. For if by any neglect of the Formosa area, the Communist Chinese are able to conquer the armies of the Nationalists, the way is open for the Red Chinese to transfer their big army on the mainland to Manchuria and the vicinity of the Yalu River. To ignore this factor of the military situation is to put in jeopardy the American divisions now stationed in Korea.

Hence, the President's message is in line with the traditional policy of the United States to protect its armed forces wherever they are. While American troops were sent to Korea to fulfill a mission directed by the United Nations, once they are stationed abroad their protection as an army does not cease to be the military obligation of the United States Government.

The defense line of the United States at present extends from Korea southward to Okinawa, Formosa, and the Philippines. Under the Truman administration, the defense perimeter did not include Korea, but it did run southward from Japan to Okinawa to Formosa and to the Philippines. So the Democrats are committed to the adoption of military measures to protect that line—in fact, it was this thesis which the United States Joint Chiefs of Staff upheld when General Eisenhower was Chief of Staff of the Army prior to the outbreak of the war in Korea.

The defense of an American line in the Far East, however, is not solely a military matter that is confined to American forces. It goes to the obligations that are implicit in the treatles of mutual defense which have been drawn up with the Republic of Korea, the Nationalist Government on Formosa, the Philippines, Australia, and New Zealand. In fact, the protection of all Southeast Asia is directly related to the joint resolution which the President now is requesting from Congress. For it means the United States intends to make good on its pledges contained in those mutual defense pacts. This is a concrete exhibition of American good faith. For a threat to the peace of the Far East indeed has arisen through the warfare by the Communists close to Formosa.

The moral impact of the step must inevitably be felt throughout the world, and especially in Europe. It puts the United States on record as willing to do its share in the defense, not only of the free countries in Europe, but those of Asia as well. It is notice to the Communists that all the byplay about sentencing American prisoners as spies and seeking by propaganda methods to capitalize on the incident is irrelevant and that when the chips are down-as they appear to be in and around Formosa United States will employ its Armed Forces. This means naval power and airpower and the use of atomic power, too. For today the dropping of atomic shells can be confined to military installations. The Communists now must understand that the United States means business and that peaceful coexist-ence must mean peaceful behavior on the part of the Communists, too, if the use of American armed force is not to be compelled.

[From the Washington Evening Star of January 25, 1955]

A WISE, FIRM POLICY—CALCULATED RISK OF THREATENING TO FIGHT IS ESSENTIAL TO SECURITY OF WORLD

(By Constantine Brown)

America is again showing to the world a firmness in keeping with her interests and power.

The decision by President Eisenhower to take a stand in the Formosa Strait beyond which the Communists could advance only at the risk of looking straight down the muzzles of the 7th Fleet's guns climaxed long debates and arguments within the Chief Executive's official family.

For nearly a year congressional leaders have advised the White House that even the appearance of a soft policy toward the Reds would play into their hands. Secretary of State Dulles, and Walter Robertson, Assistant Secretary of State for the Far East, were of the same opinion.

Other political advisers encouraged the President—for the sake of not disrupting our alliances with Western Europe—to use the soft touch and show patience and forbearance. We have done this ever since the signing of the Korean armistice. However, the Communists ignored its provisions, ran wild in Indochina, refused to return United States prisoners of war whom they held for bargaining purposes, and adopted an attitude toward the United States which was like that of Hitler toward Poland in the late thirties.

Mr. Eisenhower was urged by congressional leaders, and particularly by Senate Majority Leader Knowland, to put a stop to the Red provocations which were lowering America's standing in the world and furthering the Communist cause.

Last week's discussions were decisive. The Chinese Communists were definitely on the rampage. Their aggression was encouraged by their belief that the United States would defend only Formosa and the Pescadores and had excluded Quemoy and Matsu. These latter are regarded by our Joint Chiefs of Staff as the gateway to Formosa.

Mr. Eisenhower has tried earnestly to avoid involving the country in any armed clash, but he now believes the time has come to put a stop to the Red advances. He decided to ask Congress to support use of air and naval forces. They are being deployed to evacuate Nationalist soldiers from the militarily untenable Tachen Islands and also to bar any further Communist advances toward the rest of the Nationalist-held territory.

Mr. Eisenhower is reported to welcome United Nations intervention in the Communist-Nationalist shooting match despite the risk that it might set Peiping off toward the city of the U.N.

shooting its way into the U. N.

The question uppermost in the minds of legislators after the Presidential message is whether the calculated risk we may now be undertaking is essential to this Nation's security and also to the security of the world. The answer this reporter has found from those intimately connected with the problem of America's security is emphatically "yes."

The Red axis extending from the Elbe River to the Pacific is determined to dominate the world. In Europe the opposition to the Communists has somewhat softened. The Reds are relying in their cold war in Europe on the Socialists, Communists, and neutralists in the remaining free countries to further their interests.

Moscow no longer expects any determined opposition to its penetration of areas west of the Rhine. Trade and coexistence are its main weapons. Rightly or wrongly the Kremlin believes that Western Europe has been softened up sufficiently to make military action unnecessary.

The situation is entirely different in the Far East, where communism has made no impression on such free countries as South Korea and Nationalist China. Unless these two stubborn opponents of communism are reduced by force the entire Communist plan for Asia may fall to pieces. Moscow and Peiping can hope to gain the upper hand in Korea only by a decisive defeat of the Nationalist forces concentrated on the China Sea islands.

Destruction of Chiang Kai-shek and his Nationalists will mean inevitably the fall of Japan and the Philippines to the Communist conspiracy. Our Government is fully aware of this. President Truman gave the order in July 1950 for the 7th Fleet to defend Formosa against possible Red aggression. This order is still fully in effect. Mr. Elsenhower agreed to a mutual-assistance pact with Nationalist China because he, possibly more than his predecessor, realizes that this country's security would be seriously jeop-ardized if the Communists got hold of the western Pacific and pushed our first line of defense back to the Hawaiian Islands.

Many military and diplomatic specialists hope that the decision to step determinedly into the Pacific picture will have a sobering effect on Peiping and instead of promoting further shooting in the area will bring it to an end. The next few weeks will show how correct this estimate may be.

Chicago MacArthur Vets to Fete Commander on His 75th Birthday

EXTENSION OF REMARKS

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. ALLEN of Illinois. Mr. Speaker. under leave to extend my remarks in the RECORD, I include a statement from Brig. Gen. Julius Klein, of Chicago: .

CHICAGO MACARTHUR VETS TO FETE COMMAND-ER ON HIS 75TH BIRTHDAY-URGE PACIFIC HERO AS ADVISER ON FAR EAST CRISIS-TRIB-UTE TO GREAT SOLDIER-STATESMAN

"The Nation should render Gen. Douglas MacArthur a 21-gun salute on the occasion of his 75th birthday," said Brig. Gen.
Julius Klein, of Chicago, who served under MacArthur in World War II.

General Klein, a personal friend of the general, further stated, "When General Mac-Arthur was summarily relieved of his com-mand, I stated that the Kremlin could fire a 21-gun salute. Judging present events, I would say they are doing just that in their own way. Had we the foresight to heed this great soldier's warnings, the world situation today would be quite different.

"General MacArthur's name has always been connected with final victory," said Gen-eral Klein, pointing out that his famous words "no substitute for victory" are prophetic when viewed in respect to the global

situation at this time.

"America now has an opportunity to honor its greatest citizen-soldier statesman. I have just submitted my report to the United States Senate after concluding a mission for the Senate Appropriations Armed Forces Subcommittee. On page 3 of this report I stated:

"'Gen. Douglas MacArthur, whose years of experience have covered all phases of our defense problems, has stressed repeatedly the importance of our European flank. Out of his recognition of the global nature of Communist aggression, he wrote to Speaker Mar-TIN on March 20, 1951, sounding this warning:

"It seems strangely difficult for some to realize that here in Asia is where the Communist conspirators have elected to make their play for global conquest, and that we have joined the issue thus raised on the battlefield; that here we fight Europe's war with arms while the diplomats there still fight it with words; that if we lose the war to communism in Asia, the fall of Europe is inevitable. Win it and Europe most probably

would avoid war and yet preserve freedom."
"One month later, in his historic address
to the United States Congress on April 19,

1951. General MacArthur again reminded the American people that:

"These issues are global, and so interlocked that to consider the problem of one sector oblivious to those of another is to court disaster for the whole. While Asia is commonly referred to as the gateway to Europe, it is no less true that Europe is the gateway to Asia, and the broad influence of the one cannot fail to have its impact upon the other. There are those who claim that our strength is inadequate to protect ourselves on both fronts, that we cannot divide our effort. I can think of no greater expression of defeatism."

"'I undertook my study of our vital European flank, highly conscious of these admo-nitions by my old Pacific commander."

Klein continued: "I recommended on page 52 of my report that General MacArthur's views be invited by both our highest policymaking authorities and appropriate congressional committees to aid in the shaping of a consistent, clearly formulated global defense policy for the United States. This is the most opportune time to call back General Mac-Arthur.

"I have today wired Senator Knowland: In view of the present crisis in the Far East let me call your attention again to pages 3 and 52 of my report to the Armed Services Subcommittee of the Appropriations Committee of the United States Senate, released January 10, 1955. I urge you to request the President to call in General MacArthur for consultation and I hope your committee will do likewise.

"I have also wired Congressmen MARTIN and HILLINGS: 'Millions of Americans, including those who served under General Mac-Arthur, will applaud your bills asking for the promotion of Gen. Douglas MacArthur as General of the Armies. I urge all patriotic Americans to wire their Senators and Congressmen to support these bills."

General Klein sent the following telegram to General MacArthur: "To my old battle commander and America's greatest citizensoldier statesman of our time, I send prayers and best wishes for your 75th birthday. I have invited MacArthur veterans and other patriotic and civic leaders to join me as my guest for a birthday celebration in honor this Wednesday. Chicago, like the rest of the Nation, will never forget your last visit here. You have kept the soldiers' faith—you will remain a symbol not only to every living American but for generations to come. I know GI's throughout the world stand in salute on this day, and I join their ranks in wishing you well."

H. R. 587

EXTENSION OF REMARKS OF

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

MAILLIARD. Mr. Speaker, I would like to call the attention of the Members to H. R. 587, a bill to provide that persons serving in the Armed Forces on January 31, 1955, may continue to accrue educational benefits under the Veterans' Readjustment Assistance Act of 1952, and for other purposes. Under leave to extend my remarks, I include the following letter which I have written to the chairman of the House Committee on Veterans' Affairs:

HOUSE OF REPRESENTATIVES. Washington, D. C., January 24, 1955. Hon. OLIN E. TEAGUE,

Chairman, House Committee on Veterans' Affairs, House Office Building, Washington, D. C. DEAR MR. CHAIRMAN: Thank you for your

letter of January 20 inviting me to testify during the hearings on your bill, H. R. 587, to permit individuals in service on or before January 31, 1955, to continue to earn educational benefits. I regret that another committee meeting precludes my testifying. and therefore I would appreciate it if you would include this letter as part of the record.

I would like to urge the Committee on Veterans' Affairs to act favorably and promptly on H. R. 587. I am convinced this bill should be enacted if we are to prevent injustice to service personnel who volun-teered for terms of service of greater length than would have been required under the selective-service law in the belief that they would thereby accrue additional educational benefits. Many of them have made their plans at considerable sacrifice in order to obtain these educational benefits.

As a former member of the Committee on Veterans' Affairs, may I commend you on your prompt introduction of this desirable legislation.

Sincerely,
WILLIAM S. MAILLIARD, Member of Congress.

City of Lakewood-Modern Day Miracle

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. HOSMER. Mr. Speaker, a modern-day miracle has occurred in the 18th Congressional District of California. which I have the honor to represent. In just 4 years one of California's now major cities, with a population of 70,000, has risen on 3,375 acres of land that in January of 1951 was an agricultural reserve.

During these 4 years over 14,000 new homes were built on acreage which was part of a grant by the King of Spain to Dan Manuel Nieto in 1784. A \$100 million shopping center nears completion. A new and novel city government has been born. And important new economic strength has been added to southern California and the Nation. Such, in summary, is the city of Lakewood.

Although Lakewood's 30 new homes a day pace is slacking off, it is not because it is losing any of its reputation as a pleasant place in which to live. It is simply that residential building sites are nearing the full utilization point. There remains room to add only about 3,500 new residences.

A gigantic 154-acre shopping center containing parking space for 7,632 cars lies at the city's center. Here is to be found Lakewood's modest rented city hall, together with a total of 84 businesses in operation. Construction of nine additional stores is underway and others will be added. The shoppingoff with a medical building and addi-

tional parking lots.

The city government of Lakewood, Which was incorporated April 18, 1954, has attracted nationwide attention for its unique plan of obtaining practically all its services from special county districts in existence prior to incorporation or through contracts with the county of Los Angeles. Under this system the city has been able to contract for police, fire, sanitation, and most other functions ordinarily carried on by local governments.

Lakewood's economies in capital in-Vestment and routine overhead are substantial. Under the contract system, the city has been able to operate with only a 29-cent property tax rate and with a small staff headed by City Administra-

tor Robert T. Andersen.

After only 8 months of corporate existence, at the start of the new year the city of Lakewood had a total unexpended balance of \$441,166.98 out of appropriations of \$548,203 for the last 6 months of 1954. Thus expenditures for this city of 70,000 amounted to only \$170,036.02 during the last 6 months of 1954. Accounts show \$15,005.22 spent for personal services; \$77,551.59 for contractual services, \$5,765 for materials and supplies: \$7,636.37 for equipment and \$1,-177.75 for fixed charges.

Costs in all contracted services ran far below appropriated estimates, according to the city's financial report. Only \$269.26 of \$2,000 set aside for county jail use was spent but \$162.55 of \$600 appropriated for health and sanitation. Highest cost was \$53,100 of a \$130,000 appropriation for lighting maintenance. Business-license enforcement cost but \$776.24 against \$21,329.69 in business-

license revenues.

The extent to which contractual arrangements for services has been carried is illustrated by a current roundrobin series of city civil-defense programs being carried on throughout the city. Even these are conducted by Los-Angeles County civil-defense officials under a contract from the city of Lakewood.

Much of the success of the sparkling new community rests with its outstanding elected public officials. It is probable that no group of men anywhere in the Nation have given as much of themselves to their community during the past year as have Lakewood's city councilmen. The councilmen, all of whom serve Without pay, are: Mayor Angelo M. Iacoboni, attorney; Eugene K. Nebeker, realtor; William J. Burns, newspaper re-Porter; George Nye, Jr., school teacher; and Robert W. Baker, electrical engineer.

Starting off with a marathon reading of the massive municipal code that started on the day of incorporation and ended at 5 a. m. the next day, by the first of this year the council had enacted 37 ordinances and 150 resolutions covering a great variety of activities ranging from the city's basic legal code to cosponsorship of monthly teen-age dances.

The small group of city employees headed by administrator Andersen con-sists of: city clerk Nita Birch, deputy clerk-typist Alene Hyatt, and administrative "interne" Henry Goerlick, who is

center area eventually will be rounded on a part-time basis. Guy Halferty, special assistant to Andersen and city attorney John Todd serve on a retainer

> Incorporated Lakewood City is the hub of a yet greater contiguous community of homes some of which are in the corporate boundaries of Long Beach and others are in unincorporated county territory. The area as a whole is known as greater Lakewood. Despite this split political personality, residents of greater Lakewood regard themselves as a single community and there exists a great civic spirit which unites religious, fraternal, veterans' and civic organizations for the benefit of the entire area.

> Greater Lakewood has a colorful history. By 1930, through transfers and marriages, the part of the King of Spain's original grant to Don Nieto, which is now Lakewood, had come in the hands of the Montana Land Co. headed by Clark J. Bonner. In that year Bonner filed a plan for subdivision of the area and today is kown as the father of Lakewood.

> However, it was not until 1932 that the real beginning of greater Lakewood as a community for modern living began with the construction of Lakewood Country Club by Montana Land Co. In that same year, the company gave 29.84 acres of land to the Long Beach Unified School District for development of Long Beach City College campus. In September 1934 ground was broken adjacent to the campus for the first Lakewood subdivision.

> Montana land chose promotion-minded Charles Hopper, developer of Bel-Air and South Gate to promote sales in the subdivision and one of his first steps was to have two-lane Cerritos Avenue renamed Lakewood Boulevard. Today that road's six busy traffic lanes truly entitle it to the name "boulevard."

> Greater Lakewood's first business building was opened October 25, 1934, and its first resident, John Davies, moved into his new home in the spring of 1935.

> Growth in the area was on a modest, but steady scale until it was given impetus by breaking of ground for the huge Douglas Aircraft Co. plant at Carson and Lakewood Boulevard in November 1940.

> Postwar years saw ever increasing development by several subdividers including Griffith & Legg, Walker & Lee, Cunningham & Brittain, and the Aldon Construction Co.

> However, it was not until an \$8,800,000 transaction in January 1951 transferred Montana land's remaining 3,375 acres to the Lakewood Park Corp. which set out to build 17,500 homes that the incorporated area of Lakewood City got is real impetus.

> With its neat rows of well-kept homes, many new schools, beautifully landscaped parkways, convenient shopping sections, model city government, and intense civic pride, Lakewood today is one of the outstanding communities of the United States. Its developers and residents have made it that way.

> Every Member of Congress takes pride in the district he represents. In my case, the miracle of the city of Lakewood more than justifies my pride in California's 18th Congressional District.

Federal Regulation of Natural Gas Prices Poses Serious Problems for All Amer-

EXTENSION OF REMARKS OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I wish to include the attached article which appeared in the January-February issue of the Link, a magazine published by the Carter Oil Co., Tulsa, Okla.:

WHAT'S IT TO YOU?-FEDERAL REGULATIONS OF NATURAL-GAS PRICES POSES SERIOUS PROB-LEMS FOR ALL AMERICANS

All of us are inclined to steer away from complicated subjects

Take the atomic bomb, for example. Most of us don't know how it works or the principles behind it, being content with a few knowing statements on the subject, like "splitting the atom." Yet no one can deny the very real role this scientific achieve-ment has on each of our lives.

Or let's consider the Natural Gas Act. Granted the matter does not have the import of the atomic bomb but what has happened in Washington is earth-shaking to the oil industry and could be earth-shaking to thousands of users of natural gas throughout America (40,000 consumers have signed up for it in Chicago but cannot get service today.)

The current Natural Gas Act problem isn't complicated. It is really a fairly simple subject about which you, as a citizen, should

Let's go back to the days before World War II. About the only folks using natural gas then were the ones in the heart of the oil and gas fields. But these folks were really sold on the fuel. Women liked it because it was so clean. Men and women liked it because it was so economical.

To the oilman, however, gas didn't mean much. He was not looking for it most of the time when he found it. He had only a limited market for the gas to start with and he didn't get enough for it to feel that the whole thing was very worthwhile.

As more and more people used the gasand as the supply grew even larger as the search for oil was intensified—it became clear that the people in distant cities could be rendered a service if this modern fuel were made available to them. So, businessmen formed pipeline companies and cross-country pipelines began to be built. As fast as one city got the new fuel with all its advantages, others wanted it. Now, gas began to come into its own.

Since the pipelines stretched from Oklahoma, Texas, and Louisiana clear across the United States to the eastern seaboard, the gas was moving in interstate commerce, which could not be regulated by local or State authorities. So Congress passed a law to regulate these pipeline companies transporting the gas in interstate commerce. This was all well and good.

But even in 1938, when the law was passed, the lawmakers were very careful to distinguish between companies operating in interstate commerce and those doing business locally. And yet today this single point is the cause of all the current complicated controversy.

Before we read the act itself, let's make you an oilman.

You were drilling an oil well in Oklahoma. You were looking for oil, but found gas. You don't want to waste the gas, because it is an important, exhaustible natural resource. Naturally, you want to sell it. You make the arrangements; get a satisfactory price for it.

Then a man lays a pipeline to your well and runs the line over to a place where it connects with a lot more lines he has from wells such as yours. This man is engaged in "gathering." He in turn sells the gas he bought from you to a pipeline company which will "ship" it to the east coast.

Since you are now an oilman, let me ask

you a question:

"Are you operating in interstate commerce because you found and sold gas to a gatherer, even though you were looking for oil?" Well, let's read the law passed in 1938.

It says: "The provisions of this act shall not apply * * * to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas." That seems clear enough, doesn't it?

The Federal Power Commission, administers these laws, thought so. It flatly stated in the first hearings that it had no jurisdiction over producers of natural gas.

In 1947, the Commission issued its now famous order No. 130 which said:

"The Commission gives its assurance to independent producers and gatherers of natural gas that they can sell at arm's length and deliver such gas to interstate pipelines and can enter into contracts for such sale without apprehension that in so doing they may become subject to the assertion of jurisdiction by the Commission under the Natural Gas Act.

A sigh of relief followed the order. it's easy to understand why. If the Com-mission claimed the authority to regulate independent gas producers and gatherers, they might just as well contend they had the right to regulate and control the entire oil business, since the search for oil and for gas are virtually inseparable. In other words, the authority to regulate the oil industry from the bottom of the well in Oklahoma to the burner tip of the stove in the Connecticut kitchen might have been the result.

Does that sound like America?

That's why there was a sigh of relief in

But ensuing events made clear that the Commission order No. 130 would not go unchallenged-

So, fearing another assault on their independence, the oilmen sought still further The Congress passed the Kerr bill which did nothing more than the Natural Gas Act had tried to do-specifically exempt from Federal regulation the independent producer and gatherer of natural gas. It was, unfortunately, vetoed by President Truman.

Then one of the big producers of gas, Phillips Petroleum Co., was brought into a case before the Commission. After lengthy study, the Commission said in effect in its decision (as it had often said before): "We don't have jurisdiction over Phillips because it is an independent producer and gatherer."

Then, people who were in favor of expanded Federal regulation appealed this decision to the United States Supreme Court.

And, surprisingly enough, in June 1954, the Supreme Court held what practically everyone believed the Congress had never held or intended . . . and what the Commission did not hold in the Phillips case—that the Commission did have "jurisdiction over the rates of all wholesales of natural gas in interstate commerce, whether by a pipeline company or not, and whether occurring before, during, or after transmission by an interstate pipeline company."

Now consternation hit the oil industry.

In the first place, the search for gas is inextricably bound up with the search for oil. You may drill a wildcat for oil and hit gas. You may not even want to get gas or get in But now, by this new the gas business. Supreme Court decision, these are your

choices if you do get gas: You can shut in the well (and perhaps lose your lease and all of your investment).

You can sell your well. You could sell your gas, and if a single cubic foot of it wound up in interstate pipelines, here might come the Federal Power Commission to tell you what you could and could not do, the price you could or could not get, the amount you could or could not produce.

What other natural resource in America is

subject to such regulation?

Logically it would seem that oil is no different from coal or any other natural resource in this respect. If coal from one of the mines in McAlester, Okla., is loaded into freight cars and shipped to a steel center in Texas, does this mean that coal mines should be regulated by the Government?

According to the Supreme Court, the answer would apparently be an emphatic

"Yes!

If aluminum from the bauxite mines in Arkansas is shipped to eastern manufacturing centers for processing, does this mean that mines in Arkansas should be regulated by the Federal Government?

Surely, any average, thinking citizen can see the danger to our economic system-the envy of the world-if the Federal Government moves in to regulate every natural re-

There is where the matter rests today. Undoubtedly the Congress will be beseeched by oil men and citizens alike to act-to prohibit discrimination against a singled-out natural resource-to do once again what was sought and contended in its own Natural Gas in 1938 and by the Kerr bill which it passed in 1949. This complicated problem is one we cannot afford to ignore.

And instead of 135,000 consumers in Chicago alone who want but cannot get natural gas, there may be hundreds of thousands of would-be consumers denied this modern

Of more serious significance than even this. are the implications clearly pointed out by the Oklahoma Municipal League late in September 1954:

"Federal regulation cannot be justified except on a socialistic basis which could lead to the regulation of the price of all commodities, including oil, and which would further centralize regulatory authority in the Federal Government and thereby usurp the powers and functions of the States.'

The President's Message-Formosa and the Pescadores

SPEECH

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. CURTIS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I wish to make clear my position on House Joint Resolution 159, as pro-

posed by the President.

This is a time of national crisis which demands unity. The issues transcend partisan considerations. The country must unite behind the President in supporting the national policy, and show clearly to the world that despite political differences on the home front we

stand united when the national security is threatened.

Our first objective is to do everything consistent with national security and honor to avoid war and promote peace.

To let the world know what we deem to be our vital security interests is a constructive step in that direction. The danger and futility of not doing so has been proved by past experience. The President's message must be regarded as a step toward peace, not toward war.

We believe in the principle of united action by freedom loving peoples to repel aggression and to prevent war. In accord with that principle the President stated in his message that this country "would welcome action by the United Nations which might in fact bring an end to the active hostilities in the area.' The action which we take in passing the President's resolution will strengthen the efforts of the United Nations to find a peaceful solution to the problems in the western Pacific area.

The President's message is noteworthy in indicating his desire that Congress should share in the making of this vital foregin policy decision. This is democracy at its best. It is no renunciation of the President's constitutional power to take military action on his own authority as Commander in Chief in the face of attack or defense necessity. The President recognized that he had such authority. Consultation with Congress in the present circumstances is a wise and statesmanlike step. It strengthens our national position before the world, and particularly before those who threaten aggression.

In supporting the President we take a firm and honorable course. We are true to our traditions so nobly expressed by a great President: To strive on "with firmness in the right as God gives us to see the right."

National Association of Independent Business Opposes Lowering Tariffs

EXTENSION OF REMARKS OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. MACK of Washington. Speaker, I feel certain that most members are acquainted, as I am, with the National Association of Independent Business. This association is composed of small independent businessmen throughout the United States and has the largest individual membership of any business organization in the United

The officers of this organization are constantly polling the membership for their views on pertinent legislative problems. There are many members of this organization in my district, and I regularly receive their answers to the ballots sent to them. I find these answers most valuable and instructive.

As a result of this constant polling of their membership, the representatives of the National Federation of Independent Business are able to present to congressional committees accurate views of thousands of independent businessmen.

Under leave to extend my remarks in the Record, I include a statement of Mr. George Burger, vice president of the National Federation of Independent Business, regarding tariff reductions. It was made this morning before the House Committee on Ways and Means during consideration of the Reciprocal Trade Extension Act.

The statement follows:

STATEMENT BY GEORGE J. BURGER, VICE PRESI-DENT, NATIONAL PEDEBATION OF INDEPENDENT BUSINESS, BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS

RECIPROCAL TRADE AGREEMENT EXTENSION

I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740 Washington Building, Washington, D. C. Our national headquarters are located in Burlingame, Calif. We also maintain division offices at New York City, Cincinnati, and Chicago.

It must be understood by Members of Congress that no officer or group of officers is permitted to speak for the federation as to its position on any legislative or economic problems unless so directed by a nationwide poll of our members. The entire membership is polled and the results of these polls give the executive officers the authority to act in behalf of the members.

I am appearing in opposition to any further extension of the reciprocal trade agreement. I am basing this action on recent polls of our membership, instituted by the federation. For example, in mandate bulletin No. 169, we polled our members on H. R. 6780, introduced by Congressman Mack, a bill to protect American businessmen and their employees from cutthroat foreign competition caused by dumping of foreign products on our markets by low-wage, low-living-standard foreign producers. The results of the poll on this bill were as follows: 80 percent for the proposition, 16 percent against it, and 4 percent no vote.

In Mandate Bulletin No. 197, we polled our members on H. R. 2949, introduced by Congressman Gaoss, which would forbid excessive imports of goods which are in surplus supply in our domestic markets. The results of the poll were 67 percent for, 28 percent

against, and 5 percent no vote.

In Mandate Bulletin No. 205, we polled our members on H. R. 8585, introduced by Congressman Baker, to provide that Federal Government help States to pay jobless benefits for workers unemployed as a result of international trade agreements. The results of this poll were 20 percent for, 76 percent against, and 4 percent no vote.

It should be self-evident, Mr. Chairman and members of the committee, that the feeling of the typical small-business man reflected in this poll is that small business is not interested in any handouts or subsidies from the Pederal Government or the States.

The mandates referred to above are attached hereto as permanent exhibits in con-

Lection with this testimony.

Our Nation has been most charitable during the past decade or more in its financial aid to nations throughout the world. Billions upon billions of dollars have been appropriated and spent by the Federal Government in the hope of rehabilitating the economy of these foreign nations.

It is significant and important to note in recent comments from foreign correspondents of leading newspapers of this Nation the reports state that many of the nations who have been aided have shown consider-

able improvement in their economic situation, some nearly equaling peacetime records and even exceeding them. I think a review of the comments recently expressed by that competent correspondent, Michael Hoffman of the New York Times, will verify the statement I have just made.

In the course of our daily contacts with our small-business membership throughout the Nation, we have been notified of the serious impact on their own individual businesses due to the excessive imports of foreign goods, for example, motorcycles, bicycles, and tinfoil, etc., in which some of our people made the report that it was coming from behind the Iron Curtain countries.

More recently, from membership in the State of Texas, complaints have come in of excessive importation of Egyptian cotton. I could go on and relate the reports from many other producers or distributors in small business of this Nation who have registered protest against the excessive imports of cheap foreign goods, all tending to reduce their position in the production or distribution field.

We believe that the reciprocal-trade arrangement has gone far enough and that this power should now revert back to the Tariff Commission where it rightfully belonged in the first place.

longed in the first place.

Our interest, Mr. Chairman, is to protect the people we represent, the independent businessmen, and indirectly thereby American employment generally, and in this respect, to show the actions of the federation, I respectfully request that the attached copy of a paid advertisement of the federation which appeared in the press nationwide, be made a part of this testimony.

In conclusion, we respectfully request that you vote "No" on the extension of the re-

ciprocal-trade agreement.

Prisoners of War in China

EXTENSION OF REMARKS

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I include a copy of a resolution adopted by Nicholson Post, No. 38 of the American Legion, Louisians.

Whereas the government of Communist China is holding as prisoners, many Americans, both civilian and military personnel;

Whereas one of the attributes and obligations of national sovereignty is the protection of the citizens and nationals of one's country; and

Whereas it is our opinion that the United States Government is honorbound to do anything and everything within its power to protect and defend members of the Armed Forces of the United States who go into a foreign country under orders of their Government or are captured and taken into a foreign country against their will while in military service; and

Whereas the members of the United States Armed Forces now being held in captivity by the Communists in China are military prisoners and entitled to be treated as such under the rules of warfare; and

Whereas it is important for the cause of world peace, the dignity and honor of the United States Government, and the proper relations between the nations of this earth, for the United States to proclaim to the

world that its citizens and military personnel cannot be imprisoned, mistreated, or detained without just cause: Now, therefore, be it

Resolved, That the membership of Nicholson Post, No. 38, the American Legion, of Louislana, does hereby urge the President of the United States and the Congress of the United States to forthwith take any and all steps necessary to secure the release from Red China of all members of the Armed Forces of the United States and all citizens and nationals of the United States who are not detained for just and reasonable cause; and be it further

Resolved, That the United States Government should use any means required to secure the release and return of these United States citizens held prisoners by Red China; and be it further

Resolved, That the adjutant of this post send a copy of this resolution to the President of the United States, the national commander and national adjutant of the American Legion, the United States Secretary of State, each Senator and Representative in the United States Congress from Louisiana, the department commander and the department adjutant of the Department of Louisiana, the American Legion.

It is needless for me to add, Mr. Speaker, that I am wholeheartedly in favor of the contents of this resolution and that I hope this Government will use every means at its disposal to secure the immediate release and return of our people held in prison in violation of treaties and of laws by the Chinese Communists.

If We Want Water Tomorrow We Must Take Care of Our Watersheds Today

EXTENSION OF REMARKS

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. REES of Kansas. Mr. Speaker, I am including, herewith, a statement entitled "The Elements of a Sound National Land and Water Policy."

The first National Watershed Congress was held in Washington, D. C., December 6 and 7, 1954. It was sponsored by 24 organizations, including the National Association of Manufacturers, the United States Chamber of Commerce, the American Federation of Labor, the CIO, the National Grange, the National Farmers Union, the National Association of Soil Conservation Districts, the Izaak Walton League, the Wildlife Management Institute, and a number of other civic and conservation groups. There were some 350 accredited representatives of these organizations present along with about 150 other persons interested in the watershed movement.

The committee in charge of the Watershed Congress was headed by E. H. Taylor, associate editor of the Saturday Evening Post. Mr. Taylor is widely known and is considered an authority on farm problems, especially with respect to soil conservation. Mr. Taylor's contribution on the subject of watershed development is well known. Having given thought and effort in dealing with the question of soil

conservation over a period of 20 years, Mr. Taylor has come to the conclusion that the primary watershed is the practical basis for a conservation policy. He expresses the view that "We should begin at the beginning in the upstream sheds where most of the moisture falls." Mr. Bryce Browning, director of the Muskingum Conservancy in Ohio, is vice chairman of the committee. He worked with Mr. Taylor in proposing a real watershed program.

In -connection with the Watershed Congress Mr. Taylor has submitted a statement made by Mr. Richard E. Mc-Ardle, Chief, United States Forest Service, who expresses forthright constructive views as to what he believes to be the elements of a sound national land and water policy. Here is what Mr. McArdle has to say:

If we want water tomorrow, we must take

care of our watersheds today.

The permanent welfare of the Nation requires a basic, long-range policy for the con-servation, development, and sustained use of our land, water, and related natural resources. A sound national policy to this end should:

1. Insure adequate renewable natural resources for the needs of an increasing population and an expanding economy.

2. Recognize that these resources are interdependent and bound together in the system of nature and that programs for their conservation, development, and constructive use should deal with them in their proper combination and not separately.

3. Provide for their conservation and orderly development on a planned and continuing year-by-year basis instead of by hap-

hazard or emergency action.

4. Endeavor to develop their full potential usefulness, with the broadest possible benefits to the public.

Involve Federal, State, and local cooperation and coordination of effort, with an equitable sharing of costs and the maximum practicable local initiative and responsibility.

Practical reasons and a favorable public attitude make the primary, or as better known, the small watershed, the most feasible approach to such a policy. The United States is physically a nation of watersheds, with great river basins subdivided by numerous tributaries and myriad small streams. The problems of the major river basins are a compound of the resource problems of their lesser drainage areas and can be most effectually solved by going back to this source. The primary upstream watersheds thus become the logical starting point. Nature has fitted them for such a role. Each contains a combination of land, water, and related resources, making it a natural operational unit for the conservation, development, and management of these resources together. The measures that conserve and improve one resource will reinforce the others.

The watershed is the collector of moisture in the form of rain and snow, the soil the greatest natural storage for it. Beginning with conservation practices on the land that restrain wasteful water runoff and soil loss, multipurpose programs can be planned to yield such benefits as erosion control, reforestation, stream stabilization, flood reduction, recharging of underground water levels, protection of farm, municipal and industrial water supplies, and increased recreational opportunities. The benefits of more regular stream flow and water delivery, lessened flood dangers, and siltation prevention will extend to downstream communities.

The primary or small watershed is also the most effective approach from the standpoint of people as well as nature. Because

it is close to them both rural and townspeople living in it can see at firsthand the mutual benefits they will share in a watershed development program. This unity of interest encourages cooperative action and a willingness to assume local responsibility. The soil conservation districts, watershed associations, conservancy districts, business, farm, sportsmen's, and other groups common to the American community provide a readily available leadership to initiate, plan, and organize such programs. With the necessary technical assistance furnished by Federal and State agencies and an equitable sharing of costs, the process of Federal, State, and local cooperation becomes a working reality.

To forward such a policy these steps should be considered:

1. Increased Federal and State research to determine what physical measures are most effectual in watershed development.

2. Action by the States, not equipped, to set up a competent State agency to assure full cooperation and coordination at the State level.

3. Adequate legislation by the States, in advance of increasing demands on the water supply, to determine the respective rights of water-users and settle "whose water is it?"

By starting with the smaller watersheds the foundation is laid for expanded programs of full resource conservation, development, and management. Programs on the subwatersheds of a larger stream basin can be coordinated in plans for basinwide improvement and geared in with downstream projects for flood control, power development, irrigation or water reserve storage. The States, acting through their responsible resource agencies, can integrate watershed development plans in statewide programs. With the necessary upstream work underway, the States can synchronize their own watershed programs with plans for major river basin improvement through interstate compacts or other forms of agreement. By such progressive stages a program of nationwide scope would be brought within range of realization.

These are the elements of a sound national policy for our land, water, and other renewable natural resources as your committee sees them.

America

EXTENSION OF REMARKS OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I wish to include the following poem by Dr. Glen Levin Swiggett, of Washington, D. C .:

Beloved America, O bounteous land And generous Nation, blessed with liberty Of thought and action, may your people be Forever free as that brave pilgrim band That came in search of freedom to your strand!

And may they ever treasure thankfully Their liberty and offer helpfully To those who would be free a friendly hand!

America, your mission is today Most urgent in another hemisphere, Where newborn nations seem, in doubt, to sway

Between desire for freedom and the fear Of tyranny. Therefore, so act that they May lengthen liberty's far-flung frontier.

Capital-Gains Tax

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks I wish to include a very sensible and plausible letter received from one of the learned members of the Massachusetts bar on a subject matter to which he has given a great deal of time. thought, and study.

The writer of this letter, Attorney Frederick J. Gillen, of Lawrence, Mass., is very well versed on the Government tax program and on issues of public

finance.

This short letter merits the attention of the membership of the Congress and I offer it to you for your consideration:

LAWRENCE, MASS., January 21, 1955. Hon. THOMAS J. LANE,

House Office Building,

Washington, D. C.
DEAR TOM: From the fact that a home owner is allowed to sell his home at a profit

and reinvest in another home without paying a capital-gains tax, Life magazine attempts to argue that, holders of common stocks should be allowed to sell their shares at a profit and pay no tax if the money is reinvested in other stock.

It should be noted that the provision for home owners does not apply to real-estate investments in general. It should also be noted that real estate is subjected to a continuing form of capital gains tax in the nature of increased assessments and tax

rates.

The present capital-gains tax, as it applies to stock holdings, is like a huge Hoover Dam. Behind this dam a large reservoir of capital gains has accumulated. The accumulation has been going on since the year 1913. The color of this lake is mostly blue from the chips it holds in solution.
Congress built the dam. The Government

has a sort of lien on the vast potential behind this dam based on announced rates for

short-term and long-term gains.

Some people, including the President, believe that Congress should lift this lien and allow this accumulated power to go free at discount rates. To do so would be a fraud on the millions of taxpayers who do not have an interest in this great pool. majority of people have borne heavier burdens because the owners of this great lake of accumulated capital gains have escaped taxation by not reducing their gains to cash. even though it was readily available, even in that form.

Before the floodgates on this tremendous dam are opened a survey should be made by Congress to determine the actual depth of the waters (the actual amount of capital gains in the lake behind the dam).

Accumulated profits, over the years, have been poured into this reservoir, wherein they lost their identity and became known by another name-capital surplus. Stock dividends, representing this surplus, were issued to shareholders in the form of distributions of capital and untaxable. Stock-holders have seen their holdings double. treble and quadruple, yet, they never paid a capital gains tax, or even a tax on the dividends that made these capital gains possible.

Corporations, insurance companies and all sorts of investment trusts are waiting with bated breath for Congress to free them from taxes on their accumulated gains.

It was suggested before a committee of Congress (Subcommittee on the Economic Report, Flanders, Republican) that, the power of these great investment institutions may some day challenge even the power of the Federal Reserve System. They may, even now, be able to defeat the control that the Federal Reserve System exerts on the national economy.

If the plan hinted at in the economic report succeeds, namely, to free vast amounts of capital gains from taxation, it will be the biggest giveaway in history. We have no way of estimating its effect on the economy of the country.

Sincerely yours,

FRED GILLEN, Attorney-at-Law.

The Closing of Fourth-Class Post Offices in Georgia

EXTENSION OF REMARKS

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. FORRESTER. Mr. Speaker, under orders of the Postmaster General the following fourth-class post offices in the Third District of Georgia have been closed.

Sumter post office, a post office which had existed for approximately 90 years and a post office which served 27 families and, also, a school which was dependent upon that service; Dooling post office, an office which had been in existence for many, many years and serving 51 families; Cobb post office, an office serving 31 families and being the office which served the Veterans' State Park where the safety program, inaugurated by the State Highway Patrol of Georgia, is held annually and hundreds of boys attend annually, and where statewide veterans' activities are held on practically a yearround basis: and Plainfield post office, Which has existed for more than 40 years and which serves more than 39 families.

Further, the post office at Powersville, an office which has been in existence for many years and which serves at least 175 persons, and which would serve the personnel and civilians at the United States Naval Base, which is now in process of being built and located only 4 miles from Powersville, and where a new State highway is being built to Robins Air Force Base only 12 miles away, will be closed shortly unless the Postmaster General shows a great change of heart.

In fact, every fourth-class post office in the district I represent, which has been considered by the Post Office Department, has been closed with the exception of Powersville, and the Postmaster General has advised that Powersville is to be closed. Additionally, the Postmaster General is now investigating other fourth-class post offices in the district I serve, and if the Postmaster General follows past performance those under investigation will be closed, also.

The wholesale closing of fourth-class Post offices simply cannot be justified. The post offices I have referred to, which have already been closed, have been the means of holding those fine rural settlements together. The post offices and churches have been the means of keeping these people in their rural communities.

The post office service has been one service these rural people could see and understand, also, a service by their Government from some of the tax money they paid the Government.

Despite the fact that I thought the closing of these post offices was a tragic mistake. I have tried to feel that the fourth-class post offices in our district were sharing the same treatment as other offices over the Nation. I was terribly shocked, however, when I read in the papers last week that the Postmaster General had decided to retain a fourthclass post office in another section of this country which served 12 families, and that his decision to serve that office was based on the fact that a great athlete, in the years gone by, received his mail at that post office. This is not to be construed as a demand that the service of that post office be discontinued, but I do intend that it serve as an example to demonstrate the reckless action on the part of the Postmaster General. In common with every section in this country, prominent and remarkable people live in everyone of the areas of the post offices which have already been closed in our district.

Mr. Speaker, it is my opinion that a review should be made by the House Committee on Post Office and Civil Service of every fourth-class post office which has been closed, and to ascertain the damage inflicted upon the people served by those offices and, also, to ascertain whether any well-defined and fair policy has been adhered to in the closing of these offices, or whether many have been recklessly disposed of and many have been retained for some fanciful, but impractical, reason.

Roses and Their Contribution to the History and Economy of Pennsylvania

EXTENSION OF REMARKS

HON, PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. DAGUE. Mr. Speaker, when our esteemed colleague the gentlewoman from Ohio, Mrs. Francis P. Bolton, introduced House Joint Resolution 102 on January 10 for the purpose of designating the rose as the national flower of the United States, I was reminded of the contribution roses have made to the history and economy of Pennsylvania and, more specifically, to my congressional district.

In checking authoritative sources I have determined that the nursery production of rose plants is greater in Pennsylvania than in any other State east of the Mississippi, and in fact in any other State east of the Rocky Mountains, except Texas, where, as my informant puts

it, "They do everything in a big way." Incidentally, the production in Pennsylvania centers in Chester County, my home county.

Pennsylvania is also a leading producer of cut roses for the flower market, with 31 producers operating greenhouses in our State, in which over 1½ million plants are under cultivation. This greenhouse production in Pennsylvania constitutes about 15 percent of the annual United States output and represents an income, at wholesale prices, of around \$3 million.

On the historical side our research leads us to an interesting ceremony which takes place each year at Manheim in Lancaster County, Pa., and is traced to the life and times of "Baron" Henry William Stiegel, an ironmaster and manufacturer of early American glass. Mr. George L. Heiges, a noted historian, in commenting on Stiegel, who was a devout Lutheran, has this to say:

Earnest rosarians have knowledge of him through a unique service in a Lutheran church located in a small Pennsylvania town (Manheim), where one red rose passes as ground rent annually to a descendant of this many-sided man.

In addition to this reference to the part the rose has played in our early history, there is also the fact that the cities of Lancaster and York in Pennsylvania are known respectively as the Red Rose and White Rose Cities out of deference to the Houses of Lancaster and York in the mother country, from which their names were derived.

Returning to my home county of Chester, I am indebted to Mr. Sidney B. Hutton, of West Grove, Pa., the president of the Conard-Pyle Co., who has furnished me with the background material supporting the Red Rose rent celebration which is held each year at historic Red Rose Inn commemorating the payment of a red rose annually if demanded to William Penn and his descendants by the grantee of the land on which the inn is located. Mr. Hutton's interesting article is included in this extension of remarks and should lend further significance to the importance of roses to our way of life:

RED ROSE RENT AND HISTORIC RED ROSE INN

To pay the rent on a fine bit of property with "one red rose yearly if the same be demanded" is a delightful thought. Some such proviso has been found in several old deeds from the early days of this country. The earliest of these that has been discovered dates from 1731 and covers the tract of land at West Grove, Pa., on which the building of the present Red Rose Inn was begun in 1740. The land was part of the original grant from the King of England to William Penn. 1731 this parcel was deeded to his grandson, also named William Penn, with the proviso for the payment of a red rose yearly if demanded, and the deed was so recorded. Later deeds to the same property in 1742 and 1748 continued to carry the same provision. Then, through the years of growth of this new nation, the old deeds lay forgotten.

In 1927 a part of this tract was purchased to provide increased acreage for growing Star roses, with no prior knowledge of the red rose rent proviso. With infinite care, the new owners proceeded to restore to beauty the old inn which was included in the purchase, and to preserve its interesting features. Its oldtime, simple charm has been

retained, along with its seven fireplaces, great Dutch ovens, old cupboards, handwrought hardware, etc. Its terraces and gardens were rescued from neglect and now their stonework and boxwood make a pleasant setting for the building itself. Adjoining it are the great fields of Star roses, each adding to the beauty of the other.

To discover the date of the original construction, for the restoration of the inn, research was made of old records concerning the property. Then was found the old proviso for the payment of one red rose yearly as a rental token. And there, acres of roses were growing on that very land, not only red roses in June but roses that bloom all season and of a color range undreamed of by the writers of those early deeds. It was as if they had somehow forecast, from some 200 years before, that this spot of earth belonged to roses and never should be sold without retaining that connection.

The Chester County Historical Society in 1947 erected a marker in front of Red Rose Inn commemorating this earliest Red Rose rent deed. On a bronze tablet embedded in a large boulder is inscribed the dates, names, and details of the Red Rose rent clause in the old deeds they found recorded in the Chester County archives.

"In 1731 John, Thomas, and Richard Penn, proprietaries, granted 5,000 acres to William Penn, grandson of the founder of Pennsylvania, subject to the rental of 'One red rose on the 24th day of June yearly if same be demanded.' In 1742 William Penn granted this tract to William Allen subject to his 'paying the red rose aforesaid yearly.' In 1748 William Allen sold 53½ acres of this tract to Samuel Cross. Again the rental terms included payment of one red rose, This marker is on the Samuel Cross property."

Star Roses held the first Red Rose Rent Day in 1937, to pay the year's rental of one red rose, according to the provision of the old deeds. The following year they decided they should present, not only the one red rose, but also another 205—one for each year that was not known to have been paid for since the date of the original proviso. Annual Red Rose Rent Day celebrations followed through 1941. Then World War II interrupted the custom and, in 1947, five red roses were paid to compensate for that accrual. Since then the Red Rose Rent has been paid annually, in behalf of Star Roses, by various eminent men, including James H. Duff, then Governor of Pennsylvania; George D. Aiken, United States Senator from Vermont; Dr. William Cadbury, emeritus professor of medicine, Lingnan University, Canton, China; Hugh C. McClelland, British consul general; M. Kebalii, French consul; and others.

The charming idea of paying a red rose as rent has great historical significance, with real meaning to freedom-loving people. In olden times a man was commonly required to pledge his sword and his life to the service of the feudal lord or great landowner, if he wished to acquire a bit of the countryside for his own use. This pledge would be in addition to any purchase price that might have been settled on, and became a perpetual, grim lien on the property, passed on from father to son. In 1215 the Magna Carta in England cut down somewhat this character of rent for the first time in feudal history. Charles II made use of a symbol such as the rose instead of demanding human service as rent.

It was natural for the sons of William Penn, the great, peace-loving Quaker, to use the symbol of the rose in this way in their new English colony. It pointed out the fact that feudal lords no longer had their private soldiers for neighborhood fighting, or to rent out for ready cash. This symbol of the rose was a symbol of the advance that had been made in law and thought, away from lifetime servitude, toward greater freedom and dig-

nity for the human individual. So, on a Saturday early in September of each year that it is possible to hold the festival, one red rose is paid to a direct descendant of William Penn, for the growers of Star Roses, as an annual reminder that human freedoms that were so hard to gain must be preserved, and are not to be taken lightly.

Will Indiana Provide Schools for Its Own or Let United States Do It?

EXTENSION OF REMARKS

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the New Castle (Ind.) Courier-Times of January 21, 1955:

WILL INDIANA PROVIDE SCHOOLS FOR ITS OWN OR LET UNITED STATES DO IT?—GOAL SHOULD BE TO END PROPERTY TAXES FOR SCHOOL PURPOSES

There is a growing awareness that there must be a substitute for property tax to support our schools.

Close examination of the problem will reveal that property can no longer bear the load put upon it, should not do it, and that the choice to be made is whether we wish our schools to be financed by State taxation or by Federal taxation.

There are really only two practical alternatives if we wish to avoid the disaster of federalization of our schools: they are an increase of about 50 percent in the gross income tax or the levy of a sales tax. Whichever tax should be adopted, the money should be distributed to the schools on the same basis as the gross income-tax money now is distributed. That is, it should be collected from over the State as a whole, and be distributed to schools on a per pupil basis.

That way the child in a poor county has the same educational opportunity as the child in a wealthy county, all sorts of special aid programs for the poorer counties are made unnecessary, and local folks run local schools.

It is important, however, that this additional money raised by State taxation for school purposes not be restricted in its use. It should be handed over to the local schools, and they be permitted to use it for salaries, new buildings, coal, or whatever. After all, it takes all of these things to make a school.

The goal of this tax should be not just to alleviate the school situation. It should be to apply the cure by making its goal the practical elimination of property tax for school purposes.

This looks to the possibility of tax levies in our cities that would be below \$5, which is all that property should reasonably and

fairly be asked to pay.

Municipal government is in as bad shape as the schools, and the elimination of the schools from the property tax would make it possible for adequate civil city levies to be made without creating a burden. Home ownership and improvement would be encouraged, our cities and farms improved, and taxation levied in accordance with ability to pay.

If the State doesn't do the job, the Federal Government will.

How much time we have to act before federalization of our schools takes place nobody knows, but the school problem is acute right now, and if Indiana's General Assembly fails

to act in accordance with its constitutional responsibility to provide schools in this State, nobody can promise that federalization of schools will not have taken place when it meets 2 years hence.

The National Security Council

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following most interesting and enlightening article that appeared in the Christian Science Monitor, January 24, 1955.

It is important to note that Robert Cutler, a highly respected and admired citizen of Massachusetts, and one who is so highly qualified in national security affairs of our Nation, is really the work horse of this organization. We from the Bay State are most confident that with men like Robert Cutler on the staff to investigate and advise the membership of this most important safety council our country we will have nothing to fear and that we will be on the right road to an enduring and lasting peace.

The article follows:

(By William H. Stringer)

On a certain Sunday last September some of the most powerful men in Washington flew to the President's summer White House, at Denver, to help Mr. Eisenhower thrash out a question which could mean peace or war: Whether to defend the islands off the Chinese mainland against the Communists.

These men comprised the membership of what is easily the most important, high policy ranging, "hush hush" outfit in the United States: the National Security Council.

It is safe to say that until that publicized flight, in response to Presidential summons, most Americans were almost entirely ignorant of the existence, not to say the mode of functioning, of this agency which has such solemn influence in framing the vital decisions which determine this country's foreign policy, safety, and security in a time of mortal storm.

When the planes from Washington touched down at Lowry Air Force Base that September Sunday, there emerged such men as Secretary of State John Foster Dulles, Defense Secretary Charles E. Wilson, Vice President Richard M. Nixon, Admiral Arthur W. Radford, Chairman of the Joint Chiefs of Staff; Allan Dulles, Director of the Central Intelligence Agency, and a half dozen more.

These men bespeak the caliber of this organization which has variously been dubbed a supercabinet, a supreme high command, the successor to the State Department in the formulation of foreign policy, and a streamlined amalgamation of necessary functions.

WELL-GUARDED CORRIDOR

If one searches for the driving, pulsating "operations center" of this organization, one discovers it down a well-guarded corrider of the old State Department building. in a spare and spartan suite of offices where no reporter roams at will and where safes are locked with triple care. This is the domain of Robert Cutler, Special Assistant to the President for National Security Affairs, the

energizer and catalyst whose indefatigable zeal keeps the National Security Council's wheels turning with marvelous efficiency.

It is Mr. Cutier, a bachelor and Bostonian banker, who briefs President Eisenhower for the weekly sessions of the National Security Council. It is he who chairmans the Planning Board of the working-level departmental officials which studies the problems brought before the council and formulates suggested courses of action.

Throughout the week in Washington, the topmost officers of the departments and agencies concerned with defense and foreign policy devote part of their time to functioning as a combined operations task force, grappling with the big issues. A special aura of distinction has developed around this council, so that the phrase "approved by the NSC" is powerfully influential with Congress and with public opinion generally.

That is, it is influential when people know what the NSC is doing, which isn't often. For this important aggregation has been criticized for being too "hush hush" for the good of the American people, for operating too much in a closed circuit where it hears only its own opinions, and for reaching decisions without benefit either of public discussion or of the advice of Congress.

WISE AND STRONG POLICY

One thing is certain, however: If the NSC didn't exist, something very much like it would be invented speedily in these days when American policy must be wise and strong.

When the United States was an isolated republic of the Western Hemisphere in the 19th century, or even in the 1920's when the annual budget was measured in millions rather than billions, there was no compelling need for a top policy-coordinating-and-advising body. But during the last stages of World War II the need for coherence among the agencies engaged in formulating politico-military policy became urgent.

This resulted in interagency conferences

and Navy Departments. These became regularized into sessions of the State, War, and Navy Departments. These became regularized into sessions of the State-War-Navy Coordinating Committee, SWNCC was the

forerunner of NSC.

In 1947 when Congress, by the National Security Act, unified the Armed Forces (at least on paper) and set up the Joint Chiefs of Staff, it also ordered into existence the National Security Council, which led a fairly mild and sheltered existence until President Eisenhower, with his talent for organization, for pooling of the best minds, and for orderly procedure, breathed new importance into the structure and began to rely heavily upon it.

By statute, the function of the council is "to advise the President with respect to the integration of domestic, foreign, and military policies relating to the national security so as to enable the military services and other departments and agencies of the Government to cooperate more effectively in matters involving the national security."

NO PRESS RELATIONS

No reporters cover the sessions of the NSC. There is no press-relations man on its staff. The council makes no public disclosures. No congressional committee scans its operations, as a joint committee of both Houses watchdogs the functioning of the Atomic Energy Commission. Its deliberations are uncovered only when its recommenadtions, approved by the President, are aired in some careful utterance by the President, Mr. Dulles, or another high official, or are discerned in some act of national policy.

When President Eisenhower stands before his weekly press conference and comments on the Nation's ability to maintain a sufficiently strong defense posture with fewer troops in uniform, the reporters surmise that this subject has been under discussion at the NSC.

When Vice President Nixon expressed to a luncheon of the American Society of Newspaper Editors his view that the United States might have to send troops to Indochina if the situation worsened, editors assumed that this was a Council conclusion, because Mr. Nixon attends these sessions (and presides when the President is absent) and because this is precisely the sort of decision with which the NSC normally deals.

As a matter of fact, the Council had debated the Indochina issue but had reached no conclusion—which indicates the perils of false assumption, and the dangers of having no publicity policy at all.

MEMBERSHIP LISTED

Who, precisely, sits on this Council besides the President and Vice President. The membership consists of:

By statute: the Secretary of State, Mr. Dulles; the Secretary of Defense, Mr. Wilson; the Director of the Foreign Operations Administration, Harold Stassen; and the Director of Defense Mobilization, Arthur S. Flemming.

Added to the Council by Mr. Eisenhower: Secretary of the Treasury George M. Humphrey, Director of the Budget Rowland R. Hughes, Chairman of the Joint Chiefs of Staff Admiral Radford, Director of the Central Intelligence Agency Allan Dulles, Chairman of the Atomic Energy Commission Rear Adm. Lewis L. Strauss, Director of the Bureau of the Budget Joseph M. Dodge, and Special Presidential Assistant Nelson Rockefeller.

Quite an aggregation. All have equal status; all join in the Council's deliberations.

President Truman made use of the National Security Council, but to no such extent as has President Eisenhower. During the Truman regime the NSC made only half as many recommendations, met only 40 percent as often. Whereas the funds budgeted for Council operations in the outgoing year of the Truman administration totaled \$160,000, Mr. Eisenhower estimates an expenditure of \$240,000 in fiscal 1956.

The President pledged, during his election campaign, that the NSC would be increasingly relied upon. This has happened. Seldom does the President allow anything to interfere with an early-morning appointment each Wednesday, when, at about 8:30, Mr. Cutler arrives briskly at the White House carrying a fat brief case full of top secret

PRESIDENT BRIEFED

At this session, lasting half to threequarters of an hour, Mr. Cutler briefs the President in preparation for the weekly meetings of the full Council on Thursday. Theirs is a swift discussion—by two men who dislike waste motion, highly respect each other, and have similar, orderly thought habits.

They occasionally meet on more relaxed occasions, such as those rare White House evenings when the President and Mr. Cutler have talked far into the night. But of the Wednesday sessions Mr. Cutler observes:

"The President is amazingly perceptive. It takes me half a day to get ready for the questions he is likely to ask."

The Council, which meets on Thursday morning, is a streamlined body. Members are not allowed to bring staff, except in rare instances. Each official will already have received working-paper briefs from the Planning Board. Presumably, they have studied these carefully. Only for the greatest emergency is absence from a session excused.

Members sit down at 10 a.m. around the long table in the Cabinet Room—scene of the televised Cabinet report by Secretary of State Dulles last autumn. Seldom do they leave before 1 p.m.

The session starts with a globe-ranging 15-minute intelligence summary by CIA's

Allan Dulles, brother of the Secretary of State. Then Mr. Cutler, in his crisp Boston accent, calls on the official whose department is most intimately concerned with the policy under discussion to state his views. If the topic were military commitments in Asia, this might be Admiral Radford.

BRISK DEBATE ENSUES

A brisk debate ensues, with each interested party speaking out boldly, including Mr. Eisenhower. When the matter has been thrashed out to everyone's satisfaction, then it is up to the President to render the final decision. Shall it be this course of action or that course, this policy or that policy, or some other?

The President seldom delays. He usually makes the big decision immediately. When he has done this, and a day or so later has affixed his initials to the paper embodying the study and decision, a new official policy of the United States has been established.

The NSC deals wholly with basic viewpoint and policy, not with implementation, tactics, or procedure. It never concerns itself with purely domestic affairs.

Behind the Council and acting as its spark plug, research agency, and formulator of alternatives stands the Planning Board.

This is the agency which, with Mr. Cutler as its busy chairman, grabs hold of a problem, obtains all available information on it, discovers what the financial cost to the United States will be, and proposes a solution or various alternative solutions. Membership on the Board embraces the same departments and agencies, but at the assistant secretary level.

Talking to Mr. Cutler, one is likely to discover that the Planning Board, which normally meets three times a week, has just kept its lights burning until 11 p. m. to develop an emergency presentation for the next council meeting. Mr. Cutler is equal to any such emergency. A truly extraordinary and dedicated man, this former brigadier general and board chairman of Boston's Old Colony Trust Co., maintains a daily work schedule averaging from 8:30 a. m. to 8:30 p. m. and usually including Saturdays.

He flew to Denver seven times last summer to brief the President but he saw that city only once in the daytime because his plane customarily arrived at 7:30 p. m. and he was off for Washington again at midnight.

Who decides when and where the council should next focus its massive and wide-ranging attention? Who decides what problem should be tackled?

The agenda materializes in various ways. Sometimes President Elsenhower, peering thoughtfully into the future, says to Mr. Cutler, "Bobby, I'd like to have you give this subject a run." Sometimes a Cabinet meeting will suggest a topic. Sometimes some new phase of Soviet or Chinese Communist policy will demand attention. And sometimes, as Mr. Cutler says too modestly, "We think of things here."

When the Planning Board tackles a problem, the subject is analyzed to discover the most likely line of approach. The CIA is asked for an intelligence report on the issue and the State, Defense, and Treasury Departments, the FOA, and other agencies produce their judgments and estimates. At the Board sessions Mr. Cutler works like a Socratic questioner to elucidate information.

Finally a working paper is ready for the Council members, a study organized into five parts: (1) A statement of basic considerations, (2) a statement of desired objectives, (3) the recommended courses of action—one or several, (4) an estimate of the financial cost (very important to the President), and (5) the voluminous documentation. The whole thing is carefully stamped "top secret" and so treated.

BOARD IMPLEMENTS DECISIONS

It is an ancient weakness of government that the most stupendous decisions may go to waste because of faulty implementation. To avoid this sort of thing, President Eisenhower in September 1953 established the Operations Coordinating Board, which takes over where the Council stops, and sees that NSC policies are actually carried out.

Chairman of the OCB is the State Department's Undersecretary Herbert Hoover, Jr., and sitting with him are top representatives from the Defense Department, CIA, FOA, and Mr. Rockefeller. Through the OCB many policies have been rescued from a snafu of misdirected application—or no application at all.

On file today in the locked safes of the Council are hundreds of policy papers bearing the activated Presidential initials: "D. D. E." They do not automatically bearing the problem of the problem.

come matters of public knowledge.

Sometimes a news leak by a columnist will disclose that the President has ruled against his military advisers on the Council and decided that American air support shall not be available for the defense of the coastal Chinese islands. Sometimes a dispute within the official family, for instance, between Messrs. Stassen and Humphrey over Asian aid, will disclose that no final policy decision on this point has been initialed by the President.

It is this lack of publicity, which in effect means a haphazard and disorderly publicity, that has earned for the National Security Council its most serious criticism to date.

QUESTIONS RAISED

Everyone admits that the NSC represents a better procedure than earlier practices when a President's working papers were sometimes carried in the band of, his hat. But the question has strongly been raised whether Congress and the public really get an adequate look-in here.

Is there sufficiently wide participation in the formulation and discussion of crucial national policy? Is there sufficient crossfertilization with differing viewpoints? Are the political realities brought sufficiently to bear? Or are the same men talking to each other, and getting the same unrefreshed answers?

Is it democratic for a nonelective super-Cabinet to reach, in secret, decisions which can mean peace and war to millions of Americans? Is there sufficient liaison with Congress? Is the regular Cabinet, with its wider representation, being displaced?

These are the questions raised. There are

some impressive answers.

Perhaps the basic consideration is that the Council is not a policymaking body. As Mr. Cutler emphasizes, it has solely an advisory, recommendatory function. Its job, as spelled out by the National Security Act of 1947, is to advise and recommend. No policy proposed or developed through the NSC is official until the President has approved it.

cial until the President has approved it.

Therefore, it is argued, the Council is simply a modern, streamlined, orderly method, established by Congress, by which the President may assemble the best advice from the best Government sources. This systematic pooling of advice is now a must, considering the tremendous responsibilities facing a modern President, it is contended.

COUNCIL SEEN PERMANENT

The Council has undoubtedly attained a permanent status. Other Presidents may rely on it less but no President is likely to dismantle it.

The National Security Council, in fact, seems likely to become imbedded in the Washington picture as one more of those extraconstitutional organs of government, even as is the Cabinet itself. Even though its function is strictly advisory to the President, the very caliber of its membership is such as to give any policy which has been matured through the Council the weight of a decree from high authority.

This being so, should anything be done (1) to improve public awareness of what the NSC is doing? (2) to bring wider public influence to bear on its deliberations?

Obviously the formulation of delicate policy cannot be conducted in a goldfish bowl. On the other hand there are presumably more effective ways of keeping the Nation informed than through news leaks and scoops by the Alsop brothers and Drew Pearson.

WATCHDOG UNIT PROPOSED

Should the President, since his is the final word, undertake a periodic public accounting of the NSC's deliberations and decisions—those which can safely be made public? Or, if not Mr. Elsenhower, should a wise and discerning director of public information be attached to the Council to make an orderly, periodic report to the Nation?

It has been suggested, also, that a congressional committee might be set up to review NSC operations, even as the congressional Joint Committee on Atomic Energy watches over the AEC. Another proposal is that the President name a public commission from among the country's ablest civilians, a commission designed to function parallel with the NSC as an advisory agency on top-level policy. Such a commission would have full clearance for military secrets, power to require documents, and authority, as civilians, to make recommendations direct to the President.

Would this bring added experience and another set of values to bear on the great problems of the hour?

President Eisenhower apparently is happy with arrangements as they are. He has commented that the Council is at last working the way he likes it. It is a well-ordered and distinct improvement on earlier methods of policy formulation. But like all new institutions, it may well be subject to refinements and adjustments as experience dictates. And this institution merits the most thoughtful and appreciative concern, for it stands guard along our highest ramparts, and its Thursday morning deliberations develop policy which protects the entire free world.

Recognition of Red China

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. PATTERSON. Mr. Speaker, Mr. Sokolsky has written a most logical résumé of a situation our Nation is presently confronted with. I recommend that the membership of the House and United Nations read this most interesting article especially during these days when the game of international chess is so important to the future and security of our Nation and the world.

The article follows:

THESE DAYS
(By George Sokolsky)
RECOGNITION OF RED CHINA

The pull for recognition of Red China by the United Nations and the United States—in practice such recognition will be identical—is gaining force. As Red China grows increasingly recalcitrant and belligerent, many inside and outside the Government of the United States insist that, as the alternative is war or recognition, it ought to be recognition. Some even hold to the theory that recognition might achieve the hoped for split between Red China and Soviet Russia, which the British believe may occur.

What must be important to the United States at any time is the attitude of the Asiatic countries. In this respect, the 30-power conference of Asiatic and African countries to be held in April is of paramount significance. This will be the first all-Asian conference ever to have been held and will include Red China. Japan has been invited but not Formosa, which is indicative of the attitude.

This prospective conference, for some reason, is played down in the United States, but it may result in the advanced prestige of Red China in Asia.

At this conference, the leadership is likely to be taken by Nehru, of India, or Chou En-lai, of Red China. They may combine for strength, but Caesar and Napoleon cannot sit at the same table without one of them being at the head of it. Nehru will undoubtedly try to form an Asiatic-African combine of states that will be neutral, with New Delhi as the new Jerusalem, whereas Chou En-lai will labor to establish Peiping as the core of the revived Asiatic civilization according to the gospel of Karl Marx. A conflict between Nehru and Chou, should it occur, could be helpful to the American policy, but is not to be counted on.

The question of the recognition of Red China will take precedence at this conference at which will be present many United Nations members. They could form an embarrassing bloc within the United Nations—that is, embarrassing to the United States. The weakness of the American position from the standpoint of Asiatic logic is that if we recognize Russia, which is the mother country of Marxism, how can we reject China, which is an offspring?

Prof. C. Northcote Parkinson, of the University of Malaya, pleading for recognition.

once put it this way:

"Diplomatic courtesies imply no approval of the way a land is ruled. If they did, Great Britain need never have recognized the independence of the American Colonies. In recognizing their independence, the British were not viewing the matter with enthusiasm. They were merely recognizing a fact. The first step toward peace in southeast Asia will be for the Americans to display as much sense of reality as was shown by George III. And George, remember, was not even sane."

Professor Parkinson forgets that the United States gained its freedom at the end of a war in which the British did badly. Naturally, the British did not view our independence with enthusiasm and never have. It was probably the greatest error in British history, as William Pitt and Edmund Burke told the Parliament of their day. Our present problem is not analogous unless we are prepared to say that because we lost the Korean war, we must recognize ourselves as vanquished and the Red Chinese as victors, accepting from them a conqueror's peace. We are not as insane as George III yet. At any rate, it is to be hoped that we have not lost all dignity and honor, because we fear an atomic war, despite the frightening consequences of such a war.

A Reluctant Vote

SPEECH

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. ROOSEVELT. Mr. Speaker, under unanimous consent granted to all Members of the House to extend their remarks concerning House Joint Resolution 159, I want to take this oppor-

tunity of expressing my extreme reluctance in casting an affirmative vote on this resolution.

I would particularly like to associate myself with the forceful and pertinent remarks made by my able colleague from California, the Honorable Chet Holifield, as well as the clear and, I believe, the most important matters of principle stated to the House by the distinguished and beloved Speaker, the Honorable Sam Rayburn, as well as those of my respected colleague, the Honorable Paul J. Kilday.

My reluctance in voting for this resolution was heightened by the answer given by the chairman of the Committee on Foreign Affairs when, in answer to a question, he stated that he believed this resolution gave to the President direct authority to bomb the coast of China if, in the opinion of the Commander in Chief, such action was necessary to assure the defense of Formosa and the Pescadores. This answer highlights the extremely broad courses of action which this resolution, by implication, assures the President that we, in this House, have approved. In other words, the Congress-for the first time that I know of—is giving prior approval of actions Which the President may take, as Commander in Chief-now unknown perhaps even to him—and certainly to us, and which, as was so well emphasized in the debate—and in the President's own message-are actions which he alone, under our Constitution, has the power to

This resolution and the rule under which it was adopted also, I am sure, prevented many of my colleagues from clearing up points which are of importance to them. For instance I, for one, do not want my vote in any way to indicate approval of any aims which the present so-called Government of the Republic of China has to restore itself to power on the mainland of China. This also does not imply that I approve of the present Communist Chinese Government. I do not. That such a rule was necessary does not detract from its unfortunate effects.

There were two main and prevailing reasons for my affirmative vote:

First, I have great respect and confidence in the leadership of the majority of this House of Representatives, and when that leadership—as in this case—was unanimous in believing that it was in the national interest to adopt such a resolution, it meant and did carry great weight with me.

Secondly, the message of the President carried one most significant sentence, and I quote:

Thus it will reduce the possibility that the Chinese Communists, misjudging our firm purpose and national unity, might be disposed to challenge the position of the United States, and precipitate a major crisis which even they would neither anticipate nor deare.

To this the President also added, and quote:

I hope, however, that the effect of an appropriate congressional resolution will be to calm the situation rather than to create further conflict.

These are expressions of opinion from the one man who has the direct responsibility and who is in a position to have the most complete facts concerning this situation. In brief, this is a step the President asks for to further the cause of peace. Therefore, I reluctantly concluded that it was the duty of the Congress to support a direct request from the President for an action which he believed would contribute to peace as well as safeguard our national defense.

I can only pray—as I am sure that the vast majority of our fellow citizens are also doing—that the President may have divine guidance in his judgment. I pray, also, that he may realize that the passage of this resolution has placed upon him an even greater responsibility—that such additional power or influence as this resolution may give him shall never be used for any aggressive action of any kind.

Orange County, Calif.

EXTENSION OF REMARKS

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to include a statement by Mr. Adolph Schoepe, president of Kwikset Corp., of Anaheim, Calif., which is in my congressional district. It presents a picture of the phenomenal growth of this area. The ideal climate is attractive not only for residential purposes but for desirable manufacturing activities.

A most important point of the article is the proving of the fallacy of communism and its antipathy to capitalism. Only under our free enterprise system can the necessary large investment of capital be obtained to make possible our huge employment and its resulting high standard of living.

The Kwikset Corp. can feel proud of its important contribution to the economy of Orange County and to the American way of life. The statement follows:

We all, no doubt, noted the tremendous home building activity in Anaheim and Orange County during the past several months. The face of our area has been changed extensively.

The research department of a southern California bank reports that Anaheim and Garden Grove are the fastest growing cities in perhaps the fastest growing county (percentagewise) in the United States.

To get an idea of the population growth in Orange County, consider these figures:

In 1930 the county had a population of 118,674. It then gained some 1,200 new residents per year up to 1940 when the population was 130,500.

Between 1940 and 1950 the county gained population at the rate of a little more than 8,500 persons a year to put Orange County population at 216,200 in 1950. From 1950 to 1953, our population grew at the rate of 20,000 a year. In 1953 it grew by 26,000 to give us a population of around 300,000 on January 1, 1954. Last year the area took an-

other big population jump. Experts say it is safe to predict that our population will continue to grow rapidly for several years.

It may be interesting to note that the core of Los Angeles—the central sections—are declining in growth as people and industries (which are able to move) decentralize and spread into communities near Los Angeles.

Industries want to be near the great population center of southern California—and the important west coast markets—but do not want to be swamped by the congestion of a metropolitan area.

That is one of the reasons why Kwikset came to Anaheim from South Gate, and is one of the reasons why more and more new industry is being attracted to this area.

As the population in our area grows, so must job opportunities. Jobs must be created in industry and agriculture. These jobs not only will provide livelihoods for many families but will accelerate expansion in retail stores and other service establishments—which will provide more jobs.

But, of course, this is easier said than done.

But, of course, this is easier said than done. Studies show that an average of \$13,700 is invested by American manufacturing in order to put 1 person in a production job.

This means that before a person can go to work in a manufacturing plant, such as ours, someone must invest \$13,700 to provide 1 job. Where does this money come from? It represents someone else's labor and his ability to save money to invest in a job—after taxes have consumed a large part of his earnings.

Where does it go? It goes for machinery and equipment, buildings (working space), inventory, working capital, financing costs, land, and some miscellaneous expenditures.

It is estimated that the labor force—men and women who must find jobs in industry—is growing by approximately 1 million persons a year in the United States. Consequently, it is evident that \$13.7 billions for new jobs is required every year if this country simply holds its own against unemployment.

All this makes clear the importance to our economy, both in the United States and Orange County, of the vital role each person plays in giving utmost encouragement to the men and women who manage the plants, decide their locations, and who invest in our industrial expansion.

· United States To Get Most From Tidelands Law

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. HOSMER. Mr. Speaker, during the debate on the Tidelands legislation in the 83d Congress many extravagant statements and claims were made by opponents of the legislation including such allegations as: "It would give away Federal resources to the oil companies," and that "it would deprive the Federal Government of revenues and thus burden Federal taxpayers."

As you recall, the legislation confirmed the titles to the submerged lands within historic boundaries in the respective coastal States. Thus it was apparent and obvious that whatever the Federal Government gave up, if anything, was to our States and not to private oil

companies.

Now, almost 2 years after passage of the legislation, experience shows that in actuality the Federal Government and not the States is the chief income beneficiary from this act of Congress which corrected the unfortunate implications of a Supreme Court decision.

Take the situation of two States only, Texas and Louisiana. Undersea oil deposits off their coasts are estimated at 13 billion barrels. Of this, the Federal Government controls an estimated 11.5

hillion barrels

That amount of oil, at today's prices, is worth about \$30 billion. The royalties expected by the Federal Government, at 16% percent, are placed at \$5 billion. In addition, rental and bonuses to be collected by the Federal Government are expected to add another \$1 billion. Thus, from this area alone, the Federal Government will receive \$6 billion in revenues that could not, and would not, have been available except for the fact that the Tidelands law swept away inhibiting legal roadblocks and opened up these undersea areas to exploration and development.

Details regarding this Federal bonanza in offshore oil are contained in the following article from U. S. News & World Report for December 24, 1954:

Tidelands oil is going to turn out to be a bonanza for the Treasury in Washington, far less so for the States that fought so hard for the title to these lands under the Gulf of Mexico.

It appears now as though the Federal Treasury will end up at least \$6 billion richer because of tidelands development. The States of Louisiana and Texas will be

lucky if they get \$1 billion.

This twist of fortune results from the wording of the law that turned over part of the tidelands to the States and the oll development that now is going on. In writing the law, Congress gave Texas title to lands extending 3 leagues, or 10.5 miles, offshore, while Louisians was given title to lands 3 miles out. The rest of the Continental Shelf, stretching out as far as 100 miles, was reserved to the National Government. Louisiana, however, is claiming title to lands going out to 27 miles.

It is these lands reserved to the Federal Government that now are turning out to be most attractive to the companies that are searching for oil. These lands also are believed to contain almost eight times as much oil as the lands now held by the two States.

Federal officials, in fact, are surprised at the prices they are getting for drilling rights in the submerged lands. They recently asked for bids on 199 tracts of about 5,000 acres each off the Louisiana coast. They expected to get about \$50 million for the lot. Instead they got one hundred twenty-one million for only 97 tracts. The other 102 tracts were withdrawn because of the conflicting claims to title from Louisiana.

So far, the Treasury is getting \$144 million for leasing only 462,000 acres—less than 3 percent of the submerged lands mapped as potentially oil bearing. So, just for drilling rights alone, the Federal Treasury now is likely to get at least \$1 billion when the whole area is leased.

Royalties too: In addition, the Government will collect 16 ½ percent of the value of all oil produced. The Geological Survey estimates that off in these lands amounts to

11.5 billion barrels. At today's prices, that means a return of at least \$5 billion in royalties.

All of this money is now destined to go into the general fund of the Treasury. Once, however, Congress came close to setting aside offshore-oil revenues for the benefit of the Nation's public schools. That proposal passed in the Senate but was blocked in the House. Later the "oil for education" plan was shelved in the conflict over giving tidelands to the States. This plan now is expected to be revived.

Whatever is done with the money, it now is clear that one of the most extensive oil hunts in history is about to get under way, and the Federal Government will get the lion's share of the public benefits. The one hundred and forty-four millions that the Federal Treasury already is offered for a fraction of the tidelands, contrasted with the sixty-five million realized from leases by Louislana and Texas, is an indication of what lies ahead.

More than 30 oil companies now are active in the hunt for oil. Before they are through, they expect to locate at least as much oil under water as that already proved in the coastal plain of the Gulf States. This dry-land area is known to contain 11 billion barrels of oil and 67 trillion cubic feet of natural gas. New discoveries are still being made.

Drills go deeper: The advantage to the Federal Government results from the growing ability of cil companies to drill farther out from shore and in ever-deepening waters. Not so long ago, a 60-foot depth of water was considered the limit. This seemed to give the Gulf States all the breaks in tidelands development. But now Continental Oil Co., with associates, is preparing to drill in 97 feet of water off Grand Isle, La. Gulf Refining Co. has leased a Federal tract that lies under 164 feet of water. And oil engineers and shipbuilders have designs for seagoing platforms that will operate at 200-foot depths.

These developments have changed the basic conception of oil possibilities. The offshore area once was thought to embrace no more than 25,000 square miles. Now the estimates are double that figure, with most of the area under Federal control.

Underwater explorations are being stepped up by recent finds. Magnolia Petroleum Co. and associated firms brought in a new well on a submerged salt dome 30 miles off the Louisiana coast. The same companies made another strike 18 miles offshore. Another group also opened a new field 30 miles out, and Phillips Petroleum Co. located a natural-gas well in still another area. Shell Oil Co. has made a strike close to the 3-mile limit off Louisiana, and Standard Oil of Texas has brought in a discovery well near Corpus Christi, Tex., in State-owned waters. At the moment, at least 22 wells are being

drilled in Federal waters alone. This drilling is expected to double in the next year as more and better platforms, tenders, and barges are built.

However, it is not cheap to explore for undersea oil. A typical company usually invests \$3 million in seismographic surveys alone, just to find indications of oil. Then anywhere from \$2 million to \$10 million goes for drilling equipment. Another \$1 million may be needed to drill a well to a depth of 10.000 feet, where most of the oil is found.

These costs can be justified only if large amounts of oil are discovered. As one company executive says: "It looks like we'll have to learn to walk away from small discoveries."

Billions of barrels: Actually, the companies expect to find a lot of oil. One estimate is that, within 5 or 6 years, explorations will turn up 6 billion barrels of new oll reserves, plus 15 trillion cubic feet of natural gas. Official estimates indicate that the whole submerged area, State and Federal, will add 13 billion barrels to the Nation's present proved reserves of 34 billion barrels. Underwater oil off California may add another 2 billion barrels. That adds up to enough oil for about 20 years, at last year's rates of United States production.

Most of the oil hunting is being conducted at present off the Louisiana coast. In the waters off Texas, drilling difficulties are reported to be much greater because of high winds and rough waters. Two recent drilling ventures in this area were failures. Nevertheless, oil-company executives rate their prospects off Texas as good and are planning on more extensive drilling. They expect to solve their problems as they gain

more experience.

Eye to the future: The emphasis at present is on locating reserves. What most companies want primarily are reserves for future production, not oil that is to be marketed now. Reserves are a guaranty that oil producers will stay in business for many years ahead. Also, before undersea oil can be marketed, pipelines must be laid to link offshore wells with refineries on land. To date, one pipeline has been laid stretching out 17 miles from the Louislana coast. This is to be lengthened soon to 48 miles.

Signs are, therefore, that the actual marketing of tidelands oil will not be undertaken on a large scale for some years. That means large royalties to the States and Federal Government will not be realized either, until sometime in the future. However, there seems to be little doubt that eventually a very large public revenue will be realized from offshore oil and that more than 85 percent of it will flow into the coffers of

the Federal Government.

Gen. Douglas MacArthur

EXTENSION OF REMARKS

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. HILLINGS. Mr. Speaker, on this 75th birthday of Gen. Douglas Mac-Arthur, I wish to include in my remarks a poem written by Horace C. Carlisle, of Winston-Salem, N. C., honoring this great American patriot:

GEN. DOUGLAS MACARTHUR ouglas MacArthur is known

G-en. Douglas MacArthur is known, E-verywhere, as a great general who N-ever forsook or deserted his own—

D-aring, in spite of all odds, to stand true.
O-n all occasions his conscience was guide,
U-nder God, he stood as firm as a rock—
G-od gave him strength; upon Him he relied;
L-oyal to Him, he survived every shock.
A-nxiously fought he to win every fight,
S-trongly supported by justice and right.

M-ade in the image of God, 'twas his aim A-lways to fight, not to lose, but to win—C-owardly knuckling, to win himself fame A-nd men's applause, was unpardonable sin-R-ight was the might that gave to him his hope

T-o win the Russian-planned Korean war— H-e, more than Truman, knew best how to cope.

U-nder God, with the foes that we abhor-R-ussia's defeat was what he battled for.

-Horace C. Carlisle.

Russia's Drive to the Pacific

EXTENSION OF REMARKS

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. PATTERSON. Mr. Speaker, the following article, written by a brilliant young Marine Corps officer, Col. J. D. Hittle, is worthy of congressional attention, particularly during these critical times in the Far East.

The article is factual and denotes a great amount of diligent research. It is

brief and most informative.

Colonel Hittle is well known to our entire membership, and is to be commended for his wonderful achievement in this article:

Russia's Drive to the Pacific (By Col. J. D. Hittle)

Commodore Matthew Perry, USN, who opened the long-shut doors of Japan, was more than an unusually able admiral, capable of carrying out delicate diplomatic policy. He was, unquestionably, a far-sighted strategic thinker possessing the all-too-rare ability to see events of his time in long-range historical perspective.

Perry, who participated in the bitter international competition of the western Pacific when that area was developing at mid-19th century into a vast sea-power area, recognized the great geopolitical forces then taking shape. It was in a speech to the American Geographical Society in New York in March 1856 that Perry made his now famous forecast of events in Pacific Asia:

"It requires no sage to predict events as strongly foreshadowed to us all. * * * It seems to me that the people of America will, in some form or other, extend their power until they have brought within their embrace the multitudes of Islands of the great Pacific * * * and I think, too, that eastward and southward will her great rival of future aggrandizement (Russia) stretch forth her power to the coast of China and Siam, and thus the Saxon and the Cossack will meet once more, in strife or in friendship, on another field."

Seldom has there been a more accurate prophecy of the course of international affairs. In terms of history, a century is but a tick of eternity's clock, but in not even quite a century since his speech, events have heavily underlined Perry's grasp of history

and the accuracy of his vision.

By this point of the mid-20th century, America, by purchase of Alaska, victory in the Spanish-American War, and defeat of Japan has become the dominant seapower of the Pacific Basin. Truly, America had brought within her embrace the multitudes of Islands of the great Pacific, and most certainly, that much of Perry's prophecy has evolved as he saw it at that time.

And, unfortunately for the interests of the free world, Perry's prophecy as to Russian power stretching out to the coasts of China had come true and extension southward to Siam is perilously close to reality. Today, a new contender has entered the Pacific seapower area. World communism, under the leadership of Soviet Russia, currently controls the Asiatic Pacific littoral from the Arctic to Indochina.

The strategic result is that the world is witnessing Russia, the world's greatest land-power, emerge as a Pacific power of major consequence. Russia's rise as a seapower in the western Pacific resulted, paradoxically, from the eastward extension of Russian land-

power to its geographical limit. The shore of the Pacific marked the eastern boundary of her landpower and when Russia reached that water boundary, further eastward expansion would be largely in terms of maritime seapower.

It is from Vladivostok that Russian power Pacific Asia has radiated, and it is this base that has served as imperial and. later, Soviet Russia's main springboard for projecting influence throughout northeast Asia and much of the Pacific littoral. Russian establishment of that foothold on the Pacific marked the beginning of Russia's power in that vital area of the world and, by so doing, underlined the geopolitical vision of Commodore Matthew Perry who so accurately appraised the inexorable currents of history that were to bring the United States and Russia to the role of contenders for control of the western, if not all of the Pacific Basin.

Vladivostok is the base for Russian power in Pacific Asia. Without such a base the history of Russian activity in the Far East would read much differently, and the problems of world strategy would be much different and probably much more simple.

Although Russian exploration and acquisition of the northern Pacific shores has had significant, strategic implications, the focal point of Russian Pacific power is Viadivostok in the southern part of Russia's Maritime Province. Possession of this Maritime Province between the Ussuri River and the seathe area known as the trans-Ussuri region—flanking Manchuria from the sea and stretching southward along the Sea of Japan almost to Korea, has been indispensable to the development of Russian power in the western Pacific area. Unquestionably, Russian acquisition of this territory on the Pacific littoral constituted one of the most important developments of modern history.

An understanding of how Russia obtained Viadivostok and the surrounding maritime provinces is essential background for any basic appraisal of Russian power in the Far

East.

The story of the Russian march to the Pacific began in the reign of the able but cruel czar, Ivan the Terrible, in the latter half of the 16th century. His was a Russia in transition. The yoke of Tartar domination had been thrown off less than a hundred years before; Moscow had not consolidated her position as successor to Kiev as the seat of power. Tartars in the south, Poland, Lithuania, and the German knights in the north threatened the existence of Muscovy itself.

To the east was the vast expanse of an apparently limitless frontier sparsely settled by native groups, an easy target for conquest and colonization. Actual conquest of the lands east of the Urals dates from 1580. However, Ivan, plagued by internal and external threats, had no time for carefully planned exploitation of his eastern frontier.

In a real sense, the conquest beyond the Urals was an accurate reflection of the hectic conditions of then contemporary Russia, for the march to the Pacific was begun by a Cossack outlaw named Yermak. It was not the patriotic cause of carrying eastward the banner of Muscovy that induced Yermak to push beyond the Urals. Rather, it was because of his desire to escape Muscovy, for Yermak was under sentence of death if apprehended, for rebellion against the crown.

At the head of a small group of armed adventurers Yermak, in the fall of 1581, defeated the native prince Kuchum and claimed the vast trans-Ural territory, the "capital" of which was the town of Sibir—a significant term, for from it is derived Siberia, the name by which the entire area east of the Urals is known.

Yermak, a realist and opportunist, voluntarily presented his conquered territories to the Tsar who, in return, rewarded him with

a pardon and gifts. Thus the authority of Moscow was carried beyond the Urals and the frontier was opened. The overland move to the east had begun and it was not to end until it reached the Pacific. Significantly, the colonization of Siberia and the drive to the Pacific was not initially the result of a deliberate governmental design, but rather the early flow of hardy peasants and adventurers, migrating steadily toward a retreating frontier in an effort to improve their economic and political status.

Parenthetically, it is worth noting the historical similarities in the colonization of the American and Siberian frontiers. On both frontiers colonization began in the latter 16th or early 17th century. While the American and Siberian colonists certainly had different interpretations of freedom, each in their own way were seeking it. They were seeking material things, too, for the magnet that drew adventurers further and further into the frontiers of both Stherts and America was the quick riches in the form of Yet, there was another group which contributed later in the Tsarist regime to development of Siberia. These were the exiles who, usually for political offense, were forced to settle in Siberia. While their col-onizing role was significant, they did not play as large a part in Siberian development as some popular accounts have indicated.

On each frontier, wilderness communications were facilitated by great rivers which served as the highways of exploration. Although most of the main Russian rivers empty into the Arctic seas, their tributaries and frequently portions of the main rivers flow in an easterly or westerly direction, thus providing convenient means for waterborne

penetration of the frontier.

Also, in both instances possession of the frontier was obtained from native peoples by armed conquest: In America it was from the Indian tribes and in Siberia it was from the natives who were of largely Mongol stock. Not the least significant was the fact that the American and Siberian lines of colonization (the American marching westward and the Siberian marching eastward) were converging on the Pacific. It was this fundamental feature that so impressed Perry. Thus, in both America and Russia the frontier drew both peoples toward the Pacific. and by so doing the retreating frontiers were shaping the present conflicts of interest. With good historical reason, it can be stated that the Russian colonization of Siberia and the exploitation of the American frontier were moving Anglo-Saxon and Russian peoples in accordance with their manifest destinies on collision courses.

Within 6 years after Yermak seized Sibir, Russian colonists had pushed beyond the Urals to establish the town of Tobolsk. The march continued and the shores of Lake Baikal were reached in 1651.

Again, however, some of the land had to be wrested from the natives by force of arms. and it was only after 3 years of fighting 1655-58) that the tough Buriat Mongols of the Baikal region were conquered. As if impatient to reach the Pacific, the bolder colonists and adventurers refused to wait for the pacification of the Buriats and pressed on in the trans-Baikal region between the lake and the Manchurian frontier. As the Cossack spearhead of the Russian drive to the east moved deeper into this trans-Baikal area it reached the region of two rivers, the Amur and the Ussuri. These waterways were destined to play an increasingly important role in Russian military and diplomatic effort to establish a firm foothold in eastern Asia.

By the mid-17th century the Cossacks under Khabanov had sailed down the Amur, plundering the natives and exacting tribute as they went. At about the same time a Russian fort was established on the Amur, thus signifying in eastern Asia what other peoples in other places were to learn about the Russian to the places were to learn about the Russian to the places were to learn about the Russian to the places were to learn about the Russian tribute to the places were to learn about the Russian tribute the same tribute to the places were to learn about the Russian tribute t

sians—that conquest by Muscovy was not a transitory raid, but eventual occupation and accession.

Having reached the valleys of the Ussuri and the Amur, the Russian expansion to the sea met with an unexpected and formidable obstacle.

What had hapepned was that the Russians, who moved so swiftly through the scattered native tribes east of the Urals and in the Baikal region had, by reaching the Amur and Ussuri, pushed their expansion to the northern borders of the Chinese empire. No longer were the Cossack adventurers dealing with relatively ineffective tribesmen. Instead, they were confronted by one of the oldest and most powerful nations of the world. It was an unfortunate time for the Russians to challenge Chinese power, for China of the latter 17th and early 18th century was a China under the rule of the great K'ang Hsl, second emperor of the then new Manchu Dynasty, and one of the most able statesmen ever produced by the oriental world. This vigorous and wise ruler was not slow in reacting to the Russian pressure against his tributary peoples to the north.

Russia's armed occupation of the Amur-Ussuri region was accompanied by diplomatic overtures by the Russians toward the imperial court in Peking. Each of these early missions failed because the Russians did not offer tribute, a required ritual in initiating diplomatic relations with China, which had long ruled as the Middle Kingdom of the oriental world. The historian Aaston Cohen relates, however, that one Russian mission to Peking did return with a letter from the court, but the letter "was of no use to anybody for nobody in Moscow could read it."

K'ang Hsi was not one to be intimidated by the appearance of the Russian soldiers and colonists on his northern borders. Nor, on the other hand, were the Russians, after pushing the frontier all the way from the Urals, in any mood to turn back toward the Urals because their presence was offensive to the Chinese emperor.

As a result, there began an undeclared but bitter border war, although neither the Russians nor the Chinese wanted war. Russia sought commerce and territory north of Manchuria; K'ang Hsi's primary objective was the stabilization of his northern borders and the protection of his tributary tribes in that area threatened by Russian expansion.

In 1685 K'ang Hsl initiated negotiations with Moscow for a settlement of that Chinese-Russian conflict in the Far East. The Czar indicated a conciliatory attitude by designating Theodore Golovin as his ambassador for the negotiations with China. Four years later, in the summer of 1689, Chinese and Russian representatives met at Nerchinsk, east of Lake Baikal.

The negotiations were conducted under conditions which emphasized that in the Orient, as elsewhere, diplomatic and military strength are not unrelated. It is recorded that the Russian proposals were supported by the presence of 1,000 soldiers. K'ang Hsi demonstrated his faith in the value of diplomacy backed by force by supporting his representatives with a fleet of river boats, artillery, and 10,000 troops.

Apparently the Russian envoy got the point. The Treaty of Nerchinsk (1689) was the first treaty between China and a European power. It was also a diplomatic victory for China. Under the terms of that historic treaty—and in respect for K'ang Hsi's 10,000 troops at Nerchinsk—the Russians agreed to withdraw from the entire valley of the Amur.

Thus China was freed from the threat of Russian pressure on the northern borders of Manchuria and Russia was haited in her drive to establish a base of power in the Amur-Ussuri region of northeast Asia. Even the fort of Albazin on the upper Amur was razed in accordance with Chinese demands. One aspect of the Nerchinsk Treaty is of

One aspect of the Nerchinsk Treaty is of immediate interest in view of the recent and prolonged Korean negotiations over the issue of prisoners of war. It will be recalled that the Communist negotiators in Korea demanded the repatriation of all prisoners, regardless of their personal desires and irrespective of whether they were captured by force or surrendered willingly.

At Nerchinsk the Russian and Chinese negotiators agreed on the repatriation of "deserters" from their respective forces along the border. Thus, at the end of the 17th century, Chinese-Russian negotiations demonstrated a line of thought with respect to repatriation of enemy-held nationals which was to constitute a fundamental issue in the Korean negotiations over two and a half centuries later. Again, we have an eloquent example of how the lessons of oriental history have direct application in present-day Far Eastern affairs.

In essence, the Nerchinsk treaty expelled Russia from the Amur-Ussuri region. By so doing, the Manchu Emperor K'ang Hsi relieved the pressure on his northern Manchurian border, and he blocked, for almost a century and a half, Russian access to the strategic maritime province. However, the Russian tide of eastward expansion was running too fast and too strongly to be dammed completely by the reversal at Nerchinsk. Deprived of the Amur-Ussuri region, Russian expansion was deflected northward into the northeast Kamchatka region of northeast Siberia. Eventually, Russian expansion jumped the Bering Straits and moved into the American shores of the northern Pacific. All of which serves to illustrate the almost irresistible momentum with which Russia of the 18th and early 19th century pressed eastward into the Pacific littoral.

However, such expansion in the north did not make Russia forgetful of the more hospitable climate and terrain of the Amur-Ussuri region. An unfaltering memory has been an historic characteristic of Russian—Czarist or Soviet—imperialism. An objective once sought was never forgotten. Russia's patience was equaled only by her determination to seize the first opportunity to take that which had been denied at Nerchinsk.

Sensing that such an opportunity was soon to arise in the Far East, the Russian Government in 1828 revived its interest in the Amur region by ordering a survey of the entire area. As the middle of the 19th century approached, 4 factors combined, as if in a giant conspiracy of circumstance, to bring Russia once again to the northern borders of Manchuria and the Amur route to the sea. The first and perhaps the most basic of these factors was that the deterioration, which inevitably overtook all Chinese dynasties, had begun to manifest itself in the Manchu court. Next, unfortunately for China, deterioration of the Manchu dynasty coincided with the entry of the great western maritime nations into competition for the Chinese trade, accompanied by demands for extraterritorial concessions which China was incapable of resisting.

Then, China, by her failure to colonize the Amur-Ussuri region, made the area a tempting target for colonization. Such failure to exploit and consolidate the diplomatic victory at Nerchinsk, created in a sense, a power vacuum in the Amur-Ussuri region. Russia, whether Czarist or Soviet, has demonstrated an historical eagerness to fill such vacuums. This was to prove no exception.

Further, in 1847 the Czar designated a Nicholas Muraviev to be governor-general of the vast area known as Eastern Siberia. For that reason the year 1847 was destined to be an historic one in the long story of Russian imperialism. Muraviev was a man of great determination and astuteness, and like some other successful agents of imperialism in the Far East, he was apparently not hampered by an overdose of scruples.

Muraviev clearly envisioned the geopolitical significance of Russian possession of the strategic trans-Ussuri region on the Pacific. Control of that area would outflank Manchuria on the sea and would inevitably serve to project Russian power southward toward Korea and China proper.

Fortunately for Muraviev, Russian colonization in northeast Siberia had not stopped with the rebuff of Tsarist expansionism at Nerchinsk. Although blocked in the more desirable Amur-Ussuri region, development of eastern Sibera had been continued by exploration and active colonization in the north. The Kamchatka Peninsula was occupied in 1707 and the bleak Kolyma region opposite Alaska was colonized by 1742. The Pacific littoral had a magnetic attraction for Russian imperialism and in 1732 the Russian explorers Fedorov and Avozdev reached Alaska. Nine years later Captains Behring and Chinikov were sailing along what is southern Alaska. The Russian-American Company, under Baronov, had established Russian authority in Alaska, and by 1812 he had a Russian colony in California. It is indeed worth noting how vigorously Russian imperialism moved out of northeast Manchuria to North America and continued southward along America's Pacific littoral. Baronov, who was dedicated to his dream of making the Pacific a Russian lake, died in 1818. Had he lived a few years more it is highly posible that Russian expansion on the west coast of the American continent would have assumed a size and degree of permanency that could not have failed to create a fundamental Russian-United States conflict of interests in the 19th century.

Such Russian expansion around the northern rim of the Pacific indicated how Russia. in the 18th century, as a result of the Treaty of Nerchinsk, bypassed her main objective, the trans-Ussuri region which she wanted for her base of power in the western Pacific. It was bypassed, but not forgotten, for it always loomed large in her imperialistic designs. Thus, when the deteriorating power of the Manchu dynasty in the mid-19th century offered the opportunity for Russia to make another bid for the trans-Ussuri coastal region, Muraviev's position strengthened by the colonization of the Siberian frontier and settlement of the northeast Asian and northwest American coastal area. All of these developments had the effect, in a geographical sense, of flanking the trans-Ussuri objective.

Muraviev moved rapidly in tightening the encirclement of his objective area. In 1848 he made a test violation of the Treaty of Nerchinsk by sailing a Russian force down the Amur. This brought forth no strong Chinese protest. In 1850 he established, again in violation of the treaty, the city of Nikolaievsk at the mouth of the Amur. Russia had a firm foothold on the northern flank of the vital coastal area between the Ussuri and the sea.

In 1854 the Czar conferred on Muraviev what amounted to plenary authority to negotiate the boundary problem with China and was free to consummate his plan for acquiring the trans-Ussuri region as the bastion of Russian power on the Pacific.

China was progressively weakened by foreign intervention and domestic unrest. This was the moment he had hoped for, and in 1858, as China fought the Tal-pings in civil war and the British and French in the Arrow War (over trade diplomatic representation, and extraterritorial rights) Muraviev succeeded in bringing Chinese envoys to a boundary conference at Aigun, on the upper

At Algun there was a reversal of the Chinese and Russian positions at Nerchinsk

At the over a century and a half before. time of the Aigun negotiations, China had no forces to spare for a border war with Russia. Muraviev had a small but superior force as well as a growing base of power resulting from Siberian colonization. Power was on the Russian side, and the Treaty of Algun was a Russian diplomatic victory. Again, an example of the influence of power in orien-

tal diplomacy.

The Aigun Treaty was a salient, although not complete, victory for Muraviev. He did gain Russian possession of all the northern (left) bank of the Amur, the area from which the Russians were excluded at Nerchinsk. This Chinese concession to Russian imperialism established the northern Manchurlan-Siberian border essentially as it has remained

to the present time.

agreement on the settlement of the trans-Ussuri issue is of more than academic interest, for it was based on a compromise, the pattern of which has become virtually the hallmark of Soviet expansion in the present age. China refused to cede the trans-Ussuri and Muraviev would not withdraw his demand that it be transferred to Russia. Muraviev then resorted to the device of joint control of the region and this was finally accepted as the basis of settle-

This was satisfactory to Muraviev, for he knew that joint control of the area would Russian control. Apeventually mean parently the Manchu court at Peking sensed the same outcome and the Emperor re-

nounced that portion of the treaty.

Such Chinese reaction had no effect on Muraviev. By the terms at Aigun he had gained Russian entry into the trans-Ussuri and he had no intention of withdrawing as long as he had the stronger military forces in the area.

While Muraviev was vigorously pushing his occupation of the disputed area, a determined effort to obtain treaty sanction for Muraviev's invasion was being made in Peking. On this the Manchus were still adamant, curtly informing General Ignatiev, Muraviev's partner in imperialism, that even the joint-control provision of the Aigun Treaty was null and void.

But the Manchus were still in the unfortunate position of not being able to back diplomacy with force. Tai-ping rebel armies were devastating vast areas of China proper, the joint British-French forces had occupied Peking, burning the summer palace as punishment for the deaths of 20 European captives of the Chihese. Chinese resistance collapsed and the Manchu Emperor fied to the mountains of Jehol, on a face-saving hunting trip, leaving his brother, Prince Kung, to settle with the French and English.

Such a confused and troubled situation was just what the Russian representative, General Ignatiev, wanted and he moved rapidly, and with no small degree of astuteness. Accordingly, when he made his move, he did so with at least superficial subtlety, demonstrating an awareness of the oriental emphasis on saving face. His approach to Prince Kung was simply this: China was being invaded by the powerful British and French forces; the summer palace had been burned; Peking was faced with destruction; as a Russian, and hence a friend of China, he would intervene to save Peking from the French and British. In return for this friendship, Russia only wanted the trans-Ussuri region.

Prince Kung saw the true inwardness of the proposal, but he was powerless to reject Thus the Manchus in 1860 learned, as did Sun Yat-sen a half century later, the

high cost of Russian friendship.

So, in November of 1860, Ignatiev and Prince Kung signed the agreement by which the trans-Ussuri region was ceded outright to Russia, thus obtaining treaty title to what

Muraviev had actually, if illegally, already made a part of Russia. However, the legal affirmation of such Russian imperialism was a highly desirable achievement, for it strengthened Russian claim to a vital region at a time of intense European competition for Asiatic possessions.

The results for Russia and the modern world have been indeed significant. The Russian frontier had reached the sea and Manchuria was cut off from it. Russian territory now reached to almost the northern boundary of Korea. Russia, via the land route, had emerged as a power on the Pacific possessing a strategic coastal lodgment to serve as the base for her struggle against the maritime powers for control of Asia.

In the southern part of the newly acquired trans-Ussuri region—now known as the Maritime Province-Muraviev founded the city that was to be the hub of Czarist, and later Soviet, power on the Pacific. The founding signaled the culmination of an era of expansion, colonization, and imperial-ism begun by Yermak, the Cossack who ism begun by Yermak, the Cossack who crossed the Urals 200 years before. It also marked the opening of a new era of increased Russian competition in the Pacific Basin, an era of east-west Pacific conflict so accurately forecast by Commodore Perry.

In view of the events of far-eastern history, since Muraviev founded that city, it would appear that the name given it was less a geographical designation than an indication of the role its imperialist founders intended it would play. That city was Vladi-vostok—"domination of the Pacific."

Partnership for Whose Benefit?

EXTENSION OF REMARKS OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a column written by Thomas L. Stokes, which appeared in the Washington Evening Star:

PARTNERSHIP FOR WHOSE BENEFIT?—EISEN-HOWER PHILOSOPHY SEEN LEADING TO GREAT MONOPOLY IN POWER AND CONSERVATION-AND WITH TAX MONEY

In his message to Congress, President Eisenhower harps constantly and repeatedly upon his "partnership" idea, so-called, for conservation and development of our natural He refers to a "partnership" resources. among Federal, State, and local governments and private enterprises, with emphasis upon shifting responsibility away from the Federal Government.

Already it has raised the question: Partnership for whose benefit?

For purposes here, we will just mention in passing the revelation of how special benefits are being conferred upon powerful electric utilities by operation of this policy in development of water resources. What "partnership" means is that the utilities "monopolize the bulk of revenues" at the dams. So the trick is described by newly elected Senator RICHARD L. NEUBERGER, Democrat, of Oregon.

He knows. He won election, as the first Democratic Senator from Oregon in 40 years by exposing the harmful effects of the partnership program on the people of his State and on development of the Pacific Northwest. He is a recruit to a group in Congress which is very familiar with this issue from long experience. In the coming session this band will resist encroachment of the Eisenhower partnership idea and try to prevent damage to TVA in the Southeast, the great public projects in the Northwest, and the Southwest Power Administration in Missouri, Oklahoma, and Texas and its rural electric cooperatives

So much for hydroelectric power. There is, however, another threat to the public and consumer interest which is less readily detected because it is an almost new field. That is the production of power from atomic fuels. In a few years this will far outdistance production of electricity by other

means.

You will remember how the last Congress enacted a law by which private industry was admitted to partnership in development of power from atomic fuels, all under pressure of the administration, the Atomic Energy Commission and politically powerful private utility and other interests.

You will recall also, because of the dramatic filibuster to which they had to resort, how an embattled band in Congress was finally able to insert a few protections to the public so that the law was not the complete giveaway of the Nation's heritage in this new source of energy that otherwise it might have been.

But the law is still full of confusions and loopholes by which a monopoly could be set up that would make the once all-powerful private utility monoply look pale and wan and minuscular.

Another attempt will be made in Congress at this session to insert further protections to the public in the law after a detailed review of how the AEC is operating under the present law. That review will be through hearings by the Joint Congressional Committee on Atomic Energy headed by Senator CLINTON P. ANDERSON, of New Mexico, that he announced will begin the last of this month and run for 2 weeks or more. After hearing from the AEC, the committee then will listen to representatives of the industry and the public.

and the public.

What is the "partnership" story here?
In the first place, the whole atomic energy plant belongs to the people of the United States for the simple reason that they paid for it by their taxes, involving a certain amount of toil and sweat. Some \$14 billion of our money has gone into atomic energy to date. We are the owners-and the partners. The Government holds our investment in trust for us.

What do we see happening now? The Government-which means us-is farming out part of our holdings to private industry to develop power reactors to produce electricity. The terms are favorable to a few industrial giants which worked the Government during the war and since to produce atomic bombs and do research in peacetime uses under contracts with the Government for payment for their services, They are on the inside and on the ground floor. They have the know-how.

We are already subsidizing one company and will subsidize others with our tax dollars. They are the favored and, unless we watch they can monopolize the field to the exclusion of others. This is because of speci-fications in the law that will make it difficult for others, private industries as well as public power agencies such as municipalities and rural electric co-operatives, to get fuel and get into development of power. These specifications must be corrected. For another defect in the law, there is nothing to force private power producers from atomic fuels to pass along in rate reductions the subsidies from us, the taxpayers.

Also, while the law contains a provision for compulsory licensing of patents for 5 years, this is not tightly enough drawn in the view of some experts to prevent the giant "insiders" from withholding patents from others entitled to them.

Unless Congress and all of us are alert, we are on the eve of permitting creation of the greatest monopoly the world ever saw, and with our own money.

If we allow it, we'll deserve what we get.

The People Take the Lead

EXTENSION OF REMARKS

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mrs. FRANCES P. BOLTON. Mr. Speaker, in this Nation's efforts to ease racial and religious tensions we often tend to be more aware of the problems still confronting us rather than of the progress we have made. I believe a short pamphlet entitled "The People Take the Lead," which is a factual record of progress in civil rights since 1948, published recently by the American Jewish Committee, is a very real testimonial to the achievements in this field.

The American Jewish Committee is an organization which was founded in 1906 and which now has chapters in 44 principal American cities and members in 550 communities. Its charter, granted by the State of New York, empowers it, among other things, to investigate the infraction of the civil and religious rights of Jews in any part of the world.

To me it is significant that this pamphlet, rather than dealing exclusively with religious tensions, cites gains we have made in combating discrimination of all kinds. The majority of references are to improved conditions for Negroes, orientals, and persons of many national origins.

Under leave to extend my remarks, I am inserting the pamphlet herewith:

THE PEOPLE TAKE THE LEAD

This edition of the People Take the Lead marks 7 years of nationwide civil-rights progress. Since 1947, when the President's Committee on Civil Rights issued its historic report, new gains have repeatedly overshadowed events regarded as epochal when they occurred.

Five years ago, the first edition of this report listed few fair practice laws. Today, 12 States and 32 cities have fair employment laws. Three States have fair education laws. Five States have public accommodation laws with administrative enforcement.

Five years ago, this report listed the first Negro college professor appointed; the first Negro officeholder in the South; the first Negro doctor on the staff of a general hospital. Today, such firsts could probably fill this entire book.

Five years ago, the National Committee on Segregation in the Nation's Capital scored widespread discrimination in Washington. Today, segregation in public facilities in the Capital is the exception rather than the rule.

Five years ago, Negro students were rarely admitted to southern State universities. To-day, some 2,000 Negro students attend integrated college classrooms in the South.

And the most far-reaching advance of all the United States Supreme Court's historic decision on May 17, 1954, banning segregation in the Nation's public schools—was only a far-off dream, 5 years ago.

In every area of American life, the gap between ideals and practices is closing slowly, to be sure, but steadily. Our courts, our State and municipal legislatures, our civic leaders are continuing the forward march toward equal justice and opportunity for all.

There are still setbacks, of course; and much progress remains to be made. But those who look to this country for proof that democracy can fulfill its promise have reason to be heartened by the advances highlighted in these pages.

ARMED SERVICES

Administrative measures

Washington, July 1948: President's Executive Order No. 9981 forbids discrimination in Armed Forces; creates Committee on Equality of Treatment and Opportunity in the Armed Services.

United States Army, 1949-50: Governors' proclamations in Minnesota, Michigan, and Washington end segregation in National Guard. (See legislation.)

Washington, 1950-54: Army drops quotas for Negro enlistments; Selective Service drops questions on race for draft registrants; Navy, Marines, Air Force, and Army report segregation entirely eliminated.

Washington, April 1954: Army promises end to segregation at West Point.

Washington, October 1954: Veterans' Administration announces end of segregation in all VA hospitals.

Legislation

United States Army, 1947-49: New Jersey, Connecticut, New York, Wisconsin, Massachusetts, Pennsylvania, California, and Illinois forbid discrimination in the National Guard

ATHLETICS

Administrative measures

Birmingham, Ala., January 1954: City commission lifts ban on Negro-white football games.

Court action

Chicago, Ill., 1950: Illinois Superior Court fines American Bowling Congress \$2,500 for limiting membership to white males; ABC convention deletes "white males only" clause from charter.

Austin, Tex., October 1954: Court of eivil appeals rules State ban on Negro-white prize-fights unconstitutional.

Voluntary action

New York, N. Y., March 1948: United States Lawn Tennis Association admits first nonwhite player to national tournament.

New York, N. Y., September 1949: Greater New York Bridge Association admits Negro players to tournaments.

New York, N. Y., November 1949: Amateur Fencers League of America admits qualified applicants regardless of color.

Houston, Tex., October 1950: University of Texas permits Texas Western College to play football against teams with Negro players.

Atlantic City, N. J., November 1950: Eastern Amateur League signs first Negro in organized hockey.

San Diego, Calif., January 1952: Professional Golfers Association admits Negro players to PGA-sponsored events.

Boston, Mass., March 1953: Harvard track team withdraws from Birmingham, Ala., relay carnival because Negro member is barred.

Nashville, Tenn., October 1954: Fisk University plays Taylor University in State's first Negro-white football game.

CITIZENSHIP

Administrative measures

Mobile, Ala., November 1948: Federal officers invoke rarely used civil-rights statutes; arrest sheriff and deputy for inflicting physical punishment on Negro prisoners. New Orleans, La., December 1949: Two policemen are dismissed for depriving two Negro youths of their civil rights.

Arlington, Va., September 1950: Federal district court orders school board to provide equal facilities for Negroes and whites.

Jefferson City, Mo., November 1950: State supreme court rules white public schools must admit Negro students to courses not available in Negro schools.

Phoenix, Ariz., March 1951: Federal district court rules segregation of Mexican-Ameri-

can children is unconstitutional.

Tarboro, N. C., August 1951: Federal dis-trict court orders Washington County officials to equalize white and Negro school facilities and appropriations.

Phoenix, Ariz., February 1953: State superior court invalidates 1951 statute permitting local school boards to segregate.

Washington, May 1954: United States Supreme Court (school segregation cases) rules compulsory segregation in public schools unconstitutional; calls for further argument on implementation; returns other pending appeals for reconsideration by lower courts in light of desegregation decisions; and finalizes lower court decisions admitting Negro students to State-supported schools.

Shreveport, La., May 1954: Federal court rules State-operated Southwestern Louisiana Institute must admit Negro students.

Voluntary action

Annapolis, Md., May 1949: United States Naval Academy graduates first Negro midshipman.

Lexington, Ky., May 1949: Catholic Committee of the South urges all Catholic in-stitutions of higher learning to admit Negro students without discrimination.

Washington, November 1949: Poll of 15,000 southern college teachers by Southern Conference Educational Fund reveals 70 percent favor integration in professional and graduate schools.

Chicago, Ill., November 1949: Over 100 university presidents, deans, and admissions officers from 24 States, at Conference of American Council on Education, urge elimination of college admission quotas based on race, religion, or national origin.

Easton, Pa., January 1950: Lafayette College refuses \$140,000 bequest restricted to non-Jewish and non-Catholic students.

Birmingham, Ala., October 1951: Southern Episcopal synod urges admission of Negro students to theological schools at Sewanee,

Tenn., and Lexington, Ky. Chapel Hill, N. C., October 1951: Students' protest wins right of five Negro students at University of North Carolina to sit with white students at athletic events.

United States of America, 1952: Over 1,000 Negro students attend previously all-white colleges and universities in Southern and Border States.

Washington, 1952: New Roman Catholic high school and several Episcopal elementary schools announce nonsegregation policy.

Sewanee, Tenn., June 1952: Faculty of Cumberland Forest Music Festival and eight leading religious instructors cancel teaching and concert contracts in protest against University of the South's refusal to admit Negro divinity students; following year, university admits Negroes to school of theology.

Denver, Colo., December 1952: Colorado-Wyoming Association of Collegiate Registrars and Admission Officers votes to delete references to race and religion from applications.

Gadsden, Ala., June 1953: Cumberland Presbyterian Church admits Negro students

to theological seminary.

Boston, Mass., December 1953: Department education announces that all of State's 1,131 private schools have eliminated discriminatory questions on admission applications.

New York, N. Y., December 1953: Nationwide survey by Antidefamation League dis-closes that 450 colleges, universities, and junior colleges have removed questions concerning color, nationality, and religion from application blanks.

United States of America, spring 1954: Catholic archbishops forbid segregation in San Antonio, Tex., and Nashville, Tenn., archdioceses.

Richmond, Va., May 1954: Bishop rules Catholic high schools will admit Negro students.

Ames, Iowa, August 1954: National Student Association, representing students at 250 colleges, calls for "swiftest possible integration of the races at all educational levels in all parts of the country."

Nashville, Tenn., August 1954: Fisk Uni-versity is first Negro college invited to participate in Rhodes scholarship competition.

EMPLOYMENT

Administrative measures

Washington, July 1948: President's Exec-utive Order No. 9980 orders Federal agencies to ban discrimination in employment; creates Fair Employment Board in Civil Service Commission to investigate plaints and establish procedures for compli-

Philadelphia, Pa., March 1949: Unemployment compensation board rules employee may refuse to work on Sabbath without sacrificing unemployment compensation.

New Haven, Conn., January 1950: Con-necticut Interracial Commission conducts first public hearing under a State FEP law and finds complainant was denied employment because of race.

United States of America, 1950-51: State Commissions Against Discrimination in New York and Massachusetts issue cease and desist orders against employment agencies for discriminating in job placements.

Sacramento, Calif., July 1951: Attorney General rules that California Employment Stabilization Commission has many of the powers of a State FEP Commission.

Salem, Oreg., August 1951: State Labor Commissioner orders Brotherhood of Railway Carmen to cease racial discrimination against applicants.

St. Louis, Mo., October 1951: State Employment Service merges Negro and white

United States of America, 1951: State employment services in California and Illinois announce they will refuse to accept discriminatory job orders and will delete all racial and religious data from records.

Washington, 1951-54: President Truman creates Committee on Government Contract compliance (December 1951) to enforce prohibition against discrimination in employment by firms contracting or subcontracting Government orders. President Eisenhower creates new Government Contract Committee with Vice President as chairman (August 1953); Committee tightens nondiscrimination regulations (April 1954).

Raleigh, N. C., September 1952: Governor eliminates Negro-white salary differentials for staff of mental hospital in Goldsboro.

Atlanta, Ga., October 1953: Southern Regional Council reports 112 cities in 13 Southern States now employ 545 Negro policemen, 87 plainsclothesmen, and 90 policewomen.

Washington, October 1953: District's Board of Commissioners orders inclusion of antibias clause in future contracts. District telephone company drops color bars.

New York, N. Y., October 1953: State commission against discrimination successfully negotiates to modify employment policy of Pennsylvania Railroad. Company hires first Negro brakeman and opens other jobs to qualified Negroes.

Louisville, Ky., March 1954: Segregation eliminated in city's fire department.

Boston, Mass., July 1954: State commission awards \$250 damages to Negro fired from job because of race.

Sacramento, Calif., Scptember 1954: Attorney General rules Negro firemen in Los Angeles may not be segregated.

Washington, September 1954: District Commissioners order desegregation of Negro firemen.

Legislation

United States of America, 1943-51: Ordfnances in Akron, Ohio; Phoenix, Ariz.; Richmond, Calif.; and Sioux City, Iowa, bar discrimination in public employment or in work under city contracts.

under city contracts.

United States of America, 1948-51: City ordinances bar discrimination in public and private employment in Gary and East Chicago, Ind.; Minneapolis and Duluth, Minn.; Farrell, Monessen, Philadelphia, Sharon, Erie, Clairton, and Duquesne, Pa.; Campbell, Cleveland, Girard, Hubbard, Lorain, Lowell-ville, Niles, Steubenville, Struthers, Warren, and Youngstown, Ohio; Pontiac and River Rouge, Mich. Cities with FEP ordinances now total 32.

United States of America, 1949-51: Washington, Oregon, New Mexico, and Rhode Island adopt enforceible FEP laws, bringing total to eight.

Albany, N. Y., May 1949: Legislature prohibits questions concerning birthplace on application for State civil service

application for State civil service.
Sacramento, Calif., June 1949: Revised civil-service laws prohibits discrimination against State employees on grounds of religion, political belief, marital status, race, color, sex, or blindness.

Los Angeles, Calif., January 1951: Ordinance forbids discrimination in hiring of building construction workers on projects under urban redevelopment program.

Sacramento, Calif., November 1952: State approves constitutional amendment eliminating last prohibitions against employment of Chinese on public works.

Juneau, Alaska, March 1953: Alaska adopts fully enforcible FEP laws.

Topeka, Kans., March 1953: Legislature adopts FEP bill patterned after Wisconsin's educational plan. Four States now have nonenforcible FEP laws.

Des Moines, Iowa, April 1953: Legislature sets up commission to investigate racial and religious prejudice in State.

Court action

Washington, November 1949; United States Supreme Court (Graham v. Brotherhood) sustains injunction against Brotherhood of Locomotive Firemen and Engineers because of discrimination against Negro railroad employees.

Birmingham, Ala., May 1950: Federal district court finds Gulf, Mobile & Ohio Raliroad and Brotherhood of Locomotive Firemen and Engineers guilty of discrimination and awards damages based on wages plaintiffs would have earned on jobs denied them.

New Haven, Conn., October 1950: Superior court sustains interracial commission's order under FEP law.

Charlotte, N. C., January 1951: United States court of appeals reverses lower court decision which permitted railroads to restrict hiring of Negroes as firemen.

Washington, June 1952: United States Supreme Court (Brotherhood v. Howard) rules that Negro railway porters doing work of brakemen must receive pay and title of that job and be represented in collective bargaining by Brotherhood of Railway Trainmen.

ing by Brotherhood of Railway Trainmen.

Hartford, Conn., 1952-54: State courts
sustain civil rights commission's order
against International Brotherhood of Electrical Workers. Superior court fines Hartford local of IBEW \$2,000 for refusing to
drop discriminatory membership policy, plus
\$500 per week until compliance. Union
abandons 5-year defiance of State FEP law;
admits 2 Negro apprentices (April 1954).

New York, N. Y., April 1954: State court of appeals affirms decision of New York Supreme Court, which upheld authority of State commission against discrimination to direct an employment agency to cease inquiries, direct or indirect, as to race, creed, color or national origin of applicants for employment.

United States of America, spring 1954: Supreme courts of Ohio and Michigan rule workers may refuse to work on their Sabbath without sacrificing unemployment compensation.

Milwaukee, Wis., August 1954; Circuit court uphoids cease-and-desist order of State industrial commission under so-called educational FEP law.

Voluntary action

United States of America 1948-50: University of Chicago, Fordham University, Harvard Medical School, University of Miscouri, and Brown University appoint first Negro educators to full professorships.

United States of America, 1948-54: Many big-league teams admit Negro baseball players following successful employment of Jackie Robinson by Brooklyn Dodgers in 1947. Pacific Coast League hires first Negro umpire (December 1953).

Washington, February 1948: Gallinger Hospital is first all-white hospital below Mason-Dixon line to accept Negro interns.

United States of America, December 1948: Ten railroad unions agree to eliminate discriminatory clauses from their national constitutions, or to make them inoperative in those States with FEP laws.

New York, N. Y., April 1950: New York Telephone Co. announces discriminatory advertisements by employment agencies will not be accepted for classified telephone directories throughout State.

New York, N. Y., June 1950: Journal of American Medical Association announces it will eliminate designations of race and creed from all "situations wanted" advertisements.

New York, N. Y., July 1951: New York Telephone Company, RCA Communications,

American Cable and Radio Corp., and Western Union Telegraph Co. form voluntary committee to cooperate with State commission in eliminating discrimination in communications industry.

munications industry.

New York, N. Y., October 1951: Metropolitan Opera Company signs first Negro ballet

dancer.

Chicago, Ill., October 1951: Personnel manager of Carson, Pipee, Scott & Co. declares integrated hiring policy successful.

integrated hiring policy successful.

Miami Beach, Fla., March 1952: Mount
Sinai Hospital is first hospital in the deep
south to appoint Negro physician to staff.
Salem, Oreg., April 1952: Public protest

wins civil service appointment for Nisel veteran denied Tax Commission job.

Minneapolis, Minn., July 1952: Minneapolis Star and Tribune heads its employment advertisements with notice that they are "accepted on the premise that qualified applicants will be hired * * * without discrimination because of race, color, religion or nationality."

New York, N. Y., October 1952: International Geneva Association, a society of chefs, headwaiters, and managers serving fashionable hotels and restaurants, lifts ban on Negro members.

Los Angeles, Calif., January 1953: Negro and white locals of musicians union merge-Indianapolis, Ind., July 1953: Railway hires first Negro trolley drivers.

Peoria, Ill., August 1953: American Federation of Teachers votes to void charter of any local union which continues to segregate members.

Boston, Mass., May 1954: State commission against discrimination announces agreement by Pullman Co., of Chicago, to end 90-year ban on Negro Pullman conductors.

New York, N. Y., October 1954: Marian Anderson is first Negro singer hired by Metropolitan Opera Co.

HOUSING

Administrative measures

Washington December 1949: Federal Housing Administration and Veterans' Administration refuse to insure loans on any new housing covered by recorded restrictive covenants.

Charlotte, N. C., January 1950: Public housing administration rejects bid for Federal aid in construction of segregated housing project; city council reverses segregation register.

policy.

United States of America, 1950-54: City housing authorities in Schenectady and Buffalo, N. Y.; Los Angeles County, San Bernardino and San Francisco, Calif.; Newark, N. J.; Omaha, Nebr.; Chicago, Ili.; Baraga, Mich.; St. Paul, Minn.; Pasco, Wash.; Allegheny County and Pittsburgh, Pa.; Toledo, Chio; Washington, D. C., and Wilmington, Del., eliminate racial segregation in city housing projects.

Washington, November 1950: Public Housing Administration declares low-rent housing programs "must reflect equitable provisions for eligible families of all races determined on the approximate volume and urgency of their respective needs."

New York, N. Y., April 1951: State commissioner of housing rules that, for the purposes of the housing law, segregation is discrimination.

Washington, May 1951: Housing and Home Finance Agency says needs of displaced minority-group families and availability of substitute housing will be scrutinized carefully before approval is given to local urbanredevelopment plans.

redevelopment plans.

New York, N. Y., June 1951: Federal Housing Administrator announces that all projects to which FHA obtains title will be administered on a nonsegregated hasis.

ministered on a nonsegregated basis.

Chicago, Ill., August 1953: Housing authority admits Negro tenants to previously all-white public-housing project.

Washington, October 1954: Housing Administrator says Government will refuse Fed-

eral aid to cities which default on their obli-

gations to minority citizens.
San Francisco, Calif., January 1954: Housing authority includes nonsegregation clause in contract for operations of four temporaryhousing projects.

Legislation

United States of America, 1949-52: Connecticut, Wisconsin, New York, Pennsylvania, New Jersey, and Massachusetts forbid discrimbination and segregation in public hous-

United States of America, 1949-52: Los Angeles and San Francisco, Calif.; Cincinnati, Ohio, bar discrimination and segregation in

urban redevelopment.

United States of America, 1949-52: Ordinances in San Francisco, Calif.; Hartford, Conn.; Boston, Mass.; New York, N. Y.; Cleveland and Toledo, Ohio; Philadelphia, Pa.; and Providence, R. I., bar discrimination and

Segregation in public housing.
United States of America, 1949-53: Legislatures in New York, New Jersey, Pennsylvania, and Connecticut forbid racial and religious discrimination in publicly assisted

housing.

New York, N. Y., March 1951: Ordinance bars discrimination in publicly assisted housing.

Madison, Wis., June 1951: Legislature re-Deals State law recognizing validity of racial restrictive covenants.

St. Paul, Minn., April 1953: Legislature prohibits race restrictions in real estate contracts.

Denver, Colo., September 1953: City council bars approval and recording of subdivisions containing racial restrictive covenants.

New York, N. Y., July 1954: Ordinance makes it illegal for owners of multiple dwellings, erected with loans or guaranties from Public agencies, to discriminate against tenants because of race, creed, color or national origin.

Court action

Washington, May 1948: United States Supreme Court (Shelley v. Kraemer; Hurd v. Hodges) rules courts cannot enforce racial restrictive covenants. Five years later (July 1953). Court rules courts may not award damages for breach of racial restrictive Covenant (Barrows v. Jackson).

Birmingham, Ala., December 1950: United States court of appeals holds city racial zon-

ing law unconstitutional.
Chicago, Ill., June 1953: State circuit court bars condemnation of land owned by Negro, thwarting attempt to drive his family from heighborhood by turning property into a public park.

United States of America, July 1953: Federal district courts in Evansville, Ind., and Toledo, Ohio, enjoin local housing authorities from segregating Negro tenants in public

housing projects.

San Francisco, Calif., August 1953: State court of appeal upholds earlier superior court ruling that San Francisco Housing Authority must abandon neighborhood pattern of resident selection and admit applicants without discrimination. United States Supreme Court rejects appeal (May 1954).

Denver, Colo., October 1953: State district court rules housing authority may operate integrated housing on property once covered by restrictive covenant.

Voluntary action

Chicago, Ill., January 1948: Chicago Im-provement Association negotiates agreement under which white owners agree not to enforce existing restrictive covenants.

Miami, Fla., November 1950: National As-Sociation of Real Estate Boards votes to change its code which pronounced it unethical for a realtor to introduce new races into a neighborhood.

Buffalo, N. Y., October 1952: Builder of Philadelphia's first nonsegregated private

rental housing tells National Association of Housing Officials venture is outstanding suc-

Philadelphia, Pa., April 1954: Commission on Human Relations reports that 88 percent of the city's Negro families and 22 percent of white families live in blocks where there is some racial integration.

PROFESSIONAL, BUSINESS, RELIGIOUS, AND PRATERNAL SOCTETIES

Voluntary action

Chicago, Ill., 1948-54: The American Nurses' Association votes to give direct membership to Negro nurses refused district membership; 2 years later, National Association of Colored Graduate Nurses votes to disband. By 1954, 53 State and Territorial associations-all except Georgia-include

Negro nurses in membership. United States of America, 1949-54: Negroes are admitted to membership in State medical associations of Florida, Georgia, Mis-Virginia, Tennessee, and Alabama; medical societies of St. Louis and Jackson County, Mo., Fulton County, Ga., northern Virginia, Washington, D. C., Charleston County, S. C., and Pulaski County, Ark.; American Pediatric Society; American Board of Surgery; St. Louis Dental Society; bar associations of Missouri, Los Angeles, Cincinnati, Galveston, Louisville, and St. Louis; Arkansas Education Association: Albany Junior Chamber of Commerce; North Carolina Academy of Science, and California

United States of America, 1949-54: Baltimore Synod-Synodical of Presbyterian Church appoints first Negro moderator; Southern Presbyterian Church approves first Negro candidate for ministry; Akron Ministerial Association, General Council of Congregational Christian Churches, and Augusta County (Va.) Ministerial Association elect first Negro presidents. California-Arizona Methodist Conference has Negro bishop presiding; Episcopal diocese of Georgia elects Negro to executive council; Grand Rapids Synod of Christian Reformed Church appoints first Negro in charge of evangelism; Southern Presbyterian Church dissolves Negro synod and votes to absorb colored presbyteries in white synods; Washington Cathedral selects Negro canon; Catholic church in Washington appoints first Negro pastor; South Carolina diocese of Protestant Episcopal Church invites congregation to apply for membership in diocesan convention; bishop of diocese of Raleigh decress that segregation in Catholic Churches of the diocese "will not be tolerated"; Disciples of Christ in Portland, Oreg., admit Negro disciples churches to full membership; presbytery of Philadelphia elects first Negro moderator; Reformed Church in America installs first Negro minister.

United States of America 1949-54: National Interfraternity Council urges affiliates to eliminate discriminatory qualifications for membership; many fraternities revise regulations. National Committee on Fraternities in Education organizes to fight bias in college fraternities; Columbia University, University of Michigan, Dartmouth College and Colorado University announce they will withdraw recognition from any campus organizations except religious groups which continue, after warning period, to deny membership on grounds of race, color, or religion: New York State University orders social fraternities and sororities to cut ties with their national organizations in a drive to eliminate racial and religious discrimination in extracurricular organizations. Court action by fraternities is dismissed (November 1954) by United States Supreme Court.

Washington, October 1950: American Prison Association votes not to meet in cities where hotels practice racial discrimination.

Lexington, Ky., September 1952: Fisk and Howard Universities are first Negro colleges to obtain chapters of Phi Beta Kappa.

Washington, September 1952: American Psychological Association votes unanimously to hold no future meetings in Capital until "additional progress has been made toward democratic treatment of minority groups."

New York, N. Y., August 1954: State American Legion asks end to racial bias in Legion's Forty and Eight Division.

PUBLIC ACCOMMODATION Administrative measures

Louisville, Ky., May 1948: Public library admits Negroes to all departments on same basis as whites.

Washington, 1949-50: Department of Interior prohibits discrimination and segregation in any activity or facility conducted in parks and public swimming pools of the Nation's Capital.

Miami, Fla., June 1951: City erases color

line in its library.
Washington, November 1951: Interstate Commerce Commission bars racial discrimination in sale of tickets on Washington-Mount Vernon excursion boat.

Houston, Tex., December 1951: City au-thorities bar segregated restrooms and eating facilities in new airport terminal build-

Boston, Mass., 1952-53: State commission against discrimination awards damages to complainants denied accommodations at motor court, and service in cafe because of

Chicago, Ill., May 1952: Illinois Commerce Commission bans racial segregation by Illinois Central Railroad.

St. Paul, Minn., July 1953: Governor orders discriminatory resort literature re-moved from State Tourist Bureau offices,

New York, N. Y., July 1953: State Commission Against Discrimination orders summer resort to discontinue club-membership procedures used as subterfuge for religious discrimination and to eliminate brochure references to selected clientele.

Salem, Oreg., January 1954: Attorney general rules that under new civil-rights law, restaurants may not segregate patrons.

Dallas, Tex., June 1954: Park department ends segregation on municipal golf courses.

Washington, October 1954: Justice Department asks Interstate Commerce Commission to ban segregation on interstate railroads.

Legislation

United States, 1948-54: Connecticut, Massachusetts, New Jersey, New York, and Rhode Island extend jurisdiction of State commissions against discrimination to public accommodation statutes; Washington strengthens antidiscrimination law; Oregon prohibits discrimination in places of public accommodation.

Miami Beach and Surfside, Fla., 1949-51: Ordinances bar advertising which discriminates against any religion.

St. Thomas, Virgin Islands, October 1950: Legislative assembly passes law providing "equal rights in places of public accommodation, resort, or amusement."

Annapolis, Md., February 1951: Legislature repeals mandatory racial segregation in public transportation.

Kansas City. Mo., June 1951: Ordinance forbids segregation at Municipal Air Terminal, Municipal Auditorium, and Starlight Theater.

Madison, Wis., July 1951: Legislature prohibits discriminatory advertising by public accommodations.

Albuquerque, N. Mex., March 1952: Ordinance bans racial discrimination in public accommodations.

Knoxville, Tenn., January 1954: Ordinance bans segregation at privately owned restaurant at municipal airport.

Richmond, Va., March 1954: Legislature bans discriminatory advertising by public accommodations (race explicitly excluded). Houston, Tex., June 1954: Ordinance bans

segregation on municipal golf courses.

Court action

Washington, February 1948: United States Supreme Court (Bob-Lo Excursion Co. v. Michigan) decides unanimously that Michigan law forbidding discrimination in places of public accommodation applies to excursion boat operating between Michigan and Canada.

Baltimore, Md., July 1948: Federal district court orders Baltimore to open its three public golf courses to Negroes, though permitting restriction of Negroes to certain days of the week. Three years later (July 1951), park board votes to end segregation in city's municipal courses.

United States of America, 1948-54: Courts in Trenton, N. J.; Oxford, Ohio; Webster Groves, St. Louis, and Kansas City, Mo.; Philadelphia, Pa.; Minneapolis, Minn.; and Houston, Tex., rule that public swimming pools and bathing beaches may not discriminate against Negroes.

Washington, January 1949: Federal district court sustains right of Civil Aeronautics Administrator to prohibit discrimination and segregation at Washington National Airport, although airport is in Virginia, which has a compulsory segregation law.

Louisville, Ky., May 1950: Federal district court awards \$1,500 damages to Negro ejected

from bus on interstate trip.

Washington, June 1950: United States Supreme Court (Henderson v. U. S.) outlaws segregation in dining cars on interstate railroads.

Richmond, Va., January 1951: United States Court of Appeals holds that segregation on interstate railroad violates United States Constitution.

New York, N. Y., April 1951: Federal district court allows damages to plaintiff forced to move to segregated railway car traveling interstate.

Charleston, W. Va., June 1951: Federal district court rules county airport dining room must serve all, regardless of race.

Orlando, Fla., June 1952: Federal district court holds Negroes may not be refused admission to municipal auditorium if Negro auditorium has inferior facilities and entertainment.

Kingston, N. Y., December 1952: Jury awards substantial damages to Negro patrons refused resort accommodations after their reservations were confirmed.

Los Angeles, Calif., April 1953: Municipal court refuses to dismiss suit against interstate railroad practicing racial segregation in violation of State civil rights law.

Washington, June 1953: United States Supreme Court (District of Columbia v. Thompson) upholds 1873 statute prohibiting public eating places from refusing service because of race or color; voids long-standing segregation tradition of Capital restaurants.

Philadelphia, Pa., June 1953: Federal district court awards \$600 in damages to 4 Negro patrons arrested when they refused to be segregated in an Oxford, Pa., theater.

Washington, October 1953: United States Supreme Court (Kansas City v. Williams) denies review of lower court's decision opening municipally-owned swimming pool to Negro citizens. Court thereafter remands or refuses to review other public accommodation cases in light of school segregation decision.

Atlanta, Ga., July 1954: Federal court orders Negroes admitted to municipal golf courses.

Voluntary action

Washington, 1948-54: National Committee on Segregation in the Nation's Capital issues report condemning discrimination in Washington, D. C. (December 1948); Actors' Equity bans Washington bookings because theater rejects Negro patrons (May 1948); National theater drops segregation and reopens for legitimate stage productions (November 1951); last dime-store chain operating segregated lunch counters drops ban against Negro patrons (September 1952); motion pieture theaters drop color line (October 1953). New Orleans, La., October 1949; Archbishop

New Orleans, La., October 1949: Archbishop cancels annual holy hour services in city stadium because park commission insists on segregation of participants.

segregation of participants. New York, N. Y., April 1950; New York Travel Agents Committee resolves not to recommend discriminatory resorts.

Washington, April 1951: Daughters of the American Revolution drops 12-year ban on Negro performers in Constitution Hall.

Cincinnati, Ohio, May 1951: Dining room concession at Municipal Airport ends discrimination against Negroes.

New York, N. Y., May 1951: Unions representing more than 70,000 restaurant employees, and management associations comprising more than 1,500 restaurants, pledge equal treatment of patrons regardless of race; Committee on Civil Rights in East Manhattan, Inc. finds (June 1952) discrimination against Negro patrons in east side restaurants has decreased from 42 percent to 16 percent in 2 years.

Atlanta, Ga., June 1951: National Association for the Advancement of Colored People holds first nonsegregated meeting since reconstruction days in Municipal Auditor-

United States of America, 1952-53: Legitimate theaters in Baltimore, Md., and St. Louis, Mo., end segregation.

Miami, Fla., January 1952: First nonsegregated audience since Civil War gathers to hear Marian Anderson.

Lake Junaluska, N. C., June 1952: Delegates to regional Methodist student conference vote to boycott swimming facilities until management permits use of lake by Negroes.

Norfolk, Va., June 1952: Norfolk Ministers Association cancels annual January preaching mission until racial segregation of audiences is eliminated.

Washington, November 1953: Southern Railway System, faced with lawsuit, orders patrons seated in order of their entrance into dining cars.

Washington, January 1954: Columbia Hospital announces complete racial integration of patients.

Houston, Tex., June 1954: Protestant Episcopal Church, protesting segregation, cancels plans for 1955 convention in Houston.

Danville, Va., June 1954: Democratic committee breaks century-old precedent with unsegregated Jefferson-Jackson dinner.

Portland, Maine, August 1954: Medical Association changes site of State Medical Convention to protest discrimination by resort originally chosen.

Detroit, Mich., October 1954: Michigan Tourist Council bars discriminatory advertising in 1955 regional guidebooks of Michigan Tourist Association.

MISCELLANEOUS

Legislation

United States of America, 1951-53: Legislatures in Oregon, Montana, and Colorado repeal bans on intermarriage between whites and Negroes, Mongolians, or Chinese.

Philadelphia, Pa., January 1952; New city charter prohibits discrimination in use of city property.

New York, N. Y., June 1952: City ordinance bars public funds to any child-care institutions discriminating against youngsters because of race, creed, or ancestry.

United States of America, spring 1953: Legislatures in Washington and Iowa bar cemeteries from refusing burial because of race or color.

Sacramento, Calif., April 1953: Legislature repeals restrictions on property rights of

Court action

Washington, January 1948: United States Supreme Court (Oyama v. California) invalidates California alien land law which raises presumption of fraudulent ownership and occupation of agricultural land by persons ineligible for citizenship.

Washington, June 1948: United States Supreme Court (Takahashi v. Game Commission) invalidates California law prohibiting issuance of fishing licenses to persons ineligible for citizenship.

Sacramento, Calif., October 1948: State supreme court rules that law barring interracial marriages is unconstitutional.

Madison, Wis., January 1953: State supreme court rules State-administered life insurance fund may not reject Negro applicants on ground that as a racial group they are a substandard risk.

Voluntary action

Washington, May 1950: CIO orders local unions to disregard State segregation laws and operate all CIO facilities without discrimination.

Chicago, Ill., November 1950: Red Cross votes to eliminate racial data on all future blood donations.

New Haven, Conn., December 1952: Yale Divinity School undertakes 2-year survey of racial and cultural references in Protestant church literature.

Tuskegee, Ala., December 1952: Tuskegee Institute reports 1952 is first year free of lynching in United States since records were begun in 1882.

The Foreign Agents Registration Act

EXTENSION OF REMARKS

HON, JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a news item written by William Galbraith of the United Press, appearing in the Washington Post and Times Herald of January 16, 1955, together with a memorandum on possible legal questions raised therein prepared for me by the American Law Division of the Library of Congress:

SOVIET SEEN EVADING UNITED STATES TRAVEL CURBS

(By William Galbraith)

The Soviet Union gets partly around the recently imposed tighter control on Russian travel in the United States by employing Americans, officials said yesterday.

The Americans include cight correspondents here and in New York employed by Tass, the official Russian news agency. A small number also work for Tass in noneditorial canacities.

The United States clamped the new travel controls on Russians January 3 in a tit-fortat measure against similar restrictions which have long hindered American travel in the Soviet Union.

The order closed about 27 percent of the United States to persons holding Soviet pass* ports.

However, officials said the order has no effect on the Americans working for Tass. If the Soviet Union wants to learn something about an area closed to Russian travelers. Tass can send one of the Americans to the area to make a firsthand report.

State Department officials, who worked out the order with other interested Federal agencies, said they were aware of this loop-hole when drafting the controls.

However, officials said, if the United States found any open attempt to circumvent the Order the State Department could bring the matter up with the Soviet Embassy and presumably take action against such an attempt.

The United States hires some Russians for Work on unclassified matters in the American Embassy at Moscow. These Soviet citizens are not subject to travel restrictions on Americans but are affected by many other controls which Russia maintains on all its citizens.

LIBRARY OF CONGRESS, LEGISLATIVE REFERENCE SERVICE, Washington, D. C., January 24, 1955. To: Hon. JOHN W. McCORMACK.

From: American Law Division. Subject: Foreign Agents Registration Act.

Reference is made to your letter of January 16, 1955, in which you requested a brief on the Foreign Agents Registration Act showing what cases it covers and how it affects Americans employed by Russia or a Russian agency who travel in areas from which Russian nationals are excluded.

The Foreign Agents Registration Act (U. S. C. 22: 611-621) is aimed at foreign agents who carry on propaganda and kindred activities in the United States. On the theory that full disclosure of the facts is the best method of combating such activity, the act requires foreign agents to register with the Department of Justice and give detailed information about themselves, their principals, and their activities. It also requires them to label political propaganda sent through the mails or channels of interstate commerce for disemination among two or more persons. It does not impose travel controls on such agents.

The act applies generally to persons in the United States whether citizens or aliens, who are agents of a foreign principal. However, persons engaged only in legitimate diplo-matic, humanitarian, religious, scholastic, academic artistic, scientific or private commercial activities, or agents of a country whose defense the President deems vital to the defense of the United States, are exempt from the registration requirements. Offi-cials of foreign governments who are not Public relations counsel, publicity agents. Information-service employees or citizens of the United States, are also exempt in some circumstances.

The term "foreign principal" includes not only a foreign government or a foreign political party, but also foreign individuals and organizations, domestic organizations subsidized by a foreign principal and individuals affiliated with, or controlled or subsidized by, a foreign government or foreign political Party. A person in the United States who acts as public-relations counsel, publicity agent, information-service employee, servant, agent or attorney of, or who collects infor-mation for, a foreign principal, or who accepts compensation from, or collects funds, for, such a principal, or acts under its orders, is a foreign agent within the purview of the act. So also is a member of the Armed Forces, an officer or employee of a foreign country, and a person trained in espionage or sabotage by a foreign country or foreign political party. Domestic news agencies and publications engaged solely in bona fide news or journalistic activities are not covered.

Whether particular persons are governed by the act depends on the facts concerning their status and employment. Citizens of the United States who are employed by the Russian News Agency, Tass, may be subject to the registration and propaganda-labeling requirements of the law.

MARY LOUISE RAMSEY.

American Law Division. JANUARY 24, 1955.

The Generals Invade Politics

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Wednesday, January 26, 1955

Mr. LEHMAN. Mr. President, in the February 1955 issue of that sparkling publication, the Democratic Digest, there appears a very interesting article entitled "The Generals Invade Politics." I ask unanimous consent that this interesting discussion be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GENERALS INVADE POLITICS

Is a new political party beginning to emerge in the United States?

No one can be sure, but this much seems certain, if a third party actually does develop, it will be rigidly and extremely conservative, it will fluctuate between isolationism and so-called preventive war, and its inner circle will be full of military celebrities.

It is this last development—the now unconcealed appearance of many famed generals and admirals in the ranks of the radical right-which has aroused fresh interest in the possibility of a new party. The movement has all the necessary attributes: leadership, money, and a common denominator of extremism.

Though these extremists have no official name as yet, they have been called "Americrats," in deference to their violent and often

reckless superpatriotism.

But with or without an official name, they are on the march, holding rallies, circulating petitions, forming organizations. Their political spokesmen (McCarthy, Knowland, Jenner, Dirksen) are relentlessly trying to marshall public support by intemperate speeches and accusations which keep their opinions on page No. 1.

Not since the late 1930's, when the New Deal and the threat of a Second World War aroused bitter opposition, have the forces of reaction been as vocal as they are today.

Many Americans only began to realize the

part played by the military when two Right Wing organizations started to roll.

"For America," the first of these, was formed last May at a luncheon given by Col. Robert R. McCormick, publisher of the Chi-cago Tribune. Its stated purpose is to promote peace and "Americanism" and oppose "super-internationalism, interventionism, one-worldism, and communism."

Its early flavor was provided by such pre-World War II isolationists as former Sen. Burton K. Wheeler of Montana, former Congressman Hamilton Fish of New York, and Gen. Robert E. Wood, retired chairman of Sears, Roebuck & Co. They were joined in the early days by Clarence Manion, who was fired by Mr. Eisenhower last winter from the Intergovernmental Relations Commission because he crusaded for the Bricker amendment to reduce Presidential powers.

By November, the Colonel, an outspoken right-wing Republican, had receded into the background in order to emphasize the "nonpartisan" nature of the group. As the Christian Science Monitor described it:

"For America is seeking to reach across party lines and bring together all persons who are 'united in their distrust of Communists, socialists, internationalists, and New

The group did not fly its military colors until a few days after the November election when the names of 43 new National

Policy Committee members were made public. The military part of the roster features: Gen. Mark W. Clark, former Commander in

Chief of the U. N. forces in Korea, and commanding General of the U.S. Army Forces in the Far East;

Gen. A. C. Wedemeyer, Commander of the United States forces in China, 1944 46, and Chief of Staff to Generalissimo Chiang Kaishek:

Gen. James A. Van Fleet, also a Com-mander of the U. N. forces in Korea. Gen. George E. Stratemeyer, commanding general of the United States Air Force in the China theater in 1945, and Commander of the Far East Air Force in Korea in 1950.

Brig. Gen. Bonner Fellers, who directed Gen. Douglas MacArthur's psychological warfare against the Japanese. (Between 1948 and 1952 he was national defense consultant for the Republican National Committee.)

General Fellers, who was named executive director of For America late in November, believes that "we should slow down on our foreign aid, withdraw our troops from Eu-rope, pare down on Army and Navy expendi-tures, and build up our Air Force." He wants 10 million members and \$1 1/4 million to put his program over the top.

Two days after For America published its policy committee membership, a second organization, Ten Million Americans Mobilizing for Justice, announced a 10-day nationwide petition drive against the censure of

Senator McCarthy.

Insiders insisted the two organizations were not connected, despite the fact that General Stratemeyer was named chairman of Ten Million Americans, and General Van Fleet was named a vice chairman. One Eisenhower Republican called it a coalition of America Firsters, soreheads, and Mac-Arthur admirals.

At the time of the announcement, General Stratemeyer was down in Florida with heart trouble. But he gathered enough strength to urge the nonpolitical and nonpartisan But he gathered enough strength group to show "the real sentiment of the great majority of Americans" against censuring McCarthy.

The petition itself said that censure "could be helpful only to the Communists and their Soviet masters." It blamed opposition to McCarthy on "the Communists and their un-American cohorts * * * willing stooges and blind but innocent dupes," and made it plain that in their opinion anyone who opposed McCarthy also opposed America.

Chief of staff for the drive was Rear Adm. John G. Crommelin, who was retired as a captain from the Navy in 1950 for bitterly and publicly opposing unification of the Armed Forces. The admiral first met Mc-Armed Forces. The admiral first met Mc-CARTHY when the Senator offered to serve as his legal counsel if he was court martialed for his opposition, which he wasn't.

Immediately after his forced retirement, Crommelin ran for the Senate in his home State of Alabama, where he was listed on the ticket as an "Alabama Democrat." Said the Atlanta Constitution: "The people of his native State—being familiar with him—turned him down resoundingly."

Two other military figures in addition to General Van Fleet were named as vice chairmen of the petition drive. They were Adm. William H. Standley, former Chief of Naval Operations and Ambassador to the Soviet Union, and Lt. Gen. Pedro A. del Valle, retired, who commanded the 1st Marine Division at Okinawa.

Despite their efforts, Senator McCarthy was condemned by 67 Senators for contempt of a Senate subcommittee investigating his conduct, for abuse of its members, and for his insults to the Senate itself during the censure proceedings. Democrats voted unanimously against the Scnator, but Republicans, some of whom may have been influenced by the petitioners, split almost evenly-22 for censure; 24 against.

How had the military men become so deeply involved, not only in the McCarthy movement but with the right-wing forces generally?

Over and over again, the military men have been giving voice to their political sus-

General Stratemeyer told the Jenner committee last summer that "We weren't allowed to win" the war in Korea. He has warned against "some hidden force or some hidden power or something that is influencing our people" from its entrenched position in the Government's executive branch.

Admiral Standley is also alarmed by the hidden force which has wielded power over the last 20 years regardless of the party in

power.

General Clark likewise implied to the Jenner committee that traitors or dupes blocked an American victory in Korea. He felt there was some influence at work some place when the decision was made not to bomb Manchuria. "I do not know who was making our foreign policy," he said.

On another occasion he suggested that

the postwar rush to bring the boys home from the battlefronts in 1945 was not prompted by wives, mothers, sweethearts, and the men themselves. Instead, "Com-munists had been planted in our army to sap the power of the United States through well conceived campaigns to demobilize too

Admiral Crommelin is also upset by this

alleged mysterious hidden force.

Maj. George Racey Jordan (retired), co-ordinator of operations at TMA's New York headquarters, has offered his solution for the country's troubles: "Some fellows from West who haven't been infected with this type of thing may have to come East and shoot a few people." (The major has also warned citizens that fluoridation of public water supplies is a Russian plot.)

The Louisville Courier-Journal took note of the nagging (and undocumented) inference in General Clark's testimony that those who opposed and overrode his views were

traitors or dupes.

By quoting liberally from his book, From the Danube To the Yalu, which was published last April, this newspaper showed that only last spring Clark saw nothing mysterious about the identity of the policymakers, on Korea at least, and nothing simple about the problems those policy-makers faced. Not once in his book did he equate differences of opinion with treason or stupidity.

These generals are buttressed by other military celebrities, who have not formally joined any of the new organizations, but whose views are often just as extreme and just as political. General MacArthur, for example, was a hero of the Old Guard camp at the 1952 Republican convention, and a

dark horse candidate himself.

The general's former staff has also been active on the propaganda front. Only last summer the country heard from Maj. Gen. Charles A. Willoughby, MacArthur's intelligence chief during World War II and the early Korean war. He urged the United States and its allies to use A-bombs and H-bombs to blast "a belt of scorched earth' across the Communists' path in Asia.

How strong have the rightwingers now become? Columnist Doris Fleeson is inclined to think they will stay within the Republican Party and exercise "a veto power against actions and people they don't like." They will do this, she says, by branding the unwanted man or policy as pro-Communist and anti-American.

This was exactly McCarthy's line after his censure by the Senate. He attacked the President for weakness in fighting Communists and apologized to the voters for having told them in 1952 that Ike would conduct "a vigorous, forceful fight against Commu-

Herald Tribune Columnist Roscoe Drummond, who often seems to know what the administration is thinking, said even before the McCarry attack that the President is at a turning point. Eisenhower is now "fully convinced," says Drummond, that if the Old Guard is determined to fight him, then "it will be better for the country, better for the Government, and better for the Republican Party as a whole if they make a clean break and establish their own party."

This attitude may give an important impetus to the third-party move. Now that the Americasts are pulling hard toward the right, if the President starts pushing them in the same direction, there might easily be

a sudden split.

This ties in with the analysis of William S. White, of the New York Times. He has

"There are many signs, quite apart from the issue called McCarthyism, that the rightwingers are reaching a point of ultimate rebellion against the Republican left and center-a point where action succeeds talk.

"The political events of the last few months increasingly indicate that another third party for 1956 is by no means inconceivable-should President Eisenhower heed the appeals of his followers that he run again.

TV Towers Hazard to Aviation

EXTENSION OF REMARKS OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Aviation Age:

TV TOWERS HAZARD TO AVIATION (By Bill Deming)

(The writer of this article is a television and film producer. He also holds a commer-cial pilot's license and is a Navy Reserve with 27 years' flight experience. He wrote this article for AvAge on the basis of talks with airline pilots and his own experience in flying.)

We have three seats for you. One in the cockpit, one on the aisle, and one on the divan.

For example, this seat you occupy with your wife by your side. Junior's curled up behind, asleep. You and your family are on your way home. It's been a happy weekend visiting grandma in a nearby State

When you began this trip after the family dinner, the afternoon sun was warm and bright, the sky cloudless. For the past 15 minutes, however, the change has been dra-Rain slashes down and that lightning stabbing off to the left emphasizes the gathering darkness. You are grateful for the white ribbon of highway that lies ahead. straight as the proverbial arrow.

But this is not a highway for your wheels. It lies 500 feet below the small, rented plane in which you and your wife and boy are flying home. Like most other planes in this class, it is without blind flying instruments and if it did have them, you are not too sure of your own instrument flight ability. instrument flight requires constant practice.

As the storm increases and there are long moments when the highway ahead disappears in low clouds that join the rain in reducing your visibility, you push lower. You must not lose sight of that road home. The lightning is closer now and the little plane begins to bounce around in the increasingly turbulent air. You suggest to your wife that junior be awakened and his seat belt fastened. Your eyes are on the road ahead.

ANOTHER SEAT

There's another seat not too far away we'd like you to try. It is on the aisle and you nod affirmatively to the stewardess as she comes by checking seat belts. Rain streaks the rectangular windows and the big airliner pitches with a ponderous rolling movement. You look around to catch the stewardess You would read but the light doesn't work.

Beyond your sight in the cockpit ahead, the pilots are struggling with the same prob-The plane's electrical power has failed and the pilot is without the guiding radio signals required to complete his flight along the airway, down through the clouds and to the terminal airport according to normal plan. He turns to the copilot who is on his knees in the radio compartment and shouts, "Keep looking, Paul, I'm going down . . we'll go in underneath."

And now this seat on the divan. This seat is in the comfort of your own livingroom. Relaxed, you push off your shoes and lean back to enjoy You Bet Your Life. Television comic Groucho Marx is at his best tonight and you join the unseen audience in a deep laugh as a luckless contestant tries to match wits with the master of satire.

IMAGE DISAPPEARS

Quite suddenly the image disappears from your screen and only a gentle hiss replaces the program sound. For a few minutes you wait for the technicians to correct the problem and then, tentatively, twist the knob to another channel to test your own set's operation. The other channel comes in clear-irritably you return to the blank screen-They'd better get it fixed in time for Dragnet.

But you do miss Dragnet and the late news supplies the answer. A low-flying plane crashed into the tall television tower on the edge of town. All passengers were killed and the tower demolished.

Your very personal participation in this drama is assured with mathematical precision. You might be among the 573,000 holders of pilots licenses, you could easily be numbered in the more than 30 million people who flew on the Nation's airlines last year, or be among the close to 100 million in the coast to coast television audience. In one group or the other, there is a seat for you.

HUNDREDS OF TV MASTS

Conscious of the economic reasons behind the raising of literally hundreds of television masts close to or exceeding 1,000 feet in height all over the country (1 tower 2,000 feet high is being considered) we have for some time wondered what the airline pilots might think of these obvious hazards to safe flight.

The answer we received just about boiled the coffee. Cleaned up for home consumption, it paraphrases into, "There are no more amateurs." These men said definitely that due to the widespread TV tower dangers, flying under bad weather flight conditions today is a two-man job. One flies the plane and the other navigates.

But of course, tubes do burn out-fuses blow. Then what?

We checked with officials of the Civil Aeronautics Authority at Idlewild International Airport. Not only are there no periodic danger warnings published, but a senior airline pilot confirmed that only by word-ofmouth did the Nation's airline crews learn of these deadly structures.

MEASUREMENT OF SICILI.

No one ever flies very long under exclusively fair skies. Darkness, rain, snow, or fell inevitably enter to some degree. Our skill is measured in the correctness of our deci-Our skill sion to go on through and try to complete our flight or land safely and wait for a weather break. Airlines with their incomparable equipment and superbly trained pilots complete flights under conditions few prudent private fliers would be qualified to venture into.

Yet, the airline flight rules are studded with safety regulations and minimums that keep them on the ground or send flights to alternate airports under unsafe conditions.

But how about the private flier? The amateur about whom this essay was origi-

nally planned?

Well, CAA sets certain flight rules and then leaves it up to him entirely. Penalties for the rule infractions are trivial. A private flier may take off and attempt to fly through weather that has all airline traffic grounded. It's his life and his plane. But is this entirely so? Headlines often testify that his innocent and trusting passengers share the death into which he flies them all.

HAZARDS WILL BE ERECTED

We must accept the fact that channels for 2,000 television stations in all of the 48 States have been allocated. Almost that number of tall TV towers eventually will be built to become aviation hazards.

Both the CAA and the airlines are working on hazard-marking schemes, recommending 24 hour lighting, alternate solid banding of the towers, highly visible painting, the hanging of large Christmas tree balls on the spread of guy wires that usually surround the masts and ground marking in the area.

There should be no dragging of feet in this important marking and immediate FCC directives to television tower operators should order these safety precautions. No less than maximum hazard marking is imperative

No safety recommendations could stand Without emphasizing the urgency of providing every pilot who flies with current dangerous obstruction warnings. service is not provided to the airlines today is negligent, to say the least.

It is obvious that a terribly dangerous lack of practicable liaison exists between the CAA which governs aviation and the FCC, the radio and television licensing body. was illustrated during our talk with the Idlewild CAA Aids and Hazards Specialist. We were able to show him a listing of a 940foot television tower authorized by the FCC for erection in his area, about which he had heard nothing.

ALL REQUIRED DATA

The CAA doesn't seem to be aware, but the television industry is served by a publication (Television Factbook, published by Television Digest, Wyatt Building, Washington, D. C.) which provides, on a biyearly basis supplemented by weekly issues to subscribers, all of the warning information re-Quired by pilots to maintain their charts currently.

Each published specification lists the exact geographical location of every existing or ap-Proved television tower in degrees, minutes, and seconds of latitude and longitude. This permits the exact plotting of every hazard. In addition, the height of the tower above the ground, above the average surrounding terrain and, most important, above sea level is shown. This information, plus adequate tower marking, should greatly lessen any danger to the airlines who normally fly only on designated airways under complete ground supervision.

It is the private pilot who needs urgent help. Close to 90,000 private aircraft are available to more than half a million licensed pilots in the United States. We have no intention of specifying the new laws required on both National and State levels to legislate safety into private flying in the face of the growing number of aeronautical hazards offered by tall television towers.

NEW RULES OF SAFETY

However, it must be obvious that the present unrestricted right to fly in any weather conditions, regardless of a private pilot's proved instrument flight qualifications or his plane's equipment, must be quickly tied

to new rules of safety.

Remembering the airline pilot's admonition that there are no more amateurs, we realize that if these hundreds of thousands of itinerant pilots are to be saved from themselves, new laws are needed urgently-for the towers are going up now.

As this is written, the comparatively few television towers now standing have cost 31 lives. An airliner with 25 aboard and two private planes have struck towers with no survivors in any instance. Unless adequate marking, identifying, and legal action is taken immediately by all concerned, it may be expected that this total will be multiplied many times in the near future.

One of those seats may be yours.

Live Free or Die

EXTENSION OF REMARKS OF

HON. RICHARD W. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

HOFFMAN of Illinois, Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by Dr. Eugene Youngert, the superintendent of the Oak Park-River Forest high school in Oak Park, Ill., before a recent meeting of the Oak Park Rotary Club. An honored guest at the meeting was Mr. Stafford E. D. Barff, O. B. E., director of British Information Services in Chicago, Ill.; the speech was recorded so that it might be reproduced at a meeting of the Wandsworth Rotary Club in the suburbs of London, England.

It is a privilege to have an opportunity to call to the attention of my colleagues Dr. Youngert's remarks concerning the religious and philosophical basis for the freedoms which we in this country enjoy today. It is encouraging to know that the secondary education of the young people of the Oak Park-River Forest area is under the supervision of a man so thoroughly imbued with the knowledge of democratic principles and so thoroughly capable of arousing young men and women to devotion to those principles. I heartily commend his address to the attention of my colleagues:

LIVE FREE OR DIE

The title of the address that I am making today is "Live Free or Die." It is the motto of one of the States of my country. I choose to make this particular address because I think it covers the most important subject in the world, and the most important subject with which Rotarians of our two countries can cooperatively concern themselves as individuals in the present perilous condition of world affairs. Let me state as a subheading what it is that I am really talking about. Here it is:

The critical necessity that we must stick together whose common use of the English language betokens common origin of ethical and political ideals; that we must stick together and not allow ourselves to be driven apart if we are to have a chance to establish a lasting peace in our world. We are the inheritors of a religious ethic and a political philosophy that make freemen, and would be traitors to our great cause of liberty were we to allow that cause to fail, because we failed to stand united in its defense:

That there is a titanic struggle of ideologic nature in our world everyone knows. But nowhere near all realize that on both sides of the struggle there are men who honestly believe each that his side is right. It is abhorrent to us that men can honestly believe that our quality of individual freedom is wrong and that their idea of the submergence of the individual in and for the mass is right. It would be better for us were all of our opponents dishonest in their thinking, for then victory for our cause would be easier to attain. Men do not fight to the death for mere expediency. But they do fight to the death for ideas that they honestly hold, no matter how wrong we may think and know those ideas to be. There are scoundrels on the other side who seek to make themselves tyrannical dictators of the world, and there are countless millions in a condition worse than slavery; but also there are some on the other side who are the product of philosophies as old as philosophy itself who believe our insistence upon the worth and dignity of the individual to be error and weakness and who give allegiance to the notion that the collective state is the rightful master of men. There is the struggle. "Live free or die" is a motto for freemen, but it is at the same time the challenge cast against us by men who would make us slaves, because they do not believe in liberty. Unfortunately, in the struggle, we do not have on our side an overwhelming majority of the inhabitants of the earth.

We who are the English speaking countries-for whom English is our first language and our common means of communicationwe are the largest bloc in the world championing the cause of the individual man as against the encroachment of an oppressive all powerful state. We are the rallying point for free men everywhere. We are that champion and that rallying point because of a glorious inheritance from ancestors who through centuries cast off the yoke tyranny and established the citizenry as the makers and masters of the state. I call those men ancestors not necessarily in the sense of national, but rather of spiritual descent. Let me make myself my illustration. By national descent, I am a Swede. By birth I am a citizen of the United States. But by political descent I am the child of men who held high the Judeo-Christian ethic and who in that spirit from Magna Charta through the 400 years to the Petition and the Bill of Rights, and to this day, created a state built upon the ideal of the worth and dignity of individual men and upon the political technique of the dominant representation of these men in the machinery of the state. So are all of us who are the English speaking people of the earth: People from many lands and climes and folk, but one in the ethic and the political philosophy that are implicit in the langauge that we use. If ever we needed to be one, it is now. If ever it was true that "united we stand, divided we fall," it is now. We must stand united, for there is no alternative in which we can serve the great need of our time.

Well, let's get on. What is it that we must stand united on? What is it that makes the English speaking people champions of the liberties that make men free? What is our side, that we must be prepared to live

and die for it? Let's see, and in the seeing, let's contemplate how gloriously it serves the need of man in these crisis years.

What we are talking about is, of course, the contribution of the English-speaking countries to western culture. I suspect it has been well said that western culture is compounded of these four essentials: (1) the Judeo-Christian ethic; (2) the Greek intellectual process; (3) the Roman genius for order and law; (4) the Englishman's concern-for the liberties of the individual citizen, and the consequent British development of the representational form of govern-With no derogation meant to the contributions of the Greeks and the Romans—they were highly important—I want to spend the rest of my time on the first and fourth of the essentials that I mentioned, the religious ethic and the political philosophy that envisage the uniquely exalted state of the individual person in a social situation. For these are the heart of our side of the appalling struggle that rapidly is making of the world two armed camps.

My remarks about the religious ethic will be confined to five of the social ideals of Judeo-Christian ethic that have been basic as intellectual concepts in the evolution of the present attitude of the Englishspeaking world toward man and his govern-Please understand that I do not ments. mean that everyone accepts as his personal religious conviction this Judeo-Christian ethic, although I want to say that I do, personally. But, inasmuch as this ethic been warp and woof of the thinking of our leaders for hundreds of years, even those inherit it who reject it, just as a son can inherit who rejects his own father. That ethic has shaped the social and political thought of the English-speaking world.

At the heart of the Judeo-Christian ethic is the belief that man is created in God's image and is son of God. The natural conclusion of that belief is the insistence that each individual has worth in and of himself, and that he is not a mere dot in the mass. Such an ideal is anathema to any totali-tarian order, but it is lifeblood to liberty. Furthermore, the extent to which we allow it to become weakened is the measure of the extent of the weakening of liberty itself.

Secondly, as image and son of God, man is encompassed in a brotherhood that includes his fellowmen. For, denial of that brotherhood is denial of the divine sonship that is proclaimed by the ethic. That idea, is anathema to a totalitarian order, which can brook no feeling of brotherhood that goes beyond the confines of the state; but it is an idea that is lifeblood to democracy. Again, the extent to which brotherhood is the rule among men is the measure of the extent of the genuine fulfilment of the democratic hope.

Thirdly, the quality of the principles of conduct among men is evidence of the quality of the general ideal that we call integrity. In the Judeo-Christian ethic, the principles of enjoined conduct are those that represent integrity of a high degree, and the ideals they teach bear some of the noblest names known to man: truth, honor, service, beauty, justice, mercy, courage, temperance, sympathy, compassion, kindliness, love. and democracy cannot exist unless these are the ideals of social conscience, no matter how they may fail in practice because of the weaknesses of men. Totalitarianism, on the other hand, cannot exist in their presence, for in totalitarianism the sentiment of man for man must be completely subordinate to that of the subservience of man to his state.

Fourthly, freedom of mind and spirit are the essence of liberty and democracy—not the pseudo freedom of license, but the re-sponsible freedom of brothers that respects the rights and needs of others as it does those of self. It is the glory of the Judeo-Christian ethic that that freedom stands

at the apex of belief. One accepts or rejects God and Christ as he wills, for enforced belief is abhorrent to the thought and will of God as presented in the ethic of the Christian and the Jew. Where freedom is present, totalitarianism cannot exist; where it suffers attrition, liberty and democracy languish on the vine.

Fifthly, in the Judeo-Christian ethic, there is reverence for life as creation and gift of God. Our century is brutal-terribly brutal—and often death is treated as a mere statistic. Yet, under the drive of the ethic, the goal remains the preservation of life under conditions that will permit its unfolding according to the design of its Creator. This reverence for the life of each individual as son of God is essential to liberty and democracy; but a totalitarian order that would so exalt the individual would by that act point its own doom.

Here, then, are five social ideals that grew from religious concepts dear to leaders who century after century shaped the social be-liefs and political machinery of the English speaking world. There were other ideals, for this enumeration is not all-inclusive; but these are sufficient for illustration. They are under attack in many parts of the world today, as materialistic paganism seeks to substitute for them a theory of conduct that eliminates consideration of the welfare of the individual in favor only of the total whole. The extent to which we dedicate ourselves to their survival in the strife will be the measure of the extent to which liberty and democracy will survive. I, for one, believe that their survival is intimately tied in with the survival of the ethic that gave them birth.

I turn now to the political area of our side in world conflict, although I recognize that the political is but the extension of the philosophical into the realm of the practical. What, then, is common in the political heritage of the English speaking world?

We start with 1215 A. D., on an island in the Thames. There King John at the demand of powerful subjects signed Magna A simple act? No; for behind it lay a relentless struggle by the people against the absolute rule of kings. A simple act? Rather, a prophetic act, for it unleashed an idea that by 1689 so crystallized liberty as the rightful possession of the people that not since 1689 have the inalienable rights of Englishmen been successfully questioned by king or queen.

Was liberty achieved on the day after Magna Carta was signed? No, and certainly not for the rank and file of the people. But Magna Carta was a starting point, and it presaged 474 of the most thrilling and fruitful years that have ever marked man's upward reach to be free. Foundation stone it was of English liberty; but foundation stone it was also of the liberty of the people of the United States and of people everywhere in the world who spurn the tyrant's hand and govern themselves as freemen should.

en though Magna Carta was only starting point, there are countries behind the various obscuring curtains today that would make almost immeasurable progress if they could gain in 1954 what Magna Carta gave almost 750 years ago.

Back and forth went the struggle in England between rulers and people until in 1628 the people at the risk of the lives of their leaders wrung from Charles I his approval of the Petition of Rights and his agreement to redress wrongs and grant new freedoms along the road of liberty.

Then, the rule of another monarch having proved intolerable, the people forced his abdication and invited William and Mary to rule, upon their acceptance of the Bill of Rights as English law in 1689.

The story of those 474 years should be engraved upon the minds and hearts of all who live in the English-speaking world.

And we should remember that man after man after man perished in his resistance to the throne; that blood, sweat, and tears was not only the promise of Churchill but was the lot of countless brave souls who from Magna Carta on brought forth the structure of democracy that is the assurance of liberty in the years in which we live.

But, say some, what did come from those days to make men free? Hear, then, from the record, and think how because we so take our blessings for granted, we forget that without them we, too, would wear the slave's collar as multitudes do wherever liberty's light is out. What did come? Listen: prayer-

fully and gratefully.

The ruler must rule according to the desires of the people; Government is a contract between the ruler and the people, that neither can break without accountability; the power of the ruler is restricted by what law permits and forbids; martial law may no longer be a tool for use against the people at the whim of the sovereign; the right to quarter troops in private homes is sharply limited: the rights of the people are stated definitely in the law; laws shall be enacted by the representatives of the people in parliament assembled; the right of the people to bear arms is established by law; taxes may be levied only by the representatives of the people in parliament assembled; free elections and frequent meetings of the representatives of the people must be held: person's property may not be taken for public use except by due process of law; persons may not be held in jail without a presentment of the cause: bills of attainder are illegal; there shall not be ex post facto laws; the ideas of freedom of speech, assembly, and petition are introduced; there shall be trial by jury; there shall be freedom from arbitrary imprisonment; there shall be no unusual punishment; there shall be no excessive bail. That is not the whole of the record, but is it not enough to stir us to protect our liberty against totalitarians who would hurl us back into the dark from which Magna Charta lighted our way?

Men of Oak Park, of River Forest, of the United States: think of our own Constitution of 1789. It was no concession from a ruler, but the deliberate creation of a sovereign people, limiting and defining the powers of their Government in order to make their liberties secure. Thank God, that in the days in which our Nation was being formed, we had leaders who knew almost page by page those 474 glorious years from 1215 to 1689. so that they could write down in the law that governs us what had been wrested for all men, from the arbitrary king. And thank God that we had other men who so distrusted the corrupting influence of absolute power that they demanded in the first 10 amendments to our Constitution the proclamation of rights as specific as those in the bill of 1689, and almost in the very same words. Did it not seem a moment ago as though I were reading from our own Constitution and

our own Bill of Rights?

So it is wherever we who speak the English language have made our homes. So it is when men of other languages have read the record and decided to rear the structure of liberty for themselves and those they love. So it is wherever the fundamental concept of the worth and dignity of the individual man dominates the thought of man.

I repeat, we who are the English-speaking countries are the largest bloc in the world championing the cause of the individual man as against the encroachment of an oppressive all-powerful state. We are the rallying point for freemen everywhere. We are that because we are the inheritors of a religious ethic and a political philosophy that make men free and of a political technique

that keeps men free.

The question in the world struggle is whether our ideal of liberty shall live on of go down to defeat at the hand of dictatorial force. The question is not of our own choosing. It is forced upon us. The question is whether we will defend to the uttermost the liberty won so hardly by heroes who knew full well the evil they sought to escape. The question is whether we know how easily liberty can be lost, and that once lost it can be rewon only by the long hard road by which it was first won.

The answer is that we must and will defend our liberty. But to do that we of the English-speaking countries must stick together in our common cause. Only such a united front will win lasting and worthwhile peace for the world. We must allow nothing—literally, nothing—to drive us apart. Knowing what is at stake, we must stand as one people and face the future, not unconcerned but undismayed.

Gentlemen, the answer to the question is,

"Live free or die."

Citizen Interest in Fine Arts Legislation

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith the text of part of a radio broadcast made by Mr. Patrick Hayes on Sunday, January 23, 1955, over station WGMS:

The next 5 days are of particular interest and of some significance in the musical life of Washington. The question has been raised from time to time when the subject of an opera house or music center has been under discussion, as to whether there is a true and real need for one, and as to whether it would be put to full use once built. If you will look at the music pages this morning in the amusement sections you will see a program of festival proportions scheduled for the next 5 days: It starts today at 3 p. m. with a recital by Robert Casadesus, Which is close to being sold out, but with seats still available and the hall box office how open. Tomorrow night a great ballet company from England, London's Festival Ballet, opens a 3 day engagement at the Capitol Theater, evening performances 8:30, Wednesday matinee at 2:30. Tuesday evening, the Philadelphia Orchestra come to Constitution Hall for one of its regular concerts on its Washington series, and bringing Heitor Villa-Lobos as guest conductor, and Nicanor Zabaleta, harpist, in an all Villa-Lobos program. Wednesday evening the distinguished Dame Myra Hess is soloist with the National Symphony Orchestra in Constitution Hall, and the occasion brings Dr. Howard Mitchell back to the podium there after a 4 week flying tour of Europe as guest conductor. Thursday afternoon the orchestra and Dame Myra appear at Lisher Auditorium at 2:30, repeating Wednesday night's performance.

These are the highlights—there are 18 musical events worthy of your attention this week, and this is 6 or 7 under the winter average.

When the argument might again be stated as to whether there is enough musical activity in Washington to warrant the big and expensive step of erecting special buildings for music, ballet, and opera, it will be a convincing point that during these 5 days there were public performances by Robert

Casadesus, London's Festival Ballet, Villa-Lobos, Myra Hess, the Philadelphia Orchestra, the National Symphony Orchestra—and all well attended.

Citizen interest is beginning to emerge in support of the bills before Congress on fine arts legislation. On Tuesday, February 1, at 8:30, there will be a public meeting the fifth-floor auditorium of the old District Building, 14th and E Streets NW. The new Congressman from Trenton, N. J., Frank THOMPSON, JR., will speak on his bill which he introduced on the first day of the new session of Congress, to establish a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an inaugural hall of Presidents, and a music, fine arts, and mass communications center—this last applies to facilities for broadcasting by radio and TV of many of the present new music auditorium. Twenty-five thousand dollars is all that Mr. Thompson asks for in his bill, to get something started, to get the project off the ground, or at least out of the hopper. On Tuesday, February 1, the speakers will include F. Joseph Donohue, former District Commissioner; William H. Press, executive vice president of the Washington Board of Trade; Lee Callison, of the Washington office of Webb & Knapp, local representatives for Zeckendorf; and John R. Searles, Jr., executive director of the District of Columbia Redevelopment Land Agency. Master of ceremonies and moderator will be Melvin D. Hildreth, a leading spokesman in our civic life for music and theater and their related fine arts.

This is a public meeting, and much attention will be paid to it. The press will cover. It would be important to have a large crowd in attendance, as a sign of substantial interest, and it goes without saying that it will be a stimulating evening for those who do attend. The panel is composed of quite a battery of experts, all of whom live close to the nerve center of Washington life. The meeting has been arranged by the women's committee of the Capital Opera Association, Mrs. Hortense L. Amram. chairman.

I mentioned the modest appropriation which Congressman Thompson requests to get the ball rolling-\$25,000. In the hearings last June before the Howell subcommittee, it became clear that \$5 million would be a minimum figure to get started a na-tional arts program; that it would be a long indoctrination process to get this through Congress and the White House; but that some start should be made, if only by appointment of a commission of fine arts for study and research. Mr. THOMPSON has wisely followed this reasoning, and such a bill has a chance. The impact will be tre-mendous when Congress recognizes the fine arts in this manner. However, the larger aim is not lost sight of. Another fine-artsminded Congressman, EMANUEL CELLER, of New York City, has introduced a bill establish a program of grants to States for the development of fine arts programs and projects-this was the essence of the Howell bill in the last Congress, a truly national arts program of activity, in cooperation with the States and cities of the Nation.

The language of the Celler bill is eloquent. It begins:

"The Congress hereby finds that great contributions can be and are being made by the fine arts to the morale, health, and general welfare of the Nation. The Congress, recognizing the fact that man cannot live by bread alone, further finds that an education which includes the humanities is essential to political wisdom, and that in the world of today, as we face the persistent problems of men and defend and attempt to add stature to the ideals and principles of freemen and of free institutions, the relevance of the humanities to our task is un-

questionable, for it is the humanities, more than science or statistics, which provides the real answer to communism.

"(b) It is therefore declared to be the policy of the Congress and the purpose of this act (1) to assist the several States in developing projects and programs in the fine arts in order to serve better the needs of the people of the United States, and to encourage the growth and development of the fine arts throughout the United States for the purpose of developing greater knowledge. understanding, and practice of the fine arts;
(2) to establish in the executive branch of the Government a Federal agency to advise and cooperate with public and private agencies and organizations operating in the field of the fine arts on all matters directly or indirectly concerned with these objects, and to establish an advisory body of experts eminent in the fine arts to assist such agency in its activities; (3) to facilitate the formulation of plans for the development of the fine arts in time of war, depression, or other national emergency, in order to prevent our cultural institutions from shrinking in importance or passing out of existence and to avoid the often deplorable standards exemplified by art projects of Federal agencies at such times in the past, and in order to offset declining employment by providing for Federal assistance to States and local governments in projects for the construction, alteration, expansion, and repair of public facilities and for the development of cultural programs; (4) to integrate, coordinate, improve, and raise the standards of the fine arts programs which are presently being carried on in more than 15 Federal departments and agencies; (5) to reaffirm our faith in fundamental human rights, and in the dignity and worth of the human person; to fortify and preserve the principles of democracy, personal freedom, and political liberty, the constitutional traditions, and the rule of law, which are our heritage; and to strengthen, with these aims in view, the social and cultural ties which unite us as a people and with the free nations of the world, with our allies, and with other States inspired by the same ideals and animated by a like determination to resist aggression; (6) to stimulate private, business, and foundation giving to the liberal and fine arts; (7) to protect and preserve our artistic and historic inheritance through the pro-tection and restoration of historic monuments, houses, buildings, and sections of our cities; and (8) to destroy finally the Communist myth that Americans are insensitive, materialistic barbarians."

The bill then goes on for 12 pages of specifications and detail, portraying a great potential in America for culture and the fine arts.

Thus, early in January 1955, and early in the life of the new Congress, there is immediate and substantial activity in behalf of the fine arts. There is much to be done by many local people—first we must pay attention and display interest. We cannot expect Congress to come down the street, put up a building, and then say, citizens, here it is. There must be citizen interest shown now and continuously. There must be local leadership, such as is being shown on Tuesday, February 1, at the the District Building meeting. All this will enliven the atmosphere and bring about a favorable climate of opinion for what is proposed. And not the least possibility is that in the course of this activity and display of interest, a wealthy family or foundation might elect to come forward with a major grant of money to establish a fine arts center here in the Nation's Capital. I urge you now to note on your calendar February 1, old District Building at 8:30, for this first important meeting on the subject, Washington's Role in Cultural Affairs.

Great Lakes Water Diversion

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I wish to commend to the attention and careful study of the membership of this body an informative memorandum prepared by Mr. H. C. Brockel, municipal port director of Milwaukee, dealing with the legal background of the Chicago water diversion controversy.

Because there is a possibility that attempts will be made to revive this controversy during the present Congress, I believe that Mr. Brockel's memorandum, submitted originally to the mayor of the city of Milwaukee, merits our careful consideration:

JANUARY 21, 1955.

HOD. FRANK P. ZEIDLER.

Mayor, City of Milwaukee.

DEAR MR. MAYOR: As requested, we are glad to send you herewith a memorandum concerning the legal background of the Chicago water diversion controversy, which apparently will be revived again in this session of Congress, despite Presidential veto last August of H. R. 3300 which, if enacted, would have authorized an additional 1,000 cubic second-feet of diversion from Lake Michigan through the Chicago Sanitary Canal.

The water diversion controversy arose from the circumstance that, between the years 1892 and 1900, the city of Chicago and its suburbs carried out a plan to dispose of the sewage of the Chicago metropolitan area by cutting a canal across the low continental divide about 10 miles west of Lake Michigan, and discharging the sewage of the entire metropolitan area into the Mississippi watershed by way of the Chicago Sanitary Canal, Des Plaines and Illinois Rivers.

This action precipitated 40 years of controversy and litigation. Ultimately, the other States of the Great Lakes Basin all the way from New York to Minnesota brought an original action in the United States Supreme Court to enjoin Chicago from the continued abstraction of waters from the Great Lakes Basin. The United States Supreme Court appointed Charles Evans Hughes as special master. After years of hearings and investigation, the Supreme Court, in 1930, issued a decree based upon the findings of Special Master Hughes, who later became Chief Justice of the United States Supreme Court.

The Supreme Court held that the Chicago water diversion had caused a lowering of 6 inches in the levels of the Great Lakes. It held that the lowering of lake levels by approximately 6 inches caused "a substantial and injurious effect upon the carrying capacity of vessels, and deprived navigation and commercial interests of facilities which otherwise they would have enjoyed in com-merce on the Great Lakes." The Court also held that the 6-inch lowering of the Great Lakes had caused substantial injury in connection with fishing and hunting grounds, beaches, summer resorts, and public parks.

The Court in its decree of 1930 ordered a gradual reduction in water diversion from the amounts then being taken and ordered Chicago to provide other means of disposing of the sewage of the sanitary district.

Since 1930, Chicago has slowly and reluctantly progressed the building of sewage treatment plants, and it is understood that substantially all of Chicago's sewage is now fully or partially treated.

The Supreme Court ordered that by 1937, diversion from Lake Michigan be reduced c. s. f., plus domestic pump-The diversion of 1500 c. s. f. was considered adequate to provide water circulation in the sanitary canal and to main-tain navigation levels. No sooner had the diversion reached the level fixed by the Supreme Court in 1937, than Chicago initiated the first of its many attempts to evade the Supreme Court decree. In practically every session of Congress since 1937, bills have been introduced providing for diversion in quantities much greater than allowed by the Supreme Court decree. Numerous other efforts were made by Chicago to circumvent the decree. For example, in 1942, the Chicago Sanitary District attempted to secure from Donald Nelson, War Production Ad-ministrator, an order increasing the diversion on the grounds that increased flow of water through the canal would permit increased generation of power at Lockport for war production purposes. Thanks to vigilant action by Milwaukee public officials and the Great Lakes Harbors Association, this specious plea was denied.

Very shortly thereafter, Chicago attempted to hoodwink the United States Public Health Service into issuing an order for increased diversion. Chicago claimed that a great pool of pollution existed in Lake Michigan, in the vicinity of its water intakes, which could be siphoned off by increased velocity of flow from Lake Michigan into the sanitary canal. At the same time that the sanitary district claimed that its water supply was in peril, Mayor Kelly was campaigning for office and loudly proclaiming that Chicago had "the finest water supply in the world." Dr. E. R. Krumbiegel, Milwaukee Health Commissioner, was an effective witness in refuting this fallacious claim before the United States Public Health Service and before congressional committees.

Having been frustrated before the War Production Board, the United States Public Health Service, and congressional committees, Chicago then attempted to secure an Executive order from the late President Roosevelt authorizing increased diversion. A barrage of protest came from the Great Lakes region as a result of which the President declined to issue the order.

Chicago thereafter petitioned the Supreme Court to reopen the case on the grounds that Chicago's water supply and public that Chicago's water supply and public health were in jeopardy. A special master was appointed by the Supreme Court, who conducted lengthy investigations and took much testimony. The special master found the Chicago claims unfounded and the Court declined to modify the decree.

Officials of the sanitary district have gone so far as to claim that increased diversion of lake water is needed for the development of atomic power at the Argonne Laboratory. Neither the State of Illinois nor the Chicago Sanitary District is in any way concerned with the development of atomic power at the Argonne Laboratory. No suggestion has ever been made by the Atomic Energy Commission that increased diversion is nec essary for the operation of this atomic plant.

A variety of specious reasons have been advanced by the State of Illinois and the Chicago Sanitary District. These are not the real motives for increased diversion. real motive is obscured in the sensational claims of the sanitary district. Increased diversion is desired because of the additional income to be derived from the development of hydroelectric power at Lockport. Ill., where the sanitary district maintains an electric powerplant and to decrease the operating expenses of the sanitary district, which becomes possible if untreated or partially treated sewage can be diluted with additional lake water. In the report of Special Master Lemann to the United States Supreme Court in March 1941, it was pointed out that the additional electricity which could be developed by a diversion of 10,000 c. f. s. is worth \$1,500 a day to the sanitary district, or \$550,000 a year.

The sanitary district has thoroughly confused the entire issue by repeated shifts of position and numerous phony claims. Among the purposes mentioned by Illinois for requiring increased diversion of Lake Michigan water are navigation, public health, recreation, community use, agriculture, and atomic power. Every one of these claims has been thoroughly disproved. Only two conclusions can be drawn; Either the securing of increased diversion has become an obsession and a fixed political objective in the Chicago area, or the sanitary district wants the water for power generation at Lockport to increase the funds available to it from sale of power.
The Great Lakes Harbors Association, the

port cities of the Great Lakes, the Lake Carriers Association, and the governments of the States bordering the Great Lakes have been united in opposition to the demands of Chi-cago that the waters of Lake Michigan be exploited for the political or financial benefit of the Chicago Sanitary District. Canadian Government has repeatedly prothe tested through diplomatic channels attempts to abstract water from an international basin for the benefit of a single

community.

For the past 40 years, the Milwaukee city government has been a powerful force for the protection of community and regional interests in this matter. Milwaukee should not be diverted from its position by abusive statements emanating from Chicago, which have little or no basis in fact. The allegation that pollution in the Chicago area emanates from Milwaukee is utterly ridiculous. While the writer is no authority in the field of sewage disposal, it is my understanding that it would be physically and financially impossible to build sewage facilities of a capacity adequate to treat sudden deluges of stormwater when torrential rains fall. Under these conditions, there is inevitably some mixing of storm and sanitary sewage and a flow develops beyond the capacity of our treatment plant. However, it is my understanding that quantities of sewage passed under these conditions are small in volume, short in duration, and so diluted as not to present a health hazard.

Chicago is obviously attempting to weaken the united front of Great Lakes interests against water diversion by endeavoring to make it appear that this is a Chicago-Milwaukee squabble. Nothing could be farther from the truth, and Milwaukee's valuable and historic leadership for the protection of its interests and the interests of the entire lake region should not be diminished by these unworthy and unfounded allegations.

It has been the position of many interests on the Great Lakes that if Chicago has a legitimate basis for adjustment of the 1930 decree, it should go back to the Supreme Court and make its petition, which will become the subject of reasonable and thorough investigation. In a word, this important issue, affecting a great watershed, 2 nations, and 8 States should be decided by the judicial processes and not by political methods.

With another temporary rise in lake levels, it can be anticipated that another hue and cry will emanate from Chicago, for more water. The Chicago Sanitary District and Chicago newspapers have done a clever propaganda job in persuading and alarming owners of shore property in Wisconsin and Michigan that increased diversion of water to the sanitary canal will solve the high-water problem on Lake Michigan. The maximum correction which would result in high water in Lake Michigan as a result of H. R. 3300 would be 1 inch in 3 years. One inch of water

would obviously not settle the erosion problem when the lakes rise to levels of 3 above normal, as they did in 1951 and 1952. On the other hand, removal of 1 inch of water from Lake Michigan as a result of the Chicago water diversion would, at the low lake level cycles, have a disastrous effect upon lake shipping. If the bulk freighter fleet on the Great Lakes has its safe draft reduced by only I inch, the annual loss in carrying capacity is approximately 2 million tons of cargo per season for American vessels only, excluding Canadian and ocean shipping. In the contest between erosion and navigation, the Chicago water diversion shipping. offers small comfort as an erosion preventative, but presents a very real threat to havigation and shipping on the Great Lakes.

Milwaukee, other port cities, and maritime interests of the Great Lakes region are now pressing for Federal deepening of the Great Lakes connecting channels in preparation for the St. Lawrence seaway project. It would be most inconsistent to press for such a costly improvement and at the same time consent to other measures which would result in

lowering lake levels.

We recommend that Milwaukee continue to support legislation providing for long-range study of water levels of the Great Lakes with a view to the building of control works. Such a study by the Corps of Engineers is now in progress. Its findings should be awaited before lake levels are further tampered with. In the meantime, the writer believes that it would be sound public policy to insist that Congress refrain from adjusting the allowable water diversion until lake-level engineering studies are completed. The groups opposing the Chicago water diversion are now in a very powerful position, having the support of a Presidential veto which will serve as a deterrent to congressional committees and to both Houses of Congress against hasty enactment of legislation such as H. R. 3300 which slipped through the Senate in the confusion of the closing hours.

H. C. BROCKEL, Municipal Port Director.

Salute to India

EXTENSION OF REMARKS

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, I join with my colleague from New York [Mr. Powell] in a salute to the Republic of India on this fifth anniversary of its independence.

I share with him the thought and belief that the Government of India and its people are not antiwhite and that such charges made by leaders in our own country are unwise, unfair, and unjust.

To have India as a friend of the United States and of the free world is of vital importance to the cause of democracy and human freedom. It seems to me that the philosophy and character of the Indian people puts them on the side of freedom and human decency and against totalitarian tyranny in any form.

Not only are hostile public statements offensive to the people of India, but they

offend our friends among the dark races of Asia. The Communist cause and not the cause of freedom and democracy is helped by irresponsible public statements against the young republic and the Indian people.

As my distinguished friend from New York has so eloquently pointed out, we can play a more effective role in the fight against totalitarian tyranny when good sense and the practice of democratic principles becomes more evident in both our foreign and domestic policies.

Personal Attacks on President Eisenhower

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1955

Mr. HOSMER. Mr. Speaker, many of our colleagues must have read with amazement, as I did, an extension and revision of remarks in yesterday's Record by our distinguished colleague from California [Mr. Holifield] in connection with the Formosa resolution.

In an address to Congress by President Eisenhower on February 2, 1953, dealing in part with the employment of the United States 7th Fleet by former President Truman both, first, to prevent attack upon Formosa; and, second, to prevent Formosa from attacking the Communist-held China mainland, President Eisenhower said of the Truman order:

This has meant, in effect, that the United States Navy was required to serve as a defensive arm of Communist China.

Mr. Holifield characterized this statement by President Eisenhower as a "brazen partisan political statement," and said that "it was received by the Democrats with deep resentment—because we knew, as the President knew, that the statement was untrue."

Elsewhere in the body of today's RECORD our distinguished colleague from Michigan [Mr. Bentley] discusses in detail the facts of the 7th Fleet deployment and shows the complete accuracy of President Eisenhower's statements.

It is my real and sincere hope that Mr. Holifield did not intend from the forum of the House of Representatives to call the President of the United States a liar. I would resent such a personal attack and I know millions of fine Americans would resent such a personal attack.

Nevertheless, and despite general statements from the President's political opponents that they will not oppose just for opposition's sake, I have noted a recurrent emanation from them of what I would consider unfounded and unwarranted personal attacks on the President and those around him. Some persons have even raised a question as to whether or not there exists an organized and planned all-out attack by vilification and innuendo both against President Eisenhower and his program.

It may be that I am oversensitive to these unwarranted and unfounded personal attacks on the President. So that my colleagues may judge for themselves, I set forth some statements made over the past 6 months which I regard as personal attacks against the President of the United States:

Adlai E. Stevenson, August 18, 1954 (United Press): Stevenson charged President Eisenhower with "putting party expediency" ahead of "even his own view of the national interest."

Adlai E. Stevenson, August 18, 1954 (United Press): Stevenson sharply criticized President Eisenhower for offering his good wishes to Joseph T. Meek, 1954 Republican candidate for the Senate in Illinois.

Adlai E. Stevenson, August 18, 1954 (Washington Post and Times-Herald): In a speech on the Republican farm program, Stevenson said: "But even more interesting * * was the * * * Presidential failure to point out that it was a cynical and total breach of promise, which apparently is no longer a political offense, at least among Republicans."

Stephen A. Mitchell, August 16, 1954 (New York Times): "Let's look * * * at the Dixon-Yates scandal, Here was a deal to grant a subsidy of \$140 million to a favored power syndicate, on the President's personal order, over the protest of the Atomic Energy Commission and the TVA, without competitive bidding.

"A director of 1 of the 2 companies in the favored syndicate is one of the President's closest friends (Bobby Jones) with a cottage next to President Eisenhower's at

the Augusta golf course.

"Maybe they never even talked about it, I don't know. Maybe it's just a coincidence that some of the bankers in this administration came from banks which underwrite this kind of project; I don't know."

Stephen A. Mitchell, August 18, 1954 (United Press: Democrat Chairman Mitchell charged President Eisenhower with a "multi-billion-dollar giveaway to big business" in the Dixon-Yates power controversy.

Averell Harriman, December 8, 1954 (Associated Press): The Democrat Governor-elect of New York said: "We've got to stop avoiding holding President Eisenhower responsible for the actions of his lieutenants and of the Republican Party." * * *

"When President Eisenhower told the people of this country that there would be a 'partisan cold war' in Washington if the Democrats won control of Congress," Harriman continued, "he was saying something that wasn't true—and that he has admitted wasn't true." • • •

"If that is an example of the responsibility that President Eisenhower feels to the people of this country, then I hope it is also a lesson for us Democrats—and I think it's one we're beginning to learn.

"We've got to quit this business of excluding President Eisenhower from criticism of the unworthy campaign tactics that have been adopted by the Republican Party, and that he has condoned."

Harriman added: "This is not an administration, or a party, without a head—much as it sometimes seems to be."

Paul M. Butler, December 5, 1954 (Baltimore Sun): The present Democrat chairman said: "As the months have passed it has become more and more apparent that a military background is not a full and complete preparation for a Chief Executive.

"It has become more and more apparent month by month that the Eisenhower administration and the Republican Party have a lack of capacity to lead and unite the American people."

Asked by reporters if he meant Eisenhower himself, Butler said: "I certainly did. I think the responsibility is with the Presi-

Paul M. Butler, December 5, 1954 (Associated Press): "The responsibility is with the President to see that the Nation is united and there is ever-increasing evidence of his

Paul M. Butler, December 8, 1954 (Washington Post and Times-Herald): President Eisenhower "has not shown the particular qualities that applied the particular of the particula qualities that enabled Harry Truman to write

such a courageous page in history.
"I only wish that President Eisenhower had the courage to join with moderate Republicans and Democrats in Congress to square away with the Old Guard and ex-tremists in his own party."

Paul M. Butler, December 10, 1954 (New

Times): Amplifying his earlier attacks on President Elsenhower, Butler declared: "It would seem to me that the first step might well be to make some effort to unite and lead his own party. We do not have to look far to see that the Republican Party is not united and is not being led by the Presi-

Paul M. Butler, December 12, 1954 (Associated Press): "We feel that thus far the President has not displayed the qualities of leadership that he displayed as a military

SAM RAYBURN, December 4, 1954 (New Orleans Item): The Item quoted RAYBURN as saying that he "does not think President Eisenhower knows his job." * * *

The Item further quoted RAYBURN as say-"The truth is, I don't think he (President Eisenhower) pays enough attention to the work and I don't think he knows what is

going on"

SAM RAYBURN, January 4, 1955 (Washington Post and Times-Herald): At the party caucus of Democrat Members of the House on January 4, RAYBURN said. "* * * We on January 4, RAYBURN said, "* * * We Democrats cannot forget some of the tactics employed by the President's own party in the last campaign, the reckless smearing of Democrats as alleged traitors, with which the President saw fit to identify himself." • • • "In my estimation, that makes Eisenhower

a party to these unwarranted attacks on our

patriotism."

Democratic Digest, February 1955: The February issue of the Democratic Digest tried to show that in more than a score of inhower was "at odds with himself or his party."

The Digest asserted that since the President appeared on the political scene "he has presented so many different faces that no one

positive image had emerged."

Walter P. Reuther, December 9, 1954 (New York Times): Reuther accused President Elsenhower of perpetrating a "political fraud" by saying that Labor Secretary Mitchell held equal status with other Cabinet

"The Secretary of Labor is not a member of the Cabinet," Reuther said. "He is just there as convenient window dressing to make the working people believe they have a voice in the policymaking decisions of our Government.

Can the Ukraine Shake Off the Communist Yoke?

EXTENSION OF REMARKS

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. KRUEGER. Mr. Speaker, the anniversary of the Declaration of Ukrainian Independence, January 22, is another reminder of the tactics and policies of the Soviets against the peoples of the world who love freedom and independence.

It was in 1918 that these 40 million residents of the rich Ukraine moved toward self-government after the collapse of the Russian empire. But the Bolsheviks with a Russian army invaded the new nation, set up their puppet government and the territory went under the control of the Communist dictators.

The familiar story of oppression and pillage followed. The resources of 250,-000 square miles of fertile land, the mines and industry were diverted to the upbuilding of Communist power.

Resistance was bitter but costly. Massacre and famine followed. Millions were uprooted, sent to Siberia, to other Asiatic areas to face a bitter existence as slave laborers.

And while we hear this talk of coexistence, let us remember the pattern of conquest, the ruin of peoples and of nations that have come under the Kremlin's

In the United States today we have a group of Ukrainians who escaped the Communists. They have taken a place in their adopted country, are leaders in professions, citizens of the finest type. It is this group, with a full realization of the benefits of liberty, that are the voice of the 40 million behind the Iron Curtain, that help keep us conscious of the dangers of communism in our country.

Thirty-seventh Anniversary of the Proclamation of Ukrainian Independence

EXTENSION OF REMARKS OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1955

Mr. ADDONIZIO. Mr. Speaker, the United Ukrainian Organizations of Newark demonstrated on January 23 on behalf of the 37th anniversary of the proclamation of Ukrainian independence and the 36th anniversary of the union of Eastern and Western Ukraine. This traditional observance is a fitting occasion to reaffirm the faith and hope of all freedom-loving people in the eventual liberation of all the nations behind the Iron Curtain. I was happy to send the following message to my good friends of the United Ukrainian Organizations:

JANUARY 20, 1955.

UNITED UKRAINIAN ORGANIZATIONS OF NEWARK,

Newark, N. J.

DEAR FRIENDS: It is a privilege to send a message of greeting and friendship to your distinguished assembly upon this hallowed occasion.

January 22 of 1918 was a memorable day for all freedom-loving Ukrainians, and especially so for those who, after enduring the severe vicissitudes of World War I, attained their most cherished dream, that of national political independence. This national ideal, which was carefully nursed in the hearts of all patriotic Ukrainians during the long

years of their subjection to alien rulers, had become almost a second religion to all devout Ukrainians. Its realization in 1918 looked like a true national resurrection. Unfortunately the newly recreated government could not withstand all the evil forces of tyranny and barbarism which were arrayed against it. In less than 2 years the Ukraine's independence became a victim of these forces.

Today Communist tyranny rules over the Ukraine with an unrelenting, iron hand, but even under the present adverse circumstances, all patriotic and freedom-loving Ukrainians still cherish their national ideal. their political independence. In this celebration you are certainly helping to keep alive that fine sentiment. I extend my cordial greetings to all of you on the occasion of this celebration and wish you every

With kindest regards, I am Sincerely yours,

HUGH J. ADDONIZIO, Member of Congress.

Pledges and Hedges

EXTENSION OF REMARKS

HON, RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. BOLLING. Mr. Speaker it is easy for some people to promise much today and perform much less tomorrow. What follows illustrates this point by demonstrating the gap between the words of the Republican campaigners and the deeds of the Republican administration. It also indicates that our well-meaning President need defer to no one as a good promiser.

These pledges and hedges appeared in the Democratic Digest of February 1955: PLEDGES AND HEDGES

ON PEACE: BEFORE AND AFTER THE ELECTION

The pledge: "For the first time in 20 years * * * today we have peace." (Elsenhower, Indianapolis, Ind., October 15, 1954.)
The hedge: "The President * * * added

that the world was not at peace as he would define that word. * * * An armistice, [he] said, cannot be termed peace." (New York Times, December 9, 1954.)

BALANCE THE BUDGET

The pledge: "Isn't it time we had, in Washington, an administration which knows how to keep spending down * * * which believes that an unbalanced Federal budget is dangerous to every one of us—and moves to bring that budget into balance?" (Eisen-(Eisenhower, September 30, 1952.)

The hedge: "Humphrey Calls Balanced Budget Out of Reach: The budget outlook, as described by the Secretary, means that the administration will be unable for third year to redeem 1952 campaign pledge. (New York Times, December 7, 1954.)

UNLEASH CHIANG KAI-SHEK

The pledge: "Eisenhower Frees Chiang To Raid Mainland: I am issuing instructions that the 7th Fleet no longer be employed to shield Communist China [the President nid]." (New York Times, February 3, 1953.) The hedge: "The Nationalist Chinese Navy

and air force have been ordered to cease attacks on Chinese Communist mainland targets as a result of United States pressure."
(Washington Post and Times Herald, October 7, 1954.)

AVOID CONFLICTS BETWEEN GOVERNMENT AGENCIES

The pledge: "We shall not allow our Government agencies to fight at the expense of the American people." (Eisenhower, Troy, N. Y., October 22, 1952.)

The hedge: "Dulles, Humphreys Split Over Shift to Long-Range Aid: President Eisenhower's Cabinet is split over a proposed longrange program of economic grants and loans as the free world's chief weapon in the cold war." (New York Times, December 4, 1954.)

GETTING GOOD MEN TO SERVE IN GOVERNMENT

The pledge: "We can get the best men in America. There will have to be no cry 'we can't get good men to come to Washington.' Pure bunk." (Eisenhower, Chicago, September 5, 1952.)
The hedge: * * drawing upon the busi-

ness community for Government executives is not so simple * * * as was thought * * *. The administration from now on will find it harder to locate businessmen who are able and willing to serve. (Fortune magazine, July 1954.)

PRESERVE A NONPOLITICAL CIVIL SERVICE

The pledge: Federal employees shall be selected under a strengthened and extended merit system.

erit system. (1952 GOP platform.) The hedge: White House seeks jobs for GOP favorites. White House jobs-for-Republicans campaign headed by Adams' office. (Washington Post and Times Herald, October 27, 1954.)

HELP STATES BUILD SCHOOLS

The pledge: "In this critical problem of adequate education, we must now undertake to help needy States build schools." (Eisenhower, Los Angeles, October 9, 1952.)

The hedge: When asked about Federal aid to education, [Welfare Secretary] Hobby em-Phatically replied that it was not on her legislative agenda. (New York Times, October 22, 1954.)

AVOID BLUSTER IN FOREIGN POLICY

The pledge: "Bluster in words could here mean national humiliation * * * The way to true national security is something different from either extreme; quiet firmness in words, effective strength in purpose." (Eisenhower, Salt Lake City, October 10, 1952.)

The hedge: If you add up all the statements made by Eisenhower, the Vice President, the Secretary of State, the military and assorted Republican leaders, the sum total is bluff, bluster, backdown, and baloney. (Chicago Daily News, July 14, 1954.)

Trade Expansion Essential to Prosperity of America

EXTENSION OF REMARKS

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial published in the Seaside (Oreg.) Signal and written by Mr. Max Schafer on the subject of world trade:

TRADE EXPANSION ESSENTIAL TO PROSPERITY OF AMERICA

Of all the recommendations made during the opening weeks of the new Congress by President Eisenhower, probably the most important involves the program for promoting trade between the western nations. The whole future of the world can hang upon the decision of Congress in this mat ter. If the United States takes the lead in promoting expanded trade, we can develop the economies of the western nations to point where communism will lose its appeal. If we do not, we will force several nations into the arms of the Communists. One of them will be Japan, the key to the defense of the western Pacific. Others will be forced into a socialistic economy, which, after all, is just the first step toward com-And we will of necessity adopt more and more socialism ourselves.

From our own standpoint the most important phase of this situation is simply the fact that we cannot continue to maintain a free enterprise economy without free trade. Our productive ability has become so great that only a worldwide market, free of all restrictions and barriers, can support full employment. That we now have several million men unemployed is due to trade restrictions, which make it impossible for us to enter many markets throughout the world. We will always have this situation until trade throughout the western world is freed of restrictions.

While we are by no means the only of-fenders in this matter, it is up to us to take the lead in solving the problem. We still export more than we import. Normal imports will not pay for the American goods being bought by other nations. The difference is made up in foreign aid of one kind or another. Elimination of this aid would mean more unemployment than now exists. If we take the lead in removing trade restrictions, and in return demand that other nations do the same thing, we will open markets now closed to us and put more men to

The important fact is that we must buy from others if they are to buy from us. Except for help we give other nations, they have no resources with which they can buy American goods other than dollars earned in the process of selling goods to us. If our exports are to expand our imports must also expand.

The greatest strength of the Soviet bloc is the ability to move resources, labor, and products without restraint across artificial boundaries. Economically the various members of the bloc are a unit. The greatest weakness of the western nations is their lack

of such economic unity.

There will always be the problem of certain American industries which have been built on the basis of trade restrictions. -Probably they will need some sort of a subsidy for a period during which they would be forced to adjust themselves to the new situation or to liquidate. But the fact is that most American production will compete with any in the world and will sell in competition to that of any other nation, regardless of wage scales. Properly employed, the high-wage American workman is the cheapest labor in the world, because, with the tools American industry gives him, he produces more for a wage dollar than any other workman in the world.

Ukrainian Independence Day

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. KEATING. Mr. Speaker, January 22 marked an anniversary that tears at the hearts of many loyal Americans of Ukrainian descent-the 37th anniversary of the independence proclamation of the Ukrainian people. They had great hopes and faith when they started anew, in 1918, to carry on their ancient traditions of national independence. But their hopes were shortlived. The Ukraine was the first non-Russian country to fall victim to the wicked imperialism of the Soviet. The churches of the Ukraine were among the first to be leveled in the fanatical atheism of these godless conquerors. Ukrainians were dessimated in the famines and purges and the deportations and mass murders to which Moscow resorts when it is challenged by the national spirit of the non-Russians it enslaves.

Yet, through all these trials and tribulations the Ukrainians have never lost their spirit or their hopes. In the brief interlude during World War II, when they were permitted to fight at our sides. the Ukrainians distinguished themselves as a valorous breed apart from their Russian masters. They wait, 40 million strong, for the great opportunity-which history must surely hold for them-to reaffirm their independence and take their places, at last, in the community of free nations and free men and women.

These brave friends of ours behind the Iron Curtain cannot raise their voices so we can hear. But they hear us, through our official efforts to communicate with them, and through all the unofficial channels that always carry words of hope to men of good heart within the tyrants' domain. I am glad to see a number of my colleagues taking note of this anniversary. I am proud to join them, and add my voice to theirs.

Federal Regulation of Natural Gas Producers

EXTENSION OF REMARKS OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. HENDERSON. Mr. Speaker, the following editorial which appeared January 25, 1955, in the Times Recorder of Zanesville, Ohio, poses a penetrating question on the meaning in terms of economic philosophy of the newly imposed Federal regulation of natural-gas producers:

IS THIS WHAT WE WANT?

For years the Federal Government has fixed rates for carriers in interstate commerce and for certain legalized monopolies. State, county, and local government have regulated their public utilities. This is to give the public an enforceable guaranty of fair and just rates in the absence of competition.

But today, for the first time in the Nation's peacetime history, the Federal Government has stepped in to regulate the prices, profits, and general operations of private producers who sell a commodity for private consumption in a free and competitive market.

That commodity is natural gas, now subject to Federal price-fixing at the point of

production under a 5-to-3 Supreme Court decision of last June which considers a private, competitive producer of natural gas to be in interstate commerce because sells his product to an interstate pipeline. Actually, this independent producer is one segment of a three-part operation which brings natural gas from the field to your furnace and kitchen. The others are pipeline transporter, who is already regulated by interstate commerce laws; and the distributor, or local gas company, who is controlled by public-utility statutes. So why regulate the producer too? Will it give us cheaper gas? Indications are to the concheaper gas? Indications are to the con-trary—with the additional long-range danger of further Federal encroachment on everybody's business.

Natural gas is a clean, convenient, and economical fuel, vital to the 21 million American households that now use gas, and to the millions more who are waiting for new pipelines to bring it to them. To meet this ever-growing demand, there must be continuous exploration for new reserves. But exploration is expensive. It costs more than \$100,000 to drill an exploratory well, and 8 out of 9 are dry and unproductive. The cost of these operations must come out of the profits of productive wells, as they did when the uncontrolled gas producer was receiving 10 cents or less as his total share—not profit, but total share—of every household gas bill dollar.

Certainly there is nothing in history to

Certainly there is nothing in history to suggest that government can give us cheaper gas by imposing additional controls on production. Unless there is aggressive development of new supplies, spurred by reasonable incentives for the producers, there can only be less gas. And it is abundance, not shortage, that keeps prices down.

Far more dangerous, however, is this new precedent which could lead to Government supervision of all productive business whose goods reach consumers outside of the State of origin—oil, coal, minerals, farm products, and most anything else.

To extend the economic philosophy of the natural gas decision would, of course, be socialism. So the whole question is fairly simple: Is that what the American people want?

The Job Export Program

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I desire to call the attention of my colleagues to an excellent article appearing in a recent issue of the United Mine Workers Journal, under the caption "The Job Export Program."

Mr. John T. Jones, director of Labor's Nonpartisan League, and a high-ranking official of the United Mine Workers of America, presents forcefully the situation particularly as it affects the workingmen and women of the United States.

Mr. Jones' article follows:

THE TIME TO SEE YOUR CONGRESSMAN IS NOW, JONES WARNS IN STATEMENT ON CHEAP IM-PORTS

(By John T. Jones, director, Labor's Nonpartisan League)

The 84th Congress, convening in January 1955, will determine whether or not "the jon

export program" will be extended, or even be made permanent.

Its proponents do not call the program by that name. Officially it is on the statute books as the Trade Agreements Act. It was originally passed in 1934 as an emergency measure, and has since been extended, in periods of 3 years or less, until the present date. It deals with the statistically tedious and boringly intricate consideration of the extent to which low-cost-production goods of foreign nations may be imported into the United States to compete, for purchase dollars by Americans, with the American goods produced under the high living standards of the United States and by the workmen of this Nation.

The facts that many segments of our population fail to recognize in regard to this act include the following:

1. Every foreign-made item sold in this country in competition with similar items made in the United States represents a loss of employment to American labor.

2. The flooding of American markets with more cheaply produced foreign goods—and the resulting cutback in American production jobs—reduces the amount of taxable income by which the unemployment insurance, old-age security, pension plans, and other benefits of Americans under the American way of life and the American standard of living, may be sustained.

3. Trade agreements, which permit cheaper made foreign goods to come into the United States under low import duties, or without any duty, add to the capability of foreign goods to undercut American goods in the American home markets.

It is well to look at the backlog of fact predating the passage of the 1934 Trade Agreements Act.

Article 1, section 8, of the Constitution of the United States delegated to the Congress the regulation of foreign trade through adjustment of the duties, imports, or excises commonly called tariffs.

From the passage of the first Revenue and Tariff Act by Congress on July 4, 1789, to June 12, 1934, trade and tariff problems were handled by Congress in accordance with article 1, section 8, of the Constitution.

On June 12, 1934, a strong executive won from a weak legislative branch of our Government an abrogation of the legislative power, constitutionally given, to regulate tariffs. It was accomplished by an amendment to the Tariff Act of June 17, 1930—an amendment giving the executive branch the power to lower existing tariffs by as much as 50 percent, or of raising such tariffs.

The original transfer of this power to the Executive by the legislative branch was to run for 3 years only. The political party which held the White House from the date of passage of the Trade Agreements Act in 1934 to 1952 held sufficient power in Congress to effect extensions of that tariff-control

During the years of the buildup for World War II, the war-production years from Pearl Harbor to V-J Day, through the postwar rehabilitation years, then through the Korean police action, and subsequently the cold-war period to date, the United States has poured multiple billions of dollars into various aid and assistance programs to foreign nations—billions mat by the taxes of Americans.

billions met by the taxes of Americans.

Under the heading of "rehabilitation," the United States shipped machinery, materials, and technical know-how to the rest of the world outside the Iron Curtain. It replaced the outmoded, outworn production plants of foreign nations with modern production plants, and trained foreign labor in the mass-production technique to compete with American products.

But in the United States, as of October 1953, the average hourly earnings of industrial workers was \$1.78, as against \$1.38 in Canada, and as against a range of 75 cents down to 37 cents in such countries as Sweden, Norway, Switzerland, Belgium, the

United Kingdom, France, and Germany. The lowest scale, as of 1952, was in Japan, where the average was 19 cents per hour.

The American watch industry all but went down under the impact of literally millions of Swiss-made watches and movements, produced at a fraction of the cost of the American product, and permitted into our markets under low import rates which made it possible for the Swiss watches to undercut domestically produced watches. Since 1953 there has been some effort to equalize the situation with an upward tariff revision.

American glass and pottery makers have felt the stunning impact of cheap foreignmade products allowed to come in over low tariff barriers which permit the underseiling of American goods.

Recent testimony before the Malone committee of the United States Senate, contended that the American coal industry should have been exporting 50 million tons of coal in 1953 to foreign countries. We gave money aid to Italy, France, Yugoslavia, and the Low Countries—and they used the money to buy Polish and Czechoslovakian coal. Within the past months reports have come through of an agreement between Japan and Communist China by which Japan will import 165,000 tons of Red Chinese coal under one contract, and 85,000 tons of Red Chinese coal under another contract. At the same time the Japanese Premier was in this country seeking further financial aid from us to bolster the sagging Japanese economy.

Soviet Russia forces trade with her satellites, and, at the same time, is cajoling our "allied" friends of the free world—Great Britain, France, Belgium, Holland, Norway, Denmark, Turkey, Greece, Egypt, Pakistan, and many others—into trade and barter agreements. Red China follows a similar drive to bring India, Burma, Indochina, Indonesia, Nepal, Afghanistan—all the southeast Asia nations—into a Red Chinese orbit of trade.

ALLIES UNDERCUT UNITED STATES MARKETS

The British, West German, Italian, French, Belgian, and Dutch nations, trading with the Soviet and satellite nations, build the economic power of the Soviet toward the strength sufficient for worldwide aggression. Reciprocal trade agreements, by which these nations, of the free world can undercut American products in American markets, can only weaken the industrial power of the United States by making it impossible to maintain our high wage scales and standard of living.

American big business, maintaining production plants abroad, selling in the foreign markets with the benefit of low-cost foreign labor, further takes from the American workers the man-hours of employment which would accrue in this country were the goods produced here.

The jobless automobile workers in Detroit would do well to think of how many are "on the bricks" because of the number of Soviet, German, French, and Italian automobiles sold in foreign markets that used

to be ours.

American textile workers, hatters, shoe workers, producers of minerals and agricultural products, might well ask their Senators and Representatives, before the 84th Congress acts on the up-coming proposals to extend the Trade Agreements Act, if they understand that the proper title for the legislation should be the "Job Export Program of 1955."

After enactment of extension it will be too late. The time to see your Senator or Congressman is between now and January. The place to see him is at home, before he gets to Washington and is confronted with the pressures of the big business lobbyists waiting for him there.

WARNS AGAINST DEPENDENCE ON FOREIGN OF Russell B. Brown, general counsel of the Independent Petroleum Association of America, warned that propaganda of oil-imPorting companies is leading America into a state of complacency over increasing de-

pendence on foreign oil.

In a report to IPAA President W. A. Vaughey, Brown said the companies through Publications, speeches, radio, TV, and paid Publicity are "maintaining their pressure for continued excessive imports."

Brown stated that the American people would not stand for the United States becoming dependent on foreign sources for water power which now supplies about 4 percent of our total energy needs, but, he Dointed out, we are already more dependent on imported oil which now constitutes about 6 percent of the Nation's energy needs.

A Fair-Play Code for Congressional Investigating Committees

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. KEATING. Mr. Speaker, the congressional investigative process must be retained, undiminished and unimpaired. It is essential to the proper functioning of the legislative process.

Nevertheless, we should be the first to recognize that at times abuses have occurred. We should put our own house in order by adopting a set of basic rules to govern the conduct of all investigating committees. Then we should devise appropriate machinery to enforce such a code. At the same time we should study the methods whereby committees can more effectively deal with recalcitrant,

evasive and defiiant witnesses.

These are some of the matters which, it is contemplated, would be considered by a special committee created under the provisions of House Resolution 78.

Under leave to extend my remarks, I include an editorial from the Rochester (N. Y.) Democrat and Chronicle urging early congressional attention to this problem:

KEATING ON A CODE

Representative Kenneth B. Keating has chosen a strategic time to win converts in Congress to a plan for developing a code of fair play which he hopes will silence the rumblings of complaints over investigative abuses. His resolution will have the support of sympathetic colleagues of his party. It should also claim backing among rankled Democrats. The temper of the times indicates reform is due.

The Rochesterian's proposal of a special House committee to come up with a code of fair play stems from his grave concern over the improprieties and weaknesses of congressional inquiries. Since 1792, when a House committee made the first inquiry (into the failure of an expedition against the Indians), committees of Congress have made more than 800 investigations. In the intervening 162 years the investigative arm has swung in an ever-widening arc. The 82d Congress, for example, ran its researches into the more than modest cost of \$5 mil-

No one can seriously question the legal right of Congress to investigate. Unfortunately, some legislators have discovered in the committee hearing a new and wondrous arena for making political plays. Purposes too often have become punitive rather than factfinding. One-man hearings have often been gimmicks for handouts to the press.

The most notable casualties, but not all,

The most notable casualties, but not all, have been the constitutional rights of individuals. They have occurred, hasically, not as a direct conspiracy but as an inevitable result. Representative Keating explains it this way: "The trouble starts when the legitimate interests of the investigating committee clash with the equally legitimate protections the Constitution has given all citizens—presumption of innocence, right to counsel, speedy public trial, privilege against self-incrimination."

But this is a two-edged problem, and the extremes go in both directions. Another casualty has been the committees themselves in their inability to enforce subpenas and their failure to punish witnesses for contempt. Representative Keating's proposal looks to heading off the extremes. We cannot foresee, officially, the fate of his proposal. One forecast is safe: it will precipitate more thought and discussion on a festering sore in our legislative branch overdue for some effective treatment.

Relief From Duty of Robb N. Keyser

EXTENSION OF REMARKS

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES
Wednesday, January 26, 1955

Mr. WILLIAMS. Mr. President, on April 22, 1953, I criticized the manner in which Robb N. Keyser had in 1952 been appointed as director of internal revenue in the West Virginia area.

At that time I pointed out how Mr. Keyser had flunked his civil service examination, was rejected by the examining board as unqualified, and was only given the job after the intervention of the Representative from that State, who contacted the President of the United States, and Secretary Snyder overruled the Civil Service Commission and gave him the job.

This appointment was a direct violation of the reorganization act which was passed by the Congress for the purpose of eliminating political influence in the selection of these directors.

I do not know the nature of Mr. Keyser's more recent charges, but I am glad that at long last the wheels of justice appear to be rolling. They have been a long time getting started.

I ask unanimous consent that the newspaper article dated January 24, 1954, announcing his removal be incorporated in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Record, as follows:

KEYSER OUT AFTER INSPECTION—WITH PARKERSBURG OFFICE 22 YEARS

PARKERSBURG, January 24.—Robb N. Keyser, 52, was relieved of duty today as West Virginia director of the Internal Revenue Service.

A terse announcement of Keyser's dismissal from the \$12,000-a-year post was made by W. B. Eshleman, of Cincinnati, regional Internal Revenue Service director. Keyser, nephew of United States Senator NEELY, Democrat, West Virginia, has been

with the Internal Revenue Service for almost 22 years, the last two as director in West Virginia.

The announcement handed newsmen here by Eshleman said:

"As a result of information disclosed through an inspection of the office of the district director of internal revenue at Parkersburg, W. Va., W. B. Eshleman, regional commissioner, announced that District Director Robb N. Keyser has been relieved of duty as of today.

NOTHING TO HIDE

"Mr. Keyser has submitted a resignation effective January 24, 1955. In accordance with established policies of the Internal Revenue Service, no further details will be released at this time."

Keyser declined to make a statement at this time, other than to say:

"I have done nothing I am ashamed of and I have nothing to hide."

STAYED ON UNDER GOP

Keyser is a Democrat but continued to retain office after the new Republican Presidential administration took over. The ouster move is in line with similar action taken affecting postmasters and other holdover Democrats.

The Parkersburg News said tonight that Keyser offered his resignation in preference to dragging the Internal Revenue Service into politics.

Mrs. Ella J. Vaughn

EXTENSION OF REMARKS

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. ROGERS of Texas. Mr. Speaker, it is with distinct pride that I have the honor and pleasure of paying a much deserved tribute to one of the great ladies of our Nation. She is not one who has been publicized in the metropolitan newspapers nor one who has appeared on nationwide radio and television broadcasts. She is not one who has sought the limelight of publicity nor undertaken to find praise for the great contributions that she has made to mankind. The lady of whom I speak is truly "Mrs. America." She is Mrs. Ella J. Vaughn, of Silverton, Briscoe County, Tex., who will on Sun-day, January 30, celebrate her 103d birthday. She first saw the light of day in Wood County, Tex., on January 30, 1852, when Millard Fillmore was the 13th President of this great country. In fact, her birthplace is only a few short miles from the birthplace of the present occupant of our White House, the Honorable Dwight D. Eisenhower. Mrs. Vaughn has lived under the administrations of 22 of our 32 Presidents and has witnessed the greatest era in the advancement of civilization and in the development and progress of mankind. Her first recollection of any President was the Honorable James Buchanan. She remembers vividly the assassination of Abraham Lincoln. She is affectionately known as Grandma Vaughn to everyone who enjoys the honor of her acquaintance. Her full enjoyment of life is exemplified by the perpetual smile that greets her children and her countless friends. Certainly, we in the Panhandle of Texas are honored that her long and useful life has been spent in this great area. Her fine character and unselfish devotion to her children and her country exemplify the fine Christian life for which we all so diligently strive. Grandma Vaughn has been, and will always be, a fine example for all in our section of the country, America is indeed proud to extend to you sincere congratulations on the celebration of your 103d birthday and to extend to you best wishes for many more.

UNESCO Teachings in Public Schools

EXTENSION OF REMARKS

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1955

Mr. HALEY. Mr. Speaker, under unanimous consent, I place in the Record at this time two resolutions adopted by the American Legion which specifically set forth the fact that the American Legion is not in harmony with the teachings of the United Nations Educational, Scientific, and Cultural Organization.

The resolutions, which follow, clearly affirm the American Legion's disagreement with the principles taught by UNESCO:

RESOLUTION 322, OREGON, UNESCO TEACHINGS IN PUBLIC SCHOOLS PASSED BY NATIONAL CONVENTION, THE AMERICAN LEGION, WASH-INGTON CONVENTION, AUGUST 30 TO SEPTEM-BER 2, 1954

Whereas the policy of the American Legion in regard to the United Nations Educational, Scientific, and Cultural Organization was clearly delineated by Resolution No. 33 of the national executive committee meeting in Indianapolis on May 1, 1953; and
Whereas some confusion now exists as to

Whereas some confusion now exists as to the present American Legion policy toward this same organization: Now, therefore, be it Resolved by the American Legion in na-

Resolved by the American Legion in national convention assembled at Washington, D. C., August 30-September 2, 1954, That Resolution No. 33 of the national executive committee dated May 2, 1953, is hereby reaffirmed as to its resolving clauses: Therefore be it

Resolved, That we deplore the use of material furnished by the United Nations educational, scientific, and cultural organizations for the use in our public schools; and be it further

Resolved by the national executive committee of the American Legion, meeting in Indianapolis, Ind., April 29-30, May 1, 1953, That we call upon all American educational institutions and upon boards of education throughout the United States to cease and desist from the use of the educational materials of UNESCO propounding world citizenship and adherence to a nebulous world government as a criteria of education of American citizens; and be it further

Resolved, That we call upon the representatives of the United States to UNESCO to take appropriate measures to cause UNESCO to cease and desist from dissemination of such subversive educational materials; and be it still further

Resolved, That studies by the national executive committee now in progress by the special committee on covenant on human rights and United Nations be continued. The following resolution, originated in the national Americanism commission meeting in Indianapolis October 4, 1954, was overwhelmingly approved by vote of the national executive committee of the American Legion meeting in Indianapolis October 6, 1954, said resolution as follows:

resolution as follows:
"Whereas the opposition of the American
Legion to the teachings of UNESCO was
clearly stated by Resolution No. 33, passed
by the national executive committee of the
American Legion meeting in Indianapolis,
Ind., April 29–30–May 1, 1953; and

"Whereas at the national executive committee meeting of May 1954, in Indianapolis, the special committee on Covenant on Human Rights and United Nations of the national executive committee filed a report on UNESCO with the national executive committee, on which no approval or other action was taken; and

"Whereas this report largely stated the good things that the United States State Department and the National Commission for UNESCO, who are promoting UNESCO, had to say in favor of UNESCO; and

"Whereas, this favorable report on UNESCO, though it was neither approved nor adopted by the national executive committee has been copied twice into the Congressional Record with inference of about face by the American Legion, and has been quoted and referred to by the press of the Nation, both friendly and unfriendly to the American Legion, as an about face of the American Legion, and as tacit approval of UNESCO by the American Legion; and

"Whereas to clear up this confusion the Americanism convention committee recommended and the Washington convention of the American Legion, August 30-September 2, 1954, passed Resolution No. 322 which reaffirmed the resolving clauses of Resolution No. 33 opposing the teachings of UNESCO;

"Whereas if the American Legion were to authorize the appointment of a representative of the American Legion on the National Commission for UNESCO, it could serve only to be used by the promoters of UNESCO's world-government program, and by the press as approval of UNESCO by the American Legion: Now, therefore be it

"Resolved, Should any proposal be made to the national executive committee of the American Legion for approval of the said report filed by the said special committee before the national executive committee, May 1954 or for the appointment or authorization of the appointment of a representative of the American Legion on the National Commission for UNESCO, that the national Americanism commission hereby urges the national executive committee not to approve said report and not to appoint nor authorize the appointment of any representative or representation whatsoever of the American Legion on the National Commission for UNESCO."

Trade Not Aid Proposal Termed Colossal Hoax

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting article from the Cincinnati Enquirer by Edward Wimmer, president, Forward America Publishing Guild and vice president, National Federation of Independent Business:

TRADE NOT AID PROPOSAL TERMED COLOSSAL HOAX

The drive to lower tariffs is a greater threat to the economic and political stability of this country than any other danger confronting us from the outside world. It has within it all the seeds of self-deception, pollyanna welfarism, fear of communism and unsound economic planning necessary to destroy our present standard of living.

Picture in your mind, please, a scene containing three lakes—one of them larger and more beautiful than the other two, and resting on higher ground. Think of these lakes as the purchasing power of America, Asia, and Europe. Now place two imaginary drain pipes that will carry water from the welf-filled lake at the higher level, to the other lakes, and then open the valves. What happens? The three lakes will find the same level, won't they?

Consider, now, the thinking behind the lower tariff advocates who view 160,000,000 Americans (with one-third of their income taken away in taxes) not only providing enough purchasing power to buy what they are now producing, but, at the same time, provide enough purchasing power to raise the living standards of a half-billion wage slaves and their countless dependents—an uncanny number of whom are now trained to man high speed machinery designed to produce the same goods our own high speed machinery is overproducing.

Just stop for a moment, and ask yourself if our toy manufacturers, for example, who pay skilled workers a minimum of \$1.60 per hour, can compete with the industrious Japanese who work around the clock for 20 cents an hour—which wage will not go up appreciably if we would buy all of Japan's surplus toys. Today, our administration looks fearfully toward Japan and sees unemployment rising at the rate of 500,000 annually. The birth rate is terrifying, and there have been devastating storms and poor crops. The administration also sees Japan looking longingly toward Red Asia for markets, and then there is the voice of Britain saying "Japan must have American dollars to buy British goods."

By any measuring stick do we dare to turn Japan into a plunderbund of the American market place—in the pollyanna, faliacious thinking that we can sell Japan's low wage earners enough goods to offset the loss of jobs, taxes, and outside markets which Japan is taking away from us every day? Isn't Japan now taking orders away from both Britain and the United States, and bidding on American defense contracts at prices no American firm can even approach?

Furthermore, is there any indication that Britain and Germany will lower their tariff walls to admit American goods in direct competition to their own factories and farms, and even if they did, can we produce automobiles, refrigerators, washing machines, toasters, blankets, farm products, or anything else, at prices low enough to compete? After all, we have helped them to set up machinery which will produce all the goods the Germans or British can buy, and at a labor cost far below our own. And think of the foreign branches of American companies, ready to pour goods into the United States in direct competition to their own companies and workers.

Our lead, zinc, and copper mines are a frightening example of what could easily happen on a wide front. To supposedly insure the good will of Communist-infiltrated countries, we paid higher prices for lead, zinc, and copper abroad than it could be produced for at home, which closed a whole string of American mines, and brought near

paralysis to others. On top of this, we gave Britain \$234 million to buy lead, zinc, and copper on foreign markets, which Britain sold to America—at prices our mines couldn't meet. To make matters still worse, this country spent \$594 million to expand mining industries in foreign nations, and only sixty-four million for domestic expansion.

Since World War II we gave away fifty billion in various forms of relief. Countless billions have found their way into foreign bockets through other sources, yet they tell us now that we must let these nations flood our markets so they can get on their feet—no matter where they put us. They have labeled their hoax, "Trade, not aid," but what are broken tariff walls if they are not a subsidy, and what is a subsidy but aid?

The big problem to solve, we believe, is how to exchange goods and services at home and abroad, on a basis of fair trade—for on no other basis can nations hope to live together, prosper, and progress.

A Great Advance in Prevention of Blindness

EXTENSION OF REMARKS

HON, FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mrs. FRANCES P. BOLTON. Mr. speaker, we hear so much that is discouraging that I would like to share with you a very thrilling report that comes to me. It tells of research that led to prevention of blindness in premature infants.

Since 1942, I understand, approximately 8,000 children have been blinded by retrolental fibroplasia. For these children it means a life of abnormal darkness. To the community, the State, and Federal Governments it means heavy costs of education, training, and support, an estimated \$800 million. The successful research described in the following report means that we will have less blind babies, children, and adults in the years to come. I am proud to call attention to the fact that the National Foundation for Eye Research, whose secretary's offices are in Cleveland, Ohio, contributed materially to that research.

Under leave granted to me to extend my remarks, the report is appended herewith.

BLINDNESS IN PREMATURE INFANTS

(Prepared by the National Institute of Neurological Diseases and Blindness)

Thousands of unborn children who would have been doomed to blindness next year and every year thereafter will have been granted their sight because of the work of medical science and because of their Government which supported a coordinated research program under the auspices of the heurological institute.

They will have been spared as a result of the investigations of more than 75 ophthal-mologists and pediatricians who for the past year have worked in close coordination at 18 hospitals throughout the United States. Their purpose, and that of the Government which supported them: To find the cause of retrolental fibroplasia, the mysterious disease of the eye's retina which strikes 50 percent of all premature infants weighing 3½

pounds or less at birth. Their findings: That oxygen—the lifegiving oxygen routinely administered to premature infants in their incubators—was in fact a major sight killer.

END OF A 12-YEAR QUEST

This month before a gathering of eye specialists from every part of the Nation and from every part of the continent as well, the way was made clear for the prevention of retrolental fibroplasia. It was exceedingly simple; speaking on behalf of all those who had worked in the cooperative study, Dr. V. Everett Kinsey, associate director of the Kresge Eye Institute in Detroit, summed it up cautiously but clearly. "On the basis of (these) observations," he said, "our group of investigators feels that oxygen only be administered to premature infants in times of clinical crises rather than as routine hospital procedure."

For the scientists and physicians who heard him, and to the hundreds of hospitals and thousands of physicians responsible for the care of the Nation's newborn, these words marked the end of a 12-year quest. The observations which Kinsey had placed before them had been elegant and incontrovertible: 53 infants in the 18 hospitals, Kinsey indicated, had received routine oxygen in their incubators, and 72 percent had incurred retrolental fibroplasia, 25 percent with their eyes permanently damaged (blindness). Of 245 infants, however, who had received curtailed oxygen (for clinical crisis only) only 30 percent had developed the disease and less than six percent had suffered loss of vision.

OPENS THE WAY FOR PREVENTION

"While it had been feared," Kinsey commented, "that curtailed use of oxygen for premature infants might cause an increase in mortality, statistics of the study showed this was not so. The mortality rate was 22.2 percent in routine oxygen and 20.1 for those in curtailed oxygen." With this statement, the way was completely open for the practical prevention of most of retrolental fibroplasia.

Obvious and simple as the study may have appeared, it might well have been but one more failure in the long, hard hunt for the cause of retrolental fibroplasia which has gone on since 1942. It was in that year that Dr. T. L. Terry described and named that disease in the American Journal of Ophthalmology and said: "A variable mass of contracting scar tissue in the vitreous (central portion of the eye ball) explains the partial or complete blindness that is the ultimate expression of the condition."

LACK OF OXYGEN IMPLICATED

To Terry himself and others, the disease seemed to be due to conditions occurring prior to the birth of the premature infant. The records of mothers whose infants suffered from retroiental fibroplasia indicated that many of them had had either multiple births, toxemia of pregnancy, or placental disease or hemorrhage. It was Terry's conclusion, thereby, that lack of oxygen in the unborn baby was the most important cause of permanent damage to the blood carrying tissues of the eye which characterizes retroiental fibroplasia.

As the incidence of retrolental fibroplasia in the United States increased rapidly, however, and as reports from England, Australia, and the Continent indicated that it was on the rise there as well, it became more evident the disease might be caused by conditions related to the changing care of infants in hospitals.

MANY CAUSES SUGGESTED

In the gathering search for the environmental cause of retrolental fibroplasia, the possibilities multiplied—nutritional deficiencies in the infant, or again, nutritional excesses; irritation of light on newborn eyes or possibly not enough light; mother's milk

was implicated, then cow's milk: or was it due to faulty salt distribution in the body, to water imbalance, acidosis and oxygen deficiency stemming from anemia and other conditions? But for every scientific paper indicating evidence for one or another factor, another scientific paper emerged to controvert it.

By 1951, however, the possible role of oxygen, i. e., excess or deficiency, had been suggested. In one hospital, the increase of the disease was observed to correlate not only with the introduction of oxygen-carrying incubators but with the increased oxygen made available to premature infants over a several year period.

ROLE OF OXYGEN DEBATED

In 1952, however, it was lack of oxygen which was condemned; at the St. Louis University Hospital, it was reported that when premature infants were withdrawn from high oxygen-containing incubators, retrolental fibroplasia seemed to progress. Put them back into oxygen, however, said Dr. Szewczyk, and the condition diminishes or disappears. While these results were confirmed in a small number of cases at another hospital, the fallacy of the evidence passed unnoticed for the moment: Since a large number of retrolental fibroplasia cases diminish spontaneously, bow can we know that the cases returned to high oxygen would not have gotten better anyhow?

In 1953, the first major breakthrough occurred in Washington, D. C.'s Municipal Hospital, then known as Gallinger. Working under a grant from the Public Health Service's newly created Neurological Diseases and Blindness Institute, Dr. Arnall Patz of Georgetown University and Baltimore, separated a large number of premature infant rats into three groups who would receive the oxygen equivalent to that given children routinely in hospitals; those who would receive no oxygen; and finally, those who would go in and out of oxygen. The results: retrolental fibroplasia, least in the rat, was caused by oxygen, even oxygen administered for a short period of time.

THE FINAL EVIDENCE

Whether what was true for rats was true for humans still remained to be proved. A clinical study of premature infants weighing 3½ pounds or less at birth would pose a major problem, however; if conducted in a single hospital, it might be 3, 4, or even 5 years before enough premature infants were born so that results of the study could become statistically valid. What was needed if the answer was to be obtained as rapidly as possible was a number of hospitals working on the same problem at the same time under the same strict scientific protocol.

To initiate such a plan would demand considerable funds; even more important its initiation would require the cooperation of distinguished ophthalmologists and pediatricians whose own interest and proposed participation in such a study could stimulate the interest and controlled participation of colleagues at other hospitals. In such a preliminary organization, the National Institute of Neurological Diseases and Blindness could play a vital role; through its grants program, funds could become available; through its grantees, it had access to some of the leading scientists in the country who might spearhead the project.

Within 3 months, the National Institute of Neurological Diseases and Blindness, working closely with the Coordination Subcommittee for the Study of Retrolental Fibroplasia (including Dr. Jonas Friedenwald, associate professor of ophthalmology at Johns Hopkins and Dr. Richard Day, professor of pediatrics of the University of the State of New York), had drawn up the complete, definitive plan for 18 hospitals which would give precise, rapid evaluation of Patz's animal

work. Patz, himself, became one of the cooperating scientists, as did such other dis-tinguished investigators as Dr. Benjamin M. Kagan, director of pediatric research at Chicago's Michael Reese Hospital, Dr. George M. Haik, professor of ophthalmology at Louisiana State University in New Orleans, Dr. Clement A. Smith, associate professor at Boston's Lying-In-Hospital, and Dr. Algernon B. Reese, clinical professor of ophthalmology at Columbia University's college of physicians and surgeons. To support their efforts, the Advisory Council of the National Institute of Neurological Diseases and Blindness approved research grants in the total amount approved research grants in the total amount of \$40,000, and to this sum was added another \$11,000 contributed by the National Foundation for Eye Research and the National Society for the Prevention of Blindness. It was with this sum of \$51,000 that the final answer to retrolental fibroplasia was obtained.

THE BENEFITS

The sum is a small one compared to the benefits received. Since 1942, it is believed, approximately 8,000 children have been blinded by retrolental fibroplasia. For these still-living children, it means a full, normal lifetime of abnormal darkness and dependency. To the community, the State and Federal Governments, it means the heavy costs of their education, training, and sup-port—\$100,000 for each child (according to the American Foundation for the Blind), or a total cost of \$800 million.

With the study just completed, this personal suffering does not completely come to an end, nor does its economic burden. Some children will still have to receive oxygen for clinical crisis and a few will incur retrolental fibroplasia; a few others may also incur the disorder for causes yet to be explored; but, on the basis of the results so far announced, the picture is considerably brighter; only about 10 percent of the numbers who suffered retrolental fibroplasia in the past will probably suffer it in the future.

DEFINITIONS

Retrolental fibroplasia first reveals itself in the premature infant with shrinkage of the blood vessels of the retina. Where progression occurs, the tips of these blood ves-sels begin to grow out into the vitreous (the clear, gelatinous substance filling the back part of the eye). If the condition persists (and it may reverse itself at any stage), growth of the retinal blood vessels con-tinues, and at the final stage, the ingrown fibrous tissue in the vitreous pulls the retina loose, with resulting loss of sight.

Our Federal Officials Should Have Better Pav

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. MULTER. Mr. Speaker, newspapers and magazines throughout the country have devoted editorial space urging that the Congress increase the salaries of its own Members and that of the Federal judges of our country.

In that connection I direct the attention of our colleagues to the following editorial which appeared in the January 22, 1955, edition of the Saturday Evening Post:

OUR FEDERAL OFFICIALS SHOULD HAVE BETTER PAY

How much are leaders worth, in terms of dollars? How much should the richest nation in the world pay for statesmanship? The 84th Congress has to decide, for almost the first item in its order of business is the long deferred proposal to raise the salaries of Federal judges, and of Congressmen themselves.

The Hoover Commission recommended this increase; a Democratic and now a Republican President have urged it; editorials endorsing the salary raise have appeared in more than a thousand newspapers throughout the country. Leading columnists, radio commentators, labor-union groups, agricul-tural organizations, bar and professional associations, all have favored it. No substantial public opinion has been heard against it.

But Congressmen, by our constitutional system, are in the peculiar position of having to fix their own salaries, and time and again they have shied away from voting themselves increases, for fear of a cry of looting the Treasury. And because of a long custom, dating from the first days of the Republic, by which Federal district judges are paid the same salary as Congressmen, the whole judicial establishment of the United States is suffering from the same serious, almost critical underpayment that Congressmen endure.

The last Congress, anxious for public support, provided for the appointment of a nonpartisan commission of leading citizens, drawn equally from labor, business, agriculture, and the professions. Under the chairmanship of Bernard G. Segal, chancellor of the Philadelphia Bar Association, this commission made a full exploration of the standards by which a government should set salaries. What kind of people do we want for judges and Congressmen? the Segal commission asked. And then it inquired, how much salary or income are such qualified people commanding in private life?

The Chief Justice of the United States, they discovered, receives only what a moderately successful lawyer in a middle-sized city might make. Private industry, for tasks less important to the Nation than Congressmen must discharge, often pays salaries 2 and 3 times greater. Union officials, successful professional men, junior executives in business, men from among whom we should find our public leaders of today and tomorrow, cannot become Congressmen except at an impossible financial sacrifice. Lawyers, however qualified, cannot ascend the bench unless they are willing to lower drastically their standard of living.

The Segal commission heard a young Federal district judge in California say that he will have to quit the bench because he can-not support his wife, two children, and a third child soon to come, on a judge's salary. If he should die, his widow would receive no survivor's benefits, and his income permits only the smallest insurance program.

They heard the able and respected John C. Chief Judge of the Federal District Court for the Southern District of New York, probably the busiest Federal court in the land, tell of his financial struggles since he went on the bench in 1918. In all his 37 years, he has never had enough money to live on, has had to teach and write when he could to keep up his insurance and educate his daughter. New York State judges, even New York city judges, and municipal judges in our larger cities receive higher salaries than he does. And though he has refused appointment to State benches because of his lifelong experience in Federal jurisprudence, now, in his later years, he is unable to afford a nurse to care for his invalid wife, and must do nursing duty himself after his day's work in court is over.

The Commission discerned that the day is long past when a Congressman could earn a living in a private business or profession while serving his constituents. Congress nowadays is a full-time job, 7 days a week, every week in the year. Congressmen must maintain 2 homes, usually 2 of fices, pay most of their travel expenses, bear many costs which a corporate employer would pay for its executives. Their expenses have increased with the enlargement of their work, but their salaries have remained the same through the whole period of recent inflation, and have grimly decreased in buying power.

In its elaborate, searching report, the Segal Commission recommended a scale of increases necessary to bring the salaries of judges and Congressmen into line with the practice of the Nation in all fields. The total cost of these recommended increases would be only \$7,500,000. But the 83d Congress, facing an election, failed to

Now the election is over. The public is aware of the need; what the lawyers call the last clear chance is here. The 84th Congress, in its 2 years' existence, will spend more money for more purposes than any other body of men on earth. Common sense and public interest alike require that they should devote a tiny fraction of their appropriations to making the major jobs of statecraft in a free Nation financially pos-sible for the men best fitted to hold them-

The Coal Industry

EXTENSION OF REMARKS OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. BYRD. Mr. Speaker, I am inserting in the Congressional Record another article written by Mr. Monroe Worthington, of Beaver, W. Va. Mr. Worthing-ington's articles often appear in the Beckley (W. Va.) Raleigh Register, and the one included today was part of a series recently written dealing with the ills of the coal industry. It is entitled "New Markets Opened by Scientists."

The article follows:

NEW MARKETS OPENED BY SCIENTISTS (By Monroe Worthington)

Millions of tons of coal will find absolutely new markets if the suggestions made herein are put to work. One proposal demands only a manufacturer. And, in justice to those who have worked on it before, with no commercial utilization so far, it is not original, as many of the suggestions in this series are-

Coal can cool the homes of the Nation. Not indirectly, by making electricity to run refrigerators and air conditioners, but by a burning flame. Just as the little blue flame in a Servel refrigerator keeps food chilled, so a larger, stoker-fed flame can cool homes, offices, and factories. There is no need to explain how it works, for it is generally known that it does. The patents have long ago run out. Anyone who wants to can now make such equipment.

But coal can do far more work in a home than either cooling or heating a house, one at a time. The same burner can heat the house, freeze ice cubes, incinerate garbage, heat water, cook a meal all at the same time, but in different parts of the house. And this is not an original proposal, either. Scientists have invented a chemical called tetra cresyl silicate. It can be heated until it is hot enough to fry a steak, for instance, or set wet garbage afire. Suppose the central stoker unit were in the basement, with heating coils for the tetra cresyl silicate. First all, the distributing pipe would run through an incinerator, to burn up household waste. The fluid would operate the house heater, or the cooler, depending on the season. Insulated branch lines would run to the kitchen, where the stove would always be ready to bake a cake or fry bacon. The refrigerator and the deep freeze would get their power from this heat, rather than from a flame or from an electric wire. And, of course, heater water for the bath and washing machine would come from the same source. Since the stoker would be running, winter and summer, on efficient, lowcost coal, there would always be heat for a chilly bathroom, in the early morning. By combining these services and the needed equipment, a manufacturer could save a homeowner between \$500 and \$1,500, and would insure a larger, winter and summer demand for coal.

As has been said, the byproducts of coal, such as dyes and plastics, take only a tiny fraction of the total output of the Nation's mines. But there is one product which can be made from coal which is used by the hundreds of pounds in each American home, even those now heated by gas or oil. This product is sugar.

MAKE SUGAR FROM COAL

It seems incredible that something as white and sweet as sugar could be made from coal. But mothballs are made from coal, and they are white. And saccharine, so many times sweeter than sugar, but with no nutritional value, is made from coal.

The chemical formula for ordinary sugar is C-12-H-22-O-11. This means that a hundred pounds of sugar contains 42.1 pounds of carbon, or purified coal, if you please. The rest is water, chemically combined with the carbon until it is dry.

carbon until it is dry.

Now this same sugar can be made from petroleum, if the chemists ever get around to it, or if their bosses get hungry for busi-And the oil industry spends thousands of dollars for research, for each dollar spent for the same purpose by coal. This is the reason the oil industry is paying dividends, although the courage and ingenuity of the oilman finds expression in advertising and merchandising, too—arts practically un-known to coal. So the oil industry may proceed with this suggestion, if it comes to their attention. If they turn oil to sugar, perhaps the petroleum people will let the coal industry sell a few tons more for heating. There is no use to keep this idea of turning carbon into sugar a secret. Ideas are contagious. Edison, Dolbear, Gray, and Bell were in the courts for years to decide who owned the telephone patents; Bell won. But all of them conceived the idea about the same time, independently of each other. Chemists may already be working to make a synthetic sugar. Naturally, they wouldn't If any chemists are busy on the be talking. lob, it is safe to say they are not employed by the coal industry; but if the coal industry heeds this suggestion, it may regain millions of tons of its former sales, for a new purpose.

TWO HUNDRED DOLLARS PER TON FOR COAL

Just in case the coal industry puts good research chemists to work and finds a patentable method to make sugar in large volume at low cost, then a multimillion-dollar market will be created for a really large-volume byproduct. Sugar sells for around \$200 per ton, instead of \$3.75 at the mine. And remember, 57.9 percent of sugar is water.

The coal industry has spent a little money

on research from time to time. In fact, several years ago they were spending about a million dollars per year, but still just a tiny slice of the oil industry's budget for the same purpose. And what did they get for their money? The unfortunate thing about many researchers is that they take your money and "No" instead of using their brains and finding the right and original way. Much research being done in the United States today by the coal industry was done in Germany a quarter of a century ago and recorded for anyone who can read German or hire a translator. But few of the coal operators who pay the bill know this. It's much easier to follow an experiment of 25 years ago than to do original thinking. All it takes to do such unimaginative "research" is a Ph. D. degree. Edison, not knowing that inventors must wear a cap and gown, originated the electric light, the phonograph, a better way of making portland cement, important steel technologies, etc. Any self-respecting degree demanding research institute, were he alive and seeking a job today, would toss him out on his ear as unqualified.

REMOVING ASH FROM COAL

The sugar synthesis mentioned above calls to mind a long-known and long-suppressed way of purifying coal. Perhaps the product, which can be made of the lowest grade "bone," is too valuable as a chemical material to burn, but it doesn't have a spoon of ash in a carload, and would thus be an absolutely ideal fuel.

Here is how it is accomplished:

Burn your coal waste or bone in a gas producer, the chief product of value being carbon monoxide, which is diluted by nitrogen, carbon dioxide, steam, vaporized coal tars, and some fixed gases, such as methane, ethane, ethylene, etc. Remove the fly ash in a centrifugal filter and take out the few remaining traces with a Cottrell electric precipitator. Condense the tar vapors by chilling. They can be sold. Under the influence a catalyst (the man with shotgun at a chemical wedding) combine 2 molecules of carbon monoxide to produce I molecule of carbon dioxide and 1 atom of pure carbon. Remove the carbon with a second Cottrell precipitator, and return any unburnt hydrocarbon gases to the gas producer for burning.

If the resultant carbon is used as a fuel, freight costs are greatly reduced. (Of course it must be shipped in tank cars, to prevent the submicroscopic particles from blowing away; or it can be blown in a pipe.) There is no pulverization expense, a substantial item. There is no slagging in the steam boilers. And as a consequence, 2 or 3 or perhaps even 10 times as much of this carbon fuel can be burnt in the same boiler, as before, after stepping up the pumps and the fans. So the output of steam is greatly increased, reducing investment costs. There is no fly ash removal expense; this has been done before. The owner of a new steam-electric plant may save a million dollar investment. The Monday morning wash does not get all sooted up.

The same atomic size carbon can be used in making an ash-free briquet, or in making a liquid fuel which will compete with diesel oil.

But used as a chemical building block this purified carbon can become sugar, one or a dozen or so plastics, or one of a hundred thousand organic chemicals.

The coal industry, in its simple-minded attention to the fuel market, has been eating the banana peel and throwing away the core. But coal operators are basically smart, and when they learn of the opportunities ahead of them, they'll change their ways. Or will they?

Foreign Claims Settlement Commission

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following article which appeared in the December, 1954 issue of the Federal Bar News concerning the speech of Judge Whitney Gillilland, Chairman of the Foreign Claims Settlement Commission, at the October 11, 1954, meeting of the Chicago chapter of the Federal Bar Association:

CHAIRMAN WHITNEY GILLILLAND OF FOREIGN CLAIMS SETTLEMENT COMMISSION ADDRESSES CHICAGO FBA MEETING

Judge Whitney Gillilland, Chairman of the Foreign Claims Settlement Commission of the United States, was the speaker at the meeting of the Chicago chapter of the Federal Bar Association at the Chicago Bar Association on October 11.

Judge Gillilland stated that he presumed that we would like to hear what the Commission is doing in Washington and, perhaps, to begin with, what he was doing in Washington

"There is not as much excitement around our place as there is around some and we don't get in the newspapers very often," he said. "At the same time the Foreign Claims Settlement Commission of the United States is not without its importance and, as a matter of fact, it is an agency which concerns at least someone in every community in the United States. I believe it is fair to say that every citizen should have some knowledge of its functions and the place it occupies in the framework of our Government.

"Although I am engaged in the settlement of claims which have their origin in the misdeeds of foreign nations," he said, "I claim the right to begin with the presumption that I am not much weighted down or handicapped with any foreign ideologies, philosophies, or prejudices.

"When someone does you a wrong which results in a physical injury or in damage to your property, say someone beats you up or drives a car through your store front window, the circumstances generally give rise to a debt to you on the part of the person injuring you. If you can't collect it, by negotiation, you collect it, or try to collect it, at the courthouse.

"The same thing happens among nations. When one nation or group of nations engages in wrongdoing against another nation to its damage, or the nationals of another nation to their damage, a debt, within that none too definite set of standards known as international law, is created against the wrongdoer and in favor of the nation wronged. Unfortunately, there is no such satisfactory means of recovery as exists in the case of private and personal wrongs. There is no courthouse where general jurisdiction may be found, nor is there adequate power of enforcement, if any such jurisdiction did exist. Furthermore, as in the case of private persons, the wrongdoer does not always have assets from which recovery may be realized. At best, it is a hit, and miss affair, but that does not mean that nothing at all can be done. Sometimes remedies are achieved through negotiation, sometimes

through arbitration, a limited number through the International Court, and sometimes remedies are asserted following a war through the sheer power of the victor nation over the vanquished. The old saying that 'possesison is nine points of the law' has proved its value time and again in the field of international law.

"Many times in American history our Government has sought redress and obtained some satisfaction for a group or class of citizens who have been adversely affected by the conduct of another nation. When such a situation exists, it is customary to create a commission to determine the validity of claims against the settlement fund, and, to the extent possible, provide for their payment. That is the kind of a commission to which I belong," he said, "and of which I am chairman. As a result of the tremen-dous impact of international events in recent years, the present Commission, the Foreign Claims Settlement Commission of the United States, has had a much greater total number of claims before it and a greater number of categories of claims than any which has ever been previously constituted.

"In recent years there have been two major classes of general liabilities arising against foreign nations and in favor of the United States and the citizens of the United States.

"The first of these arose as a direct result of World War II. It was founded on the premises that World War II was an illegal war, a war of aggression in violation of international law, and that the participants, particularly Germany and Japan, became legally liable for all of the unhappy consequences resulting therefrom.

"The second arose substantially as an indirect result of World War II, the dropping of the Iron Curtain. Many millions of dollars worth of property of American citizents located in the Iron Curtain countries was expropriated.

"In each instance the United States was able to lay its hands on some property of such nations or the nationals thereof, to be applied in satisfaction, or in partial satisfaction, of some claims of some persons adversely affected. It became the duty of the Congress to outline the general classes and priorities.

"During World War II and under the authority of the Trading With the Eenemy Act, the Allen Property Custodian, subsequently the Office of Alien Property in the Department of Justice, impounded all assets of Germany and Japan and assets of nationals of Germany and Japan in the United States. Assets of other nations, including the Iron Curtain countries, were also impounded and, with some exceptions, have not yet been released.

"In 1948 Congress enacted a law known as the War Claims Act, which provided that the net proceds from the liquidation of all impounded German and Japanese assets should be paid in to what is known as the War Claims Fund to be applied against the claims of those classes of persons designated by Congress who were deemed to have suffered unduly as a result of the war. At about the same time, the United States Government reached an agreement with the Government of Yugoslavia whereby in exchange for the release of impounded assets, that nation deposited in the United States Treasury the sum of \$17 million to be applied against the claims of Americans whose properties had been expropriated.

"The exact net balances which under present law may become available to the War Claims Fund have not yet been determined. To date, there have been transfers of \$210 million and \$15 million more is presently authorized.

"To administer these funds, despite the similarity of problems, Congress created 2 Commissions, with 2 sets of quarters, 2

staffs, duplicating administration and similar procedures. To administer the 'War Claims Fund' they created the War Claims Commission, and to administer the 'Yugoslavian Claims Fund' and any other funds subsequently derived from the settlement of claims against the Iron Curtain countries or claims of related nature against other countries, they created the International Claims Commission. Under the terms of President Elsenhower's Reorganization Plan No. 1 of 1954, which went into effect on July 1, 1954, these two agencies were united in the Foreign Claims Settlement Commission of the United States, which results in the elimination of duplication, increased efficiency, and a substantial saving in expenses, including, I suppose, the salaries of three Commissioners.

"Now, I expect you would like to know a little more about exactly what claims receive the attention of the Commission. To date, there have been in the neighborhood of 600,000.

"I will give you a few examples. Following the acquisition of the Philippines from Spain at the turn of the century, a great many American missionaries went to that country and engaged in religious teaching and in the inculcation of American ideals among the people. Included among them were Catholics, Protestants, and Jews. They not only built churches and missions, they established colleges, universities, hospitals, orphanages, observatories, and other related and similar institutions throughout the islands. Not all of our soldiers on Bataan were captured or remained captives. Some got away. They either avoided capture or escaped from captivity. Additionally, there were many thousands of American citizens who were encouraged to remain in the Philippines to support the morale of the native populations. The help that was given by the missionaries to the The help people who were in hiding was immeasurable, They took them in, hid them, gave them food, shelter, and clothing, gave them money and aided their escape. They arranged secret transportation for them out of the islands and to free China and elsewhere. They also helped the American citizens in internment camps to the greatest extent possible. They had an espionage system and, to the extent that they were able, they kept General MacArthur advised and provided information of tremendous value in planning reinvasion. These things were done in peril of their lives and many of them were apprehended by the Japanese and executed or tortured and imprisoned.

Congress provided that these missionaries should be repaid from the War Claims Fund for their expenditures and the value of their services and the food, lodging and clothing furnished. Then, in token of our gratitude for their deeds, and further, in appreciation of the bulwark they are proving to be against Communistic teaching in that critical part of the world. Congress determined that they should be provided with funds to rebuild their schools, colleges, universities, hospitals, orphanages, observatories and other institutions of similar character, many of which had been completely destroyed during the war. We administer that program.

"I have already told you about the Yugoslavian claims. There were some against Panama arising out of an international settlement. We have claims of servicemen and other American citizens who lost their bank accounts in the Philippines as a result of Japanese confiscation. We have claims of American civilian citizens who were captured by the Japanese in the Philippines or on Wake, Guam, or Midway, or who went into hiding to avoid capture. Recently, there have been added similar claims of American citizens in Korea. We also have the claims of American merchant seamen who were captured during World War II.

"Numerically, the largest class of all are the claims of American members of our Armed Forces or American members of Allied Forces who were prisoners of war at any place throughout the world during World War II. These claims are of two classes, first, those arising from the failure of the enemy to provide proper food, and, second, those arising from mistreatment by the enemy such as beating, abuse, undue exposure to the weather, exposure to disease and so on. Similar benefits have recently been provided for prisoners of war in Korea.

"We also have jurisdiction to receive and adjudicate claims against Russia arising under the so-called Litvinov assignments, and measures are pending before Congress which relate to certain categories of claims against Italy, Rumania, Hungary, and Bulgaria."

Authorizing the President To Employ Armed Forces of United States To Defend Formosa, Etc.

SPEECH

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the joint resolution (H. J. Res. 159) authorizing the President to employ the Armed Forces of the United States for protecting the security of Formosa, the Pescadores, and related positions and territories of that area.

Mr. JUDD. Mr. Chairman, the purpose of this resolution is to try to prevent war in the Far East with Communist China. It is based on the conviction, supported by our practical experience in the past, that whenever and wherever the United States has taken and maintained a constant, consistent, dependable position of firmness and strength in harmony with our historic principles, it has not led to war, and our legitimate interests have been protected.

On the contrary, whenever our policy has been soft and weak, or half-hearted, or even hesitant; whenever we have allowed our desire for peace to lead us into vacillation and concessions and then additional concessions to aggressors, we have regularly lost ground, the dangers have increased, and expanded hostilities have resulted.

Our situation in Asia today is similar to that of 8 years ago when President Truman came before the 80th Congress and said in substance, "The time has come when we have got to stop further expansion of this Communist menace in Europe, specifically in Greece and Turkey. The United States must assist free countries in their efforts to resist subjugation from without or subversion from within by aggressive Communist forces."

That Congress was Republican controlled. It gave him full support and the Congress passed, first, the bill to give military and economic aid to Greece and Turkey, later the Marshall plan, and then legislation laying the foundation of NATO. We did so because we knew it

would be too dangerous to the security of the United States to have the apposite shores of the Atlantic in the hands of mortal enemies of the United States instead of in the hands of the friends of the United States.

When our Government took a firm stand on the Communist blockade of Berlin, and backed up our words with firm deeds, the airlift, the Kremlin breathed fire and brimstone, but it did not start a war.

When the Communists attacked South Korea President Truman again took a strong stand and again we prevailed, with much of the free world responding to our leadership. Unfortunately, in 1951, just when victory was in sight, a victory that could have demolished Red China's military power and prevented both Indochina and the present threats against Formosa, some of our allies and some timid souls among ourselves decided that it was more dangerous to win than to accept the truce proposed by the Reds. They assumed that the military defeat of Communist forces meant also their political defeat, and the end of the threat. Many in America thought that to push on to victory in Korea would lead to extension of the war, when in reality that was the only way to end it.

When a strong, firm, policy had succeeded to the point that Malik suggested a truce, many in our Government accepted the proposal at face value and returned to a policy of softness and weakness. They assumed that when Communists propose a truce, they want what we want, namely peace. But to Communists a truce proposal is a military maneuver, not a move to bring real peace. Years ago the present Communist Prime Minister Chou En-lai who is so belligerent today, said, "A truce is the military equivalent of the political tactic of coalition."

That is, in politics, if they do not have enough support to win an election, they say to the stronger elements in the country, Let us have a coalition government, take in all the parties, including the Communists, of course. Let us form a democratic front, or a united front, then they bore from within to take over the coalition.

In war, when they cannot win, they say, Let us have a cease-fire and negotiate.

But let us not forget that to them, a truce is the military equivalent of the political tactic of coalition. It is not a move to end a war, but only a trick to end a losing phase of it—such as Koend a losing phase of it—such as Koend as Indochina—which they believe will be more profitable.

When we see a prizefighter along about the 10th round become very affectionate with his opponent, embracing him ardently, we do not misunderstand that maneuver. We do not imagine it is because he has decided to give up and not try to win the fight. We know it is the reverse: he wants to hang on and rest, if he can, until the end of the round, in the hope he can knock the guy out in the next round.

When Communists suddenly propose a truce, it is only a skilled boxer's clinch.

It means they are in trouble and trying to get out of it. The purpose is not to end the war, but to win it.

Our sincere desire to have peace at almost any cost caused us to make repeated concessions in Asia despite Communist duplicity and violations of agreements. Of course, Communist aggressiveness grew.

When General Eisenhower became President 2 years ago, his first official act in the field of foreign policy was one of firmness. He withdrew the order under which our fleet was protecting Red China against any possible attacks from Formosa. The purpose of that order had been to avoid provoking the Communists, to keep them out of the Korean war by showing them that we had no designs against them, that we were not going to attack them or let Free China harass them. But it did not keep them out. Rather, our softness encouraged them to intervene in Korea and take thousands of American lives. So, it made no sense to continue that order; it had failed of its objective.

That firm act by the new President got prompt results. The Communists reversed their adamant position on prisoners of war, and asked for peace negotiations. It was, of course, only another clinch.

Unfortunately, once more we followed our hearts instead of our heads, and permitted them to get out of the hole they were in in Korea, and resume the offensive elsewhere. I opposed our abandonment of the strong, firm policy, which was working, to return to the soft, weak policy which never has worked. As expected, the result was not to limit the war, but to extent it—to Indochina, and now to the Formosan Straits.

Surely it is plain that whenever we have been consistently firm and strong, we have succeeded. Western Europe and the Mediterranean today are free. Wherever, as in Asia, we have not had a similarly firm and strong policy, under either administration, we have uniformly failed and steadily lost ground.

Our desire to avoid trouble in Asia, because it seemed to some less essential to our security, and the policy that we must not get involved in China has now led to greater involvement, as it was bound to. It has forced us to one or the other of the two courses we wanted most to avoid, namely, we have to withdraw step by step from Asia in disastrous defeat, or we have to expand the sanctions, that is, stop the Reds by force. Those are the two things we did not and do not want; and almost 10 years of weakness and indecision, or at least halfheartedness, in that part of the world have led inevitably to one or the other. We cannot delay a decision any longer. Perhaps by firmness now we may still prevent having to do either. That is the reason for this resolution.

Some may ask, Why not let the Communists take Formosa? Because the stakes are too great for ourselves. The issue in this part of the world is not Chiang Kai-shek, it is not Syngman Rhee, it is not this, that, or the other controversial figure as some have suggested in the past. It is the security of

the island chain from the Aleutians to Australia. It is the freedom of the remaining 800 million free people in Asia. It is the security of the United States.

The Communists have understood that clearly. Right after the end of the last war, 3 months after VJ-Day to be exact, the Communists published their instructions to their faithful followers in this country. I discussed them here at some length in 1950, right after the Korean war started. This was their central instruction: The war in China is the key to all problems of the international front.

We said that Germany was the key; we said the North Atlantic was the key; some said the Mediterranean was the key; some said Japan was the key. But the Kremlin, in its hard-headed realism, said, "The war in China is the key to all problems on the international front."

The war in China was the one we did not want to bother with, but they were determined to win. Why? Look for a moment at the geography of Asia. It is like a giant hand. China is the palm of that hand, the hub of the Asia wheel, just as Germany is the hub of the wheel in Europe. Out of the palm that is China go 12 fingers-12 countries that are island groups or peninsulas. On China's east are Korea, Japan, Formosa, the Philippines. Down in southeast Asia are Indochina, Thailand, Malaya, Indonesia. Then there are four more across the south-Burma, India, Pakistan, and Afghanistan.

In those 12 fingers live one-third of all the people of the world. The Communists saw that if they got the palm, China, and were able to consolidate their position there and develop China's vast manpower and raw materials, they could gradually take over the fingers, one by one—unless the free world fought back.

So the stake is not just Formosa and some island outposts; it is a third of the people in the world, with vast resources and strategically located bases. Once on the Indian Ocean, Africa lies ahead—almost totally unprotected on its east.

Well, the Communists have China, for the present. To change to another figure, China is first base. Their next objective, of course, is second base, the 12 countries lying like a giant crescent around China from Korea and Japan to Iran. If they are permitted to get second base they will outnumber the free world 2 to 1. Europe will be cut off from many of her raw materials and markets. Does anybody think Western Europe can long support herself isolated from two-thirds of the world? Or that we can support her indefinitely? The Communists then can get Europe—third base.

But a man does not go to third base to stop; he goes to third base to get home. And who is home base? We are, of course.

The Communists turned to Asia in 1928 as the surest and safest way to get Europe and America. Their real objective in Asia—in China, Korea, Indochina, and now Formosa—was and is to isolate and ultimately destroy the United

States, which is all that stands between them and total control of the world.

How can they best get second base? If you look at the two chief portions of the crescent around China you see that one is the island chain in the western Pacific and the other is south and southeast Asia. Formosa is a key to both.

Our chairman has described our western Pacific defense line. It arches from the Aleutians through Japan, Okinawa, Formosa, the Philippines, down to Australia and New Zealand. The key to that arch happens to be Formosa.

It flanks the Philippines on the north, You remember the Philippines were attacked and taken by the Japanese from Formosa.

It semiflanks Japan on the south. On Japan's north, the Russians are in the Kurile Islands, which unfortunately were given to them at Yalta in an effort to get peace and good relations. How is anybody going to make a bastion out of a Japan flanked on the south by Formosa and on the north by the Kurile Islands?

Look now at the other part of the crescent around China-the counties to its south. The richest of Asia are not in China. They are down here in southeast Asia-tin, rubber, oil, rice surpluses. Now, if you were a Communist general, would you move down into Burma or Thailand or Malaya or India as long as on your flank lay this unsinkable aircraft carrier, Formosa with some 60 airfields originally built by the Japanese, some of which have been enlarged to take jets? There are not too many jets there now, but we could get them there very quickly from Okinawa, Japan, and elsewhere. It is the existence of a free Formosa on the flank of Red China which makes the Communists say so emphatically that they are determined to capture Formosa. They dare not try to take south Asia without first securing Formosa, or perhaps getting it neutralized.

The reason why they say they must get Formosa is the reason why we are saying they must not be allowed to get Where could they be stopped then? Mr. Nehru, for example, has said he has no means of saving India if the Chinese Communists move against his country. Formosa is a major deterrent to Communist aggression against the vitally rich prizes of the south, including the Malay Peninsula and the vast country of Indonesia. Australia, right next door, understands this, but our people as a whole have not understood it.

We hope we will never have to use Formosa for such purposes, but the very existence of it there in friendly hands on Red China's flank is perhaps the best guaranty against further Communist expansion, which would force us into war-unless we were to let all Asia go and retreat to our west coast.

So this resolution is not just to save one island and some outposts, but to help keep free over one-third of the human beings in the world and keep the balance of power from being turned overwhelmingly against us. The free world now has one-third, the Communists have one-third. Which way is the enemy? That is what we are talking about today.

The CHAIRMAN. The time of the gentleman from Minnesota has expired. Mr. CHIPERFIELD. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield briefly to the gentleman from Illinois.

Mr. YATES. Is Formosa an international territory today, or does it belong to the Republic of China?

Mr. JUDD. The juridical position of Formosa has been in dispute. Some say one thing, some another. Events are probably going to have to determine it. China ceded it to Japan after the war of 1895. Japan relinquished all right to it in its treaty with the Republic of China after World War II. Both the Nationalist Chinese and the Communists insist that it is Chinese territory. It is the one thing on which they agree. But, the international status of Formosa from a juridical standpoint, I think, has not been finally determined. and therefore I do not think that we need to go into that today.

The main issue today is whether that key strategic area is to be taken over by the Communists and the defenses of ourselves and the free world in the western Pacific go down.

Quite as important as the geographical considerations involved are the morale factors. Should we retreat once more in the mistaken notion that would appease the Communists, the already shaken morale of other countries in the area, and their confidence in us, are bound to deteriorate rapidly. Are we, then, to abandon the Philippines and Japan also as soon as Red China is ready to threaten them? The Japanese prime minister has recently been defeated, in part because he put all his chips on the United States and its strength, and the people out there are not certain we can be depended on.

Mr. Chairman, I came home a year ago from a study trip through all these "fingers" with about four main impres-

First, the people there are awakening to the nature of communism and its threat to them.

Second, they are afraid of it, especially of Communist China, because they know it will destroy their newly won national independence. When people like Mr. Nehru extol the Chinese Communist regime or agree with it on almost everything, it is not because they are pro-Communists; they are afraid. Why should not they be?

A high official in one of these countries said to us that if we strong nations in the West did not have the courage to stand up against Communist China, how could the new and weaker governments of Asia be expected to? He said, "Some your allies 6,000 miles away from China, not right across the border, are insisting that you accept Communist China into the United Nations. If you are to embrace Communist China, how can we resist her?" I did not have a

other third to go-with us or with the good answer. Only such a resolution as this expressing the united will of this Nation to back down no further and to surrender no more strategic bases and no more millions of free people to Communist conquest, can give an answer they will believe.

Third, they want to be on the side of the United States and the free world, because that is their best hope of retaining their dearly bought freedom from alien control; but fourth, they are not certain we will stay on our own side, the side of human freedom. They are afraid we will make a deal with the Red tyrants at their expense, in our desire to get peace for ourselves, however illusory and transient it will be. I hate to admit it, but just as the question mark in Europe is France, so, in the minds of the people of east Asia and southeast Asia, the great question mark is the United States. If they do take a firm stand on our side, how can they be sure that we will not let them down?

It is the vital importance of Formosa from the standpoint of these geographical factors plus the morale factors which has brought us to this showdown today. The showdown for Europe and the Mediterranean came over Greece and Turkey almost 8 years ago. The President and Congress then took a firm stand and it did not lead to war. The showdown for Asia is over Formosa, and it is here now. I only hope it is not too late to convince these men of violence in Peking that our repeated concessions in the past, our attempts to get peace at almost any price, our long suffering and patience, are not synonymous with weakness. The Communists always proclaim to Asia that America is a paper tiger, and they may have come to believe it. Chou En-lai bellowed his threats yesterday in an attempt to intimidate the American people, trying to beguile us once more into believeing that it is not their aggression, but our resistance to it, that threatens war. Naturally he hopes that we will once more give in and back down.

Mr. Chairman, our appearance of weakness and softness in the past has encouraged the present Communist arrogance and aggressiveness. Firmness now may cause them to pause. Weakness now would be certain to increase their truculence and to extend, not limit, hostilities.

For communism is exactly like a cancer. It lives by lawless encroachments on neighboring tissues or peoples. We are presented here today with the same problem a surgeon has when a lady comes in with a cancer. We tell her it must be removed. Her husband says, "But may not the operation lead to her death?" And we reply, "Yes, it may." But what is going to happen if we do not operate? She is certain to die. You had better ask the question this way, "May it still prevent her death?"

So there is risk of war if the United States takes and firmly adheres to the stand proclaimed in this resolution. But we had better put it this way, "May it still prevent war?" Certainly there will be war later if the malignant Communist growth is permitted to continue

circumstances. There is risk of war if We act-but there is also hope of peace. There is greater risk if we do not act-and no hope.

So this proposed action is a belated effort to prevent war, not to make it. However great the dangers involved in taking this step, the risks assumed in not taking it are greater. I have no difficulty in deciding to take the course of lesser risk.

For I am sure that we will have a world war if we return to a weak and vacillating posture. And it will come at a time when, God help us, the odds will be against the United States. I cannot choose that.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section re-lating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together With a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the Year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, Who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Repre-Sentative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

its course-and under far more difficult LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES .- The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUS-TRATIONS, MAPS, DIAGRAMS .- No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Representatives, and Delegates is respectfully invited:

- 1. Arrangement of the daily Record .- The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: Provided, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.
- 2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will These reunusual indentions be permitted. strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.
- 3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.
- 4. Tabular matter.-The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.
- 5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks .- If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words - addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days. unless otherwise ordered by the committee.

8. Appendix to daily Record.-When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the Congressional Record Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. Official reporters.—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. Illustrations .- Pursuant to section 182b. title 44, United States Code (as shown above). requests for authority to insert an illustration in the Record should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. Corrections.—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Con-gress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Address of His Eminence Francis Cardinal Spellman, at the American Legion National Convention, Washington, D. C., August 30, 1954

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid and effective and timely address made on August 30, 1954, in Washington, D. C., to the delegates of the American Legion National Con-Vention by His Eminence Francis Cardihal Spellman, archbishop of New York. His remarks made at that time are particularly timely now in the light of recent events. His statement made in an address some 15 years ago "that it is better to have protection and not need it, than need protection and not have it" as Cardinal Spellman so well said in his August 30 address, is just as applicable today as it was then. To translate his statement, "If we are going to err, it is better that we err on the side of strength

The address follows:

than on the side of weakness."

THE PRICE OF FREEDOM

(Address of His Eminence Francis Cardinal Spellman)

Better to have protection and not need it than need protection and not have it.

A few months ago Dien Bien Phu was a hame which stirred the hearts of freemen and alerted the flagging spirits of liberty-loving peoples. For 57 fateful days it had been the scene of an heroic and gallant de-fense by an outnumbered band of French and Vietnamese soldiers. Although it finally fell to the superior numbers of attacking Communist forces, its fall seemed to call the free world together in a common acclaim for the brave and courageous deeds its epic defense had elicited. Hope then ran high that Dien Bien Phu would be remembered not as a symbol of defeat but as the rallying point there the free world would recover its initiative in the struggle against communism. Had it realized that high hope, had it thus served as a reveille awakening the world of freemen to the need for swift, decisive action against that Red tyranny which has now enslaved 800 million souls, it would have combensated, in some measure at least, for the dreadful losses and painful sacrifices its eventual fall entailed.

Alas, the passage of the past 4 months has revealed how pathetic was the hope that Dien Bien Phu would inspire the free world to take a more realistic stand against communism. If Geneva and what was agreed upon there means anything at all, it means that the trumpet which we heard over the fallen garrison of Dien Bien Phu last May sounded taps and not reveille. Taps for the buried hopes of freedom in southeast Asia.

Taps for the newly betrayed millions of Indochinese who must now learn the awful facts of slavery from their eager Communist masters. Now the devilish techniques of brainwashing, forced confessions and rigged trials have a new locale for their exercise. Now will the relentless, shattering fear of the secret police have a new people to terrorize. The tragic plight of Poland, indeed that of all eastern Europe, China, and Korea, will now be shared by a people who, for all the diplomatic guaranties that have been given them, already stand under the heavy shadow of the hammer and sickle spread across their land.

If we view the Geneva guaranty of indebendence for Laos, Cambodia, and South Vietnam with a large measure of disbelief, it is only because we remember how Poland's hopes, and the hopes of all the other countries now in the Soviet orbit, were shame-lessly betrayed. There is no reason for believing that the partition of Vietnam will have any different effect than the partition of Korea. Indeed, hardly was the ink dry on the Geneva Pact when the Communist leader of North Vietnam, Ho Chi Minh, boastfully proclaimed that within 6 months he expected to bring the independent states of Laos, Cambodia and South Vietnam under Communist control. If the history of Communist tactics in Europe and Asia is any guide, then the boast of Ho Chi Minh will be shortly realized. And with its realization we, in America, will have reason to understand that the fall of Dien Bien Phu was more than the loss of a jungle garrisonfor with its loss the grand plan for Communist domination of southeast Asia moved For too long we have into high gear. looked upon each act of Communist aggression as a self-contained conflict where we should have recognized each one as a carefully calculated incident in a worldwide struggle that enlists the zeal, energy, and discipline of Communists everywhere.

What we fail so tragically to realize is that communism has a world plan and it has been following a carefully setup timetable for the achievement of that plan. Red rulers know what they want with terrible clarity; determined to get what they want with violent consistency. Up to the present the Communist advance has concerned us, as Americans, only insofar as it has involved nations and peoples for whom we have the deepest sympathy and most sincere admiration. We are appalled at their enslavement but our sorrow is as nothing compared to the infamies and agonies inflicted upon the hapless victims of Red Russia's bestial tyranny. However, time is running out for us also, because, given the present pace of the Communist advance, it cannot be long before its encircling pincers will be turning upon ourselves. Fifteen years ago I was also privileged to speak before your national convention in Boston. At that time there was much propaganda that it was unnecessary for the United States to be prepared for hostilities. In my belief that the peaceful purposes of our country were not shared by some other nations, I urged that we prepare to defend ourselves against aggress making the keynote of my remarks the declaration that it is better to have protection and not need it than need protection and not have it. And today I stand firmly upon that same program of preparation for preservation, else we shall risk bartering our liberties for lunacies, betraying the sacred trust of our forefathers becoming serfs and slaves to Red rulers' godless goons.

Dear friends and fellow Americans, I speak to you in the frankest terms because I know your demonstrated sacrificing dedication to American ideals, American traditions and the protection of our United States of America. In war and peace you have proven how very much you prize all those treasured factors that have brought America to her present greatness. Your deep concern lest subversive groups undermine our American way of life has been manifested for many years, even when such manifestation exposed you to ridicule and abuse. You have known the menace of communism and you have alerted your members to it. However, there is a vast number of our countrymen who live in complete indifference to the terrifying fact that communism will settle for nothing less than the domination of the whole wide world.

Thirty-five years ago Lenin made this

prophecy:

"First we will take Eastern Europe; then the masses of Asia. Then we will encircle the United States of America which will be the last bastion of capitalism. We will not have to attack it; it will fall like an overripe

fruit into our hands."

While not all prophecies are to be taken at their face value, if we but look at a map of the world today, Lenin's prophecy must startle us. Eastern Europe is completely shackled. China, North Korea, and a large part of southeast Asia are now under Communist domination. The confident boast of Lenin that the United States will not have to be attacked because it will fall like overripe fruit into the hands of the Communists cannot casually be dismissed. Indeed, it constitutes a very shrewd thrust at our complacency and our confident belief that our country will never go down at the hands of any enemy. It is an ancient bit of wisdom that "a man's own worst enemy is himself," and if we extend that wise observation to national life we find that history vindicates it on every page. Nations and civilizations go down at their own hands. When the in-ner life of a people, that life which is nourished by the things of the spirit, shows signs of being hollow and without substance, then that people is sick unto death.

America is not immortal and there are today signs in American life of an alarming deterioration in the things of the spirit. When we think how home life has disintegrated, how parental responsibility is being shamelessly shirked, how shockingly juvenile delinquency has incredibly increased with all of the dreadful social consequences, we can look into our hearts and ask ourselves if the fruit of hard American planting and the sacrifice that went into so much toil has not already become overripe and ready for plucking by an enemy who is willing to make limitless efforts and use dastardly methods in order to gain his goal.

With all the fervor I can command, I appeal to your great organization courageously to extend and intensify your truly American program which emphasizes religious values, and gives to our Nation's youth a vital interest in the things which brought our country to its greatness, combining in a wonderfully integrated way your patriotic, educational, and athletic activities.

It may be that the challenge of evil totalitarianism will be faced by us sooner than we think, and in that event we wil need all the

strength that our prayers and sacrifices can bring to us. The prophecy of Lenin should at least have the merit of putting us on our guard. We remember how paralyzing a blow was struck at our Nation in the surprise attack at Pearl Harbor. And the bitterness of that blow was increased by the knowledge that the attack was not unexpected and that we should have been better prepared for it and spared many mothers and fathers the tragic news that their sons went to their deaths unnecessarily.

The danger of another Pearl Harbor embracing the whole American people is definitely possible and possibly imminent. We have been warned by Communist leaders about their aims and ambitions concerning For 35 years they have given intensive study of the best means and methods to penetrate and overthrow our free institu-tions and they have made no secret of their purposes.

Americans must not be lulled into sleep by indifference nor be beguiled by the prospect of peaceful coexistence with Communists. How can there be peaceful coexistenc between two parties if one of them is continually clawing at the throat of the other, continually threating, continually committing actions which are designed to destroy life in the other party? How does one peacefully coexist with men who mouth words of peace while waging treacherous war; men who wear the trappings of civilization while they indulge in the techniques of barbarism? It is ignorance of a fatal kind which prompts the illusion that free men can peacefully coexist with Communists. We have the words of the Comminists themselves to prove it. Twenty-four years ago an address was given to the international students at the Lenin School of Political Warfare in Moscow, by Dimitry Z. Manuilsky. This is the same man who later presided over the United Nations Security Council in this country in July 1949. This is one of the responsible men of that movement which has introduced the most dreadful bloodbath in history and yet has the effrontery to appeal to the world for peace. This is what Manuilsky had to say in 1930 to the young men and women from all over the world who had been brought to Moscow to be trained in espionage so that they might go back to their native lands and practice their nefarious activities:

War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. will be electrifying overtures and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist.

Do you peacefully coexist with men who thus would train the youth of their godless, world-men whose language of vilification and arrogance make it impossible for any meeting of minds? Ask any of our American representatives who dealt with the Communists in Germany, in Austria, in Panmunjom. They know the answer to their sorrow-and to ours.

We Americans need to remember as we have never remembered before in our national life how definite a sentence of death has been passed upon us by the very power with whom we have been asked peacefully to coexist. We need to remember as we have never remembered before how fatal it would be to succumb to the temptation to place any trust in those evil leaders who have risen to their world position by reason of lies, duplicity, and treason.

No guaranty has ever been given to America that it shall continue to enjoy the dominance it now has as a nation. America came to its mighty and majestic greatness and achieved her present destiny through a conscious dedication of our fathers to religious truths and principles, for they knew that unless the Lord build the city, they labor in vain who build it. We must intensify our religious life as a people. We must restore to our homelife some measure of that inspiration which our fathers and mothers be-quethed to us. We must give our children that sense of responsibility which will give strength to their characters and direction to their lives. We must ever be mindful of the sacrifices and toil that went into making the heritage which is ours as Americans and never shirk any sacrifice or task necessary for the preservation of the heritage of free-dom for which our valiant forefathers and the glorious youth of America, down through the decades of our country's life, have bought with their precious lives.

United in love and loyalty for our free and

beloved America, let us pray:
O Lord of Hosts, bless and protect the legions of our Armed Forces in their crusade to defend and vindicate the ideals of human freedom; bless them and the thousands of martyrs who have been called to lay down lives on the battlefields of the Grant that we may not prove unmindful or unworthy of their blood, which is the price of our freedom, that freedom which is the fruit of vigilance, toil, and sacrifice.

Be with us Blessed Lord, lest we forget and surrender to those who have attacked us without cause, those who have repaid us with evil for good and hatred for love. Amen.

H. R. 587

EXTENSION OF REMARKS OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following statement of Cecil H. Munson, chief, vocational training and education, national rehabilitation commission, the American Legion, on H. R. 587, before the House Veterans' Committee, January 25, 1955:

Mr. Chairman and members of the committee, the American Legion strongly recommends approval of H. R. 587, a bill to amend Public Law 550, 82d Congress, the Veterans' Readjustment Assistance Act of 1952. The enactment of this bill will extend education and training benefits to all persons in the Armed Forces on or before January 31, 1955.

It is not necessary to enumerate numerous reasons for supporting this bill. The heading for title II is "Educational and Vocational Assistance" and the declared purpose is to extend education and training assistance to provide vocational readjustment and to restore lost educational opportunities to those whose educational, professional, or voca-tional ambitions are interrupted or impeded by active service in the Armed Forces during the specified emergency period which is referred to in Public Law 550 as the "basic service period." It is further stated in the policy declaration of the bill that this educational program is intended to aid such persons in attaining the educational and training status which they might normally have aspired to and attained, had they not served their country.

For those persons in the Armed Forces on or before January 31, 1955, proclamation 3080 terminating the emergency period does not alter the need for assistance to provide vocational readjustment and to restore lost educational opportunities.

There was widespread confusion regarding education benefits after the proclamation was announced. Enlistments were encouraged believing that those persons in the Armed Forces would be permitted to accrue maximum education and training entitlement. The man in service on or before January 31 will be eligible for home, farm, or business loans partially guaranteed by the Government after he leaves service. This benefit and the educational provisions have been powerful incentives for enlistments. Both have contributed much to good morale in the Armed Forces among those who enlisted or were drafted.

For those not acquainted with legal terminology the reading of section 214, Public Law 550, could lead to a misunderstanding. Paragraph (a) reads: "Each eligible veteran shall be entitled to education or training under this title for a period equal to $1\frac{1}{2}$ times the duration of his active service in the Armed Forces during the basic service period. * * *" In the absence of a legal interpretation regarding the relationship be-tween "* * his active service in the Armed Forces * * " and "* * the basic service period . . " before the announcement of a termination date each person in the Armed Forces had reason to believe his entitlement would be based on " * * the duration of his active service in the Armed Forces. *

The enactment of H. R. 587 will promptly dispell all feeling of resentment on the part of those who have entered or will enter Armed Forces before January 31, 1955. These men and women are giving all that is asked of them. It will continue the emphasis upon vocational readjustment and the restoration lost educational opportunities resulting in the obtainment of educational and vocational goals in the shortest time possible. This is of supreme importance to the security of the United States and our way of

Federal Agencies Directed to Slash **Business Activity**

EXTENSION OF REMARKS OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. OSMERS. Mr. Speaker, during the 83d Congress I sponsored H. R. 8832 and H. R. 9890, which had for their purpose the elimination of competition on the part of the Government with its citizens in business activities. After lengthy hearings, the Committee on Government Operations favorably reported and the House passed a bill along these lines. The Senate failed to take action and, therefore, I have again introduced a bill, H. R. 687, for the purpose of ending this type of competition. The New York Times of January 26, 1955, has reported on Bulletin 55-4 of the Bureau of the Budget, and because of the wide interest in the subject I include this article in the Appendix:

FEDERAL AGENCIES DIRECTED TO SLASH BUSI-ACTIVITY-BUDGET CHIEF ORDERS STUDY TO END ENTERPRISES COMPETING WITH PRIVATE INTERESTS

(By Charles E. Egan)

Washington, January 25.—Government agencies were ordered today to see how rapidly they could drop more activities compet-ing with private business.

Under direction of the President, Rowland R. Hughes, Director of the Budget, instructed all agencies and departments to review their industrial and commercial activities and "determine how many of these activities are in competition with private business and how many can reasonably be ended."

Each agency received until April 15 to complete an inventory of its commercial activities and until July 15 to advise the Budget Bureau as to which of the manu-facturing functions it performed could be

ended.

Later in the year, the agencies and departments will submit evaluation of other commercial activities carried on for the Government's own use, such as repair and business services, transportation, communications, and wholesale and retail trade.

These evaluations, of necessity, will require a number of months to prepare, it

was said.

In the meantime, the departments and agencies were told not to start any new enterprises that would compete with private business.

PRESIDENT'S REMARKS RECALLED

The order is in line with the President's thinking, and on many occasions he has em-Phasized his feelings in the matter. During the 1952 election campaign, he said:

"That no Federal project, large or small, will be undertaken which the people can effectively do or be helped to do for them-selves; that no Federal project will be undertaken which private enterprise can effectively undertake; that no project and no program Will be started on the Federal level which can be undertaken and effectively carried through on the State or local level."

Mr. Hughes said today that Government departments and agencies should discontinue activities competing with private enterprise "unless, as shown by the evaluation, it would not be in the public interest to procure products or services from private enterprise through ordinary business chan-

nels.

He said that the order did not deal with "activities of direct service to the public," such as "lending, insurance, and the gen-

eration and sale of power."

He added, however, that the agencies were expected to keep these activities, including insurance of home loans, lending to small business, and the production of electric power by the Tennessee Valley Authority, "under constant review and evaluation."

Costs will be a factor in deciding whether the Government should discontinue a busihess activity, but Mr. Hughes decreed that in comparing Government and private business costs, the computations must be made

fairly and must be complete.

This was believed to be almed at getting cost comparisons on a business bookkeeping basis, including charges for interest on capital, taxes, and other costs normal to business but sometimes not figured in computations comparing Government costs with those of business.

In the last 21 months, the Government has divested itself of a number of commercial activities. Among these were the placing of the Reconstruction Finance Cor-Poration in liquidation, the sale of the assets of the Inland Waterways Corporation, and the selling of most of the synthetic rubber plants, subject to congressional approval.

The Defense Department began a survey of its commercial operations last March and reported that progress had been made in reducing the area in which it competed with private business, Mr. Hughes said.

The Navy is no longer manufacturing its own clothing, he added, and the Army has sold a \$15 million chlorine plant in Alabama. The Army also has increased the percentage of automotive maintenance and pair being done by private garages, and the Air Force is contracting out almost half of its maintenance and modification work.

Ukrainian Independence Day

EXTENSION OF REMARKS OF

HON, PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. FINO. Mr. Speaker, under leave to extend my remarks in the Record, I include therein my statement in observance of Ukrainian Independence Day:

UKRAINIAN INDEPENDENCE DAY

Ukrainians constitute the largest nationality group, with the exception, of course, of the Russians, in the sprawling Soviet empire. It is only under compulsion that these 40 million hardened and sturdy tillers of the soil are subject to the Communist rulers of the Soviet Union. Even with all the harshness of the Red regime, the Ukrainians resist it whenever they can.

The Ukraine is the breadbasket of Russia. Without the Ukraine's abundant harvest, it would be almost impossible to feed the people The leaders of Russia, of the Soviet Union. Czarist as well as Communist, know the agricultural importance of this rich blacksoil area. For that reason they robbed the Ukrainians of their national independence. annexed their beloved and richly blessed country, and have since 1920 considered it a Soviet Socialist Republic.

To call the Communist regime in the Ukraine a republic is, as we know so well, a farce. The independence which the a farce. Ukraine attained at the end of World War I and unfortunately was forced to lose in 1920, was real, was genuine national independence, whereas the euphonious republic which the Kremlin claims the Ukraine is today, is nothing but a sham. It is a downright falsehood, a gross distortion of the accepted meaning of the word, to call the Ukraine of today, or any country dominated by the Soviet Union, a republic.

It is, of course, most unfortunate that since 1920 there has been not a single gleam of light in the Ukraine indicating there is any genuine independence. The barbarians of the Kremlin see to it that there is no such light.

Fortunately, however, neither the tyrants of Moscow, nor their minions in the Ukraine, can extinguish the spirit of freedom and of liberty-loving independence which all Ukrainians claim as their birthright. As long as that noble spirit is kept alive, as long as the ideal of national freedom is cherished by the Ukrainians, no dictatorships or tyranny can rob the Ukrainians of their real independence—the independence of their souls and hearts. As long as they possess this, they will never give up their resistance to the Red tyrants.

The Ukrainian Congress Committee of America has done excellent work in keeping alive Ukrainian hopes for the recovery of their freedom. On this Ukrainian Independence Day, I wish you all success in your inspiring endeavors.

Anniversary of the Establishment of the Ukrainian National Republic

> EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I include the text of a speech which I made on Sunday, January 23, on the occasion of the 37th anniversary of the establishment of the Ukrainian National Republic:

SPEECH OF HON. ALVIN M. BENTLEY, OF MICH-IGAN, IN DETROIT, JANUARY 23, 1955

I am very happy to be here this afternoon and to have the privilege of speaking to the Detroit branch of the Ukrainian Congress Committee of America on the 37th anniversary of the establishment of the Ukrainian National Republic. I know of the many thousand persons of Ukrainian origin and descent who live in the Detroit area, in the State of Michigan and throughout our country and it is a happy opportunity to join them in commemorating this day. During the work of the House Select Com-

mittee To Investigate Communist Aggression on which I was privileged to serve during the 83d Congress, I came to learn a good deal concerning the essentials of the history of Ukraine and its people, including the period of Communist takeover and occupation of that nation. Given this occasion which has brought us together today, it is not inappropriate to review briefly some of these essentials so that we may have a better understanding of how the present situation was achieved.

It is a well-known fact to Ukrainians and non-Ukrainians alike that today the Ukrainian Soviet Socialist Republic, as one of the union republics of the U.S.S.R., is a charter member of the United Nations, but it is not allowed to enter into direct relations with any of the free nations of the world. Not so well known, perhaps, is the fact that, according to the best calculations, which are, of course, approximate, there are about 54 million Ukrainians in the world. This entitles them to rank in Europe next after the Russians and the Germans in point of numbers. It certainly merits careful consideration being given to the present problems and the future of this great people.

It is interesting to note how Ukrainian consciousness fared under pre-Communist foreign dominations. Under the Hapsburgs there was no denial of the Ukrainian national identity. In Russia, however, that is Czarist Russia, the Ukrainian identity was denied and many of the younger Ukrainians were drawn into the Russian revolutionary movement, while no separate Ukrainian political activity was possible.

A study of the rise of the Ukrainian National Republic should properly begin in March 1917, when the old Russian imperial organism collapsed under the strain of World War I. It was at this time that Prof. Mykhaylo Hrushevsky returned home from forced exile in Russia. On April 7 there was a great demonstration in Kiev at which Professor Hrushevsky spoke of the ending of the past, the fight for fundamental national rights, and called on the Ukrainians to be loyal to their native land-Ukraine. It was out of this that the Central Rada developed which issued, on June 23, 1917, its first universal, written by Vynnychenko, and declaring that from this time Ukraine had to live its own life. The general secretariat which was set up by the Rada was in effect the first modern Ukrainian government.

On November 20, the Rada, which had now become the governing body of Ukraine, issued the third universal, which was really a declaration of national independence except that it contained the phrase "not breaking federative bonds with Russia." This important statement provided for the establishment of a democratic republic in the Ukrainian ethnographic boundaries and guaranteed to all citizens those democratic rights that form the basis of a free country.

More important, however, from the standpoint of the Ukrainian people was the statement issued by Nikolai Lenin, on behalf of
the Soviet of People's Commissars, on
December 17, 1917, which officially recognized
Ukraine as a completely sovereign and independent state. However, at the same time
this recognition was extended, the Bolsheviks
presented an ultimatum, an ultimatum
which was rejected by the Ukrainian Government.

The Soviets thereupon declared war and invaded the Ukraine, driving the Ukrainian Government from Kiev to Zhytomyr in February of 1918. Prior to this, however, the Rada decided to proclaim the fourth universal on January 22 and declare the complete independence of a Ukrainian state.

Thanks to the fact that the Central Powers recognized the independence of the Ukrainian National Republic and sent military assistance, the rada was able to return to Kiev by March 1 and resume its work of constructing a democratic state. On April 29. a constitution was adopted and Hrushevsky was elected president of the Republic. Although a German-inspired countermovement against the rada was temporarily successful, it collapsed along with the Central Powers and by December 19 the Ukrainian National Republic was again restored. On January 3, 1919, the western Ukrainian National Republic voted to unite with the Ukrainian National Republic and the union was proclaimed at Kiev on January 22. It is the 36th anniversary of this great event which we are celebrating here today.

Even before this time, flagrant Soviet interference had assumed serious proportions. On January 16, the legal Ukrainian Government was forced to cease efforts at peace and to declare war on Soviet Russia. Caught in the midst of the Russian civil war, the Ukrainian Government was forced to leave Kiev by early February even though it returned twice briefly in August and again in May of the following year, both times with Polish assistance. However, the armistice of Riga on October 18, 1920, put an end to hostilities. The Bolshevik-supported Ukrainian Soviet Republic signed this treaty and no mention was made of the Ukrainian National Republic. When the remaining Ukrainian military forces withdrew across the Zbruch in November of 1920, it marked the close of a chapter in an heroic struggle for national independence.

Opposition to communism continued, however, especially among the Ukrainian peasants. Ukrainian national consciousness was also heightened by the fact that for a while Moscow desired to keep the Ukrainian Soviet Socialist Republic as a quasi-independent state for its international value and effect. It must be emphasized that Ukraine proved itself an unwilling victim, albeit a very challenging field for the trying out of experiments on ways of dominating subject countries. That is why Ukraine has been the scene of so many experiments and why it has been an especial victim of the Russian Communist terror.

The Russian leaders of the first invasion of Ukraine were as much interested in plundering the peasants to secure grain as they were in capturing the country. As might have

been expected the peasants resisted. Then in 1921 a famine broke out and several millions of people starved. One result was the adoption by the Soviets of the new economic policy (NEP) which resulted in a slight in the field of agriculture. tunately, the outside world assumed that the disastrous effects of militant communism had taught the Communists reason and commonsense and that they were returning to sound and civilized policy. Such impressions were strengthened by the measures which the Communists adopted in heavy industry, in coal mining, and the production of iron ore and pig iron. Even the steady diminution of the influence of the Ukrainian S. S. R. on foreign affairs and the development of the idea, in 1922, of the formation of the Union of Soviet Socialist Republics did not serve as sufficient warnings to world leaders.

During this period a lively intellectual life was developing in the Ukraine in connection with the so-called Ukrainization. Ukrainian revival came to an end in 1926 when Stalin decided that Ukraine would continue to be an agricultural area and the producer of mineral and metal raw and semifinished materials which would take their final form in the Russian Republic. first step in the deliberate destruction of the Ukrainian village was to ruin the peasants and force them to turn over their lands to the collective farms. Then, in 1930, came the order for compulsory collectivization of all the land and the means of production. And then Stalin decided upon a still more drastic device-the starvation of the Ukrainian villages-which resulted in the great famine of 1932-33

During the hearings of our committee last year, one witness testified that during the period of the famine at least 6 million people died in the Ukraine as a result of it, and about 80 percent of the Ukrainian intelligentsia also perished. The most conservative estimate is that there were about 4,800 .-000 deaths, although there are many recognized scholars who have placed the number as between five and eight million. In addition, there was the loss to Ukraine of that part of the population which did succeed in getting out of the country and securing work in other sections of the Soviet Union. It should be remembered that, despite all appeals, any international relief was prevented by Stalin and his associates during this period.

At the same time of the collectivization and the famine, a similar attack was directed on all of the intellectual leaders of the country. A Ukrainian orthodox bishop told our committee that over 3,000 Ukrainian priests were exterminated or sent to prisons in Siberia. He added that about 90 percent of the Ukrainian orthodox churches were either completely destroyed or were turned into other buildings, such as warehouses and barns.

It was also at this time that professor Hrushevsky, former President of the Ukrainian National Republic and then 64 years of age, was arrested and confined in an obscure village under inhuman conditions. When he was completely broken by this procedure, he was released and moved to a rest home in the Caucasus, where he died in 1934. Along with Mezepa and Petlyura, he had been charged with bourgeois nationalism and accused of trying to destroy the unity of the Russians and Ukrainians and to undo the great work of Marx and Lenin.

The destruction of the Ukrainian cultural renaissance and the crushing of the traditional Ukrainian peasant life were but the first steps in the policy of Stalin and his associates. That dealt with Ukrainian life and thought in the present. It was necessary also to alter the past and the future. Therefore the suggestion was made that the

Ukrainian language should be assimilated to Russian by the introduction into it of Russian words wherever the Ukrainian words differed. Even today the Communists are striving to make Ukrainian a dead language incapable of growth or of adaptation to modern conditions in any way other than by the addition of Russian elements.

The outbreak of World War II and the crushing defeat of Poland by the Nazi hordes also saw the Soviet Union invade that part of Ukraine and Byelorussia that had previously been Polish lands. On October 22, 1939, a national assembly (elected by the usual Communist methods) met in Lvov and asked admission to the Ukrainian Soviet Republic. A hand-picked delegation went to Moscow and on November 1, the area was formally incorporated by the Soviet of Commissars in Moscow.

It is undeniable that, when the German-Soviet war broke out in June of 1941, many of the Ukrainians welcomed the invading German forces. However, Hitler's plans did not include the formation of an independent Ukrainian Government. In August 1941 the Germans annexed western Ukraine to the governor generalship and the rest of the Ukraine was formed into the Reichskommissariat Ukraine. Therefore resistance against the new invaders developed early in with the formation of the Ukrainian insurgent army (UPA) and the next year there was finally formed the Supreme Council of Ukrainian Liberation (UHVR) which coordinated the military and civilian sides of the Ukrainian struggle. This became in a sense a government for the UPA.

One of the members of the Ukrainian Supreme Liberation Council who testified before our committee told us that the Ukrainian resistance was organized not only on political lines but also in the form of armed resistance and added that all the Ukrainian people fight for the same aims and motives as the Ukrainian insurgent army itself.

When the Soviets returned at the end of the war, they endeavored to soothe the aroused nationalistic feelings in Ukraine and Byelorussia. It was for this reason that they secured the entrance of the Ukraintan and Byelorussian Soviet Socialist Republics as charter members of the United Nations and later gave these republics their own flags and provided new national anthems for them. But in spite of this the UPA turned against the Communists and continued to fight the Soviet armies as determinedly as they had fought the Germans.

The success of the UPA encouraged the population and did much to hamper the return and functioning of the Soviet system in the Ukraine. This continued success led to a tripartite agreement of the Soviet Union. Poland, and Czechoslovakia on May 12. 1947, to suppress the UPA, and the armed forces of all three united to suppress a menace that the Communists had denied ever existed. By 1952 open military conflict had pretty much ceased and the chief object of the UPA is now to maintain a constant state of unrest and uneasiness on the part of the more prominent Communist terrorists in the country.

In postwar Ukraine the real church has ceased to exist or has gone underground. The agricultural policy of the Soviet Union has been to revive and reform the collective farms and also to introduce the so-called agrogorod, or farm city, which facilitates the the control of the collective farms by the Communists. The work of restoring the factories has gone slowly since the policy on the part of the Soviets has been to develop the entire union in such a way that Ukrainian industrial production would increase very slowly and the share of Ukraine in the total agricultural and industrial yield of the Soviet Union would definitely diminish.

You may be interested to know that in

You may be interested to know that in January of 1953 there was celebrated with

all the fanfare possible the 300th anniversary of the Treaty of Pereyoslav which brought Ukraine into alliance with Moscovy. On this Occasion the theses of the Communist Party call Kiev the oldest Russian city and Lvov the oldest Ukrainian city because it was founded by the Ukrainians after the division of the language. Of course this postulates an original linguistic, political, and racial union of the two nations. You may also be interested to learn that the Council of Ministers turned over to Ukraine the Crimea from which they had already forcibly deported its native Tartar population. And finally, since Moscow has decided to cultivate more land in Kazakhstan and Siberia, some 800,000 young Ukrainians, young men and women, are to volunteer for the pioneering service. It is another example of the long continued attempt to place the Ukrainians everywhere, except in Ukraine.

These are some of the facts which were brought out by the Select House Committee on Communist Aggression and contained in its special report No. 4 which was published at the end of last year. I have been given a few hundred copies of this Ukrainian report and would be happy to supply you with copies as long as my supply lasts, if you will

write me at my Washington office.

As many of you also know I was, during the last Congress, Michigan's only Representative on the House Foreign Affairs Committee. I recall our hearings on July 15, 1953, on the consideration of House Concurrent Resolution 58 which would have authorized the establishment of diplomatic relations with the Soviet Republics of Ukraine and Byelorussia and the creation of American representation at Kiev and Minsk. Although I endorsed this legislation publicly during the course of the hearings and supported its passage in committee, the bill

itself was never reported out of committee. In this connection, I would like to clarify a point which may seem confusing to some people. The Select Committee on Communist Aggression, in its final report, recommended steps which would lead to the breaking of diplomatic relations between this Government, on the one hand, and the Soviet Union and its satellites, on the other. Along with every other member of the committee, both Republicans and Democrats, I signed this report and endorsed such steps. Some persons might naturally inquire, therefore, why I endorsed the breaking of relations with the Soviet Union while at the same time I supported attempts to establish diplomatic relations with Ukraine and Byelorussia.

Of course, those of us who supported the latter step had little hope that the Soviet Union would permit this Government to have direct contact with the so-called foreign offices of Ukraine and Byelorussia. But We wished to force the Soviet Union to refuse publicly and thus give the lie to the fiction that these two Soviet republics enjoy autonomy in the conduct of their foreign affairs. Of course, we all know that neither Ukraine nor Byelorussia have the slightest degree of external or internal autonomy, but it is important that the most clear and ample proof of this be displayed to the outside world and we believed that the passage of this concurrent resolution would have placed a valuable weapon in our hands for the coldwar struggle.

I wish now to speak of the captive peoples, not only of Ukraine but everywhere behind the Iron Curtain. Recently there has been much talk in the press of peaceful coexistence between this country and the Soviet Union. Some have interpreted such talk as an indication that we have abandoned the captive peoples to their fate, that we are willing to sit down with the Soviet rulers and divide the world into so-called spheres of influence, that we are prepared to per-

mit the Communists to have Ukraine, let us say, if they will agree to abandon their infiltrative efforts in perhaps Guatemala or Chile or Brazil. I want to answer such interpretations this afternoon.

I can categorically assure all of you here that the policy of this Government toward the captive peoples behind the Iron Curtain has not changed one iota, nor will it change under our present administration. Under date of December 16, little more than a month ago, I received the following assurances from the State Department (from which I quote): "This Government is not reconciled to the present fate of those peoples; it will not be a party to any arrangement or treaty confirming or prolonging their subjection to Soviet despotism, and it seeks by peaceful means conditions permitting these enslaved national groups to recover genuine freedom and independence."

You may have heard of or read the recent speech which Secretary of State Dulles made in Chicago in which he stated (and I quote again): "The scope of conferences with the Soviet Government is necessarily limited by our attitude toward the captive peoples, for the Soviets know that we will not make any deal which would condone and perpetuate the captivity of men and nations." And the State Department has personally assured me that our objective remains unchanged, that is, to work in all peaceful ways for the creation of a Europe in which the captive peoples will again enjoy governments as well as social and economic institutions of their own free choice.

I hope that these official statements of policy on the part of our Government will act to reassure the captive peoples that they are not and will not be forgotten and that no so-called deal will be made with the Soviets that would in any sense of the word be an acceptance on our part of their conditions of bondage. Moreover, I will say that I am convinced that the great majority of the American people are desirous and hopeful that the eventual day of liberation will come and that it will come soon.

I wish to make one thing clear about which there has been much misunderstanding. There will be no so-called war of liberation in its literal sense. The American people are not prepared to and do not intend to fight a war solely and simply for the liberation of the captive peoples. The horrors of an atomic and thermonuclear war are too great for us ever to seek war of our own choosing. But if, in spite of all our efforts for peace, war should be thrust upon us, we will not shrink from its horrors, however catastrophic they may be.

All of the peoples of the world ardently desire peace. But we will not pay any price, however unworthy, to buy peace. And I am convinced that if war with the Soviets should come, albeit not of our choosing, we would not hesitate but would wage it until the power of international communism everywhere was beaten and trampled into the ground.

So I tell you that, while there may be talk of peaceful coexistence, a concept which I personally believe can never be realized, the policy of liberation is still as much a part of our national objective as it ever was. And there are peaceful means and ways in which we can work for this liberation, some of which are already in use while many others remain to be tried.

In working for peaceful liberation, I believe we would in effect be working toward a victory over the Soviet Union in the only way which would avoid either shameful surrender to the Soviets or an all-out atomic war in which there would be neither victor nor vanquished. Therefore you can see that the achievement of liberation by peaceful means would be very much in the interest of our own national security and therefore

must of necessity be and remain a part of our Government's international policy toward the Soviets.

One thing more. When one deals with the Soviets, it is necessary to approach them from a standpoint of strength, not weakness, For example, when our citizens are incar-cerated in Soviet prisons, it is not only unnecessary but even the height of folly to resort to the payment of ransom and blackmail in order to effect their release. This was done in the case of Oatis from Czechoslovakkia, Vogeler from Hungary, and in other instances. Such examples not only set dangerous precedents but are also shameful reflections of the loss of honor and prestige of a great Nation. You here in Detroit have just witnessed a successful attempt, in which I was proud to play a small part, at liberating one of your own fellow townsmen from a Soviet prison. No ransom or blackmail, no shameful concessions, were paid to effect the release of John Noble. He had been in a Russian labor camp for 9 years. But it was not until the State Department stopped writing notes and instructed our Ambassador to take the matter up personally with the Soviets that success was achieved.

I have been privileged to join with you this afternoon in honoring the 36th anniversary of the establishment of the Ukrainian National Republic. I join with all of you in praying for the day when the people of Ukraine will once again be free and able to choose their own form of government in accordance with the cherished principle of self-determination which this country has always espoused. I am happy to come here and tell you that the Eisenhower administration is just as concerned with this question of liberation as any of you and to assure you of my own intention to work for this principle as long as I remain in public service. I commend you for keeping the mem-ory of this day alive and I urge you never to forget what this occasion signifies as best expressed by the title of your historic national anthem, Shche Ne Vmerla Ukraina Ukraine Will Never Die.

Correction of Flaws in the Present Federal Statute Regarding Arbitration

EXTENSION OF REMARKS

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. GARMATZ. Mr. Speaker, in the 2d session of the 83d Congress, I introduced H. R. 10010, which had as its purpose the correction of numerous inaccuracies and flaws contained in the present Federal statute regarding arbitration. The bill was introduced on July 22, 1954, but because of the relatively short period remaining before adjournment, it was impossible to pursue efforts to have it enacted into law.

I am again introducing the bill, which has been carefully studied by practitioners in various parts of the country, and it is hoped that it will not be the subject of controversy. Accordingly, I trust it will have the favorable consideration of the general membership of the Congress.

For a long time those familiar with this subject matter have realized the lack of provisions for judicial review in questions of law arising out of arbitration. A large number of standard forms of charter party and other contracts contain clauses requiring that the arbitra-

tors shall be commercial men.

A proposed amendment would clarify and would extend jurisdiction of the District Courts to issue orders requiring arbitration. Another purpose of the proposed legislation is to preclude the enforcement of arbitration in those instances where the dispute has become time-barred.

The bill being introduced would incorporate in the statute the prevailing judicial view that unless the parties expressly agree otherwise, all arbitrators must be impartial persons and their decisions should be limited to evidence submitted to them in a specified manner. Members of the Maritime Law Association of the United States have been actively interested in this legislation and I consider it worthy of the attention of the Congress of the United States.

What's Wrong With Our Present Drought Program?

EXTENSION OF REMARKS OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. EDMONDSON. Mr. Speaker, along with colleagues in both Houses of the Congress, I am today introducing a concurrent resolution calling for a complete study and investigation of drought conditions in the United States for the purpose of preparing plans and programs for their alleviation.

This resolution is offered against a background of increasingly disturbing news concerning the gravity of the drought catastrophe in my own State of Oklahoma and the pitiful failure of our existing drought-relief program to meet adequately the emergency which we face.

It is offered against a background of long-range weather predictions which point to another dry year in 1955.

It is offered against a background of declining farm income throughout the Nation, even as we face an administration farm program which is aimed directly at further depressing of farm prices.

As I pointed out in my speech to the House on January 20, we have 18 States-and 944 counties within their boundaries-which are today classified as drought emergency areas.

Literally hundreds of thousands of farm families are today on direct food relief throughout the Nation, the victims of relentless drought and the tragic fallure to provide an adequate drought relief program.

I want to submit to you a summary of the reports which I have been receiving for some time concerning the operation of the Benson drought program.

Most of the ideas and opinions expressed are the ideas and opinions of men who know the drought program best, because they are living with it, in the drought area of Oklahoma.

From letters and messages received in my office, from farmers, ranchers, county agents, and others, I submit this report

on our drought program.

I hope there are reasonable explanations and answers for some of the program's failures-but I doubt that there

I would prefer that some of the charges are not completely accurate-but I am afraid that they are.

The Congress should act now to create machinery for a careful review of this program, and should act at once to improve it where action is demanded by the plain facts.

REPORT ON THE DROUGHT PROGRAM

The major complanit against the program is plain inadequacy. Concerning the feed relief program, one farmer who is president of a civic association writes as follows:

At the meeting of our organization last night the feed relief program was discussed and found to be inadequate. If this program is not changed at least 60 percent of the farmers who have cattle will be forced to sell their livestock and leave the State seeking employment.

This prediction has already been proved accurate in many counties of the State

The president of one small town chamber of commerce wrote:

The drought program set up by the Government has been of no help to our farmers in that it is set up to help the big man, but not the small cattleman.

A leading citizen of another eastern Oklahoma town agreed:

Our farmers and livestock growers are in desperate condition for feed with which to winter their livestock. They have made no crops and will have very little money if any to buy feed with and the feed that is available is very costly.

A county agent wrote as follows:

I have lived in Oklahoma for 61 years and believe that I can say without reservation that this is the worst drought that I have ever seen, partly due to the fact that it follows previous drouths of 1952 and 1953. A great many of our little farmers especially are in very bad shape financially. They would like some kind of made-work program so they can earn an honest living, not a giveaway Also, it seems to be the consensus of all the farmers that I have talked with that this 60 cents per hundred on drouth feeds is entirely inadequate.

After numerous protests, the Agriculture Department finally admitted the truth of this charge and raised the assistance to \$1 per hundredweight on feed, but the basic problem of finding a way to make up the cash difference remained to blight the program for the small and hard-hit farmer.

Meanwhile, high prices on feed grains were compounding the problem for the drought-hit farmer and stockman.

In most cases, the fault did not lie with the local feed dealer, who raised local prices very reluctantly, but rather with his sources of supply, who were taking advantage of market conditions and at the same time draining off large Government surpluses at bargain rates.

According to CCC operational reports. more than 193 million bushels of corn were sold between January 1 and October 31, 1954. The average price was \$2.52 per hundred.

In Muskogee, Okla., on October 4. 1954, the wholesale price of \$3.40 per hundred was being quoted for corn.

The CCC sold 11 million bushels of oats at an average of \$2.26 per hundred-and the October 4 wholesale price on oats in Muskogee was \$3.00-\$3.10.

More than 12 million bushels of barley sold by CCC brought an average price of \$2.25 per hundred-while the Muskogee wholesale price was \$3.10.

CCC disposed of 1.2 billion pounds of grain sorghums at an overage of \$1.77but in October the Muskogee wholesale price for ground sorghums was \$3.10.

Note that these Oklahoma prices are wholesale prices, for truckload lots or more, according to report, and retail prices in lesser amounts would run even higher.

Who was the beneficiary of the Government's feed program, anyway?

A county agent quoted by the farm editor of the Tulsa World made this comment:

Take the case of grains which are covered by this new plan; all it means is that the feed merchant will simply up his price under this program, and the Government's money will be wasted. * * * The feed trade has the ball now. It is just about the same as a year ago under the beef-buying program when the packers and not the cattlemen had

Members of the Oklahoma delegation, knowing the financial distress of the drought area, appealed on more than one occasion to top agriculture officials for direct distribution of Government grain surpluses, as well as seed for winter cover crops, to the farmer victims of the drought.

The Department elected to peddle surpluses at bargain rates to big feed and seed dealers, and then lend a small measure of financial assistance to the farmer in order to bolster the sizable profit to the feed and seed speculator.

No departmental attempt was made to hold prices down, unless the bargain sale of surplus stocks can be so described.

On the contrary, it is reported that the practice of posting a "fair price" list of dealers guaranteeing reasonable prices was ordered discontinued in ASC committee offices.

The picture on seed surplus disposals and price trends for the farmer is just as disturbing as the feed picture.

In a letter of August 9, 1954, to the President, I offered the following recommendation for emergency drought measures in this field:

2. ASC regulations should be amended to make wheat, oats, and barley available at once as ASC practice for winter pasture and This seed should be made available free if possible in the disaster area, or at least at a reduced cost. As an ASC practice, it would be accompanied by necessary fertilizers, and of course, it would be subject to the provision that the crop would not be harvested for grain but would be

used to meet actual pasturing and feed needs on the farm itself. Such an amendment of ASC regulations, which would not require new law, should take place immediately, since the time for planting of winter pasture will soon be upon us in our section. Of course, this practice would require some rain this fall, but it is our best hope to secure a feed supply through the farmers' own efforts in this disaster area.

On August 18, the Department sent me a copy of a press release dated August 16 quoting the Secretary of Agriculture to the effect that "under a recent change in the ACP any farmer or rancher is eligible to apply for cost-sharing for planting cover or green manure crops on cropland which will be shifted from crop production next year. The ACP authorizes payment of up to 50 percent of the cost of seedbed preparation, fertilizer, lime, and seed for establishing cover crops on such land."

This was a good beginning, but it did not go far enough. In the first place, it should be noted that cost-sharing was made available only in connection with "crops on cropland which will be shifted from crop production next year." In recent years, a great physical change has been wrought in much of eastern Oklahoma. As a result of the good work done by the Extension Service, Soil Conservation Service and other conservation agencies, vast acreages have been taken out of crop production and put into pastures. Obviously, no assistance would be made available on these acres nor to the people and livestock on them.

Secondly, the Department ignored the opportunity to move seed from CCC stocks directly to farmers in furtherance of a program of self-help. In anticipation of developments which subsequently occurred, I called upon the Department to undertake the immediate distribution of winter cover crop seed to farmers in the drought areas. In behalf of my own farmers, I specifically requested the release of CCC stocks of oats for this purpose but was advised that there were no such stocks. In our emergency we would have welcomed any seed that had a good chance of germinating. Since the program did not permit harvesting of any yields, we were not interested in anything but an edible growth.

The Department at that time had tremendous stocks of winter cover crop seeds, such as vetches, crimson clover, peas, and so forth, which were in demand in my State. But our plea for direct action was ignored. As a result of the actions taken by the Department, some startling developments have occurred. To anyone even remotely acquainted with the agricultural situation these developments should not have been unexpected. To anyone closely associated with the Department, and particularly those in policymaking positions, they doubtless were expected.

As the ACP winter cover crop practice got underway, local seed stocks were quickly exhausted. In some States, county ASC committees gave purchase orders to farmers which constituted the bulk of the purchase price for such seed. Great volumes of seed were moved in a short time. The Secretary of Agriculture anticipated this. In his press release of August 16, "Secretary Benson

urged farmers to anticipate their needs and order seed early." It was said that "this will facilitate movement of seed from surplus to deficit areas."

By mid-September the Department was reporting sharp increases in grass and legume seeds, although seed grain prices had dropped. Some seed prices had advanced as much as 35 percent since spring. Seed oats and wheat were also in demand and prices reflected this demand.

The September 1954 price on winter seed wheat was \$2.86 compared with \$2.82 in September 1953 despite the sharp drop in prices in other farm commodities

With increased demand, other seed prices shot up. At least in my section of this country, these price increases did not represent profiteering on the part of local seed dealers. As a matter of fact, they, too, were caught in the price squeeze as they tried to hold retail prices down. Prices generally maintained their stability until local stocks were exhausted, and then they were forced up by the increases in prices asked by the big seed suppliers in other parts of the country. In some sections, I am told that these price increases virtually wiped out the temporary benefit farmers received from cost-sharing participation on the part of ACP.

Since CCC had a virtual monopoly on many seed stocks, I was interested in learning what disposition had been made of them. According to CCC financial reports, more than 18 million pounds of vetch seed was sold between January 1. 1954, and October 31, at an average price of 5 cents per pound. Much of this was common, selling for about 3.5 cents per pound for export. On September 15, the Department reports showed that Oklahoma farmers were paying 13.5 cents per pound for hairy vetch, the national average retail price was 16.3 cents, and prices in some States ranged as high as 23 cents per pound. Common vetches were selling at a national average of 8.4 cents and as high as 10 cents.

Another example of CCC sales of winter cover crop seeds was crimson clover. In this same period the Department sold almost 5 million pounds of crimson clover seed at an average price of 18 cents per pound. Oklahoma farmers were paying 24 cents per pound, the national average was 23.9, and prices were as high as 30 cents in some States. Almost 6 million pounds of Austrian winter peas were sold by CCC at about 2 cents per pound while Oklahoma farmers were paying 7 cents, with a national average of 6.9 cents:

A great demand has also developed for alfalfa seed. Although not a winter cover crop, the actions taken in connection with the 40 million pounds of seed held by CCC typifies the seed operations of the Department. Factors influencing the alfalfa seed market were well known to the Department last summer, but the official reaction to impending price increases was surprising indeed. In its press release of June 1, 1954, about 20 million pounds of northern alfalfa seed was offered at \$37.50 per hundred pounds, and about 15 million pounds of various certified varieties were offered

at \$43 per hundred. On July 1, 1954, these prices were reduced to \$35 and \$40 respectively. From January 1, 1954, through October 31, CCC reported the sale of over 12 million pounds of alfalfa seed at an average of 35 cents per pound. I understand that the CCC stocks of alfalfa seed have either been exhausted since that time or soon will be. In the meantime, alfalfa seed prices in retail stores showed sharp increases between spring and fall. Prices ranged as high as 43 cents a pound and more in some States for improved varieties.

The examples I have cited are illustrative of both the effects of strong demand upon the market and the manner in which the Department of Agriculture reacted. It is quite significant that CCC price decreases and volume sales of seeds were followed almost immediately by considerable price increases at the retail level

This was not the only action taken by the Department in the interests of the seed speculators. As I mentioned earlier, prior to the announcement of the special drought emergency ACP cover crop practice, the county committees had for several years maintained what was known as fair price lists. Each committee determined fair prices for ACP seed after consultation with local dealers and posted such prices in the county office together with a listing of firms agreeing to offer seed at prices not higher than those listed. With the advent of the drought emergency program and an increased demand for seed-paid for in large measure by the Government-the Department directed the discontinuance of the fair price posting. In other words, the Department directed its field personnel to look the other way while the seed industry took advantage of human misery to increase profit margins on seed. For the first time in modern history, our Government gave the green light to profiteering by a few on the suffering of

It is not only proper but highly desirable for the Department of Agriculture, and any other agency of our Government for that matter, to conduct its business wherever possible and practical through normal trade channels. But it is inconceivable for an agency of government to deliberately set up an emergency program to alleviate human suffering and at the same time create conditions for unconscionable profiteering. It will be recaled that when it was found that gamma globulin offered some hope for polio victims the Government stepped in and controlled distribution to prevent inequitable treatment and profiteering on a life-saving medium. Could we expect any less from the same Government in the development of a humaniitarian program of assistance for our drought-stricken farmers?

The 83d Congress recognized the need for emergency credit for drought-stricken farmers in the enactment of Public Laws 115—amending Public Law 38, 81st Congress—and 727. Unfortunately, the administration of these and other credit programs has revealed a striking inadequacy.

There has been little or no uniformity in the local application of regulations applying to production emergency loans. In some places, a penalty has been applied to bigness; in others, it was the little farmer or stockman who found the door closed. Refinancing of existing indebtedness was denied, as were loans to compensate applicants for their losses as a result of the drought.

In too many instances the requirement that the proposed borrower be unable to obtain from other lenders the credit required was interpreted to mean that he must be virtually without means or substance. If he met this test, then he failed the requirement that he have reasonable prospects for success with the assistance of a loan.

These were but a few of the obstacles placed between desperate people and a source of credit which would have meant the difference between survival and failure. Where credit is made available for crop production, the terms of the loan require that the debt be paid when the income derived from the sale of the crops produced with the loans is received. At best, this requirement only delays economic death until the end of the crop season.

The principle of self-help through the extension of emergency credit has been defeated by the manner and method of administration. Thousands of farmers who had found new faith and hope in the announced emergency loan program learned to their sorrow that their Government's interest was limited and that in the end they were left to the mercy of the improvident elements.

In summary of the charges made in this report—which admittedly are only a part of the numerous complaints against our present drought program—I can only repeat that the relief extended thus far has apparently been too little and too late, and all too often in the wrong place.

Hundreds of thousands of American farmers are waiting hopefully for action by this Congress to change this picture, and place in action a fair and effective drought-relief program.

drought-relief program.

Every day of delay means new tragedy on the farm front.

On January 22, the Tulsa Tribune carried the Associated Press item "Farm Population Drop Continues."

Between 1950 and 1954, according to this report, the Nation's farm population fell 12.6 percent, from 25,058,000 in 1950 to 21,890,000 in April of 1954.

This continues a trend in evidence since 1940, when our farm population totaled 30,547,000.

Most heartbreaking aspect of this trend is found in the drought area—the west-south-central region—where the farm population drop in the last 4 years was an alarming 21 percent.

The farmer continue to be the backbone of the Nation and its economy, yet we are permitting the steady weakening of this backbone by our failure to act with full vigor and effectiveness to meet our farm problems.

Make no mistake about it, drought damage is public enemy No. 1 among those problems in many States today.

I hope and pray that the 84th Congress will rise to its responsibility in meeting the drought challenge.

The 1955 Flying Wheels

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1955

Mr. HOSMER. Mr. Speaker, the 1955 Flying Wheels, all-star wheelchair basketball squad of the Paralyzed Veterans' Association, Long Beach, Calif., Hospital Chapter will arrive in the Nation's Capital this next weekend. They will play the Jersey Wheelers of New York at Bethesda Naval Hospital Sunday night, January 30 at 8 p. m. All Members of Congress are invited to attend and I can personally guarantee an exciting and inspirational evening. Wheelchair basketball always is fully as exciting as the regular game and oftentimes more so.

This marks the ninth annual coast-to-coast nonprofit, noncommercial trip by the Flying Wheels to play the Nation's top-ranking teams and provide inspiration and free entertainment for hospitalized veterans.

All traveling expenses for this tour, and the last 3 years, have been paid by the Los Angeles Evening Herald and Express through the courtesy of David Hearst, publisher, and Vic Dunsmore, business manger. Expenses for the other five coast-to-coast tours were raised by tour director John B. Olds, of the sports department of the Herald and Express.

Mr. Old conceived the idea of these tours over 10 years ago and he has directed each one of them. I could not overstate the respect and admiration for Mr. Old held not only by the Flying Wheels, but sportsmen all over the country for his wonderful work over the years on this most worthy of projects.

Paralyzed veterans by definition are fine young Americans who will never walk again. They are paralyzed from the waist down. Most of them are victims of an enemy bullet in the spine; others are victims of polio or tragic accidents. All served their country gallantly.

Many are continuously bedridden, Others find themselves chained to wheelchairs for the rest of their life, compelled to return periodically to VA hospitals for checkups and medical attention.

Their incentive to live is not the same as most people—or so you might reasonably assume. Not so with the courageous members of the Flying Wheels, all-star wheelchair basketball squad of the Long Beach, Calif., Paralyzed Veterans' Association.

They are out to prove to themselves, to their less fortunate bedridden PVA brethren, polio victims everywhere and the world at large that the years to come should not be wasted in self pity or vain regrets sitting on the sidelines of life. They are going to be participants.

The agonies of the soul which all hopelessly crippled young veterans must have suffered can only be imagined. What "gutty guys" like the Flying Wheels are doing today takes more courage, in a way, than they were called on to display against the enemy.

Although their mode of living is limited, they have but one code: "Ability, not disability, counts." Wheelchair basketball is doing much to keep that spirit alive and contagious.

It all started early in World War II at the now discarded Birmingham VA hospital, Van Nuys, Calif. Hunting a way to inspire bed-ridden patients, Bob Rynearson of the recreation department hit upon the idea of wheelchair basketball—played just like able-bodied teams do with only slight variations—such as two pushes on the wheels, while the ball rests on a player's lap, is the equivalent of a dribble.

Occasionally a veteran would wheel down to the gym. On the court self-confidence was bolstered. Returning to his ward, he would brag of his shooting—a direct challenge to ward mates to get out of bed. As the competitive spirit lurks in the heart of every American youth, many accepted. Later more and more. For most of the paraplegics it was their first real inspiration to get out of bed—back into the American competitive way of life if only to beat a bunk mate.

Once on the court they gained physical benefits far and beyond the reach of calisthenics. A new and hopeful mental outlook was born. They bit heavily into the challenge to excel, found they were no longer cognizant of their handicap. Now all wheelchair basketball players love crowds—especially when backward fellows with similar handicaps are watching. Their brilliant court play is inspiring proof positive: Ability, not disability, counts.

Because of its proven value, wheel-chair basketball is now played wherever PVA groups assemble. Unfortunately for the southern California group, there is no other VA paraplegic center west of Kansas City. Hence these annual coast-to-coast nonprofit, noncommercial tours. The Flying Wheels want to meet and beat the best wheelchair teams in the country.

During this tour, in addition to the Bethesda game, they have or will play teams at Tulsa, Chattanooga, Richmond, New York City, Chicago, Kansas City, and Amarillo.

In 8 coast-to-coast wheelchair basketball tours, the Flying Wheels have amassed the creditable record of 50 games won, 22 lost, in 72 intersectional engagements. They have averaged 33 points per game—a remarkably high percentage for a free-wheeling outfit.

Their best years were in 1948, 1950, and 1953. In the 1948 campaign they won 12, lost 1, to be named national wheelchair basketball champions by the Melms Athletic Foundation of California. In the 1950 trip, they compiled a 10 won, 1 lost record to regain the national title.

In 1953 they won 9, lost but 1 game, in their annual tour, that one by 2 points. Two months later the Flying Wheels competed in the national championships at New York City. They were eliminated after winning one championship game by Kansas City, who went on to capture the 1953 crown.

An excerpt from Veterans Administration Technical Bulletin TB 10-503, page 36, paragraph 5, reveals: The importance of competitive games for physical and psychological rehabilitation of paraplegics must not be forgotten. These games maintain the musculature in good condition, improve coordination and put to severe test the paraplegic's ability to balance as in a fast basketball game conducted from wheelchairs.

The mental goal achieved by such competition is a loss of self-consciousness and a gain of self-reliance.

It is medically desirable that tournaments be regularly arranged between the several paraplegic centers in the Veterans' Administration.

Dr. Ernest Bors, medical chief, paraplegic section, Long Beach Veterans' Hospital, observes: Having witnessed the very beginning of the athletic rehabilitation of paraplegic patients, I am impressed with the beneficial effect wheelchair basketball has on the morale and on the physical well-being of the paralyzed veterans.

Sucessful rehabilitation of the severely disabled person is contingent upon the mental approach. It is evident that the self-consciousness of patients, who are bound to use a wheelchair, has been greatly relieved by competitive performances before spectators. Good muscle function, so vital to the patient with a spinal cord injury, is obtained through participation in wheelchair basketball.

The patient's desire to play wheelchair basketball makes his mental and physical rehabilitation a voluntary pleasure.

The Flying Wheels squad roster for 1955 is as follows:

Num- ber	Name	Position	Service	Age
3	Jack Chase Gilbert Ortiz	Forward	Army Signal Corps	. /2
13	Al Halverson	Guard	Army do	1110
6	Morris Moorhead	Forward	Sergeant, Marines	2
7	Fritz Krauth	do	Navy Air Force	3
8	Wally Frost	Guard	Army	- 2
10	Bill Fairbanks	Forward	(Equipment manager)	1 2
11	Lee Barr	Guard	Army	2
12	Norman Harris	Center	Lieutenant, Air Force	3
16	Arthur Eakes	Center	Army	2
20	Walter Haley	Forward	Navy	3

The 1955 Flying Wheels able-bodied personnel on the tour are: Coach, Everett Sylwanowicz, Long Beach VA Hospital; physician, Dr. John F. Fahey, Los Angeles; trainer, Dave Flores, Los Angeles Baseball Club; publicity director, Sam Schnitzer, Los Angeles Examiner; tour aid, Jack Disney, Los Angeles Herald-Express; Stewart Air Service pilots, Capt. Ed Stewart and Jim Gregory; tour director, John B. Old, Los Angeles Herald-Express.

Time for Straight Talk

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a timely editorial entitled "Time for Straight Talk," appearing in the Boston Traveler of January 24, 1955:

TIME FOR STRAIGHT TALK

Like it or not, our Far East policy is

changing by the month.

We're stepping back as Red China feels us out with an exhibition of fist waving. We're cooling off in our attitude toward Chiang Kai-shek and his dream of returning some day to the Chinese mainland.

Within recent days, the administration has shrugged off the Red Chinese capture of Yikiang Island as something of no importance—although it moves the Reds one step closer to an attack against Formosa.

Also, the administration has all but asked outright for a United Nations action that would bring about a cease-fire in Formosa Strait. And Defense Secretary Wilson has said we ought to expand our trade in non-atrategic materials with Communist countries, which happens to be a complete somersault from his stand of some months ago.

Next came the talk about withdrawing Chiang's troops from the outer Tachen Islands and conceding those outposts to the advancing Reds.

It's time President Eisenhower gave the Nation a clear, factual account of what's going on and where we're heading.

We are still committed to the defense of Formosa and the Pescadores. But in view of our recent actions, Red China has good reason to suppose that we won't honor that commitment. The Reds therefore might be tempted to launch their attack, gambling that we'll back out of trouble.

If we meet such an attack, we'll unquestionably be back in a war again. If we duck away from it, we'll be guilty of a shameful sellout and appeasement.

Without doubt, the best solution at the moment would be a cease-fire arrangement, but we don't expect to see one. Neither the Reds nor the Nationalists would accept it at this point.

We think President Eisenhower should speak directly to the American public and state exactly what our policy is and what risks it involves.

Events in the Far East are moving swiftly toward a showdown. We'd like a frank statement of what to expect when it comes.

The American Merchant Marine

EXTENSION OF REMARKS

HON, EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. GARMATZ. Mr. Speaker, the plight of the American merchant marine has been of vital concern to me because of my membership on the Merchant Marine and Fisheries Committee, as well as because of my apprehension for the security of our beloved Nation. Throughout my congressional service, I have been actively interested in the furtherance of

measures calculated to improve this segment of our national defense.

It is with considerable regret, therefore, that I note today the fact that our Nation has fallen to 12th place among the shipbuilding nations of the world. This serious situation must not be allowed to stand, and I exhort the Congress and the citizenry to consider how harmful it will be to American prestige if we do not improve this state of affairs.

Under unanimous consent I insert in the Appendix of the Congressional Record the article appearing in the February 26 edition of the Baltimore Sun, as follows;

SHIPBUILDING IN UNITED STATES TAKES DRAS-TIC DROP-WITH ONLY 99,568 TONS ON WAYS, NATION IS 12TH COMMERCIALLY

London, January 26.—The United States, with only 99.568 tons of merchant shipping on the ways, has dropped to 12th place among the shipbuilding nations of the world.

This was disclosed today by Lloyds Register of Shipping in its report for the last quarter of 1954.

Of all nations, Lloyds said, the American shipbuilding industry showed the largest decrease.

BRITISH YARDS GAIN

On the other hand, British shipbuilding yards touched their busiest point since World War II.

On December 31 British yards were building 327 merchant ships of 2,140,752 tons gross, or 36.57 percent of the world's new tonnage. This was a gain of 82,295 tons over the previous quarter.

Germany improved its position as the second ranking shipbuilding country with 772,-012 tons, or 13.19 percent of the world total, under construction in the last quarter. This was a gain of 103,258 tons over the 3 previous months.

RANKINGS LISTED

The following table shows how the nations ranked as of December 31, 1954:

	Number of ships	Gross tons
Great Britain and Northern Ireland. Germany Netheriands. France. Sweden Japan Italy Norway. Spain. Denmark Belgium United States Other nations.	327 204 136 55 65 47 42 54 62 30 17 15	2, 140, 752 772, 012 529, 679 449, 096 433, 191 376, 565 195, 189 194, 408 186, 817 130, 533 110, 868 99, 568 235, 569
Total	1,169	5, 854, 247

No figures were available for Soviet countries.

MERCHANT MARINE UNIT HITS DROP IN CARGOES

Washington, January 25.—Decline in military cargoes and increased foreign-flag competition for commercial cargoes created a serious impact on the privately owned United States merchant marine during 1954, the American Merchant Marine Institute reported today in its annual report.

These economic factors caused the surplus of United States-flag dry-cargo vessels to exceed 1 million tons by midyear.

The problem of inactive tonnage was relieved in late summer by the enactment of a law requiring at least half of all United States Government-financed cargoes to be moved on American-flag ships and the relaxation of the Maritime Administration's policy on the transfer of idle tonnage to foreign registry.

TRANSFERS ASSAILED

The transfers abroad, which have been attacked by the maritime labor unions, reduced both the overall size of the dry-cargo fleet and the idle United States-flag tonnage, now down to 370,000 deadweight tons.

The private-owned dry-cargo fleet at the end of 1954 was 730 ships of 7,618,071 deadweight tons, a reduction of 76 ships and 770,000 tons from January 1, 1954.

The active commercial-type passenger fleet now totals only 40 vessels, compared with a prewar fleet of 123, the institute said, and added:

"Our inability to keep pace with progress made by foreign fleets leaves us with a glaring deficiency of commercial-type passenger vessels for both overseas travel and for potential conversion to troop transports in emergencies."

Viciousness in Comic Book Field

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following sensible analysis from the Lawrence Daily Eagle, Lawrence, Mass., Saturday, October 2, 1954:

THE COMIC BOOK STORY

The American comic-book business seems to have learned a lesson in the power of public opinion.

A newly created trade group which includes most of the industry has taken steps toward banning offensive comic books.

Under a code of ethics every book will be read by reviewers. All terror and horror books will be refused approval. Books which pass inspection will be marked with a seal so that parents can know at a glance which books are safe to buy.

With all the talk about this development, it deserves to be put in perspective.

In the first place it should be noted that all but a very few comic-book publishers are innocent bystanders in the situation. They have never published anything but wholesome material. They have deplored the excesses of the offending publishers. They should not be tarred by too vigorous a brush.

Then, too, it should be pardonable if newspapers, as the granddads of the comic cartoon, point out the character of their branch of the family.

Your newspaper is now doing, and has always done, a good clean job of entertaining with comics and policing itself, all these years, with good taste and judgment.

There are many safeguards. The newspaper comics are produced by organizations with a sense of responsibility and are reviewed, finally, right in each community by the newspaper editors themselves who are the ones who decide what to print and what not to print.

Smacking down a few merchants of viciousness in the comic-book field still leaves unresolved one of the major tasks facing a democracy built with the keystones of free speech and a free press. There are those at one extreme who feel you cannot have a little censorship. It fills them with dread of a growth toward Hitler-type bookburnings. At the other extreme are those who fear, equally, a contagion from poisonous words which would fill the Nation with a soul-sick and misled citizenry.

This debate will go on and on while we, as a democracy, struggle to hammer out workable rules for our own welfare.

At least, in the area of mass reading for juveniles, it would appear that public opinion has forced a restraint. If the publishers of comic books can't see what is acceptable good taste they will be made to conform.

It spotlights a basic principle which can stand repeating: That the right kind of censorship is that of public opinion.

If people find something offensive it is their right and duty to withdraw support from it. Soon, as occurred in the comic-book case, the public's refusal is certain to bring results.

Universal Military Training

EXTENSION OF REMARKS

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I now submit the following editorial from the American Issue under date of January 1955:

UNIVERSAL MILITARY TRAINING

A new conscription plan has been approved by President Eisenhower and the National Security Council. The plan includes extension of the present draft law under which men must serve a 2-year term, followed by 6 years of Reserve duty. It also authorizes the Army to enroll volunteers for 6 months of basic training, after which they would be transferred to a National Guard or Organized Reserve unit. They would be compelled to attend weekly drills and summer camps for a period of 7½ years, the penalty for noncompliance being reinduction in the Regular Army for another 18 months.

Draft deferments would be cut down and military service made as universal as possible. A limited quota would be accepted for the 6-month program and free choice would be allowed only until quotes ware filled.

be allowed only until quotas were filled.

The indicated purpose of the proposal is to build a 3 million man reserve for the Army in addition to the regular military forces. Under this plan there would be 26 National Guard divisions and 26 Reserve divisions filled by UMT boys.

UMT was opposed in 1950 by church, labor,

UMT was opposed in 1950 by church, labor, farm, peace, and temperance groups. The Council of Bishops of the Methodist Church on November 21, 1954, called upon their 9 million members to fight any attempt at peacetime conscription.

The National Temperance League is constantly opposed to the widespread availability of alcoholic beverages to the Armed Forces at military bases. Hence, NTL is opposed to any conscription plan, which would place every American boy under the pressure to drink beer, wine, or liquor, which is well nigh omnipresent at all military bases, both here and overseas.

The United States Brewers Foundation claims that 3 out of 4 boys in the service drink beer. Evidence from other sources indicates that from 90 to 95 percent of the men in service use alcoholic beverages. Many of these never drank before they were drafted into service. They begin to drink because of social pressure, and loneliness, and because drinking is so much a part of the military tradition.

If the facts were fully known, there is no doubt that the large percentage of ex-servicemen now being treated for alcoholism in veteran's hospitals became alcoholics because of the widespread drinking custom among military personnel

The National Temperance is not unaware of the threat of Communist aggression from without but it is tremendously aware of the threat to individual and national moral welfare from within if every American boy is to be subjected to the pressure to drink which at present seems to go hand in hand with military training.

Continuing Struggle for Freedom and Independence

EXTENSION OF REMARKS

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. ROOSEVELT. Mr. Speaker, during the past week of January 22 the Ukrainian Congress Committee of America has, throughout the United States, observed the anniversary of the proclamation of Ukrainian independence which took place on January 22, 1918.

This observance is truly an occasion, as the committee says, and I quote, "for the unending reaffirmation of our faith in the eventual liberation of all the enslaved nations in the Communist empire."

I am happy to include a summary of these stirring feelings in the Congres-SIONAL RECORD:

SUMMARY

The centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human history. This indomitable will for national freedom clearly crystallized itself in the old Ukrainian Kievan state from the 9th to the 14th century, in the Ukrainian Kozak state from 1648 to 1783, and more recently in the Ukrainian National Republic from 1917 to 1920. As one of the first victims of Soviet imperialism, Ukraine, since the very inception of alien Bolshevik tyranny, has proved to be the Achilles heel of the Soviet Union. The de-struction of its national churches, the horrible manmade famine of 1932-33, the mass murder at Vinnitsia in 1937-39, and the vast purges and deportations decreed by Moscow have failed to exterminate the spiritual and moral resources for national freedom in Ukraine. The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free, and indepéndent.

During the Second World War millions of Ukrainian patriots seized the short-lived opportunity of the German invasion to realize once again this hope, only to be frustrated in their valiant efforts by the scourge of another imperialism. But this unbending will continues to be strong and powerful in the epic struggle of the Ukrainian insurgent army (UPA) against the evil forces of Soviet imperialism, and in the resistance of the Ukrainian people.

As a nation of over 40 million people—the largest non-Russian nation behind the European Iron Curtain—Ukraine stands as one of our most important and natural allies in the eventual defeat of Soviet imperialism. Its historic claim to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free Europe of tomorrow must be assured, if the foundation of permanent peace among freedom-loving nations is to be impregnable.

Speech of Hon. Jamie L. Whitten, of Mississippi, at Annual Meeting of the National Agricultural Limestone Producers

EXTENSION OF REMARKS

HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1955

Mr. WHITTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered at the annual meeting of the National Agricultural Limestone Producers, January 18, 1955, Washington, D. C.:

Mr. Chairman, ladies and gentlemen, I welcome this opportunity to speak to your Organization and to so many of my leagues. Many times in the past I Welcomed your active assistance in fights in the Congress for conservation of national resources. I understand that your business interests give you a special interest in the conservation of the Nation's soil. Knowledge of the problems which you gain in your own business gives you a knowledge of land needs, and may I say, gives you an obligation to make available to the committees of the Congress and to the public what you have learned. Not only do you have the right to speak but an obligation, in my opinion.

You know there are many things involved in this complex subject of American agriculture and its place in the Nation. We left agriculture out for many years when industry had advantages written into law and when industrial labor was protected by law. Largely as a result, 80 percent of our timber is gone; 40 percent of our fertile land is gone. Farm life had so few returns from the farm share of the national income dollar that farm homes had few conveniences others had. Work hours were longer. It followed that nearly all who could left the farm. Farm population went down steadily from 84 percent to only 13 percent on the farm.

Today, farming is a commercial operation. Farmers either make costs plus a living, or deplete the land, go broke, and move to town like the rest of us. We had the great de-Pression of the twenties, for which many explanations have been offered. At any rate, a drastic break in farm prices led off in that depression which carried all down with it—labor, agriculture, and capitalist. We cannot stand another. Finally, it was determined by the Congress to put protections for agriculture in the law, where the Other two major segments were already. Thus, we have the price support system provided by law. You may say you now have a price support law, though actions last year weakened it; but may I remind you that farm income can be ruined by reductions in acreage and the giving away of our foreign markets.

We no longer have the natural resources to waste, which were wasted when "sale at the market place" under world competitive conditions was all that agriculture got.

I believe in free enterprise, but if you analyze the situation you soon find that our free enterprise has been free only under the laws as written by the Congress and by the States. There has been competition as to how these laws were written. It has been said that all anybody wants is a fair advantage—an advantage which he wants others to agree it is fair for him to have. One way to get such advantages declared fair is to pass a law and have the law declare it fair; with the first Congress the fight was on.

Early in our history, industry got protective tariffs written into law; and a good argument could be made for such protection, especially in the early days. They retain most of them today, and they are not going to be repealed. Only about 22 years ago did agriculture begin to receive somewhat equal treatment in law.

Agriculture today operates in an economy where for all practical purposes those advantages to industry and labor are provided by law, and such laws are not going to be repealed. Only recently the President of the United States asked for a 90 cents an hour minimum wage. Whatever the merits, it can only have the effect of raising farm costs at a time when farm laws are under attack and farm income is going down.

Today farming is a commercial operation, Farming is a business and is no longer merely a way of life. The expensive farm machinery necessary today makes it that.

Forty years ago 70 percent of the farm investment was land. Today only 45 percent of the investment is land. The balance is expensive farm machinery, equipment, and needed buildings. These things cost money, and they wear out.

Forty years ago it took a farmer almost 10 years to lose his farm if he made nothing. Today, due to heavy outlay of cash, he can lose it in less than 2 years. A real farmer must be a capitalist as well as a laborer today.

There has been some 13 freight-rate in-creases since World War II, based on operations of other laws, an 85-percent increase in spread between prices received on the farm and prices to the consumer, a 13-percent increase in farm costs in the past 2 years, with a 12-percent decrease in farm income. These conditions, which largely result from laws, many of them enacted by Congress to provide protection to various segments of our economy, make price supports for certain basic agricultural commodities essential to maintaining some degree of balance in our economy. The fact that price supports are necessary to offset American costs does not remove the necessity that our foreign markets be retained to absorb commodities surplus to our domestic needs, if we are to avoid further curtailments in agricultural production and farm income with the resulting unemployment of thousands upon thousands of American farmers.

LARGE INVESTMENT OF COMMODITY CREDIT COR-PORATION COMES BECAUSE OF REFUSAL TO SELL

The large holdings of agricultural commodities in the hands of the Commodity Credit Corporation in recent years is not the result of our price-support program, rather is due to the Government's refusal to offer to sell our products, once they are in the hands of CCC, competitively on world markets. Yet each time I have challenged this policy of holding our agricultural commodities back, admitted to be our policy by our Department of Agriculture, I have been faced with the fact that such policy reflected the attitude of our State Department and those handling foreign-aid programs, based on what the State Department claimed were political and national defense considerations. That Department has made its decisions, apparently, without any awareness of the effect on agriculture and business in the United States. I believe such policies ruinous to American agriculture and, in the long run, to the Nation.

ECONOMIC LOSS FROM REFUSAL TO SELL

According to the national advisory committee for CARE, composed of such men as Henry A. Bullis, General Mills' chairman of the board; Roy C. Ingersoll, president of Borg-Warner; Ward Melville, Melville Shoe Corp.; H. J. Heinz, and others equally successful, such policy costs the United States \$700,000 a day for storage, deprives American railroads of transportation equal to 100

transcontinental freight trains each day for a year, deprives American shipping of the equivalent of the dispatch of 10 oceangoing freighters every day for a year, not to mention the loss of labor and the effect on agriculture itself, being cut back now to absorb surplus commodities. And all this food and fiber has been held back by the Department's policy, set up by our State Department on the fallacious argument that such a course helps needy peoples of the world.

WE NOW HAVE AUTHORITY TO SELL COMPETI-TIVELY ON WORLD MARKETS

I would point out that the Commodity Credit Corporation Charter Act in section 5 (f) authorizes the Corporation to export or cause to be exported, or aid in the development of foreign markets for, agricultural commodities. Under the Charter Act these commodities may be commodities acquired under price-support programs or specifically procured for export purposes.

The Charter Act contains no restrictions on the prices at which commodities may be sold by the Corporation. Section 407 of the Agricultural Act of 1949, as amended, does establish minimum prices at which the Corporation may sell commodities owned or controlled by it, except in the case of sales for certain specified purposes. Sales for export, however, are specifically exempt from the application of this minimum-price restriction.

Yet the United States Department of Agriculture admitted in hearings before my committee last year that the United States has been following a policy of holding our commodities at prevailing prices, letting other countries undersell and have the markets. Many commodities have not been offered even at prevailing prices.

Foreign countries do have the dollars. However, due to our policy of not offering our commodities these countries simply are not spending as much for agricultural commodities, but are buying other things. Agriculture's share of United States sales has dropped from 28 percent in 1934-38 to 19 percent in 1953. We will spend \$3,200,000,000 in support of our military in foreign countries this year.

Only last week authority was granted to the Commodity Credit Corporation to use \$7,200,000 in additional funds for administrative expenses. Our committee went along with this request because these funds are necessary to handle the quantities of agricultural commodities which the Commodity Credit Corporation owns, but which it has on hand because of faulty Government policy.

The price-support system may have caused the Corporation to buy those commodities, but the Corporation has them because we would not sell them.

This fact is proven in hearings held by our committee last week, when Secretary Benson and Under Secretary Morse were before us.

LARGE HOLDINGS USED TO LOWER PRICE SUPPORTS
AND IMPOSE ACREAGE REDUCTIONS

We read about our Secretary of Agriculture and others talking about having invested more the \$6 billion in farm commodities, and that is true. We saw the last Congress, where the administration including the Secretary of Agriculture, reduce price-support levels on basic farm commodities from 90 to 82½ percent of parity; the Secretary of Agriculture said "to prevent the holding of such huge supplies of farm commodities."

Dairy support levels were reduced because of the butter CCC owned. Last year drastic reductions were made in acreages in wheat, cotton, and other crops, and decreased production was ordered. This year still further drastic reductions in acreage were ordered, which is working a tremendous hardship and putting lots of people out of business in the area I come from.

Our hearings, and if you haven't read those hearings you should, disclose that, notwith-

standing the fact that the Commodity Credit Corporation has had authority to sell these commodities in world markets for dollars, it simply would not do it. We have held our commodities off world markets and thereby helped to increase foreign production. By way of illustration, since 1945 cotton production in Asia has increased by 3½ million bales and in Africa by more than 100 million bales, not to mention Central America and Europe. I tried to get a change in policy last year. Later in the year we got them to offer same commodities in world trade on a competitive basis, and they sold \$453 million worth of them, reducing CCC stocks to a minimum.

THE PRESIDENT'S MESSAGE

On January 10 we heard the speech of our distinguished President of the United States, in which much was made of the administration's efforts to move the CCC-owned agricultural commodities into foreign trade for foreign currency under Public Law 480. What does Public Law 480 provide? A close reading of that speech will show you that 90 percent of that foreign currency we would receive is not even subject to the control of the Congress. By far the greater part of that foreign currency will be used for economic development in those countries. The last 10 percent of it can be given to them if the President just says the word. was not in the President's speech is the fact that his administration is trying to give these commodities away under Public Law 480 without even offering them for sale for dollars, under the general authority of the The administration's approach would continue to hold an umbrella over world

Representatives of the United States Government are going around over the world trying to give away to foreign countries that which they will not offer for sale, commodities which they have the authority to sell but which they will not sell, all to add to foreign aid.

And all the time foreign production increases, and the American farmers gets his production cut more and more. There is ample evidence of the fact that the Corporation could sell to be found in the experience that they have had with those items which we finally got them to offer for sale on a competitive bid basis last year. Let me read to you a list of those commodities which they will not even offer for sale on a competitive basis: cotton, cheeses, corn, rice, seeds, naval stores, tobacco, wool, and butter—our investment, \$3,700,000,000.

Secretary Benson says the trade recommended this policy. I know many in the trade do not. In fact, many people in the cotton trade have asked that I determine who it is who has benefited from increased foreign production, which is protected by the United States umbrella." In many, In many. many cases, I am told, it is American opera tors who have moved into production and business in foreign countries; and it is charged by some in the cotton business that many of those same people are now in key spots to advise the United States Department of Agriculture to hold American production off world markets. I expect to have a special investigation to find out these facts with regard to the various commodities. I believe such information will be valuable to the Appropriations Committee.

If it be true that it is not foreigners who have increased cotton production in foreign countries, but American business interests which have moved in to take advantage of the United States umbrella they help to raise over their foreign investments, they have what you might call perfect insurance or assurance of profits. Furthermore, do not try to tell me that we must sell these commodities from one government to another government.

THE REMEDY

All we have to do is announce periodically that given quantities of those commodities will be sold on a competitive-bid basis to American exporters for export. By controlling the quantity offered and the spacing of our offerings we can take into account all factors. My suggestion is not dumping, for United States businessmen would buy and sell in the regular way. We would use the private enterprise system.

Foreign countries do have the dollars, but this shortsighted policy of not selling our commodities competitively on world markets, and thus holding an umbrella over world prices, invites the increased production we are getting in nearly every country which produces such commodities. We are making competitors out of our customers. This failure to use the general authority of law is cutting back the income of our own farmers more and more, so as to leave many of them far below any kind of a reasonable standard of living; and if it is continued it will result in American agriculture being limited to the domestic market. What I charge here is proven by the testimony in the hearings before our committee.

Though actually the President's recommendation for giveaway under Public Law 480 is a form of dumping, contrary to misleading headlines our committee has urged no irresponsible dumping. Our Government has held these commodities so long it has built our holdings up to the extent that we must gradually move back. May I read to you the report of our committee:

COMMITTEE REPORT

"In the opinion of a majority of the members of the committee, actions of the Department to reduce price supports, change parity formulas, and reduce acreage allotments will not cure the problem of the increasing commodity holdings of the Corpo-They believe that this difficulty ration. due to the fallure of the Corporation to discharge its responsibility under its charter to sell its commodities competitively in world markets. Testimony before the committee shows that none of the large stocks of cotton, cheese, corn, rice, seeds, naval stores, tobacco, and wool have been or are being offered for sale on a competitive basis, despite basic authority in law to do so.

"The program for moving commodities under Public Law 430, for which much is claimed, actually is a means of giving commodities away in preference to attempting to sell them through normal trade channels. It involves prior clearance from a committee composed primarily of representatives of nonagricultural interests (State, Commerce Departments, etc.) which is a serious hurdle in getting agricultural commodities exported. Also, under the law, the major portion of the local currencies received for commodities shipped abroad will be used for foreign-aid purposes in the countries from which received.

"The majority of the committee feels that steps should be taken as early as practicable to begin the movement of these commodities into world markets on a competitive bid basis through American exporters. The committee also feels that an immediate announcement of such change in policy should be made to discourage further increases in foreign production to the detriment of American farmers.

"Such an action will eventually make possible reductions in administrative costs of the Corporation. It should also help to correct the present practice of making competitors out of former customers and should benefit foreign consumers who have a real need for products surplus to United States domestic needs.

"Further, and most important, it will enable the American farmer to compete with foreign producers and make additional acreage available to relieve undue hardships existing in many areas of the country under present orders."

THE TRAGIC EFFECT

The tragedy of not selling these commodities-cotton, cheese, corn, rice, they could have been sold, is that those same commodities for which there was a market and for which there is authority to sell, were used and counted to cut support levels, to reduce acreage, and restrict American production, to restrict the cotton acreage of American farmers. It was used as an argument to reduce the price-support levels on basic commodities from 92 percent to 821/2 percent. It was used to change the parity formula so that it will almost automatically go down to 75 percent within the next several years. All the time the commodities that were used for this purpose could have been sold, and there was authority to sell them. When these fights were up last year, Secretary Benson did not tell the American people he had full authority to sell these commodities, but would not offer them for sale to our traders for use in world trade. The major harm or loss is not the amount of money we have invested in these commodities; it is not the fact that the longer you keep them the more storage we have to pay; but the commodities which we have, which we would not sell, have been used to do these injuries to the American farmer, leaving thousands of tenants without a means of livelihood in the South and many, many small landowners reduced below the barest minimum essential to a decent living.

VIEWS OF SECRETARY BENSON

The chief difference between the views of the Secretary of Agriculture and myself, on the price support system, is that I believe price supports are necessary to protect the American farmer against high United States costs largely brought about by other American laws.

American laws.

Apparently the Secretary, judged by his arguments for flexible supports, feels that price supports should be a means to help regulate American production. He would increase supports when he wants more production and lower supports when he wants less.

Where I believe the parity formula should be tied to costs as it was under the old parity formula, the Secretary's modern parity, substituted last year, ties parity primarily to the average price the farmer received for his commodities for the 10 preceding years. Under the Secretary's law, as the farmers' prices go down parity goes down though costs may be going up. Under the old formula, as cost went up parity went up.

However, whether you agree with Mr. Benson or with me, neither system will work unless what the farmers produce above domestic needs is offered in world markets on a competitive basis. I repeat: "According to admissions of Mr. Benson and Under Secretary Morse, before our subcommittee last week, billions of dollars worth of cotton, corn, dairy products, wool and tobacco are not even being offered to the markets of the world for sale on a competitive basis. To prove my point, those commodities we have been able to get the department to offer have been sold for dollars."

QUANTITY OR VOLUME IS AS ESSENTIAL AS PRICE

Price-support levels are only one factor. The other essential is quantity or volume. If you guarantee a cotton farmer 200 percent of parity and limit him to 3 acres of cotton, his gross income would be less than \$1,000 per year. Today acreage curtailment in cotton is reducing thousands of small farmers to less than \$1,000 gross per year. Tenant farmers, thousands of them, are being let out entirely. This cutback is to help absorb cotton which the Government has and won't offer for sale competitively: and actually, unintentionally I am sure.

amounts to forcing our United States farmers to absorb foreign increases in production.

SMALL PARMERS

Our distinguished President, in speaking to the joint session of the Congress, said the administration had to do something for the small farmers.

Acreage reductions in my section are making many more small farmers for the administration "to do something for." Today, the Government is giving them cheese and butter, mighty good products but tiresome if the only food provided.

Incidentally the Government has this cheese and butter because it won't offer it for sale to our exporters on a competitive basis.

We must start moving to prevent further losses in our United States export markets. We must begin offering some quantities on a competitive-bid basis to our own traders for export, or we will be back to the domestic market on a permanent basis.

I repeat: by controlling the size of our offerings and the spacing between offerings our Department of Agriculture can consider all factors. Such a course is not dumping; but giving away what we won't offer for sale competitively under Public Law 480 is dumping, though there are certain safeguards written into the law.

PARMERS' INCOME DETERMINES CONSERVATION

Why do I stress price supports and market to you who are primarily interested in conservation? Because, however strongly you and the farmers believe in conservation, restoring minerals to the soil, the job will be done only as the farmer's income leaves enough over after taxes and cost to put something back into the soil.

Income over and beyond cost of living to the farmer is essential to the effectiveness of our Soil Conservation Service, Extension Service, and yes, will even control the amount of sales of limestone by members of your association.

WHAT IS THE FARM SITUATION TODAY?

The prices of farm products have declined about 25 percent since February 1951. The cost of farming continues to increase. The het farm income in 1954 was down about 30 percent from 1951.

And the outlook is for still further declines in net farm income in 1955 because of the reduction in acreage of controlled crops and the low prices of nearly all farm products.

In December, the parity ratio dropped to 86, the lowest since 1941.

As a result of the decline in prices of farm products and the drastic drop in net farm income, the value of United States agricultural assets dropped from \$170.1 billion on January 1, 1952, to \$156.5 billion on January 1, 1955, a loss of \$13.6 billion, or 8 percent.

During this past 3-year period the value of farm real estate dropped nearly \$9 billion, or about 9 percent. The value of livestock declined \$8 billion, or more than 40 percent.

The losses sustained in real estate and livestock were partly offset by small gains in the value of farm machinery, crops on farms, and household furnishings.

What has happened in industry during this period? From January 1949 to January 1955, the value of 30 leading industrial stocks skyrocketed from \$175 to \$412.97 per share. The total value of industrial stocks increased by \$53 billion.

The continuing boom in industry and the spiraling prices on the stock market are reflections of the profits of industry and dividend payments by industrial enterprises. How much of the advance is the result of speculation or hope of future gain is itself a question for speculation and meditation. And all this adds to costs to American farmers, but the new parity formula is based

on the average price the farmer has been receiving, not on the cost of what he buys.

Mr. Fred J. Hurst, director of information,

Farm Credit District of New Orleans, says:
"The farm mortgage debt has almost doubled since 1945. The estimated dollar volume of farm mortgages recorded during the third quarter of 1954 totalled \$380,-343,000, which was nearly 2½ times the amount recorded in the third quarter of 1940, and the largest dollar volume recorded during the third quarter of any year since the heavy refinancing year of 1934.

"Yet, despite the decline in farm prices and farm income, despite the unfavorable position of agriculture in the national economy, responsible officials continue to lower farm price-support levels. At the same time we hear the official call to the Congress to raise the minimum wage level from 75 cents to 90 cents an hour. We hear the call for increase in salaries for various groups. We see and hear many things happening that would tend to widen rather than narrow the disparity between agriculture and industry.

"It is disturbing to note that there seems to be little concern about the plight of agriculture except among farmers themselves and their cooperatives and a limited number of sympathetic farm leaders who know the desperate battle farmers are waging to make ends meet, and who realize the danger to the entire national economy unless the decline in farm income cannot only be arrested but reversed and improved.

"Unfortunately, there seems to be a disposition on the part of some agricultural groups, judging by their published statements, to echo the national refrain, to docilely accept the indifferent national attitude toward agriculture, and to consider the farm price situation as something inevitable and permanent. We want to make a plea for a general awakening to the worsening farm situation. We want to sound a warning. Past experience has shown that there is a limit to the beating farmers can take. There is a limit to the depths to which farm income can drop without bankrupting agriculture and without endangering the entire economy. The current 86 percent of parity is a long way from the 100 percent of parity, the fair level goal set for agriculture.'

GOVERNMENT SUBSIDIES

You may say the farm program is a subsidy program. Collectively, through Government, we spend as much as \$6 million on getting one group of magazines distributed. The Government largely supports the distribution of newspapers. We subsidize the airlines; we held build ships, so our shipping can pay the high wages of the American seamen, protected by bargaining power of labor unions, to haul commodities in competition with foreign shipping; and so it is just about in every direction you look. Through Government we have had many advantages termed fair by being enacted into law. Under those conditions we had better be sure we include agricultural income along with the rest, for food, clothing, and shelter are still basic. Whatever the real cost of the farm program would be, our refusal to sell Commodity Credit stocks on a competitive basis multiplies such costs many times over.

THE YEARS AHEAD

Our population is increasing by 3 million people each year. Twenty years from now, except for new increases in yield, we will need in this country 115 million more acres of land than we now have.

Four out of five people have left the farm in the last 40 years. With the present commercialization of farming, with present high cost of each crop, unless the farmer makes a profit he will first drain his soil of its fertility, as he did with 40 percent of our land; then if price is no better, he too will move to town like the rest of us.

If the consumers demand our food, clothing, and shelter below the cost of production, the United States will go the way of China, whose resources are gone; and instead of 1 farmer feeding 8 city consumers, it will take 6 farmers to feed 1 city consumer.

WE MUST DIRECT OUR ENERGIES TO OUR OWN

A year or two ago the Chief of the National Production Authority, the Federal agency which had the job of planning the increase of the production potential of our country in power, nitrates, aluminum, and all other things needed to meet the Russian threat, told me privately that if he were Joe Stalin and wanted to wreck the economy of the United States he would declare 5 years of peace. With all of us praying then and now for peace, his statement was shocking. He continued:

"If we were to cancel all war contracts with the resulting closed factories and unemployment, if we were to have nearly all of our men in the service back home seeking jobs, if we quit shipping out machinery, equipment, and nearly everything else to our allies, if civilian industry had to cut out its 20 percent of extra production with its labor let off, and if the farmer had no market for 20 percent of his production, it would wreak havoc with our national economy—for with our present debt of more than \$260 million we must keep national income high, the dollar cheap, if we hope to handle it."

the dollar cheap, if we hope to handle it."

If we think of it, we have been producing through all our factories about 15 to 20 percent more to meet the needs of war. There has been a sale for practically anything industry produced. If we will dig further we will realize that labor turning out that production has been accustomed to a full workweek, and farmers producing about 20 percent more than our present domestic markets will-use were accustomed to selling almost anything we could grow.

If we follow the subject further we will also see that the American people as a whole, except for the farmers this year, have enjoyed material prosperity for the past 12 years to a greater extent than any people ever before in this or any other nation. We have had more cars, more clothes, more and better food, more radios, television, more electrical equipment, more of everything that people need or want.

With all of us sincerely for peace, it is unbelievable that it takes a war and preparation for war to continue such prosperity, even though war and its demands on us seem to have brought about increased production.

In war and preparation for war, a large part of that extra effort is shot up in shells, worn out as military vehicles, planes, equipment, guns, warships, in wear and tear on our railroads, our highways. The extra food and fiber is either given to our allies or else we have given them the money and sold them such commodities for our money back. Our lands have been used to a greater extent, our timber and natural resources have been further depleted.

If that extra effort due to war and the preparedness for war is the basis for our material prosperity, then why not continue to put forth that extra effort, not in a war which leaves us a poorer country but in work that will improve our country? Why can't we put forth that extra effort in reforesting our lands, harnessing our streams for electricity, reclaiming our lands through soil conservation and in those things that make our country richer and better?

Where war and preparedness and all that goes with it leaves us with a poorer country, if our efforts were made as I suggest we would have a better and a richer country I think you will agree with me. But I will tell you the only hitch. It is to be doubted that our people will put forth the same effort in our own country, or let us through the in-

strument of government attempt to move in measure designed to prohibit members that direction.

WHILE THE GOVERNMENT AIDS OTHERS, IT REDUCES EFFORTS AT HOME

While speeches are being made on conservation, funds for soil conservation are being reduced by the President's budget. The conservation job is being pushed back on the individual farmers, when their income is decreasing and their costs are rising. The job is being put back on the States, though those with the greatest problems are least able to pay.

While our President speaks of providing farm commodities to the needy peoples of the world, our own school-lunch program is While we provide money to the world for their economic improvement, the same United States commodities are being held off world markets, to give such markets to operators in foreign countries. While American tenant farmers are being cut back in acreage to the point of being without a means of livelihood and thousands of others are reduced to a gross annual income of less than \$1,000, we are promoting the increased production of the same commodities throughout the world-at least 1 million bales per year increase in foreign cotton production-not only by providing an umbrella over world prices, but by grants of American dollars as well.

PROVISION FOR THE FUTURE

It has been said, "The world is never more than 1 year ahead of starvation." In our country we have had great abundance through the years. Now we know we are gaining population at the rate of 3 million a year. We must, in self defense, if we hope to maintain our present high standard of living, see to it that a reasonable part of what is taken out of the land is put back; and that will be done only as income received exceeds cost of production.

Protections for industry and labor are going to continue and since that is true we must see to it that agriculture, the source of all wealth returns to the head table too,

for the good of the Nation.

The farmer must have price, but he must

have volume as well.

Remember, the only source of real wealth is the land. Your income and the future of our Nation, as well, is tied to the farm income.

It we leave to our children and children's children a fertile land, with timber restored, our soil erosion stopped, and our streams harnessed, with our natural resources intact, they will make it fine. On the other hand we could leave them all the money in the world but leave them a worn-out land and they will have nothing on which to build. Remember, the cost of producing food and fiber on the farm is going to be paid-either those who use the products of the soil or by the land from which it comes. Forty percent of our land has paid that price in the past. Today with an everincreasing popula-tion, we don't have the land to spare. There will likely be no Marshall plan or foreign aid law like our Public Law 480 if our country should ever be worn out as are most of the old countries of Asia we ald today.

Entry of Firearms Commonly Referred to as "Souvenirs"

EXTENSION OF REMARKS OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. HOLTZMAN. Mr. Speaker, in the 83d Congress I introduced H. R. 3842, a of the Armed Forces and their dependents from bringing into this country certain firearms commonly referred to as souvenirs. Under the provisions of my bill, the Secretary of Defense would be required to search the effects of returning servicemen and to seize any such weapons.

Statistics show that as many as 50,000 contraband weapons have been brought into the United States of America on 1 ship returning from the European theater. It has also been established that in 1 county of New York City as much as 75 percent of the crimes of violence have been, and are being, committed with these so-called souvenirs.

Too often do we read of tragic accidents resulting in fatality or serious injury as a result of the mere handling of these allegedly harmless guns.

Mr. Speaker, if we mean what we say about combating juvenile delinquency, I can think of no better beginning than by making it extremely difficult, if not impossible, to get these Lugers, P-38's, and Berettas. With few exceptions lawenforcement officials all over the country have agreed that passage of this bill would be a real deterrent to the frightening increase in the crime rate.

I am today reintroducing this bill and urge my colleagues to give it careful consideration.

H. R. 587

EXTENSION OF REMARKS OF

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1955

Mr. ASHLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I herewith submit a statement in support of H. R. 587. to provide that persons serving in the Armed Forces on January 31, 1955, may continue to accrue educational benefits under the Veterans' Readjustment Act of 1952.

H. R. 587 recognizes the ex post facto nature of the Presidential proclamation of January 1, 1955, which arbitrarily abrogates as of January 31, 1955, the right of men and women now in military service, or about to enter service, to participate in the benefits of the Korean bill of rights.

It hardly need be pointed out that young men and women entering the Armed Forces prior to the President's January 1 proclamation did so, at least in part, on the basis that the benefits promised by our Government were real and concrete. Plans were made on this basis which most assuredly affected the course of tens of thousands of American lives.

I support H. R. 587 because it recognizes that the American people, through their Government, insist upon keeping faith with the men and women upon whom our country depends for its national security.

Prairie Dogs Versus Prosperity?-The Story of Reclamation, Victim of Neglect

> EXTENSION OF REMARKS OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. ASPINALL. Mr. Speaker, the story of reclamation should have a different title than this. It should be something like The Story of Reclamation-Prosperity From Investment.

Yet, Mr. Speaker, the sad fact is that reclamation right now is a victim of neglect. Such neglect came by design for we have seen our investment in this program whacked down by 65 percent since our last peacetime budget of 1950. No great improvement is shown in the new budget for 1956 and this great investment program is slowly dying on the

We who come from the West have long understood the many national values from reclamation, the many benefits which accrued to all from water development. However, reclamation has always had many opponents and right now the opponents appear to have the upper hand. Still, I am sure that if the reclamation program were fully understood, if it were placed in its proper perspective, then it would have understanding support from most of those who are now persuaded that there is something wrong with it.

To provide a worthwhile review of the whole reclamation program to the Members, I am attaching to these remarks an article which appeared in the roundup section of the Denver Post of Denver, Colo. It is my opinion that this factual article will prove most interesting and enlightening to those who wish to study the real value to the Nation of a virile and active reclamation program.

The article follows:

PRAIRIE DOGS VERSUS PROSPERITY?-THE STORY OF RECLAMATION, VICTIM OF NEGLECT

(By Robert H. Hansen)

Just a little more than 100 years ago. Daniel Webster scornfully described the western half of the United States as the formidable home of savages and beasts and an expanse of wastelands and brooding mountains. Speaking against western railroad develop-

ment, Webster declared:

"I will not vote one cent from the Public Treasury to place the Pacific Ocean 1 inch nearer to Boston than it is.

"What do we want with this worthless area—this region of savages and wild beasts, of shifting sands and whirlwinds of dust, of cactus and prairie dogs?

"To what use could we ever hope to put these great deserts and these endless mountain ranges?"

Few men so illustrious have ever proved so wrong on such a tremendous scale so soon.

Only a few years earlier, in 1847, Brigham Young and the Mormon pioneers set off an economic chain-reaction when they diverted water from the stream they called City Creek to irrigate their gardens and fields where Salt Lake City now stands.

That was the start of reclamation as we know it today. Little more than 50 years later all three major political parties of the day wrote into their platforms pledges for the rapid irrigation development of the West.

In 1901, President Theodore Roosevelt first set forth far-reaching natural-resource policies that still exist today, with these Words:

The reclamation and settlement of the arid lands will enrich every portion of our country, just as the settlement of the Ohio and Mississippi Valleys brought prosperity

to the Atlantic States.

A year later, on June 17, 1902, Teddy Roosevelt signed into law the Nation's first reclamation act. Many of these principles are cardinal to western development today.

President Franklin Roosevelt put the Federal Government massively into the business of harnessing the West's raging rivers and reclaiming its fertile deserts. He did that at a time when such public works were Justified both as investments and as make-Work projects to relieve unemployment. And he tied public power generation to irri-

gation irretrievably.

Today, 54 years of Federal reclamation have cost \$2.4 billion—insignificant compared to the fabulous new frontiers it opened. the billions of dollars it poured into the Pockets of farmers, wage earners, and businessmen, the millions it has raised in local, State, and Federal taxes, the hundreds of thousands of new jobs, new farms, and new industries it created, the tremendous new markets, sources, and opportunities it developed.

But today, the continuation of that program has been slowed down by skeptics, opponents and men of little faith.

Reclamation appropriations have been more than cut in half since 1950; from \$358.3 million a year to \$143.6 million.
Total reclamation employees have been

reduced by nearly one-third in the last 2 years alone; from 13,348 in 1953 to 9,700 today. Hundreds of those 3,600 employees Who have been laid off are going to be hard to replace when and if reclamation is ever cranked up again, for they include some of the world's finest engineers and most expert technicians.

President Eisenhower promised a revival of major reclamation activity when he addressed the opening of the 84th Congress. He pledged support of the upper Colorado River storage project, which will be a \$1billion-plus undertaking that will require something more than 30 years to complete. with other enormous projects of that kind, Congress will be asked to appropriate funds each year to carry them on, rather than put up all the money in any single Year

A smaller but still costly and complex projis the Arkansas-Fryingpan which provide supplemental valley to 300,000 persons in the Arkansas Valley, and add to the critically short water supply of Pueblo, Colo.

The President, Interior Secretary McKay, and Reclamation Commissioner Dexhelmer are all committed to both projects. But they have been unsuccessful in selling Congress of them as a result of strong opposition by nonwestern Representatives and Senators, and by other groups who insist the economic justification of such public Works is missing. And in finding fault with the repayment procedures, the power sales Policies and the subsidies to agriculture, opponents of reclamation often ignore the demonstrated benefits that have flowed from this program over the years. Too many of those who flatly reject reclamation as a Worthy function of government don't know the facts.

An unheralded, unpretentious document from the Reclamation Bureau should convince even the most skeptical mossbacks.

It's entitled matter-of-factly: "The Growth and Contribution of Federal Reclamation to an Expanding National Economy."

The Bureau of Reclamation prepared it for the congressional Committee on Interior and Insular Affairs. Dated October 20,

1954, it's known as Committee Print No. 27, and signed by Reclamation Commissioner Dexheimer.

In 27 pages of plain language it traces reclamation from its ancient origin in the Tigris, Euphrates, and Nile Valleys to early South American civilization, from the Spanexplorations into the Indian pueblos of the American southwest to the Elsenhower standstill.

Because it tells an amazing story of spectacular progress and significance never before so simply, clearly, and completely complied, the Denver Post presents this digest of the Reclamation Bureau's nationally important findings and conclusions.

First, the official document debunks many popular arguments about Federal income returns, tax collections, and excessive costs.

Hear this:

The total \$2.4 bilion spent on all Federal reclamation since 1902 would finance the Defense Department less than 1 month.

What has been spent on reclamation over 50 years would finance our foreign-aid program to overseas nations for only half a year.

What was spent on reclamation in the one fiscal year of 1953 would have financed the Defense Department less than 3 days, the foreign aid or Veterans' Administration programs less than a month.

Now take revenue returns to the Federal Government from reclamation projects:

The 29 power plants now in operation have paid back \$226 million net to the Federal Treasury, \$34 milion in fiscal 1954 alone after deductions for annual operation, maintenance, and replacements. Over the next 50 years a total net return of \$1,692,500,000 in power revenues is predicted.

Irrigation and municipal water ment contracts will return \$691 million, of which \$109 million has already been paid. While making these construction account repayments, the water users have also paid operation and maintenance costs as they became due.

The total return to the Treasury from water and power projects combined will come to \$2.6 billion over the next 50 years, of which \$335 millon has already been paid.

Now taxes: Since 1916 Federal income-tax revenues which can be attributed directly to Federal reclamation-project developments have exceeded \$3 billion. This sum alone exceeds by 25 percent the total cost of all Bureauconstructed projects to date.

The Bureau's study repeatedly emphasizes that these and other benefits are from projects involving less than half the total irri-

gation feature costs to date.

Accelerated benefits, revenues, taxes, and business, it points out, will pile up as the really great projects of the Columbia Basin, California's Central Valley, and the Missouri Basin go into full operation and production.

. That should be borne in mind as the digest of the Administration's reclamation study continues.

Long after project costs have been repaid fully through the sale of electric energy and operations of repayment contracts," the re-"the new wealth created port stresses. through the Federal investment in the development of its own resources will be reflected in a continuing flow of tax revenues from the project areas and from the rest of the Nation as well."

Under the heading, "Reclamation's Contribution to the National Economy," the Bureau study makes these observations:

First, the crops and livestock shipped out of a reclamation project area create income in transportation, processing, milling, spinning, weaving, manufacturing, wholesaling, financing, retailing, and all other processes between the farm and the consumer.

Total crop production on reclamation projects since 1906 stands at \$10 billion-nearly times the total cost of all reclamation

Consider for a moment the business created by a bale of cotton from the Rio Grande project in Texas as it becomes clothing purchased in Maine or Wisconsin.

Or the Yakima, Wash., pear that turns up in a salad in Chicago. Or the Salt River Valley lettuce and grapefruit on a Pittsburgh table. Or the milk and cream from Twin Falls, Idaho, that becomes butter for Boston and cheese for St. Louis.
"Every State in the Nation shares the

health-giving benefit of protective foods produced on reclamation projects," summarizes

the report.

"A steer fed on the North Platte project may be finished in Iowa, butchered in Chicago, and eaten in Detroit or New York. The trade-creating aspects of the production of a reclamation project goes deep into the national economy.

Take transportation alone. The 1953 crop production from reclamation projects totaled nearly 26 million tons. To move this by rail would require a train 6,258 miles longtwice the distance from the Atlantic to the

And as that production, valued at \$786 million on the farm, is processed into foods and clothing its value is increased many times.

To measure that increase the Bureau followed the production of the Carlsbad project in New Mexico through from farm to con-

"It was found," the Bureau reported, "that the new labor, management, and property incomes over all other costs beyond the project area were about 3.2 times the value of the crops as they left the farm.'

But money isn't the only way to measure the value of reclamation crops.

Many of those crops, the Bureau found, provide "a delightful and health-giving supplement to the Nation's diet."

The irrigated West produces almost all the Nation's apricots, almonds, walnuts, dates, lemons, figs, prunes, and olives. It grows 95 percent of the grapes; 90 percent of the lettuce; 75 percent of the avocados, pears, and cantaloups; 65 percent of the asparagus; 50 percent of the peaches; and more than the truck crops.

Off-season production is important, too. Witness these contributions to the Nation's dinner table from Arizona's Gila, Yuma, Salt River, and Boulder Canyon projects alone:

More than 97 percent of United States-grown dates; 45 percent of winter and 42 percent of spring lettuce; 85 percent of early spring cantaloupes and 80 percent of early summer melons; 85 percent of the spring carrots, and sizable portions of the national supply of other choice vegetable and truck crops vital to healthy diets.

The second trade-creating aspect of reclamation is the purchasing power of project farmers and others whose livelihoods depend on their production.

The Reclamation Bureau discovered that the new income generated at the local farm and nonfarm level is about 170 percent of the value of crop production. That would be \$1.3 billion in 1953 alone. Largely that goes into retail sales.

California's Central Valley project-one of the world's biggest-was cited as an excellent example of the business this new income makes possible. The Central Valley project, it is estimated, provides a new market for:

One million pair of shoes every year, from Massachusetts, New York, Pennsylvania, and Missouri.

Ten million dollars worth of tobacco products, which come from North Carolina, Virginia, Kentucky, Piorida, and Pennsylvania,

And 8.000 vacuum cleaners, 8.000 refrigerators, 8,000 ranges, 8,000 washing machines, 8,000 radios and TV sets-all of which will come from many States, but chiefly from Ohio, Michigan, Illinois, Connecticut, New Jersey, New York, and Pennsylvania.

And that's not all. The report continues: The increased purchasing power of this project translates into an annual market for 15,000 new cars, some from Detroit and South Bend, and other cities, but many assembled in California from parts manufactured in Michigan, Indiana, Illinois, Ohio, and Wisconsin; for hundreds of thousands of dollars' worth of textiles from New England and the South Atlantic States; and for thousands of automobile tires and accessories, home appliances, office machines, and

all the assorted gadgets of the day produced in all corners of the country."

The 6,000 new farms carved out of the Central Valley desert, the report disclosed, also require 8,000 tractors, largely from Pennsylvania, Illinois, and Wisconsin; 7,500 trucks from Michigan, Indiana, and Wisconsin; and 1,000 hay balers, spray outfits, harvesters, and other machines from Tennessee, Iowa, Wisconsin, Illinois, New Jersey, and Pennsylvania; and thousands of plows, harrows, cultivators, mowers, and other implements from the Great Lakes, East Central and South Central States.

Concludes the bureau's report:

"Every segment of the Nation's economy has participated and shared directly or indirectly in the construction of these reclamation projects.

"In doing so every section of the Nation has been benefited by reclamation long before the impact of prosperous and continuing consumer markets has been measured.

'An analysis of direct Federal procurement for the Central Valley project in California, for example, indicated that all of the 48 States, the District of Columbia, and Hawaii supplied some portion of the \$99 million

Federal purchase.

"In like manner, these many areas shared in purchases by the contractors of millions of dollars of materials, equipment and supplies. The same pattern of nationwide procurement occurs in the construction of other

reclamation projects."

To analyze the trade reclamation generates between the eastern and western halves of the United States the Interstate Commerce Commission made a study of railroad way-

It found that in 1951 more than 1,500,000 railroad cars, weighing nearly 40 million tons, were shipped into the 17 Western

States from the 31 Eastern States.

More than 2 million carloads, weighing nearly 72 million tons, were shipped from west to east. An additional 5 million freight cars were loaded with 187 million tons goods and shipped from one Western State to another.

Then a study was made of the growth of these rail shipments from typical reclamation project areas. Here are some of those

Wyoming's Shoshone project showed only 510 produce carloads were shipped out of basin, Greybull, Lovell, Powell, and Worland in 1910. By 1941, those shipments had almost reached 12,000 carloads. Shipments into the region from other parts of the Nation grew from 653 to more than 5,000 carloads.

In 1900, before irrigation began on the North Platte project in Wyoming and Nebraska, only 190 carloads of outgoing freight were shipped from Scottsbluff. By 1910, when irrigation started, carloadings reached 1,300. By 1942 they had exceeded 3,100.

Even larger growth was reflected in goods shipped into Scottsbluff as reclamation developed.

In 1900, only 283 carloads from 6 States were sent to Scottsbluff. In 1940, 14 States shipped in more than 1,400 freight cars. 1942, 39 States were shipping in more than 7,000 carloads of goods a year.

A similar pattern was uncovered in a study of carloadings to and from Ada and Canyon Counties in Idaho, on the Boise, Owyhee and

Vale reclamation projects.

And those studies reflected only railroad Said the Reclamation Bureau:

"Significantly, the carloadings and tonnage figures covered in the ICC report represent rail shipments exclusively, and do not prorate the 162 billion ton-miles of shipments carried by motortrucks in the Nation

This tremendous volume of trade produced a retall sales market in the west in 1951 which was nearly three times greater than the total United States exports to all foreign nations combined.

Retail sales in the 17 Western States during 1951 rose to almost \$40 billion. That's an average of \$1,139 for every man, woman, and child. National retail sales the same year averaged noticeably lower-\$1,023 per capita.

All this in a land not even Daniel Webster wanted only 100 years ago, in a land only cowboys, trappers, and Indians even knew. And still this digest has only scratched the surface of the role reclamation has played in this great boom.

The Reclamation Bureau's factfinding report makes this comment, populationwise;

"The story of the phenomenal growth of our Nation is the story of the new frontiers it has conquered. The Ohio Valley, Louisiana Territory, California, the Oregon country, Alaska, and the persistent development of the resources of these and many other new frontiers have provided the Nation with ingredients for economic growth.

"From the Nation's beginning it was the resources from the new frontiers that nurtured it from economic infancy as a nation of farmers and woodsmen to the industrial giant it is today, and made possible the population growth from the 5.3 million of 1800 to 161 million today."

Clearly, said the Bureau, the West today is that new frontier with the new resource the Nation needs to feed and clothe its climb

to 200 million by 1970.

Since 1900, it noted, the 17 Western States gained 204 percent in population; the 11 Mountain and Pacific States, 378 percent; and the 3 Pacific States, 499 percent. During the same time the national population did not quite double.

Since 1940, the Bureau went on, the 17 Western States gained 25.8 percent; the 11 Mountain and Pacific States, 40.9 percent; and the 3 Pacific States, 48.8 percent. total United States population increased only 14.5 percent.

"The West is growing up and, in the process, is assuming more than ever a position of vast strategic importance in the Nation's future," the Bureau sums up.

What did reclamation have to do with that great western population boom, and what of the future? The Bureau made a study of that, too. Here's what is found:

First, the past and present-

"The story of any major reclamation area in the Western States is a story of a humble beginning of a few irrigated farms, from which an economic giant has grown," the Bureau observes

"No one would claim that irrigation alone created these giants, but it is not accidental that each started where man came to grow crops and developed the water resources.

In 1953, the Bureau calculated, reclamation crops contributed \$550 million in income to farmers, owners, and laborers. totals about 70 percent of the value of crops produced on reclamation farms.

An additional \$786 million in urban income to labor and capital in the project trading area also was generated-or \$1 in business income for every \$1 worth of crops produced.

That adds up to \$1.3 billion in total farm and nonfarm income made possible in 1953 by reclamation crops.

The Bureau offered individual illustrations for various projects in Idaho, Oklahoma,

Oregon, Nevada, New Mexico, California, and other States and then concluded:

"The Salt River project (in Arizona). which represents a total Federal investment of about \$26.7 million, offers an ideal case study of the benefits of reclamation to the country, and at the same time provides another Horatio Alger's theme on a magnificent scale, not the rise of an individual, but of & community of over one-third of a million

"At the turn of the century, Phoenix was a village in the desert. Today it is a metropolis and the heart of the Sait River project, one of the most highly developed agricultural

areas in the United States.

"The gross value of crops produced on the project during 1953 was \$79,875,616. Since the first irrigation water was supplied in 1909, the cumulative value of crops harvested through 1953 amounted to \$1,187,021,331.

This wealth production is evidenced perhaps the most readily through its influence on retail sales, bank clearings, and Federal

"Retail sales from Maricopa County totaled \$468.637.000, volume of bank clearings in Phoenix reached \$3,229,375,000, and Federal taxes from Maricopa County were estimated aa \$69,400,000, all during 1951.

"Much of this business activity was created in the processing, shipping, and marketing of the project's production, and in providing goods and services required by farm owners, operators, and laborers and by all those whose income is derived from the production of the project."

Again to sum up, the Bureau figured since reclamation began in 1902, it has contributed \$6.8 billion in income to reclamation farmers and farm workers, plus \$10 billion in local nonfarm income within the trading area it

spawned.

That's a total of nearly \$17 billion-or six times the cost of the reclamation projects that not only made it all possible, but are paying themselves off as they continue to expand farm production and business at the local, regional, and national levels.

From the day in 1847 when the Mormons first diverted the waters of a creek to their fields, irrigation has been a part of the development of the West," the Bureau report

reflects at this point.

"In many cases, small irrigation enterprises grew to large projects. People created on the desert or in the mountain valley first a village, then a town, and now a city, with processing, shipping, manufacturing, industries, churches, schools, hospitals, and banks, and the numerous other facilities and services common to a modern urban center.

'The irrigated land may seem lost among the modern improvements, but year after year crops have been grown to sustain the economy of the area. Reclamation, both Federal and private, along with grazing, mining, forest production, and transportation have constituted the economic hase upon which the West has been built."

Recreationwise, the United States Fish and Wildlife Service was quoted on a "conservative estimate" that reclamation projects produced \$33 million a year in benefits to sportsmen and businessmen.

Here's how that is figured:

Some 6,500,000 annual visitors are esti-mated to enjoy recreation of some kind on the more than 100 reclamation reservoirs. Half are tourists from every State in the Nation. If they spend \$6 a day for food, lodging, and other items, that's \$19 million a year.

Fishermen spend more than 1 million angler-days on the reservoirs, too. If they spend \$10 a day for gas, oil, boats, and tackle, that would be \$11 million.

Another three hundred thousand-odd hunter-days of all types of hunting on all reclamation projects is believed a reasonable estimate. At \$10 per day expense for each hunter, that's a \$3 million annual business reclamation generates.

In direct benefits such as reclaimed land, irrigation and other water development, public power, and flood control, reclamation makes perhaps its most valuable contributions to the Nation's economy.

There are 69 irrigation projects or major divisions constructed by the Government, or receiving water through Government-built works, scattered over the 17 Western States

They supply full or supplemental water to more than 7 million acres. About two-fifths of those lands depend on reclamation for their full water supply; three-fifths for part of it.

They lie from the hay and pasture producing high mountain valleys to below sealevel truck crop farms. They constitute only 23 percent of the total number of acres irrigated in the West, and only 21 percent of the Nation's irrigated land. The rest is irrigated by private projects.

Yet this report deals only with the features and benefits of the Federal reclamation proj-

ects and areas.

Federal reclamation water serves about 125,000 family-size farms, and another 125,-000 suburban homes. On the projects were 417 towns with a population of more than 1.6 million.

"Considering power, municipal and industrial water and irrigation," says the Reclamation Bureau, "more than 5 million people in the service areas of reclamation projects obtain their living directly or indirectly by reason of the project development."

Mammoth dams like Grand Coulee, Hoover, and Shasta often give the impression that the Bureau deals only in grandiose projects.

Actually, the reverse is true.

Yes, the Bureau has the know-how to erect the world's tallest dam, Hoover Dam across the Colorado River. It has drilled the Nation's longest tunnel, the Alva B. Adams bore under the continental divide on the Colorado-Big Thompson project. And it has built river-size canals in California's Central Valley and the Columbia Basin.

But, concludes the Bureau, those are the

exceptions.

"Most of the Bureau-built projects are small in size and involve relatively simple engineering structures," the Bureau observes.

All but 14 of the 69 Federal reclamation Projects serve less than 100,000 acres; 31 Berve less than 25,000 acres, and 9 serve less than 5,000 acres.

Typical of the smaller, local projects to which the Bureau has given increasing attention in recent years, are the Fort Sumner Project in New Mexico and the Lewiston Orchards project in Oregon.

Fort Sumner supplies 205 farms and 2,650 Deople. Lewiston Orchards serves 1,800 domestic water users and irrigates 3,524 acres.

Such projects, according to the actual figures, far outnumber all the Hoover, Grand Coulee, and Shasta Dams the Bureau could ever hope to build.

Now to touch on power, municipal and industrial water and flood control, for therein lies the much-discussed principle of multipurpose resource development. The Bureau puts it this way:

"For optimum development, control, and use of water resources, Federal reclamation multipurpose works are being constructed to serve irrigation, power, municipal water, flood control, navigation, fish and wildlife, recreation, pollution abatement, and other purposes.

"The inclusion of revenue-producing power facilities permits the construction of projects greater in cost than the repayment ability of the irrigation water users ordinarily would allow."

Seventeen multipurpose reclamation projects with 29 powerplants are now in

operation. They include 4.72 million kilowatt capacity, almost 9,000 miles of transmission lines, and nearly 300 substations.

In fiscal 1954, these plants generated and sold 24.5 billion kilowatt-hours of electricity, enough to supply a city of 7 million people.

The sale of that power netted the Government nearly \$34 million, after paying all operation, maintenance, and replacement costs.

The rates are fixed to pay off the Federal power investment, plus $2\frac{1}{2}$ to 3 percent interest, in the first 50 years of plant operation.

The 29 powerplants now in operation on Federal reclamation projects have paid back some \$226 million to the Government, and in the next 50 years at current rates should return a total of \$1.7 billion more. That revenue will keep right on coming in long after the plants are fully paid off.

Who buys that power? Half of it goes to such Federal marketing agencies as Bonneville Power Administration in Washington and Oregon, which in turn feed it into private industry, private utilities, and

public agencies.

The second largest buyer is the Nation's private utilities. Despite their arguments that they and their customers foot reclamation bills through taxes but can't buy reclamation power, private utilities take more than 20 percent of the total output.

Another 20 percent is purchased by State and local publicly owned utilities. The rest is divvied up between co-ops and other Gov-

ernment bodies.

Many of the cities served by that electric power also get their municipal and industrial water from reclamation projects, too. Farmers also depend on reclamation water not only for irrigation but also for domestic uses.

There are now about 56 urban areas under contract to receive their municipal and industrial water from Federal reclamation projects.

Under the present concept of comprehensive, multipurpose water development, the Federal Government now includes current and future water needs of all cities and towns in project areas.

It also carefully considers downstream flood-control needs as well.

The first reclamation projects were strictly for irrigation. Then along came power to help pay the bills, and domestic water for thirsty cities. And today, flood-control protection is a major consideration.

The Bureau has found that a little more cost to include flood-control features can save millions of dollars and even hundreds of lives downstream.

For example, the dams on the Columbia River saved an estimated \$5.5 million in flood damages in 1950. The giant Shasta Dam in California held that State's worst flood in history to a toll of \$10 million, also in 1950.

Remember the great Kansas flood of 1951, the following year? Worst in the Nation's history, it caused nearly \$1 billion in damages, killed 18 persons, drove 87,000 from their homes, destroyed 354 businesses, did \$363 million damage to Kansas City alone.

That scarred into history just how disastrous floods can be.

And it was all so needless. Engineers can prove those raging torrents could have been reduced to a mere trickle by dams and levees long held on drawing boards by lack of construction funds.

Each of the reclamation dams, then, holds back water, stores it for time of greatest need, and puts it to beneficial uses for all the Nation that can be measured only in the billions—water which, if not controlled, could destroy property and life with the suddenness of lightning.

Looking into the future, the Reclamation Bureau sees an even greater need, greater

role, and greater potential for reclamation in the next quarter century.

By 1975, the Bureau estimates, the Nation's population will stand at 200 million—a 40-million increase in the next 20 years. Others say 200 million will be reached within 15 years.

Every day that means 6,000 more people sit down to dinner. In 25 years, 5 will be seated around the dinner table which feeds 4 today.

There won't be enough food to go around, the Bureau warns bluntly—not at our present standards of living and eating.

"The equivalent of 100 million new acres must be developed," the Bureau declares, "Much of this will come from more intensive use of land we now farm, a part will come through new irrigation projects in the arid West.

"But perhaps the most productive potential source will come through making irrigation available where rainfall is unreliable or inadequate."

To date, the Nation has improved irrigation and put water on 26 million acres, Most of this has been reclaimed from the desert.

There are approximately 400 million acres all told under cultivation. In 1900, there were 4.2 acres for each person; by 1950, 2.7 acres. With fewer acres per person, the Nation is still living and eating better than it did 25 or 50 years ago.

That's been accomplished by making 1 acre do the job of 2—through irrigation, fertilization, mechanization, scientific farm-

ing, and conservation.

In the future, irrigation is going to be called upon to play a bigger part in continuing that progress as the total population booms while farm population drifts into the cities.

But the growing demands for more food are only part of the rising need for water developments.

The water problem is no longer one of irrigation limited to the parched West. It has reached into all levels of society, all walks of life.

For example, it takes 18 barrels of water to refine a barrel of oil. More than 85,000 gallons of water to produce a ton of rubber. Some 800,000 gallons to grow a bale of cotton. About 200 gallons a day for every person.

No longer is the East a land of plenty of water, either. Many of its cities face water shortages even more severe than Denver's.

To paint water's role in the economic world of tomorrow, the Bureau has singled out the upper Colorado River Basin, thusly: "Here are 17 pecent of the world's coal

"Here are 17 pecent of the world's coal resources. Much of it can be developed as a source of synthetic oil. This reserve would supply the Nation's present consumption of oil for hundreds of years.

"The oil-shale deposits would supply the present national consumption for 190 years. Vast deposits of uranium, vanadium, magnesium, and phosphate are available for use.

"The development of water and its power potentials would lead the way to a vast industrial expansion."

That's the kind of new economic frontiers and opportunities reclamation must open up in the future to keep the Nation growing and strong, the Bureau believes. It puts it this way:

"Our increasing population must find an increasing field of economic opportunity. The development of new water resources can be used as a foundation on which an expanding economy can be constructed."

Not only that, the Bureau adds, but such developments as the upper Colorado would disperse both industry and population, reduce transportation burdens, and make regions of the Nation more self-supporting—all important factors in atomic war.

Is there any limit to reclamation's potential? Not that the Bureau can foresee, not when the Nation puts to beneficial use only 14 percent of the annual water runoff while 400 million acre-feet of precious water waste

into the ocean every year.

Is there any limit on what engineering can do? No project, the Bureau answers, has ever been proposed that cannot be built with the engineering skills of today.

To what extent does the future of America rest upon water development? The Bureau, in reply, quotes President Eisenhower's letter to Secretary McKay on May 26, 1954, as follows:

"The conservation and use which we make of the water resources of our Nation may in large measure determine our future progress and the standards of living of our citizens.

"If we are to continue to advance agri-culturally and industrially," President Eisenhower continued, "we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans.

"It is my desire that this administration furnish effective and resourceful leadership in establishing national policies and improving the administrative organization needed to conserve and best utilize the full potential of our water resources."

Reclamation, then, stands today at the crossroads and so does the Nation. And the Eisenhower administration stands squarely on the spot.

Forestry Anniversary

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

GAVIN. Mr. Speaker, under Mr. leave to extend my remarks in the Rec-ORD, I include the following editorial from the Washington Evening Star of January 26, 1955:

FORESTRY ANNIVERSARY

If America is greener in 1955 than it was in 1905, some part of the credit certainly must be due to the Forest Service. The trend half a century ago was away from conservation, but it carried its own correctivethe wasting of the Nation's timber resources led to the setting up of a national program of timber saving which now is one of our country's most useful public agencies.

Of course the Forest Service has not been the only working force in this field. When it was formed by merging the old Bureau of Forestry and the Forestry Division of the General Land Office, it was expected that it would have the cooperation of other conservation organizations and establishments. Visitors to the golden anniversary exhibition at the Agriculture Administration Building see evidence there of the helpful partnership of State forestry units, forestry schools, forest industries of many different sorts and many farm societies, wildlife and recreational bodies and hundreds of private individu-We Americans definitely are timberminded people. In perhaps no other similar activity are we so conscious of the origins of our material progress. But it does not follow that we are as concerned or as well educated as we ought to be. For example, there is need for wider and more effective knowledge of the insect enemies of our forests and of the fungus diseases which afflict them in large areas. We also should be better trained and better equipped to fight forest fires, first by being vigilant to pre-

vent them and, where they already have been started, skilled in putting them out and re-placing the losses they have caused. Forest conservation and its relation to water supplies likewise should be better understood.

The 50th aniversary of the Forest Service then is no mere jollification. Rather, it is a new opportunity for enlisting interest in keeping America green and in making America greener.

Meeting To Help Coal

EXTENSION OF REMARKS

HON, ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert the following editorial from the Bluefield Sunset News, Bluefield, W. Va., for Monday, January 24, 1955:

MEETING TO HELP COAL

Representatives of the coal industry and other industries in West Virginia affected by foreign imports will meet in Washington tomorrow to chart a course of action in connection with President Eisenhower's call for extension of present United States trade policies. The meeting is important to West Virginia because of the economic beating have taken in the coalfields as well as in our glassmaking and pottery centers. The meeting is under the auspices of the nationwide Committee of Industry, Agriculture and Labor on Import-Export Policy. The Nation's economy and security are threatened, members of the committee contend, by the Eisenhower administration's trade policies.

Industries expected to be represented, in addition to bituminous coal, include railroads, chemicals, glassware, and a score of others. Railroad brotherhoods and the UMW will join with management in urging relief from present policies, which, in the case of foreign residual-oil imports, have cost coal heavily in important markets.

Some 30 bills have already been introduced in Congress relating to import restrictions, higher tariffs, or other forms of stabilizing foreign-trade policy, and we are happy to say that West Virginia's Democrats in Congress have thrown their full weight into the fight. Bluefield's Congresswoman KEE, for example, who has long espoused quota limitations on the imports of residual oil, has been a leader in this fight.

Only recently she reported to Congress that on her trip to Europe in November and December that she had an opportunity to see at firsthand a number of communities where "industrial recovery has been slow and real prosperity is still not in sight. Nowhere," she said, "did I see the economic stagnation that has enveloped many of the coal communities of West Virginia since foreign residual oil began its relentless surge into the fuel markets of the east coast. To my way of thinking, our first obligation is here at

Other West Virginia Members of the House have echoed Mrs. KEE, notably Representative HARLEY O. STAGGERS, of the First District. He has protested administration attempts at further reduction of tariff barriers by demanding "a Marshall plan for American workers." He attributes heavy unemployment in West Virginia and other coalproducing States to the fact that "the Government of the United States has seen fit to take away from them the fair and just protection of a tariff that for more than 160 years helped the American workman achieve a standard of living unmatched by the workers of any other nation in the world."

Representative Balley has described some of the supporters of the program to extend the Trade Agreements Act as "investors and international bankers whose prime objective is to make it more profitable for American capital to invest abroad than to spend their money in the development of our own country."

Representative Byrn has castigated importing oil companies which "ruthlessly subordinate the interests of United States economy and safety to the practice of profit-at-any-cost." Inserting in the Congressional Record the resolutions on competitive fuels and reciprocal trade adopted by the NCA board of directors last month, Representative Byan said that careful study of the documents may "go a long way toward helping the legislative body decide upon the course that our fuel policies-immediate and long range-are to take."

The meeting Tuesday will have its work cut out for it. There is a preponderance of evidence to support the contention, in the case of coal, that quota limitations should be placed on the oil imports. But the big stumbling block and the one that must be overcome is the opposition of the Republican administration and President Eisen hower to doing anything to restrict such imports. The only way the situation can be helped is for Congress itself to recognize the plight of such industries as coal and to enact relief measures.

Cushion for Freer Trade

EXTENSION OF REMARKS OF

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

BUCHANAN. Mr. Speaker, Mrs. under leave to extend my remarks, wish to include the following editorial from the Pittsburgh Post-Gazette of January 25, 1955:

CUSHION FOR FREER TRADE

It is as a longtime friend of freer trade for America that Representative HERMAN EBERHARTER, of Pittsburgh, wants to help those who might be hurt by tariff cuts.

Mr. EBERHARTER figures there are 20 johs in the United States that are dependent on foreign trade for every 1 dependent on high tariffs. Even so, he would like to cushion the effect of freer trade for that very small minority of 1 in 20. He has introduced \$ bill under which Uncle Sam would give special aid to this minority, the idea being to help affected firms and workers switch over to new and profitable business. Such help would come, for example, in low-interest loans, in quick tax writeoffs for new machinery, in training for workers, in loans to workers to help them move elsewhere if that move is necessary, in favored treatment on Government contracts, in technical advice-The help would be temporary.

High tariffs, as Mr. EBERHARTER rightly figures, are plain subsidies. They are subsidies paid to a special group of firms and workers by every American consumer. Certainly, for the good of American consumers, for the good of most American workers, for the good of the family of free nations, we must lower these subsidies. But since we have given them for so many years, we do have a moral and social duty to show some consideration for a distressed minority in withdrawing.

withdrawing them.

This is just what Mr. EBERHARTER has in mind. His idea of cushioning the effect of freer trade has been put forth by others—notably by Pres. David McDonald, of the United Steelworkers. It is an idea that should appeal to all those who, while supporting freer trade in principle, have had occasional doubts about how it might work in practice. If Congress incorporates this idea into the administration's proposals on trade, the whole program should surely enjoy the overwhelming support of Americans.

The Economics of Pension Funds

EXTENSION OF REMARKS

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article entitled "The Economics of Pension Funds," by F. W. Paish and A. T. Peacock, which appeared in Lloyd's Bank Review for October 1954:

THE ECONOMICS OF PENSION FUNDS (By F. W. Paish and A. T. Peacock)

The recent Report of the Committee on the Taxation Treatment of Provisions for Retirement 1 and the study of the Research Group of the Institute of Actuaries 2 have drawn attention to the remarkable growth in pension rights which are being accumulated through schemes sponsored and in many cases administered by business enterprise. Despite the publicity given to them in official reports, there is a surprising lack of information about the extent and the operation of industrial pension schemes. The inquiry undertaken by the Ministry of Labor for 1936, which was published in the Ministry of Labor Gazette in May, 1938, has never been followed up, and the statistics illustrating their growth are very sketchy. The Ministry of Labor inquiry for 1936 put the number of employed persons covered by privately administered pensions schemes and Life Office schemes (the distinction is considered below) at about 1,600,000. This total had risen to something like 5 million in 1952. About 40 percent of persons covered by schemes of this sort in 1936 were members of schemes to which only the employer contributed, and this percentage has now probably fallen to somewhere around 30 percent. In 1936, the numbers covered were equally divided between manual workers and clerical and administrative staff, and this percentage does not appear to have altered. the number of persons covered by statutory superannuation schemes, this is to say civil rvants and other Government employees, then in 1952 the total number of those covered by pensions schemes, quite apart from the national insurance scheme, was someworking population. Moreover, everything Points to continued growth in the number of schemes, so that by now the total numcovered may be appreciably more than this.

The reasons for this growth are diverse, but there seems little doubt that the principal one in this country has been the maintenance of full employment for something like 15 years. Employers have found pension achemes useful as methods of attracting and

Footnotes at end of speech.

holding a skilled labor force at a time when labor has been a scarce factor of production. Moreover, they have been encouraged to do so by the high rates of profits tax and income As their own contributions to schemes of this kind have been treated as a cost for tax purposes, they have in effect been subsidized by the inland revenue. While schemes of this sort were earlier regarded with suspicion by trade unions, as promo-ting a division of loyalties and providing an alternative to higher wages, they gained the support of these organizations in recent years. One of the most important factors influencing trade union support has been the operation of wage restraint in the Trade unions preearly years after the war. ferred wage increases in the form of additional pension rights rather than no increases at all, and employers readily granted them.

The few figures illustrating the growth of these schemes are sufficient to suggest that retirement provision of this scale must have important economic effects. This article is an attempt to analyze these effects, and to consider how far they conform or conflict with generally accepted objects of economic policy.

II. THE NATURE OF PENSION FUNDS

Methods of retirement provision vary greatly from one enterprise to another, as the result partly of historical accidents and partly of the particular circumstances of each business and the relationships between employer and employed. Besides the broad distinction already mentioned between con-tributory and noncontributory schemes, there are at least five other types of major differences. Noncontributory schemes can themselves be subdivided into the majority, where regular annual appropriations are paid into a fund on a scale actuarially sufficient to provide for future pensions, and the minority, where the employer merely charges direct to profit-and-loss account such pensions as he happens to be paying at the moment. A second difference, important for its effects on the mobility of labor, is between schemes where the employee loses all but the benefit of his own contributions (if any) if he resigns (except perhaps for reasons of health) or is dismissed before reaching retirement age, and those under which he can take his full rights with him, in some form, even if he resigns or is dismissed. Thirdly, from the point of view of taxation privileges, there is an important difference between schemes which confer pension rights only and those which give the beneficiary the option of taking a lump-sum payment. Fourthly, the recent heavy fall in the purchasing power of money has emphasized the difference between schemes where the benefits are fixed or depend on previous contributions, whether fixed or varying with salary, and those where they are based on retiring salary. And finally, from the point of view of the form of organization, there is the distinction between those schemes which are privately administered and those which are conducted through one of the life offices.

These differences are not, of course, wholly independent of one another. Schemes conducted through life offices must necessarily be conducted in accordance with actuarial principles. It also seems probable that schemes providing benefits based on retiring salary, which may involve the employer from time to time in large supplementary contributions, are more likely to be conducted privately, while schemes giving only such benefits as are covered by previous contributions are more suitable for conduct by life offices. It may well be also that life office schemes carry options to lump-sum payments and benefits which remain the property of the employee on resignation more frequently than do privately conducted schemes.

Of the two main types of organization, the commoner, especially for firms with large salaried staffs, is the privately administered scheme, and this is the most important financially. Under such a scheme, employees and employer pay contributions into a fund, which is administered as a trust. The general nature of the scheme is usually approved by both directors and the trade unions. The trustees are appointed by the directors of the firms, and usually employees are represented on the board of trustees.

The contributions and benefits will vary according to the nature of the enterprise and the objects of the scheme, but some degree of uniformity is detectable, largely because the schemes are influenced by the generous tax concessions given to pension schemes which provide benefits only in the form of an annual pension to those of retirement age, without the option of a lump-sum payment. Usually, the benefits and contributions are related directly or indirectly to salary, the general object being to reward the employee for his efficiency and length of service, subject to the condition of maintaining the solvency of the pension fund. Pensions of salaried employees, who are likely to achieve their peak in earnings at the end of their careers, are usually based on their final salaries, subject to some length of service condition, or upon their average salary over, say, the last 10 years of service, while contributions of both employer and employed are a fixed proportion of annual salary. relation, therefore, between contributions and benefits is indirect. Care has therefore to be exercised to keep the fund actuarially solvent, that is to say, to ensure that it is able to meet its obligations on the assumption of current conditions of retirement, contributions and benefits.

When an increase in the cost of living makes necessary a general rise in salary scales, and especially insofar as this affects those employees who are nearing retirement age, the fund accumulated out of past contributions and appropriations will no longer be large enough to meet the prospective demands upon it. As it is impossible to demand restrospective contributions from employees, the whole cost of making good the who will deficiency falls upon the employer, have to make special supplementary appropriations, in addition to a permanent increase in his regular appropriations in promagnitude of these special supplementary appropriations when salary scales are raised will depend partly on the size and distribution of the increases, partly on the age distribution of the staff, and partly on the number of years over which retiring salaries are averaged for the purpose of calculating pension rates. The longer this period, the larger the share of the loss due to the loss of purchasing power of former contributions which will be borne by the employee and the smaller the share borne by the employer; but unless salaries are averaged over the whole period of service (which is the same as making pensions dependent entirely on former appropriations and contributions) the employer will continue to bear some part of the risk. In practice, the period over which retiring salaries are averaged seems rarely, if ever, to exceed 10 years.

In a large firm, there may be different pension schemes to suit different classes of employees. Thus manual workers, whose average earnings may not vary greatly according to age, may receive a fixed pension laid down in advance and pay relatively little by way of contributions. At the other extreme are the high executives, for whom the tax concessions attracted by schemes of this sort are of great importance. Again, an elaborate pension scheme is obviously inappropriate where the rate of turnover of labor, usually female, is very high. It is common in such firms to institute provident fund

schemes with contributions by employee and employer.

Some large employers of labor prefer to operate schemes in which only the employer pays contributions, or in which the employer guarantees a pension on the fulfillment of the conditions of service which is met out of current receipts and not out of a seperately constituted fund. This type of provision obviously gives the employer more control over pension rights and more freedom in his distribution of rewards for service.

The second main type of organization, the so-called life office scheme, is commonly found in small firms with, say, 100 employees or less. Such firms cannot take advantage of the administrative economies of schemes which cover large numbers of employees and may not possess the financial expertise to devise and administer a private scheme. Instead, they pay over their own and their em-ployees' contributions to a life office, either in order to provide policies for individual employees for the joint premium, or in order to provide a blanket policy covering all the members of the scheme irrespective of the individual risks and contributions.

The existing system of tax exemptions weights the scales heavily in favor of private schemes as against the life office schemes. A suitably devised private scheme can obtain registration as a charity and so escape the payment of income tax on the interest earned on its invested funds, while a life office must pay tax on its interest earnings at the rate of 7s. 6d. in the pound. To compete with the alternative of a private fund, the life office must be able to show advantages in its (administrative organization and skill, and in its power of spreading risks, sufficient to offset the effects of discriminating taxation; and this it can usually do only for the smaller businesses.

III. THE TAX TREATMENT OF PENSION SCHEMES

In addition to the exemption from income tax on interest receipts granted to those pension funds which are registered as charities, pension schemes attract very considerable tax concessions on contributions-concessions which are undoubtedly one of the main reasons for these schemes' recent rapid growth. Tax legislation governing pensions provisions is complicated, but generally speaking it can be said to adopt the formula of exempting contributions from tax while taxing pensions as earned income. The general principle followed (although not altogether consistently applied) is that taxpayments are spread over the period of the consumption of income rather than over the period in which it is earned. Thus, subject to safeguards regarding the amount that can accumulated as provision for retirement, relief is afforded on premiums. The conditions which the schemes must fulfill in order to attract relief are laid down in a series of acts beginning with the Income Tax Act of 1918, subsequently modified in 1921 and 1947. The three main conditions are as follows:

(a) That the sole purpose of the fund is the provision of annuities on retirement for employed persons, or for their widows and dependents in the event of the death of the employee. (This criterion rules out any schemes under which the employee receives a lump sum on retirement, or has the option of commuting part or all of his pension into a lump-sum payment. If no tax has been paid on the contributions to such schemes, at least at the reduced rate appropriate to life-insurance premiums, the lump-sum payments are taxable as income in the year

in which they are received.)
(b) That the scheme is open to all employees of a defined category, e. g. all salaried

(c) That benefits are reasonable in relation to the employees' remuneration and length of service. (The test of "reasonable-ness" is provided by the statutory superannuation schemes for civil servants.)

Once a scheme receives the approval of the Internal Revenue, then in the case of trust funds the employer's contribution is ductible as an expense in determining profits tax and income-tax liability, the individual employee obtains tax relief on the whole of his contribution, and the interest income of the funds is exempt from tax. typical life office schemes, where the beneficiary retains a lump-sum option, the concessions are less generous. The employer's contribution is deductible as before, but the employee's contribution attracts only the normal concession for life-insurance miums, which is equivalent to two-fifths.

When an employee retires and begins to receive his pension, he is taxed as if he were receiving earned income, but if he leaves employment before the age of retirement either because he wishes to become self-employed or wishes to join another firm, then usually he receives back only his own contributions. The trust fund is then liable to pay tax on the surrendered contributions at 25 percent of the standard rate, which is claimed from the employee in question. If he moves to another enterprise which has a pension scheme of its own, and the trustees of the scheme operated by his new employer are prepared to offer him pension rights in return for the contributions in respect of his previous employment, then the employee may claim back the tax paid. However, this relief does not hold in the case of a person who chooses self-employment and wishes to buy, for example, a deferred annuity. Moreover, in most cases the individual who transfers employment or prefers self-employment sacthe benefits he would receive as rifices result of the employer's contribution, for the latter is rarely paid over as an addition to the paid-up contributions of the resigning employee.

A considerable part of the report of the Committee on the Taxation Treatment of Provisions for Retirement is devoted to the question of this discrimination in favor of employed persons. Although we are con-cerned here with the effects of pensions schemes and not their rationale, brief mention should be made of the recommendations of the report, because they would modify some of the economic effects of the schemes, were they to be embodied in our tax legislation. In general, the report endorses the present principles of exempting premiums from tax and of taxing benefits, although it recommends that up to onequarter of the total value of benefits due on retirement should be payable in tax-free lump sum form, subject to a maximum of £19,000. Its suggestions, however, include two for major changes, as well as a number for minor ones. The first of these is that life office schemes should be subject to the same tax treatment as those privately administered. The second major change proposed (subject to the reservations of two members of the committee) is that where comparable schemes can be set up for self-employed persons, either for individuals or for groups of persons (such as schemes operated by professional associations), contributions should attract full income tax and surtax relief. As in the case of the existing types of scheme, annuitles would be treated as earned income. and lump-sum retirement provision, subject to a maximum limit, would be free of tax.

Some observers, including Mr. Cater and Mr. Woodcock of the committee, think that price of consistency of treatment is too high. They consider that self-employed persons are, to quote their note of reservation, 'necessarily possessed of capital assets which of themselves provide in some degree retirement resources." Moreover, they argue that some of these assets, such as goodwill and real property, may exhibit capital appreciation, which is untaxed, and that it is much easier for self-employed members of a pro-fession to obtain deductions for expenses under schedule D than for members of the same profession who are employed persons. It is doubtful if the quoted statement is a fair appreciation of the situation, and even if it were it would be true of the past rather than the present. It ignores altogether the long-term effects of heavy income taxation and of death duties. It is also in essence an argument for the taxation of capital gains rather than an argument for differentiation in respect of tax treatment for retirement

However, what we are interested in here is the economic effects of such recommendations; for instance, in the effect of more consistent treatment on the relative attractiveness of being an employed person or selfemployed. We must now consider these effects in detail.

IV. THE ECONOMIC EFFECTS OF PENSION SCHEMES

1. Effects on savings and investment

The main concern of our economic policy at the moment is with the maintenance of high and rising level of productivity, not least because of the problems facing a country with an aging population. We can say without fear of contradiction that this object requires, among other things, first, the maintenance of an adequate volume of productive investment and, secondly, an adaptable and mobile labor force responsive to changing opportunities of employment due to changes in the pattern of demand, particularly of foreign demand, and therefore of investment. We can now consider each of these factors in turn.

To take the first point, the maintenance of an adequate volume of investment in conditions of high employment will depend on the provision of the requisite amount of saving to prevent consumption rising above the level where inflation begins to appear. In any given year, income receivers in aggregate receive pensions from industrial schemes which are part of their income receipts, and pay out contributions which represent part of personal saving. The Actuaries' report puts the 1952 level of contributions at £116 millions for employers and £52 millions for employees, representing an aggregate of £168 millions, out of total personal saving of £614 millions or about 27 percent. However, what we are really interested in for our purpose is the annual net saving brought about by schemes of this

The net saving is the difference between the current income and expenditure of these schemes. At present, according to the Actuaries' report, the ratio of pensioners to active members of schemes is about 11 percent, in the case of privately administered schemes and 3 percent, in the case of life office schemes. Accordingly, the expenditure on pensions is much lower than the income from contributions. Moreover, on ceipts side we must add in the interest income of the schemes, which, as we have pointed out, is tax free, and which, in the case of the privately administered schemes, represents a substantial portion of total receipts-above one-third. The total net saving of both forms of schemes amounted to about £140 millions in 1952.

The interesting question raised by this figure is how far it is possible to state what net saving would be were there no such schemes in operation. We have not sufficient confidence in the economic theory of distribution to state what alteration such a state of affairs would make to the relative rewards of the different factors of production, and all we can do is to consider alternative possibilities. If the total contribu-tion income were distributed in the form of wages and salaries, then the yield of profits taxes would not be affected, as the extra wages would be treated as a cost, just as the contributions were; but the yield of income tax would rise, both on account of the in-

Footnotes at end of speech.

crease in wages and on account of the disappearance of the tax concession granted on the employees' contributions. Other things being equal, therefore, government revenue would rise and with it, in the absence of budgetary changes, government saving. seems unlikely, however, that the difference between the increase in government saving and the present level of net saving would be made up by private saving on the part of wage and salary earners. If, alternatively, we assume that the employers' contribution swelled the total of profits, then both income tax and profits tax would rise and, by the same reasoning, so would government saving. The effect on private voluntary saving would depend on whether the residual amount accrued to dividend receivers or remained as part of undistributed profit. But so long as wage and salary earners received as wages part of the contributions which they would otherwise have paid (and this seems a reasonable assumption, given full employment), it seems likely that net saving would be reduced below the level attained under present arrangements.

For the present, therefore, it can be said that these schemes raise the level of aggregate saving above what it would otherwise have been. The employed persons of today not only build up claims against the future national product, but also promote its increase by releasing resources currently for investment. We cannot assume, however, that the present level of net saving through Pension funds will be maintained indefinitely. With the growth in the proportions of the population over retirement age and of the retired population in receipt of pensions, pension outgo is likely to increase considerably, while the size of the working population is unlikely to alter much. Accordingly, receipts are unlikely to increase to anything like the same extent as payments. With the Present number of retirement schemes and a constant level of wages and salaries, payments would gradually rise to approximately the same level as receipts, so that after a Period of time, which to judge by the actuaries' figures would be about 30 years, net saving through pension funds would become zero. In point of fact, of course, it is extremely unlikely that money wages and salaries will remain unchanged, if only because of a rising national real income, so that it is probable that existing schemes will continue indefinitely to show some surplus of receipts over payments, which the continued setting up of new schemes would increase. But it is also very probable that after some years the rate of growth of existing pension funds will show a marked decline.

The effects on the level of saving of a mature system of pension funds, as compared With their absence, is not easy to determine. If saving has risen during the period of the building-up of the funds, it is likely that the level of national income will be higher than the funds had never been created. On the other hand, it is probable that consumption by retired persons will also be higher, even though the fact that they are in receipt of private pensions may enable them to dispense with public assistance and also to consume less of their own capital. Even, however, with the level of pension funds no more than constant, there is no reason to believe that the increased consumption of retired persons would be greater than, or even as great as, the increase in the real national income generated by the earlier increases in national saving, provided that these have been wisely invested.

What exactly constitutes a wise investment is impossible to define with any precision, if only because the definition will depend in part on the political views of whoever sets it out; the wide disagreement over the amount of investment in housing and electricity as

compared with private industry bears witness to this. It is therefore difficult to relate the effects of pension schemes to the object of ensuring the "right" distribution of investment as between different projects. There however, a considerable consensus of opinion that there is an undesirable tend-ency for investors to "play safe", and that too little capital is being devoted to develop-ing new enterprises which might become the great industries of the next generation. Professor Titmuss, one of the first to draw attention to the importance of pension schemes, subscribes to this view when he makes the criticism that life offices and pension funds will favor "safe" investments, and that these schemes "signify a decreasing flow of risk investment and greater power to insurance institutions over industry in general." While, however, many people will agree with Professor Titmuss about the form of investment which he considers desirable, his views on the effects of the growth of pension schemes seem more disputable. It may very well be that the trustees of a pension fund are not so enterprising as a large private investor, especially when he is investing his current savings rather than his existing cap-

But the choice is not between the investment of new savings by pension funds and by large private investors. It is partly between investment by pension funds and investment by small savers (that is to say, mainly by institutional investors), by businesses and the government, and partly between investment by pension funds and no investment at all. Further, there is some reason to hope that, as the now discredited practice of investing trust funds exclusively in trustee securities fades from memory, trustees of pension funds, who in general have fairly wide powers, may be led by the fact that they pay no tax on their investment income to step, at least in part, into the empty shoes of the large private investor. There are two main types of risky investments-those which yield little or nothing at present but may conceivably yield something substantial at some future date, and those which give a high current yield but may cease to do so. The former, which give little or no current income but the chance of substantial capital appreciation, must be left to the surtax payer; but the second, with their high current yields and risk of capital depreciation are (provided that they are well spread) the ideal investment for charities, since these alone can amortize the risk out of gross income while taxpayers can do so only out of net. If, therefore, market prices of this type of secu-rities are such that they are regarded as reasonable by taxpaying investors, the net vield (after setting aside the risk premium) for a charity will be extremely high. For instance, a security giving a gross yield of 10 percent with a 4 percent risk of total loss gives a net yield of 1½ percent to an income taxpayer (and a negative yield to a surtax payer). while it gives a net 6 percent yield to a charity. It is such types of investments that private pension funds (and if the committee's recommendation is adopted, the funds of life office pension schemes) are far better able to hold than any taxpaying investor.

About the present assets structures of private pension funds there is very little information. Some cases are known where pension funds have been invested in the enterprises which have initiated the schemes, and even where they have become majority shareholders; but in general it seems likely that investment inside the business is relatively rare. On the whole it seems probable that trustees of private pension funds are still exploring only very cautiously the potentialities of tax-free investment, and that the

general pattern of their investments is still fairly similar to that of life offices in spite of the great difference which at present exists between their taxation treatment.

2. Effects on the distribution, size, and mobility of the working population

The aspect of pension schemes which is perhaps most open to attack is their effect on the distribution, size, and mobility of the labor force." This criticism takes three main forms. The first is that the existence of pension schemes in some occupations and not in others exercises an undesirable influence on the original choice of occupation. It is true, of course, that the existence of a pension scheme may exercise a very considerable attraction and divert some prospective workers away from occupations where no pensions are available. For instance, so long as professional men, such as architects, lawyers, and accountants, can qualify for pensions only by becoming employees, especially of public authorities, the attraction of these forms of employment, as compared with being self-employed, is very great. This is an argument commonly advanced by the professional associations involved; but while it is entitled to the utmost respect, it seems to us that it is possible to exaggerate it. In the long run, even in the professions, the laws of supply and demand work. Given relatively stable conditions of demand, an increase in the supply of those who enter employed positions must even-tually affect the price of their services. The risks of self-employment may be offset by a lower reward in safe jobs. This, however, is merely a caveat to the technical argument and not a justification of the status quo. In any case, this criticism will disappear if and when the recommendations of the committee are adopted on the taxation of superannuation provisions by the self-employed.

The criticism that pension schemes promote early retirement, and so deprive an aging population of part of the resources it have used and part of the real national income it might have enjoyed, also seems to have substance, though it too should not be exaggerated. One of the reasons for instituting schemes of this sort is that older persons can thereby be retired gracefully without fear of hardship and without damage to the conscience of the employer; and in this policy the employer usually has the enthusiastic support of younger employees, trade unions, and all who benefit from a scarcity of labor. Yet the system of retiring salaried workers on pension at an age when they are still capable of rendering useful service, though no doubt on balance it has an adverse effect on the national income, is not wholly wasteful. There must be many cases where an older man, though still capable of rendering useful service in some capacity, is no longer the best man for his present position, and where his replacement by a younger man opens the way for new and fruitful ideas and policies, the introduction of which might otherwise have been delayed. Nor are the services of a retired man, especially of a retired professional man, necessarily lost to the community altogether. Unlike national insurance tirement pensions, the receipt of a pension under a scheme does not normally prevent a retired man from seeking other work to supplement an income which, even under a generous pension scheme, has probably shown a substantial fall. In addition, there is a great deal of socially valuable unpaid work which in earlier decades was performed mainly by those with private means but for which in future the country will have to look largely to the older men, especially the older professional men, who have retired on pension.

Footnotes at end of speech.

Footnotes at end of speech.

Most serious of all is the criticism that the existence of pension schemes, as at present organized, has an important adverse on the mobility of labor. In noncontributory schemes the employee normally sacrifices the whole of his pension rights if he moves from one occupation to another. while even under contributory schemes, except within Government or university employment, the most he can normally expect is to receive back his own past contributions with accrued interest, less deduction of income tax at a quarter of the standard rate. In seeking to move to other employment, a man, especially an older man, is therefore under one of two disadvantages. If his prospective new employer has no pension scheme, or a pension scheme based on past contributions or on number of years' service. the man who moves will sacrifice the bene-fit of the whole of his former employer's contributions. If, on the other hand, prospective employer gives pensions at a fixed rate, or at a rate based entirely on re-tiring salary without reference to number of years' service, he will be unwilling to engage an older man, to provide a pension for whom will entail abnormally high appropriations during his relatively short period of service. In the first case, the employee will be deterred from moving unless the other conditions of his new employment show a great improvement on the old; in the second, the new employer will be reluctant to engage him unless his qualifications are outstanding.

Thus his existing employer, by, in effect, deferring part of his salary and making its payment contingent on continuity of service, can impose a tie on an employee similar to that imposed on the shipper by shipping conferences under the deferred-rebate system. While the disadvantages of this limitation on competition for labor are clear, it is unlikely that they will be remedied voluntarily, for the reduction in the rate of labor turnover is usually one of the main objects of introducing a pension scheme. There re-mains the possibility of making tax privileges granted to pension funds conditional on their amendment in such a way as to eliminate their effect of tying workers to their existing occupations. Thus it would be possible to restrict the registration of pension funds as charities, or even the allowance of employers' contributions as expenses, to those schemes where the employee re-tained a full title to his share of the fund (including all employers' contributions) even after leaving his employment. The share either could be transferred to him in cash, as a surrender value, in which case he would be liable to tax on it unless he used it wholly as a subscription to another scheme, or could be used to purchase for him a deferred annuity to commence at retiring age. While such an alteration in the terms on which tax privileges are granted to pension schemes would hardly be popular with employers, it may be doubted whether, in view of their appeal to employees, it would lead to the discontinuance of many existing schemes, or even prevent the setting up of new ones; and it would go far to remove the principal economic objection to the schemes as they now exist.

New Vistas for International Development

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 27, 1955

Mr. WILEY. Mr. President, it was my privilege this afternoon to speak before the National Workshop on World Economic and Social Development, at a meeting held in the Woodner Hotel.

I ask unanimous consent that my address on that occasion may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

New Vistas for International Development (Speech by Hon. Alexander Wiley, of Wisconsin)

It is a great pleasure to be with you today. International economic development is the most exciting undertaking of this generation. Of all the great events which we have seen in our lifetimes, none offers a greater challenge, nor a greater opportunity for creation of a world in which peace and prosperity will be accomplished facts instead of wistful dreams.

I think it is not too much to say that whether future generations live in a Communist world or a free world depends on how we, the American people, carry out our part in international development.

The words of Theodore Roosevelt, more than 40 years ago, are more than ever appropriate in this connection.

"The United States of America." he said, "has not the option as to whether it will or will not play a great part in the world. It must play a great part. All that it can decide is whether it will play that part well or badly."

Before this group, there is no need to belabor the set of facts which makes this so. You are all familiar with them. Three facts, however, are worth emphasizing.

The first is the great—and growing—disparity in levels of economic development between the United States and Western Europe, on the one hand, and most of the rest of the world on the other.

The second is the urge to develop which characterizes important segments of the underdeveloped world. These countries have glimpsed better things and are determined to have them.

The third is the increasing effort of the Soviet Union and Communist China to make it appear that communism offers the shortest road to economic development.

Most of the people, and a great many of the resources, of the world are in underdeveloped countries which in their present state are quite incapable by themselves of withstanding determined Communist aggression. If these underdeveloped countries were to go behind the Iron Curtain, the United States' problem of national survival would be greatly increased. Development of these areas is therefore in our interest in order to increase their capacity to defend themselves. It is also in our interest to provide an irrefutable demonstration to the skeptics in these nations that communism does not offer a short cut to conomic development but that, on the contrary, a free society produces richer rewards economically as well as spiritually.

We might as well recognize that the economic history of the Soviet Union since 1917 is attractive to some people in the underdeveloped countries. While there is considerable doubt that the average Russian has any more of the material things of life than he had under the Czars, the Soviet Union has nonetheless sprouted steel plants and tractor factories at a rate which, though not equal to the United States, is at least sufficient to impress some of those underdeveloped countries which want steel plants and tractor factories themselves.

But it is putting the case for international development on too narrow a base to state it solely in terms of a defensive measure against the threat of Communist aggression. Programs of assistance for international development would be in the self-interest of the United States if the Communist threat did not exist.

Defense is essentially negative, but international development is positive and constructive. It is our best long-term instrument for accomplishing our foreign policy objectives. These objectives, it seems to me, are too frequently stated in negative terms of resisting aggression. That is, of course, one of the fundamentals of our policy, but it is by no means the whole of our policy. It is, indeed, no more than an essential prerequisite to the accomplishment of our broader objective of an expanding economy in a free society. Programs of international development offer an opportunity for imaginative, constructive accomplishment in the highest traditions of enlightened statesmanship.

In the language of the scripture, "Let us therefore follow after the things which make for peace, and things wherewith one may edify another." This is a Christian program, and we would not be true to our moral and spiritual heritage if we did nothing to lift up the hopes and minister to the needs of those who are less fortunate than ourselves. United States participation in international development can be justified on these grounds.

But it can also be justified on the basis of dollars and cents.

From the economic point of view, international development is in our interest because poor countries are poor customers and poor suppliers. The underdeveloped part of the world is an increasingly important source of the raw materials which American industry needs. It can also become an increasingly important market for the products of American industry. The bulk of our international trade is carried on with the more highly developed countries. As economic development progresses, trade increases—to the mutual benefit of all concerned.

These various reasons for United States participation in international development—the reasons for defense, of economics, and of morals—are not contradictory; they are complementary. When you put them together, they do not weaken the case for international development; they strengthen it.

We have been much too coy in making plain all our motives for carrying out our programs of economic development and technical assistance. The result of this coyness has been that the people who are receiving our help frequently do not understand why we are giving it. They are skeptical of the explanation that we are doing it in their interest and therefore search for some hidden motive which they believe must exist and must be so bad that we are ashamed of it. The Communists have ready at hand the explanation of imperialism, and this gains credence through our own lack of complete frankness.

¹ Command Paper No. 9063/54, hereinafter referred to as "the Report."

The Growth of Pension Rights and Their Impact on the National Economy.

In the national accounts, employers' contributions are treated as part of factor incomes, on the assumption, no doubt, that they represent payments which would otherwise be paid as wages and salaries. This follows the same line of reasoning as that which supports the view that the employers' contribution to national insurance is also a part factor incomes, on the grounds that it is a tax on labor.

The case for United States assistance for international economic development is so strong, on several counts, that we must be as careful not to attempt too much as not to attempt too little. When one considers the state of the underdeveloped parts of world, and particularly when one considers the Soviet threat, he feels a sense of urgency. And certainly the need is urgent. But this is a situation in which haste can best be made slowly.

What we can do is, of course, limited by our own resources. But it is more severely limited by shortages of skilled technicians and by the capacity of underdeveloped coun-

tries to absorb capital.

We can accomplish more by spending \$2 billion in 10 years, or even 20, than by spending the same amount in 1 or 2 years. sonally, I would rather see the United States undertake a long-term commitment, on a relatively modest annual basis, than a shortterm commitment on a large annual basis.

It takes time for economic-development projects to produce results, and it sometimes requires a high order of faith to persevere in these projects when no immediate results are apparent, but we must think in terms of decades, or even generations, instead of

2 or 3 or 4 years.

Despite the long history of economic de-Velopment in Western Europe and the United States, the process is as yet imperfectly understood. Indeed, there is a serious question as to the validity of the conclusions which we can draw from studying our own history when we attempt to apply those conclusions to the rest of the world. effect do cultural attitudes and social organization have on economic development? And what effect does economic development have on cultural attitudes and racial or-ganization? This is a field in which we have much too little information and to which we have given much too little attention.

In the United States, we have what I believe anthropologists call a future-ori-entered society. We like to try new things, simply because they are new. We adjust to technological change with relative ease. Witness, for example, the smoothness with which, in the space of scarcely more than a generation, we shifted the focus of our family life from the living room to the

automobile to the television set.

We have great faith in expertness. Veterinarian tells us that the cow and the calf will both be healthier-and that the farmer will have more milk-if the calf is weaned at an early age, the farmer may not understand the biological reasons why this is so, but you can bet that he will at least give it a try. Yet when a veterinarian in one of the underdeveloped countries told a group of farmers the same thing. they flatly refused to believe him because everybody knew that it had always been done differently. When the veterianarian gave what he thought was a convincing demonstration, his credibility was not increased at all; the people simply said that although it might work with his cattle, it certainly would not work with theirs.

I could tell you many similar stories; I am sure many of you are familiar with others of the same type. The point is that the receptivity of people to technical knowledge varies greatly, and the more underdeveloped their economies, the more highly resistant they are apt to be to improvement,

We make a great mistake when we do not take this into account. International development is not a program to remake the world in our own image. Humility, patience, tact, and understanding are more important than technical expertness. A paternalistic, do-it-this-way-daddy-knows-best not only foredooms a project to failure, but produces positive harmful results.

Economic development cannot be imposed from without. No matter how much capital investment or how much technical knowledge we may be able and willing to supply, it will not have the desired effectsindeed, it may even have negative effectsunless there exists in the recipient country the urge to develop.

This urge is a great deal more complicated than the simple desire for more food, or better housing, or better schools, or concrete highways, automobiles, and plants. If a country wants more food, is it willing to change its traditional, perhaps centuries-old, system of land tenure? it wants better schools, is It willing to step on the toes of vested interests who may be fearful of the power of an enlightened people? Is it, in other words, willing to break with the past?

This is basically a question of politics in the broadest sense of that word. The drive to independence among former colonial areas of the world is one of the most significant phenomena of the age in which we live, and it is directly related to the problem of inter-

national economic development.

An example from one of the newly independent Asian countries will illustrate what mean. A missionary in this particular country devoted most of his adult life to improving a single village. With the help of the local people, he made it into one of the cleanest, healthiest, most prosperous, and best educated villages in the Withal, it was a monument to what could be done with meager resources and tireless, dedicated work. Shortly before World War II, the missionary went home to retire, and within a year after he had left, the village had reverted to its previous condition of poverty and filth and was indistinguishable from all the other poor, dirty villages in the country. After World War II, this country gained its independence, and within a year thereafter, this particular village was once again a model of village improvement.

In this case, political independence had almost everything to do with the urge to develop. This urge did not exist until the people realized that, at long last, it was their country they were concerned with, that their

future was in their own hands.

One cannot be dogmatic about these things, because we are dealing with a field in which our ignorance still exceeds our knowledge, but there is evidence to suggest that economic development flourishes best in an atmosphere of political and social change. Change, of course, does not necessarily imply instability. But when political authority changes hands, old symbols of authority are torn down and the atmosphere is cleared for accompanying changes in social outlook and organization.

One could cite many examples. Certainly, the political changes in India and Pakistan from British rule to national independence have greatly improved the climate for economic development. A different kind of political change, but one with equally favorable results from the development point of view, has occurred in Egypt and also in We find similar evidence in the

history of our own country.

I would not want to deny categorically that this sort of change cannot be induced by outside pressures, but certainly in its most favorable form it is self-generating and comes from within. This is why, in addition to the legal reasons, we can carry out development assistance programs only on the invitation of the country we are trying

Much has been said about international development being a self-help program. But I sometimes fear we have fallen into the statistical trap of measuring self-help in terms of the number of dollars, or dollar equivalent, which the recipient government is willing to contribute to joint development

projects. This is a useful indicator, but it is no more than an indicator and it may be misleading. Equally important—perhaps more important—is the spirit of the people and the extent to which they are willing to give their labor, their time, and their effort. Contributions of this sort, as well as contributions in goods, are difficult to measure quantitatively, but they are important in-dices of how badly a people really want economic development.

It seems absurdly elemental to say that how we go about extending international assistance for economic development de-pends upon the state of development of the recipient country. Yet some of the assistance programs which I hear suggested from time to time lead me to believe that this elemental truth is too often overlooked. During World War II, we became so familiar with the complaint of "too little and too late" that many of us resolved we would never again ourselves to be put in that position. Americans are a pretty impatient race, anyhow, not given to waiting happily until next week for something we would like to have tomorrow.

But in this process of economic development, I suggest that the pitfalls of trying to do too much too soon are probably as great as those of once again being too late with too little.

The capacity of any economy—even that of the United States—to absorb capital is limited. The more underdeveloped the economy, the more limited is its absorptive capacity. This poses a dilemma. Develop-ment assistance would produce the greatest results in the countries which are in an intermediate stage of development. But, excepting the primitive tribes of Africa and the South Pacific, the countries which can absorb the least amount of assistance are precisely those where the need is greatest and most urgent.

I do not know the answer to this dilemma. I do know one thing which the answer is not.

It is fantasy to think of international assistance for economic development in terms of the European recovery program. When I hear people talk about a Marshall plan for Asia., I wonder if they have really thought about what they are saying. The Marshall plan, as its formal name implies, was a program of economic recovery, which is a great deal different from a program of economic development. The recovery of a highly developed, but war-devastated, economy can come about very quickly; economic development is an infinitely slower process.

There now appears on the horizon, however, a further aid to international development which may provide at least a partial answer to our dilemma. Certainly it has potentialities so vast that we as yet but dimly comprehend them. I refer to peace-

ful uses of atomic energy.

In the intermediate future, at any rate. this may turn out to be more important to underdeveloped than to highly developed countries. It may be possible for example, to generate electric power from atomic en-ergy at rates which are economically feasible in a country severely short of power before it is possible to do so in a country with well-developed hydroelectric or steam generating facilities.

The prospect of huge quantities of power from atomic generating plants in the underdeveloped parts of the world carries with it the most breahtaking implications. Food production could be greatly increased through the irrigation of vast areas of new lands. A wide variety of new manufacturing industries would become economically feasible for the first time. The whole countryside, as well as the whole lives of the people, could be transformed.

Here is a great new resource—a new tool for economic development-which may do even more for Asia than the invention of the cotton gin did for our own southland. Like the cotton gin and all other new technological developments, it will also carry with it, of course, social implications of the first magnitude.

Peaceful use of atomic energy on an international scale appears to be still some time in the future. Progress has been slow, and much yet remains to be done. But progress has been nonetheless real and encouraging. We have gotten off dead center, largely through the impetus of President Eisenhower's imaginative and statesman-like address to the United Nations in December 1953. Despite the filibustering of the Soviet Union, the free nations of When world have resolutely pushed ahead. the Soviets realized that they could not block the project, they came forward with offers of cooperation. It remains to be seen whether these offers are spurious or genuine. We hope they are genuine, but on the basis of bitter experience, we must reserve judgment until they are followed up with concrete actions.

In any event, an international conference on cooperation to promote the peaceful uses of atomic energy is scheduled to be held in Geneva in August. There are good grounds for encouragement that we are now somewhat more quickly approaching the day when the atom will come into its own as an instrument for peace and prosperity.

The atom has a habit of rendering preconceived notions obsolete. It may well render obsolete much that I have said here today. Let us hope it may also render obsolete hunger and poverty, misery and hope-

Administration Should Fill Judgeship Vacancies

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. CELLER. Mr. Speaker, efforts have been made to ask the Chief Justice of the Supreme Court of the United States to address a joint session of Congress, in order that the problems of the Court, with particular reference to its clogged calendars, be made known. In that connection, permit me to submit a list of vacancies in judgeships in the Federal court, other than the Supreme Courts, which includes the time the vacancies have existed, as of January 11. 1955:

Location	Origin of vacancy	Date vacancy occurred
Circuit judgeships: 2d circuit 5th circuit Do District judgeships: California, southern Do Delaware New Jersey New York, southern North Dakota Do Oregon Pennsylvania, eastern Do Pennsylvania, western Do South Dakota Texas, northern	Elevation of Judge Fee. Resignation of Judge Bard New position do do do Retirement of Judge Atwell	Do.! Oct. 20, 1954 Aug. 20, 1954 Feb. 10, 1954 Apr. 30, 1954 2 July 16, 1952 Feb. 10, 1954 Do.! Do.! Do.! Do.! Do.! Do.!
Wisconsin, eastern Judgeship in U. S. Customs Court: Customs Court	New position	Mar. 1, 1953

Date of approval of Public Law 294, 83d Cong., 2d sess.
 Nomination made Mar. 29, 1954, but not confirmed.

Is it not high time that the administration filled these judgeships, instead of shouting from the housetops that it needs no less a person than Chief Justice Warren to demonstrate the needs of the

court. Let the President and the administration act, and act quickly to fill these

vacancies.

Pope Pius XII's Peace Program

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following newspaper article which appeared in the Catholic Messenger on December 23, 1954:

FOUR CORNERSTONES OF POPE PIUS XII'S PEACE PROGRAM—SOCIAL, ECONOMIC, SPIRITUAL REFORM NECESSARY POLITICAL,

(By Donald McDonald)

If one had to select a single word to describe Pope Pius XII's approach to the problem of achieving world peace, the word would surely be "realistic." Throughout his 15 annual Christmas messages, from 1939 to 1953, the Pope has consistently attacked the roots of war. He has consistently recognized that war, in the sense of actual armed conflict, is but the result of earlier failures which might have been averted at some point in the events leading to the final outbreak of hostilities.

Because he has so consistently attacked the causes of war and has so unerringly put his finger on the real causes, Pius XII easily ranks as one of the most creative of modern intellectuals concerned with the construction of a peaceful world order.

More than emotional

The Pope's abhorrence of war is more than a sentimental feeling which protests against pain and suffering, although he has a genuine sympathy for suffering peoples through-out the world. Perhaps his most eloquent expression of this sympathy is to be found in his 1952 Christmas message when he painted the desolate word picture of millions of destitute, uprooted, and homeless peoples. But what the Pope is primarily concerned with is the injustice in the world which lies at the roots of war and war's aftermath.

Neither is the Pope's abhorrence of war limited to a consideration of the material weapons of warfare today, although here, too, he has by no means ignored the necessity of disarmament. In 1951, he said: "We, too-and more than anyone else-deplore the monstrous cruelty of modern weapons. deplore them and do not cease to pray that they may never be employed." In that same 1951 message, the Pope noted that he had "always desired and begged for simultaneous and reciprocal reduction of armaments."

But, he asked, in his 1951 message, "is it not, perhaps, a kind of practical materialism and superficial sentimentality to make the existence and threat of these (modern) weapons the sole and principal consideration in the quest of peace, while no attention is paid to the absence of that Christian order

which is the true guaranty of peace?"
There is nothing wrong, to be sure, with our instinctive shrinking from the awful destructiveness of modern war with its thermonuclear, bacteriological, and chemical weapons. But there is nothing constructive of world peace in such a shrinking, either. It is merely an animal reflex to pain, leaving the human mind and spirit disengaged from any realistic consideration of the causes of the war which would bring us such pain.

Four basic points

A first reading of the Holy Father's 15 Christmas messages, or even the key parts which we have published this week pages 17 to 24), would seem to indicate that if the Pope has developed a program or a set of principles for world peace it is a highly complex program with a myriad of ramifications and subtle distinctions.

A second, more analytical reading, reveals. however, that the Pope's peace program can be summarized under four general points, or conditions of world peace.

1. Social justice, on a national and international scale, based of necessity on a true notion of man and society.

2. Economic equity between the peoples of the world—"the abolition of glaring inequalities in living standards.'

3. Political and juridical reform of the nternational order to achieve genuine "international solidarity," the "indissoluble union of peoples," and to protect the common good from individual aggressors.

4. Spiritual reform, a return to a Christian order in which hate, cupidity, and overweening lust for prestige would be abolished.

There is also a fifth point in the papal peace program which I would call the "wider extension of the democratic form of govern-ment in the world." Although the Holy Father devoted his entire 1944 Christmas message to a consideration of democratic government and an affirmation of its value, and although I shall comment on those remarks later, I have left it out of the above list of the Pope's basic conditions for world peace because it does not have the categoric assent which the Pope has given the other four points.

Other addresses

It must be remarked here-before we consider the cornerstones of the Pope's peace program—that his Christmas messages do not exhaust his thinking on the problem of world peace.

During his pontificants, the Holy Father has delivered many other addresses on the conditions of world peace. For example, in the matter of political and juridical reform of international life, the Pontiff has spoken out 3 times in the last 3 years on the need for world law, political federation of nations

and on the relationship of church to state Within a world government which he envisages as necessary for world peace.

But all the elements necessary for a realistic pattern for world peace are to be found in the Christmas messages themselves. And, unless otherwise noted, I shall confine this

Commentary to those messages.

It is most important, I believe, that as we consider the four basic conditions of world peace-social, economic, political, and spiritual reform—we understand that these conditions are interactive, that all of them must be realized if there is to be any effective guaranty of peace. One, two, or three of these conditions are insufficient guaranties by themselves. Spiritual reform, for example, without the corresponding political and social expression of virtue, will be ineffective. Likewise, social or economic reform without the correct spiritual principles and cut off from spiritual inspiration based on the true notion of man, will tend to become-as the Pope has repeatedly warnedbasely materialistic, scientific, and exclusively technological.

Positive, negative points

In his insistence on social justice as a fundamental of world peace, Pius XII has employed two approaches, a negative and a positive approach.

Negatively, he has continually and consistently condemned social injustices which not only provide fertile ground for the seeds of war but which disfigure human beings Who have been created in the image of God.

Positively, the Holy Father has outlinedparticularly in his 1942 Christmas messagethe true nature of the human person and human society. This positive definition of the human person and society is vital in view of the fatal error which seems to be gaining wider acceptance each year—the error of conceiving social justice as a goal Which can be reached by exclusively scientific, technological, and completely impersonal organization of society. In his 1952 message, and again in 1953, the Pope warned of this depersonalization of society which can only end by robbing man of all that makes him a free and responsible person.

I. PURPOSE OF SOCIETY

To get the full force of the Pope's denunclation of social justice, it might be well first to consider his observations in 1942 on

genuine social order.

The origin and the primary scope of Social life," said the Pope, "is the conservation, development, and perfection of the human person, helping him to realize accurately the demands and values of religion and culture set by the Creator for every man

and for all mankind."

Here we see how social, juridical, economic, and spiritual order interact, why each is indispensable for all. The Pope remarks that in order for social life to "attain its scope, such as God willed it, it needs a Juridical order to support it from without to defend and protect it." This is what we to defend and protect it." This is what we commonly call in America, the citizen's Protection of the law; and, as we know only too well, in international relations, there is no comparable protection because there is no comparable international law. As Mundelein Seminary's Msgr. Harry Koenig, a close student of international affairs, has re-markd: "We have today only international anarchy."

Social-economic relation

Also, if human society is to be not only a living together in order but also a living together in tranquility, there must be eco-nomic equity—again we see how social and economic reform interact organically.

There can be no tranquility when there is economic injustice leading to agitation and bitter conflict. If there is to be pacification of the community, then positive law must see to it that the worker who is or will be the father of a family is not condemned to an economic dependence and slavery which is irreconcilable with his rights as a person.

In a society marked by genuine order and tranquility certain fundamental personal rights are protected and nourished including the right to develop one's corporal, intellectual, and moral life, the right to worship God in private and public, the right to marry and achieve the aim of married life, the right to work as the indispensable means toward the maintenance of family life, the right to the use of material goods.

Such a society will also be characterized by its defense of social unity and especially of the family, its recognition of the dignity and prerogative of labor, the rehabilitation of the juridical order which will give to man's inalienable rights juridical security, and the Christian concept of the state which recognizes that the state and its power are at the service of human society.

False social reform

How far men have departed from the true notion of human society the Holy Father demonstrates in his last two Christmas messages of 1952 and 1953. In 1952 he devoted almost the entire message to the depersonalizing forces at work both within nations and between nations. In 1953 he scored the fallacy of relying exclusively on technological progress while ignoring the human person in society.

However, as early as 1939, the Pope was speaking of the real needs and just demands of nations and peoples as well as ethical minorities.

In 1941 the Pope again refers to the rights of minority peoples who must not be made to suffer open or occult oppression of their cultural and linguistic characteristics or the limitation or abolition of their natural fertility.

But it is in his 1952 Christmas message that Pius XII delivers his most terrible indictment of gigantic social organizations which no longer view people as human persons but as unit-factors in life. Perhaps the most flagrant example of this inhumanism, cited by the Pope, is the practice by certain nations which set arbitrary immigration quotas and decide from the sole standpoint of prophetic mathematics how many people may enter a particular country, disre-garding the needs, indeed the rights, of those peoples living in overpopulated countries to have access to land in other countries.

II. ECONOMIC REFORM

Now, economic reform is closely linked, one could say it is organically linked to social reform. Social order and social peace is impossible where there is economic injustice, poverty, and utter destitution.

In virtually every Christmas message, the Pope alludes to the need for economic equity between all the peoples of the world. speaks in 1940 of the need for genuine Christian solidarity of a legal and economic character which not only underlines the economic aspect of world peace but furnishes a foreshadowing of ever more explicit de-mands by the Pope for legal or juridical guarantees of peace.

In 1942 he declared that a normal, natural foundation of life is the private ownership of property, if possible by all. And he com-ments in the same message that "it is only through an intelligent and generous sharing of resources between the strong and the weak (nations) that it will be possible to effect a universal pacification."

Cause of world tension

In 1948 the Pope listed, among the chief causes of world tension, the economic inequity for some peoples suffering from a comparative scantiness of national territory and the want of raw materials.

He asks a number of questions in 1948: Instead of shipping food to starving peoples, why not transport the starving peoples to land areas where they can grow their own food; and instead of "setting up barriers to prevent one another's access to raw materials. why not make their use and exchange free of all unnecessary restrictions?"

"Bread," said the Pope in his 1946 message. "bread in the literal sense of the word is needed by entire populations, who because of its lack are becoming weak, worn out, enervated, the prey of diseases and pains, and dangerously aroused by the dull goad of hopeless rancor and deep-seated social re-

"Nothing is so well suited to create the indispensable spiritual requirements of peace as help liberally given by State to State, by a people to a people, without regard to na-tional boundaries. * * *"

International Solidarity

Once again, we can see how intimately bound together are the reforms of social, economic, political, and spiritual life. There cannot be economic equality unless there is international "solidarity."

In his 1952 Christmas Message, the Pope said that "although even the most perfect realization of international solidarity would hardly bring about perfect equality among nations, still there is an urgent need that this solidarity be put into practice at least enough to change perceptibly the present situation. * *

"In other words, solidarity among nations demands the abolition of glaring inequalities in living standards. *

III. POLITICAL-JURIDICAL REFORM

We came, now, to the political-juridical reform which Pius XII sees as being essen-tial to the realization of a peaceful world

The two primary effects of a just international political and juridical order are (1) the securing of the social and economic rights referred to above; and (2) the establishment of genuine union of the peoples of the world, "the family of nations" within which armaments for international war will "progressively reduced" and ultimately abolished and effective santions can be taken against would-be aggressors.

In an evident reference to the failure of the League of Nations, the Pope, in his 1939 message, speaks of the need for reconstructing international institutions which will not repeat the defective functioning of similar previous projects. He called for the establishment of juridical institutions which will guarantee the faithful carrying out of treaty terms between nations.

In 1940, he speaks of the new order in Europe which will be marked by a firm determination to establish a * * * just national and international order and which will be organically stronger than any past order.

To smother aggression

In 1941, the Pope says means must be found which will be appropriate, honorable, and efficacious in order that the norm-pacts must be observed-will once again enjoy its vital and moral function in the juridical relations between states.

In 1943, he speaks of the new spirit of world union. And in 1944, he declares that the decisions already published by international commissions permit one to conclude that an essential point in any future international arrangement would be the forma-tion of an organ for the maintenance of peace, of an organ invested by common consent with supreme power to whose office it would also pertain to smother in its germinal state any threat of isolated or collective aggression.

The Pope added, in 1944, that no one could hall—the above—development with greater joy than he who had long upheld the principle that the idea of war as an apt and proportionate means of solving international conflicts is now out of date.

No absolute sovereignty

In 1948, the Pontiff declared that a convinced Christian cannot confine himself within an easy and egotistical isolationism, when he witnesses the needs and the misery of his brothers. * * *

Then, in that same Christmas message, Pius XII delivered one of his most forthright affirmations of the need for genuine international union:

"The Catholic doctrine on the state and civil society has always been based on the principle that, in keeping with the will of God, the nations form together a community with a common aim and common duties. Even when the proclamation of this principle and its practical consequences gave rise to violent reactions, the church denied her assent to the erroneous concept of an absolutely autonomous sovereignty divested of all social obligations."

The obligation to defend another nation unjustly attacked is also affirmed in 1948: "All the more does the solidarity of the family of nations," said the Pope, "forbid others to behave as mere spectators in an attitude of apathetic neutrality."

For one thing, he goes on, such neutralism only encourages "authors and fomenters of aggression. * * " And: "Nations as a whole * * * have a duty not to abandon a nation that is attacked."

At this point we can see how remote from the Pope's thinking is the thought of some of our most articulate citizens in the United States who preach in season and out that the United States has no real obligation to defend other nations; that our immigration quotas are our own business; that our national sovereignty is an absolute; and that world law and world organization are but a snare and a delusion of the "one-worlders."

Indissoluble world union

Again, in 1950, Pope Pius XII emphasizes the need for a 'close union of all peoples who are masters of their own destiny * * *" as the "sole means for the defense of peace and the best guaranty of its reestablishment."

In the following year the Pope returns to his demand for a union of all peoples, this time in even more explicit language:

"The common good, the essential purpose of every state, cannot be attained or even imagined without this intrinsic relation of the states to the human race as a whole. Under this aspect the indissoluble union of states is demanded by nature. It is a fact which is imposed upon them. And in consent to it, although sometimes hesitantly, they answer the voice of Nature. This natural union they strive to embody in an external framework, an organization."

It should be noted at this point that earlier in the year of 1951—April 1951, to be exact—the Pope had delivered his historic address to the World Movement for Federal Government in which he had told the world federalist delegates meeting in Rome that "nothing was more in conformity with the traditional teaching of the church (than) an effective political organization of the world."

In his 1953 Christmas message, the Pope did not, of course, abandon any previous affirmations of the need for world federation of the nations. Indeed, on December 6 of that year, he had spoken out again on the need for world government.

But at Christmas, the Holy Father concentrated his attention on the need for Europe itself to form a "continental union of its peoples," noting that a "strong encouragement to such a union is the manifest failure of the contrary policy" of divided nationalisms and conflicting, patchwork, economic, and social relations between the European peoples.

Peace value of democracy

A word here about the Pontiff's monumental 1944 Christmas message in which he extolled the political and social virtues of genuinely democratic government wherein the citizens would have a truly effective voice in their government and by which they could control the actions of public authorities who might otherwise drag them into the "vortex of a disastrous war."

The Holy Father did not single out the democratic form of government as the only legitimate type of government, or as the one type which could secure the church's exclusive encouragement.

But he noted that, given the historical circumstances of the age, in which citizens are asked to make greater and greater sacrifices and in which the machinery of the state and government continues to grow more and more complex, "vast and decisive"—given such conditions, said the Pope, "the democratic form of government appears to many as a postulate of nature imposed by reason itself." It is significant, I believe, that the Pope does not disassociate himself from this viewpoint of democracy.

But even in this 1944 message devoted to a discussion of the democratic form of government and the contribution it can make to world peace, the Pope returns to his insistence on the need for a world juridical order in the "society of states" by which "chastisement (can be) inflicted on the aggressor * * * and so that war will always be subject to the stigma of proscription, always under surveillance, and liable to preventive measures. * * "

IV. SPIRITUAL REFORM

If we turn now to the fourth reform which Pope Plus XII considers a fundamental condition of world peace, spiritual reform, we note that the Pope, beginning in his 1939 Christmas message, adverts to this reform year after year.

And the Pontiff's advertence to spiritual reform is in no sense to be confused with a merely vague, hopeful wish that men will be better. On the contrary, he insists that moral virtue and spiritual vitality play an integral, constructive, and inspirational part in the establishment of world order and peace.

We have already seen, I believe, how futile it would be to hope for some of the indispensable deep-seated social reforms from a society of nations bereft of even the elemental awareness of the nature of man as a creature of God.

Not idle pietism

In his 1945 Christmas message, the Pope takes note of those who claim it is idealistic or pietistic to demand a return to the "order fixed by God * * * to a real Christianity within the state and among states." It is these, said the Pope, who are unrealistic.

"Let it not be said that this (return to the Christian order) is not realism in politics. Experience should have taught all that the policy guided by eternal truths and the laws of God is the most real and tangible of policies. Realistic politicians who think otherwise pile up only ruins. * *"

In his 1951 Christmas message, the Pope speaks of the spiritual anemia of the modern world and shows how it is those who are so afflicted in the spirit who fail to penetrate to the real heart of the causes of war and international misery. "A friend of peace," says the Pontiff, such a person "will always arrive too late to save it."

A reading of the 1942 Christmas message immediately makes clear how vital spiritual reform is in the establishment of a true social order geared to the good of each citizen viewed in his relationship to God as his origin and destiny. It is impossible to imagine how any genuine social order can be attained or any society long endure which progressively and practically denies the im-

mortal nature and consequent dignity of its citizens.

It is in his 1950 message that the Holy Father, who perhaps more than any other living man has seen more deeply into the sufferings of world peoples and who has recognized more clearly than any of his contemporaries the magnitude of the task of constructing a peaceful world order—it was in that message that he turned most poignantly to God for help: "The undertaking," he said, "is so great and merely human means so ineffective, that we turn our gaze to heaven and raise our hands in supplication to Him, who from the glory of the divinity came down to our level and became 'one of us.'"

What can we do?

At this point, American Catholics, who are fully aware of and assent to the cornerstone principles of Pope Pius XII's peace program, might well ask, with typically brisk American efficiency-mindedness: "Well, what can we do about it? The holy father's peace program makes sense. It is realistic. It is Christian. But what can we do to bring it closer to realization in the world?"

Well, I think we can do a great deal.

In the first place, American Catholics are of all the people in the world—most advantageously situated to do something big and constructive for world peace.

As Americans we are citizens of the most favored Nation on earth; most favored from the standpoint of civil liberty, personal freedom, natural resources and, partly because of our geographical location, we are relatively unhampered by all the traditional, petty, but deep-rooted, hates and fears and suspicions which make clear, objective thinking so difficult in Europe and other parts of the world.

Our Catholic leadership

As Catholics, we have had the brilliant intellectual and Christian leadership of our holy father. We have, also, the Catholic Association for International Peace, which is a member agency of the social action department of the American Catholic Bishops' National Catholic Welfare Conference.

In addition, we have native scholars of international political thought, including such luminaries as Jacques Maritain, Father E. A. Conway, S. J., Monsignor Koenig (referred to above), Msgr. George Higgins. Father William Lynch, S. J., editor of Thought, Bishop John J. Wright of Worcester; and others. What this means is that, as Catholics, we have had sufficient intellectual leadership for the formation of a sound public opinion on international relations in general and the problem of achieving world peace in particular.

This, then, is the first thing I believe we can do. We can develop a public opinion on world peace which will be vital, dynamic, constructive, rational; a public opinion which will be cleansed of all stains of bigotry, prejudice, emotionalism and that ultranationalism, which is contemptuous and callous concerning the common good of all the family of nations.

Those who oppose

In the formation of a strong public opinion for the Christian principles of world peace, it is inevitable that we shall collide with bitter opponents of those principles. people who preach the un-Christian and discredited doctrine of isolationism; people who say that all American aid to other nations is money down a rathole; people who, without regard to this country's ability to absorb refugees, would reduce the flow of immigrants to a trickle; people who want to sell American products abroad at handsome profits but who want high tariff walls at home to discourage even the modest profits which other nations must have in order to survive; people who form well-financed, highly

ticulate national committees whose announced purpose is to fight any form of world federalism; people who claim what the Holy Father has pointed out over and over cannot be claimed—absolute national sovereignty in the universal community of nations.

It seems to me that, given the above situation, it is necessary to combat these destructive counteropinions. And so, there is a negative aspect in what we can do about world peace. While we work, positively, to form a constructive public opinion on the problems of peace, we must also—insofar as it lies within our power—neutralize and reduce the destructive forces at work.

Sadly, and tragically, some of these very destructive forces are to be found in our own midst—we have a few strident Catholic editors and writers and their letter-writing counterparts who echo the leaders of un-Christian isolationism in this country despite the contrary thought of the Pope himself. Fortunately, these Catholics are few; unfortunately, they are noisy and seem to possess an unlimited ability to confuse sincere Catholics who are concerned about the problems of world peace and are looking for guidance.

Force of opinion

I believe we should not underestimate the effectiveness of public opinion in this country. There is a feeling among some that public opinion is, after all, only a weak, abstract sort of thing which doesn't really count in the area where decisions are made

and things happen politically.

This is perhaps not the place to develop a discussion of public cpinion, and space does not permit full development of that subject. But one illustration may prove the Power of public opinion. It is this: There is in the present Congress an estimated 25 to 30 percent of our Representatives and Senators who agree that some kind of limited world federal government—along the lines laid down by Plus XII—is absolutely essential if we are to have world order and world peace.

Yet these Congressmen do not voice their world federalist opinions in public. Why? Because they are afraid of the political consequences of such opinions. They are afraid they will be attacked by their political enemies and defeated when they seek relection. In a word, they are afraid to say publicly what they say privately about the need for world federalism because they fear there is not a sufficient public opinion in favor of federalism, that there is not enough popular foundation to support them if they should publicly express what their informed conscience tells them should be expressed.

Nor is this public silence the only consequence of a weak and misdirected public opinion. The percentage of our Congressmen who would begin to work toward federation of the nations would undoubtedly increase as public opinion in favor of federalism became more widespread. For withal their public silence, the 25 to 30 percent of our representatives who affirm the need for world law and government do, after all, constitute the courageous minority, the small group which dares to hold, even privately, opinions and convictions which are subject to such violent and savage attack by the isolationists and demagogs in the Nation.

Specific peace groups

A final suggestion: In addition to the formation of a sensitively Christian public opinion on world order and world peace, we can, and we should, work with all the specific organizations and committees which are striving to accomplish all the social, political, economic, and juridical imperatives urged by our Holy Father.

For example, there are civic and political organizations seeking to reduce the trade

barriers between our Nation and other nations who have goods to sell us. There are groups seeking to make the United Nations a juridical organization with sufficient power to smother, as Plus XII said, the threats of war and aggression in their germinal state. There are other groups which are seeking to adjust United States McCarran-Walter immigration law to make it more equitable, thus more Christian.

Three steps

In summary, then, we can (1) learn, through study, what constitutes the Christian principles of world peace; (2) help form a sound public opinion on world peace which will reflect those Christian principles; and (3) take an active interest in at least some of the specific city, State, regional, national, and international organizations which are trying to realize those Christian principles in practice.

As a help to accomplishing the first of the above three steps, the Catholic Messenger has published pertinent sections from all of the Pope's annual Christmas messages. They are complete this week in one section of the newspaper for handy and, we hope, continuing reference.

continuing reference.

Our Holy Father has spent himself to the point of exhaustion in his ceaseless efforts for world peace. It is long past time that we begin matching at least a fraction of his sacrifices.

Address by Hon. Thomas E. Martin, of Iowa, Before Ladies Auxiliary to Veterans of Foreign Wars

EXTENSION OF REMARKS

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1955

Mr. HICKENLOOPER. Mr. President, on January 26 last my colleague from Iowa [Mr. Martin] delivered a keynote address at the 1955 National Conference of the Ladies Auxiliary to the Veterans of Foreign Wars, in Washington, D. C. The address dealt, among other things, with the subject of national defense. I ask unanimous consent that the address delivered by my colleague be printed in the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEYNOTE ADDRESS BY SENATOR THOMAS E. MARTIN, OF IOWA, AT THE 1955 NATIONAL CONFERENCE OF THE LADIES AUXILIARY TO THE VETERANS OF FOREIGN WARS AT THE HOTEL STATLER, WASHINGTON, D. C., JANUARY 26, 1955.

It is a pleasure to meet with this distinguished group again. With the leaders you have selected and the program they have arranged I'm certain your stay in Washington will meet your every expectation. I know from past experience that your meetings are successful and worthwhile. Your kind invitation to be a part of the panel last year marked one of the high spots of a busy and eventful year for me. I sincerely hope that in the coming years in the Senate I can continue to merit your kind consideration and support.

As members of the Auxiliary to the Veterans of Foreign Wars, you fully realize that these times fill a precarious page of our history. During the lifetime of some of us we've seen our youth march off to three

wars. Billions of dollars and thousands of lives have been sacrificed in a battle that is not yet wholly won. Last year the guns of war were silent in the world for the first time in many years. Today, we hear the ominous rumblings of conflict that at any minute may blaze into the red hot fury of active fighting. Formosa and its outlying islands have become a point of severe tension. Just 2 days ago President Eisenhower sent to us in the Congress a message that drew the line of no return in the Pacific. The guns of war are aimed and loaded on several fronts. Whether we like it or not—whether we would change it or not—these are the conditions in the world today. To ignore them could be fatal.

Because of these world tensions the problem of our military manpower assumes an increasingly important role. I have a full awareness of the problem. As some of you know I had the privilege of serving in the Regular Army on the Mexican border and in World War I. I taught military science at the University of Iowa during the 1920's when it was not popular to believe that we should be prepared. Later, I was on the Armed Services Committee in the House of Representatives through the bitter years of the second and worst world war. These are experiences you don't easily forget.

Because of this background I take a special interest in the new military manpower program advanced by President Eisenhower. Certainly it is one of the most important messages to be sent to Congress from the White House. It attacks a difficult problem. It offers a constructive, affirmative answer. It is a characteristic Eisenhower message.

Before we discuss the important portions of this military suggestion might I take a moment to point up the thorny dilemma that confronts us. As a country we have to walk a delicate tight rope in constructing a fense programs. Russia and her satellites have a total population that exceeds a bil-We have 160 million. lion persons. have an estimated 4 million men in the their ground forces alone. Today, we have less than a million and a half. The training and maintenance of an active army is costly, almost beyond comprehension. It would be impossible for us to maintain a sufficiently strong standing armed force to be ever ready to oppose any belligerent move by these hordes of communism. To try to match, soldier for soldier, their active Army would be to threaten our own economy. Stated blunt-ly, we can't afford it. We must be constantly alert not to spend ourselves into economic exhaustion. From the Communist point of view a devastated American economy is as important as a crushing American defeat on the battlefield. In the language of my grandchildren, we would be cutting off our noses to spite our faces.

But this undeniable fact remains—we must be prepared. The Reds understand nothing but force. In my first week at the little country school in Iowa where I started my schooling I learned the characteristics of a bully. I learned that he will listen to reason, that he will talk things over—but only if he believes that you have the force to back up your demands. The lesson I learned on the dirt schoolyard in Iowa is equally valuable when applied to world conditions today. When we negotiate with the Reds we must do so from force, not weakness. We must offer no invitation to disaster.

A quick glance at history shows that we have never been prepared when war sought us out. That is a tragic indictment. But it is an accurate one. Think back to the first few months in 1942. Remember the tragedies of Bataan and the Rock. Hark back to July and August and September in 1950. Think of the sorry spectacle of American boys retreating down the Korean peninsula. Remember the stories we heard of our fighting men—grabbing, clawing, striving to hold on—paying in blood and tears the price

of inadequate equipment. This is what happened. This is what must not happen again. A 20th century war doesn't give you time to leisurely build up your fighting force. The devastation of war is upon you with the first blast of the first atomic bomb. The moment we forget that we have, by our omission, passed the death sentence on thousands of our sons. Like the bloodspots in Macbeth. it will come back to haunt us.

In the face of this problem of great magnitude President Eisenhower has offered a plan. It is a good plan. It offers, first, a well-trained, active Armed Force of sufficient proportions to act as the shock absorber for the first attack if it comes. It protects us to the maximum extent under the dictates

of economic necessity.

Secondly, the Presidential plan contemplates a reserve force sufficiently trained and organized so that it forms an alert backfield for the front line of the standing Armed Forces. This is a vital part of the new program. Its importance cannot be overstressed.

Thirdly, the proposal provides for an unorganized reserve pool that brings with it a fundamental training available for quick mobilization.

My friends, an adequate reserve force is not a luxury that we may forego if we wish. It is as essential to our preparedness as is the whole program to our future as a Nation. We must have a neffective National Guard: we must have a competent, modern Army, Air Force, and Navy; we must have an organized group of trained reserves for all branches of the Armed Forces-for the Air Force and Navy as well as the Army. In the Air Force the great need is for a trained reserve of ground force personnel. There must be no time lag between scientific development and Reserve training must military urage. modernized to keep pace with the giant

strides made by industry and science.

We must train ourselves to be trained.

We have no alternative other than

My friends, this is a program that requires participation and support of all of us. Make no mistake, this is not the easy way out. To ignore the real danger would be far easter. It would also be far more costly in the end. So many times I have visitors who come to Washington and say I have come to see how the Government works. I am always glad to see them, but somehow, I feel they should realize that I am only an elected official and that these people from Iowa-like you people out there-are the government. It is a two-way street. You have a responsibility, just as I have. This new program offers a challenge to you. It must have your active support.

Unless the reserve program is adopted in substantially the same form it was presented to Congress it will be the first real signal for our adversaries. Failure to adopt an adequate reserve program will be notice that we are allowing our waistlines to expand into complacency. It will be more than a sign that we will have no hard hitting reserve force available should an emergency arise. It will be more than a statement that we will not prepare ourselves. It will be the fivestar announcement that the proud American eagle is ready to assume the role of the sparrow.

My friends, even this morning we are engaged in battle. This is not the simple alignment of armies—it is a conflict of concepts-of ideologies. As Gen. Matthew B. Ridgway so accurately portrayed it: "The real issue is whether the rule of men who shoot their prisoners, enslave their citizens and deride the dignity of men shall displace the rule of those to whom the individual and his individual rights are sacred; whether we are to survive with God's hands to guide us and lead us, or to perish in the dead existence of a godless world."

It is wishful thinking for us to contemplate living today in a quiet world where quiet decisions are made. These times de-mand big decisions from big people. That is our role. We must accept it.

CONGRESSIONAL RECORD - APPENDIX

Right-to-Work Laws

EXTENSION OF REMARKS

HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, January 26, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two very significant articles from the February issue of the American Federationist on so-called right-to-work laws. One is by Dave Beck, president of the International Brotherhood of Teamsters, and the other by the Reverend Walter G. Muelder, dean of the school of theology of Boston University, in Boston, Mass.

These articles serve to show the hypocrisy and perils of the misnamed right-to-work statutes, one of which already has been partially declared to be unconstitutional by the courts of my State of Oregon.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE RIGHT TO EXPLOIT

(By Dave Beck, president, International Brotherhood of Teamsters)

Seventeen States have outlawed union security through so-called right to work laws. Hiding behind a deceitful slogan, these laws deprive organized labor of one of its fundamental means of self-protection, the union shop.

State right-to-work laws constitute a menace to the trade-union movement. By seeking to weaken and undermine the stability of trade unions, they threaten the wages and working conditions of all union members. They deny to workers the right to protect their own organizations through the establishment of membership requirements. By establishing a compulsory nonunion open shop, they abridge the rights of workers to contract freely with their own employers for union-security clauses.

State right-to-work laws should be more honestly labeled as antiunion laws which turn back the clock of labor relations to the dark ages.

Let us examine this enticing and misleading phrase, the right to work. Every trade unionist believes in the democratic right to gainful socially necessary employment for all our citizens. In this sense, then, the only threat to the right to work of American working men and women is the haunting specter of mass unemployment. That is why the American labor movement consistently supports economic and social measures and policies to achieve full employment.

If business groups and others who support right-to-work laws mean what they say, why do they oppose full employment measures and the guaranteed annual wage? Why do they speak of "widening job opportuninonunion members, when unemployment actually has been increasing? Why do they speak of the untrammeled right to work, when employers set age limits on hiring—often as low as 35 and 40—and many other restrictions? Why do they oppose union proposals to ban discrimination in

hiring on account of race, religion and sex? The so-called right to work laws are not, as one might think, bills to guarantee every worker a job. Can any worker, union or not, walk into a plant or factory, state his right to work and declare himself on the payroll? What rights does a State right-to-work law give an unemployed worker?

The right to work which employers have so often been eager to defend for their nonunion employees has never in fact existed. Even where union security clauses are prohibited, the nonunion employee's right to work for an employer is not enhanced one bit. His hire and tenure still remain a matter of the employer's choice and control.

As Samuel Gompers pointed out 50 years ago in this magazine (February 1905, p.

"A man who must sell his labor upon such conditions as his employer may determine cannot by any form be regarded as either free or enjoying liberty." Every American citizen, under the Consti-

tution of these United States, has the right to work if the work is available and chooses to take it, and no State law is needed to guarantee a constitutional right. The real guardian of the worker's right to work is his own trade union and his fellow unionists throughout the country.

Those opposed to union security fundamentally have not accepted collective bargaining as a desirable part of the democratic process. They have not accepted the fact that strong unions are good, desirable and constructive forces in our society. They overlook or ignore the fact that union security provides stability to labor relations—which was the primary objective of Congress in enacting the Wagner and Taft-Hartley Acts.

Union security—the union shop—is a tangible symbol that management accepts the The union shop allows the employer full freedom to hire whom he will, but new employees who are not members of the union must join within a specified period—nor-mally, thirty days. Countless studies of industrial relations have shown that such acceptance is one of the causes of industrial peace under collective bargaining.1

Those who oppose any form of union se-curity do so very often in the name of democracy. It is undemocratic, they say, to require anyone to join a union. This sounds good-but it simply does not make sense.

Majority rule is in the American democratic tradition. It has made America strong and progressive. The union shop is an extension of this American precept of democracy. Our nation works for the com-mon good of all. Since the union also works for the common good of all within a plant, it is only fair that all should become

Without security of the union, individual security always is threatened. Only a strong union can adequately protect its members, and only a strong union which has the back-ing of all employes in the unit can bargain effectively for better wages and better working conditions.

American workers want and like the union shop because it is democratic majority rule in practice. In over 46,000 NLRB-conducted elections on union shop authorization, the union shop was authorized in 97.1 per cent of the cases, and 91.4 per cent of the voters voted in favor of the union shop. These polls clearly indicate how strongly workers favor the union shop.

State right-to-work laws impose greater restrictions on the activities of labor unions than our national labor policy. This prece-

National Planning Association, "Causes of Industrial Peace Under Collective Bargaining," Fundamentals of Labor Peace (1953).

dence of restrictive State law over a Federal act has no parallel in any other field.

Usually, the States may not pass laws which conflict with any Federal law regulating interstate commerce. In brief, the Federal power to regulate commerce and thereby labor relations affecting commerce is supreme, that is, paramount to that of the States

But the Taft-Hartley Act, in section 14 (b), not only permits but encourages States to destroy union security by the enactment of right-to-work laws—even though union shops are permitted under another section of Taft-Hartley (sec. 8 (a) (3)). Section 14 (b) not only runs counter to the entire concept of a national labor relations policy but it shows that the over-all design of Taft-Hartley was to saddle unions with the most restrictive union security provision that could be found, to the detriment of the welfare of wage earners and of the public interest.

The possibility of 48 separate and conflicting State laws on union security, resulting from section 14 (b) of the Taft-Hartley Act, creates serious practical difficulties in collective bargaining. Undoubtedly, this is what advocates of antiunion right-to-work laws desire.

Agreements in the trucking industry are often negotiated on a multi-State or regional basis, with one master agreement regulating the rates of pay, rules, and working conditions of employees in many States. The duties of many employees require the constant crossing of State lines. Under the present law the parties to the contract cannot write a single clause establishing the union security arrangements to cover all workers in these different States.

Many individual trucking firms operate across State lines. Because the permissible union-security arrangements vary from State to State, a firm dealing with the same union representing workers doing the same work negotiates a union-security provision with the union in one State and in the other State is prohibited from doing so. Yet it is generally recognized that good personnel practice requires uniformity in matters of labor relations.

Former Gov. Alf M. Landon emphasized this objection, among others, when he urged defeat of a right-to-work proposal in Kansas:

"I am of the opinion that legislation of this type might be something of a barrier to large industries considering Kansas for branch plants. Many corporations desire to settle their labor problems with a well-organized stable union. And most of them desire to do it on a nationwide basis where the negotiations can all be conducted at one time and place. The proposed 'right to Work' bill would, of course, bar that where the plants are located in Kansas."

Unlike the Taft-Hartley Act, the Railway Labor Act permits union-security agreements in the railroad and airline industries regardless of state laws to the contrary. If the result is desirable in the railroad industry, surely it is equally appropriate for the trucking industry and for other industries affecting interstate commerce.

The Reverend William J. Kelley, of Catholic University, Washington, D. C., who for more than 10 years was chairman of the New York State Labor Relations Board, states that union-security provisions "are proper moral matter for collective bargaining contracts"; that the objectives of "right to work" legislation "conflict with social morality"; and that "right to work' laws take away from man a necessary means to achieve and protect his God-given right of association."

Archbishop Rummel, of New Orleans, has described the Louisiana "right to work" statute as follows:

"It is insincere because while it pretends to guarantee the right to work, it actually frustrates that right, in effect exposing labor to the loss of security, a decent standard of living and humane working conditions. It makes a mockery of the constitutional right to organize for the common good and welfare. It invites continuing and recurring social strife and discontent. In a word, it is unfair and unsocial class legislation contrary to the common good."

Rabbi Israel Goldstein, president of the American Jewish Congress, has condemned such laws because they seek the destruction of the trade union movement, the abrogation of democratic rights which it has taken decades to secure and the undermining of one of the strongest pillars of American democracy. They do so by outlawing union-security arrangements which enable trade unions to enlist the widest moral and financial support for their policies, thus increasing their collective bargaining strength.

RIGHT TO WORK LAWS VICTIMIZE THE WORKER (By Rev. Dr. Walter G. Muelder, dean and professor of social ethics, School of Theology, Boston University)

The direct appeal to a right to work arouses a spontaneously warm response in the mind and heart of any sensitive person. In American society work has a high value. It represents productivity and self-respect. A person who is willing to work thereby signifies his sense of responsibility. An unemployed person who wants to work is well thought of and commands sympathy. Americans dislike unnecessary dependence on government. At a time when a few people have learned how to exploit the welfare of government, the demand for an individual opportunity to work seems to express personal integrity.

But for these very reasons it is important to give a realistic analysis of those legislative attempts under the slogan of "the right to work." For the slogan seems to assume that an obvious affirmative response to the right to work can be made and that the freedom of opportunity to work without union membership is a simple and self-evident moral fact. We shall see that the right to work is not self-evident.

In modern industrial society, personal and group relationships are highly complex. A long history lies behind the present structure of relative justice in industry. Each job relationship, whether of management or of workers, is surrounded by a firmament of understandings, social policies, and legal enactments which defy self-evident slogans.

The significant peace of our present industrial society has been made possible by organizational and institutional agreements entered into through collective bargaining. Tens of thousands of these agreements are involved in the warp and woof of the employment situation. Work is not individualistic; it is a network of conditions, responsibilities, and opportunities.

A recent writer has wisely pointed out that the relative justice of labor-management relations today is the product of understandings between two organized groups, industrial management and organized labor, in which both coexist and in which each retains institutional sovereignty, working together in reasonable harmony and in a climate of mutual respect and confidence

mutual respect and confidence.

Industrial peace and labor-management

Industrial peace and labor-management relations cannot be taken for granted. They must be positively striven for. They can be easily undermined where either party violates the assumptions on which the industrial peace exists. We must keep these factors in mind when we reflect on the efforts in numerous States to undermine through right-to-work legislation the basic security of organized labor. In the discussion which follows we will consider first the general

problem of rights and then relate it to this legislative situation.

All moral rights root in the worth of persons in community. This means that rights are claimed by persons in their relations to other persons. Both the principle of individual worth and the principle of social responsibility must be recognized. All persons in the community make claims against all other persons. No one right or claim is unconditional, but must prove itself in the light of all other claims.

In the last analysis, the standard of measuring the rights of man is the kind of person we ought to develop in society. The kinds of persons we need and can approve of in a democratic society are not the kinds that look out only for themselves, but who are responsible members of the community.

In the United States of America the principle of personal worth is recognized in many constitutional provisions and legal statutes. Among these an important milestone was section VI of the Clayton Act of 1914, which begins with these words:

"That the labor of a human being is not a commodity or article of commerce."

It has been one of the great contributions of organized labor to give effective implementation to this idea. It is not worthy of mankind that any individual be treated merely like a commodity in a free market.

Another milestone was the statement of national policy embodied in the Wagner Act of 1935 as follows:

"It is hereby declared to be the policy of the United States to (encourage) the practice and procedure of collective bargaining and (to protect) the exercise of workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection."

This national policy of the United States expresses the truth that respect for worker personality is to be protected by and in appropriate and effective associations.

The previous history of labor-management relations had clearly demonstrated that the "right to work" as a moral demand could not be effectively implemented on an individualistic basis but needed both organized labor and the legalized policy of the Federal Government to be made effective.

What is a right? A right is the moral claim the person on the community for the satisfaction of needs which are indispensable for his fulfillment as a person. There are many rights which the community is not to fulfill. For example, in countries like India and China today the community is not able to fulfill the basic claim for enough food to prevent starvation for millions of people. The general moral claim persists as a mandate to the community to create the social conditions in which these basic needs can be satisfied. The claim and the responsibility are two sides of the same moral coin. The general moral claim does not produce the food. To produce enough food for all, many conditions of agricultural and industrial life must be fulfilled. It is a responsible, complex, and cooperative assignment. Likewise, the general "right to work" does not produce jobs nor the conditions of just and decent employment. It does not produce a specific claim to a specific job.

A legal right exists when moral rights have been defined and written into law and the appropriate institutional responsibilities have likewise been specified in law with appropriate sanctions. Legal claims do not exist in the abstract; they are part and parcel of developing social policy. They rest on moral claims, but they are not to be confused with general moral ideals. Legal rights define policies and practices in concrete historic situations. When a legal right has been established, a corresponding legal satisfaction enforceable in the courts has

also been established. Workers know these things because of legislation like the Wagner

Act and the Taft-Hartley law.

Is there a right to work? Work does not confront the average person so much as a right as it does as a necessity. Most of us must work, or else. When we are out of work we need to get a job, or else. The unem-ployed person has a general moral claim on the community for an opportunity to satisfy his need for a job.

This claim has been put in words by the National Council of Churches:

Every able-bodied adult has an obligation and the right to an opportunity to serve the community through work. He should take responsibility for supporting himself and his family."

In sum, no one gains in the long run and everyone loses. Democracy suffers from the

anarchy of union insecurity.

It is a most irresponsible social policy to destroy the integrity of labor unions under the guise of the so-called right to work. individual worker has no effective legal right to work under conditions worthy of human dignity where strong unions have been eliminated. Since collective bargaining is under present circumstances a proved condition of stable industrial relations, a worker has a moral obligation to accept his share of responsibility through membership in organized labor.

But what of the large portion of the labor force who do not belong to organized labor? Undoubtedly many of the benefits they experience are byproducts of the historical victories of the trade unions. They owe gratitude and support to the trade unions. They may not be in a poistion to join a bona fide trade union, but they ought to seek the extension of collective bargaining so as to expand the area of truly responsible industrial relations.

The right to work laws are a virtual conspiracy of the crafty, the ignorant, or the misguided to subvert industrial peace, exploit men's need to work and deluge the community with industrial irresponsibilities. Right to work laws do not create jobs; they only victimize the worker and make his organization ineffective.

Address by Douglas W. Hartman Before Rotary Club of Richmond, Va., on January 25, 1955

> EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, January 27, 1955

Mr. WILEY. Mr. President, about 21/2 years ago a distinguished Wisconsinite was asked to become the head of an operation in New York City designed to register the holdings of German dollar bonds and to act on the validation of those legitimately held. His name is Douglas W. Hartman. He delivered an address before the Rotary Club of Richmond, Va., on January 25, 1955. Because of its illuminating character, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD. as follows:

ADDRESS BY DOUGLAS W. HARTMAN BEFORE A LUNCHEON MEETING OF THE ROTARY CLUB OF RICHMOND, VA., ON JANUARY 25, 1955

Mr. President, members of Richmond Rotary, and friends, about 21/2 years ago I was asked if I would be interested in heading up an operation in New York City designed to register the holdings of German dollar bonds and to validate those legitimately held. I then learned that vast quantities of these bonds which had been sold in the United States during the 1920's had been repurchased by the German issuers for retirement purposes, but had never been canceled. These bonds had been stacked up in the vaults of the Reichsbank in Berlin, and remained there until the Russians overran the city in 1945. Many of you will remember the Dawes loan of 1925 and the Young loan Besides these many German state and municipal as well as corporate bondssuch as North German Lloyd, Hamburg America Line, German General Electric, Siemens & Halske, Vereinigte Stahlwerke, All of these issues are among the 92 our board must examine and either validate or invalidate.

It is estimated that about \$350,000,000 principal amount of these bonds in the Berlin banks fell into Russian hands at that time.

When the allied negotiators met with the Germans in London in 1952 to work out settlement agreements on Germany's prewar and postwar debts they realized that it be an utter impossibility to expect the German nation to make good all the prewar and postwar claims against it, to say nothing of any reparation for war damage, and still remain solvent. One of the main objectives of the conference was to put Germany back on a stable economic basis so that it could resume its place among Western nations and serve as bulwark against communism.

The allied negotiators also recognized that Germany's prewar debt was almost entirely a private debt and that the bankers of the world and private investors in German bonds would never again extend credits to German corporations or German governmental agencies if these old debts were not substantially honored.

The German negotiators agreed that these private debts should be honored by issuing new bonds with new maturity dates in the same principal dollar amount as the old ones. Interest rates on the new bonds, it was agreed, could be somewhat reduced and accrued unpaid interest was to be partially covered by 3 percent funding bonds.

When these understandings were reached the nations recognized that something would have to be done about all of the retired bonds which had fallen into Russian hands. machinery was set up to block exchange or payment of these looted bonds, all of them would certainly be presented for second payment and the Communists would be enriched by as much as half billion dollars. a law was drafted requiring the registration and validation of German foreign currency bonds before they were eligible for exchange or payment under the terms of the debt settlement agreement. This law was adopted by the German Bundestag in August 1952 and is the basic instrument under which the Validation Board in New York functions. A treaty, specifying that dollar bonds not validated, should be unenforceable, and recognizing the agreements, was ratified by the United States Senate on July 13, 1953.

The German member of the Board, Dr. Walther Reusch arrived in the United States late in April. We met at the Department of State on April 28, and started at once to lay our organizational plans.

Public notices appeared in the principal newspapers and financial magazines in the United States in August, requesting all holders of German dollar bonds to register

them with the Board in New York. Registration started on September end of 1954 \$130,626,200 principal amount been registered with the Board. Of this \$116,923,100 had been validated. Oyer \$400,000 worth of these were registered from Virginia.

After 16 months of registration, the Validation Board and the Finance Ministry in Germany have accounted for the existence and location of approximately \$200 million principal amount of these bonds in legitimate possession. We estimate that there are in legitimate possession approximately \$227 millions worth of these bonds. Since we know that the loss through the Berlin banks was approximately \$350 million, the estimate of the amount in legitimate possession approximately \$227 million and only \$200 million have been registered or accounted for it is certain that few of the bad bonds have come out of hiding.

We feel fully confident that less than \$1 million of the bad bonds have been registered with us. We have not as of this date ordered an invalidation of any bonds, but such action will probably be taken at a very

early date.

Now, after working closely with the 20 or more German men and women on our Board for nearly 2 years; having had very much contact with the German diplomatic representatives in Washington, D. C. and the Consulate General in New York; having met many of the principal officials of the Finance Ministry, and having spent almost a month in Germany where I visited many of the banks who act as examining agencies for us, where I met the directors of these institutions, I feel that I have had perhaps as close and as important a contact with these people as very few others in the United States have had, and I have made some observations which I think may be of interest at this time when so many of us are wondering whether we are making a mistake in rearming Germany.

There are those among us who fear that in rearming the German nation, we are again loosing a giant who will turn against Such fears are thoroughly understandable, for have we not twice during the lives of most of us here gone to war to stop aggression from that nation? But when we try to find in the character of the individual German something that sets him apart from us and indicates why we have been at war, we come face to face with an enigma. These people we find are in all respects, except their language, like us, and a great many of them speak English fluently. After having worked day after day for nearly 2 years with this group of people who went through the whole Nazi experience, who survived the terrific bombings of German cities and, having talked to all of the people I have mentioned before, I say the only conclusion you can fairly reach is that there isn't anything fundamentally different about us, so far as basic character is concerned.

The United States Senate's Judiciary Committee made a study (under S. Res. 137). entitled "Immigration and Naturalization Systems of the United States." This was This was published (on Rept. No. 1515 and dated) April 20, 1950. It says:

"While there were Germans among the early colonists of this country, the first typically German settlement was made in 1683 in Germantown, near Philadelphia. came the distributing center for the large and continuous stream of German immigrants many of whom crossed the Potomac and pressed farther south. Pennsylvania continues to be the State most thickly settled by the Germans who at one time numbered a third of its population. mans constituted about a tenth of the white population in the Thirteen Colonies in 1775."

John Fisk in his book Old Virginia and Her Neighbors, says: "German immigrants, mostly farmers, quickly followed the Scotch and the Scotch-Irish settling in 1730 into backwoods Virginia, particularly in the foothills of the Appalachians, and in the Shenandoah Valley. There they founded the towns of Strasburg and Hamburg, Spottswood, a great English landowner, brought a whole colony over from the Rhineland to make native Virginia wines." Charles Andrews in his book Colonial Period of American History says that Virginia's first colony, Jamestown, began to show a labor shortage not long after it was founded in the 17th century and the Virginia company imported many German artisans to fill the void.

I was born in Wisconsin of parents who were also born in Wisconsin, but whose parents in turn on my father's side arrived in the United States as children from Germany. I have no accurate knowledge of when or from where all of my forebears came to this country, but I know that as early as 1813 a branch of my mother's family arrived in the

United States from Germany.

The small town in Wisconsin where I spent my childhood was almost wholly populated by persons of German extraction. Many of our neighbors, more recent arrivals from Germany, still spoke German in their homes. I was sent to a German Methodist Sunday school and got my early religious education

in the German language.

My recollection of life in those childhood days is that these people were a happy people. There was always a lot of singing and I still remember from those days old songs Oh du lieber Augustin and Du Du

liegst mir im Herzen. When World War I broke out I was 11 Years old. I remember vividly the denunciations of the Kaiser among these people of German origin and the immediate voluntary response to the call for enlistment When the United States entered the war in The love for the freedom they enloyed in this blessed land and the deter-mination to do their part in suppressing despotism was here unmistakable. People had come to the United States for the most part during the middle part of the 19th century and were part of that tremendous German migration to this Nation from 1845 to 1890 which included Carl Schurz who arrived in the United States in 1852.

A very large number of men and women of German parentage played important parts in our own national development. All of you will recognize these. In engineering, Charles Steinmetz, George Westinghouse, Bausch and Lombe, Mergenthaler; in auto-mobiles, Chrysler, Studebaker; in steel, Charles Schwab; photography, Alfred Stieg-litz (the father of photo art in America); literature, H. L. Mencken, Steinbeck, Dreiser, Untermeyer, Thomas Mann, and did you know that Thomas Nast, the artist who created the Republican elephant, the Demo-cratic donkey, and the Tammany tiger, was a German?

Henry Villard, a German, pushed his rail-

roads to the Pacific.

Practically all of our planos are made by companies started by Germans—Steinway, Knabe, Wurlitzer, Stieff; and who makes our beer? beer? Schlitz, Pabst, Anheiser-Busch, Blatz, Ruppert, Schaeffer, Gunther, Heurich—all Germans.

The kindergarten is a German educational invention-introduced by the wife of Carl Schurz in Watertown, Wis.

Gen. Frederick Wilhelm Steuben has al-Ways been given credit for welding the courageous but unorganized guerrilla troops of 1776 into a disciplined, well drilled army. Congress honored him by placing a statue in Lafayette Park in grateful recognition of his services to the American people in their struggle for liberty.

General de Kalb also of Revolutionary fame was a German.

John J. Pershing in World War I was of German descent and curiously enough the military leaders who headed the branches of our armed services during World War II were all of German descent. Our now President Dwight D. Eisenhower, Chester Nimmitz, and Carl A. Spaatz.

My authority for these names is Francis Brown's book entitled "One America" pub-

lished in 1952.

During the months of April and May of I spent 24 days in Germany visited 10 of the principal German cities, saw much of the terrible bombing they endured and the remarkable reconstruction. I sat in conference with groups of bankers in every one of these cities and was everywhere most cordially and courteously received. At almost every one of these meetings, at least one of the Germans present expressed gratitude to me for the remarkable thing the United States had done in making their recovery possible. Honestly, gentlemen, I never got the slightest feeling of bitterness from any of the contacts I made in Germany during the 24 days I was in that country. On the other hand, there was a remarkable warmth of feeling toward the United States that was true, not only in the circles of bankers, but also with the industrial people and with the government people that I met.

A touching incident occurred one day last fall with one of the German Government officials in New York City. He had come to America on a special assignment which lasted several months and during that period I had occasion to see him a number of times. Toward the end of his visit we were walking down Broad Street in New York City one noon and as we looked up at the large American flag hanging over the entrance to the Chase National Bank this man commented 'wouldn't it be wonderful, Mr. Hartman, if Germany could someday be a star in that flag." Perhaps not all Germans feel as cordial to our country as this man, but so as the basic nature of the German individual is concerned, it responds to and accepts the democratic idea quickly, eagerly.

I think the arrogance that Hitler brought out in some of these people, and the bill of goods he sold them that they possess a peculiar superiority to all other races and nations on earth, that they are the supermen has almost entirely disappeared. Among all of the Germans I had contact with in Germany, I detected objectionable arrogance very rarely. On the other hand, humility in many of them was marked. A German I met in Hamburg made the statement to me that, of course, they regretted the terrific bombing and the destruction of their cities but he said "we asked for it."

I have tried profoundly to understand what it has been that has led to the situations which brought about the two World Wars and I believe confidently that those causes were entirely economic not due to any fundamental fault in German character. I believe confidently that it will be a very long time before another mesmeric spellbinder like Hitler will be able to fool any important number of the German people of today. Some probably but not many. a purging of soul such as the German went through in 1944 and 1945 he won't quickly follow leadership like that again. Believe me, my friends, Germany took punishment in World War II. Those cities were plastered. and I mean plastered. President Heintze of the Securities Settlement Office for German Foreign Debts took me to a hill overlooking the famous old city of Freiburg-only a few miles from the Rhine and from Switzerland. He pointed out what happened in 20 minutes one night late in the war. A swath was cut right through the center of that famous old city and 20,000 persons lost their lives. The rebuilding has progressed well but you could

still see the path where the bombs from our planes fell.

Other cities like Bremen, Hamburg, and Berlin were bombed repeatedly and the ruins there are still tremendous. No people could emerge from such an ordeal without refine-

But the human mind is the same the world over. Unless men can be sure of a measure of economic security and they have a fair chance of selling what they have or can make so they can buy the things they do not have but need, they will resort to forceful action to make adjustments-and such action always leads to excesses and to the play of emotion above reason.

German cities appear in most respects like our own. The bulldings where they have not been bombed are older but the shop windows display the same kind of wares in the same neatly arranged displays as in the shop windows on Broad Street. The people dress like we do, they eat foods of a very similar nature, and they look like we do. These people are for the most part a very kindly people, good natured, helpful, even sentimental. They respond instantly to kindness and praise. They are a very intelligent people. Some unfortunately make a pettish of predigious memory and become intellectually self-important.

Those with whom I am working in New York are a particularly fine group. are undoubtedly above average in intelligence and balance. The German member of the Board, Dr. Walther Reusch, and his of the Board, Dr. Waither Skaupy and Dr. two deputies, Dr. Walther Skaupy and Dr. Walter Clemens are all lawyers. They express the very highest sense of fairness and human kindness. All of the business of the Board since its inception has been conducted in harmony. It would be impossible to desire more courtesy or a more objective approach to problems than that which has been expressed by these three Germans. have had dozens of registrations by individuals in the United States who have been unable to present documentary evidence to prove that their bonds were outside of Germany on January 1, 1945, but in almost all of these cases, the holdings were in very small amounts, perhaps only 1 or 2 or 3 bonds. Generally the holder was either the

child or the wife of the one who bought the bonds during the 1920's. Here the Germans might have taken advantage of the technicalities and could have refused to validate such securities with less than absolute proof. They could very well have objected to validation and made things generally difficult. but they saw the absurdity in these cases in contending that such bonds could have passed through Communist hands so they agreed with me to accept the affidavit of the registrant as supported by banking or character references.

The very fact that so many of these bonds were stored in the Berlin bank vaults without any special identifying marks testifies to the high regard of the German bankers for the terms of contract.

The trustees in almost all of the 92 issues involved were United States banks and the indentures in these bonds provided that only this trustee could cancel or cremate bond. Accordingly, being unable to ship these bonds to New York for several reasons they stacked them up waiting to send them to New York after the war. Now, of course, many of these bonds were

repurchased under questionable circumstances at substantial discounts, discounts brought about by the manipulations of the Nazi government. The Schacht administration refused to permit the export of dollars to pay the interest on these bonds and, accordingly, the value of the securities on the market fell substantially and as the prices fell they used the dollars which should have been used for interest payments to buy up more bonds. But here again the contrast between the gangsters who gained control of Germany and the rank-and-file bankers shows up. Had the same ruthless thinking governed these bankers, does it seem likely that the terms of a contractual agreement in a bond would have deterred their destruction or, at least, their mutilation.

While in Europe last spring I had opportunity to visit many of our Foreign Service outposts and in some cases renew acquaintances made during the period I served the State Department in 1923-28. My impres-

sion was a wholesome one.

I have always held our Foreign Service In high regard and deplore very much the tendency to use the Service as a whippingboy; for political purposes. The need for establishing our outposts abroad in such a way as to make service in them a mark of highest prestige cannot be overemphasized. The United States is undoubtedly the leader among nations today. We are, I think, exercising our leadership well, but in proportion as the men who represent us abroad are wise, patient men who express an affection for mankind without patronizing or flattering, I think we will gain the deepseated respect of all people and do the maximum possible to create in our world the environment in which men of good will can unite on objectives and live together in economic order and excellent fellowship.

I believe very profoundly that we are not misplacing confidence in trusting the Germans to cooperate with us. One thing, however, we must never forget, the German people are the next door neighbors of the Russians. Also that they live in a divided country. The first concern of any German Government must almost certainly be the reunification of the nation. Should we hear that the Germans are making deals with or concessions to the Russians let us remember that these people are looking into the muzzles of Russian guns. The price the German nation will be willing to pay for the reunification of the East and West is the uncertain

factor.

We know that the price of neutralization and of complete subordination to communism is too high, for they have already refused to pay those prices. The personal experiences of such a very large percentage of the German population has instilled the whole population with a dread of Russian domination, which leads me to feel very confident that the Federal Republic will never sell out to the Russians. The extent of the concessions which they may feel obliged to make, no one can foretell. Undoubtedly, however, they will consult and work with the West in any such decision.

I think that as we continue to help them shape their economy more and more in line with our own that the German nation will stand stanchly beside us. Then along with the British and let us hope, the French, we will indeed build a world where there is (1) freedom of speech everywhere in the world; (2) freedom of religion everywhere in the world; (3) freedom from want everywhere in the world; and (4) freedom from fear everywhere in the world.

The Publication of the United States Statutes

EXTENSION OF REMARKS

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Charles J. Zinn, law revision counsel to the Committee on the Judiciary of the House of Representatives, which appeared in the Brooklyn Barrister of November 1954:

THE PUBLICATION OF THE UNITED STATES

(By Charles J. Zinn)

A law, according to the philosophers, is a rule of conduct dictated by reason, enacted by competent authority, prescribing or forbidding some action in view of the common welfare, and made known to those who are to be bound thereby. It is with the last element of that definition, the publication of the law, as it relates to the statutes enacted by the Congress of the United States, that this paper is concerned. Obviously a secret statute can have no binding effect upon an unaware and unsuspecting public. Publication is the sine qua non of the aphorism that every man is presumed to know the law of the land. The ancient Romans, from whom we seem to have borrowed more than a few of our principles of legislation, clearly recognized the necessity for publication by their requirement that the law be posted in a public square "where it could be easily read from the ground."

In the United States the requirement of promulgation is satisfied by two principal methods of publishing: (1) In the United States Statute at Large; 1 and (2) in the

United States Code.

A proper understanding of the functions of these two publications and the differences between them require some knowledge of the legislative process in general and of the form of enactments by the Congress in particular.

Under the Constitution a bill (or joint resolution) that has passed both the House of Representatives and the Senate in precisely the same form becomes a law only after the happening of 1 of the 3 following events:

1. It is approved (signed) by the President within 10 days (Sundays excepted) after having been presented to him.

 Ten days (Sundays excepted) have elapsed after it was presented to the President, the Congress being still in session, and he has not signed it.

 It has been repassed by two-thirds of both Houses after having been returned with the President's objections to the House in which it originated.

In the first instance the original enrolled bill signed by the President is transmitted by the White House to the Administrator of

General Services pursuant to law.

In the second instance, which rarely occurs, the enrolled bill is usually transmitted by the President to the Administrator of General Services although there is no constitutional or statutory provision requiring him to do so.

In the third instance the Clerk of the House of Representatives or the Secretary of the Senate (depending upon which body originated the proposal) transmits to the Administrator of General Services the enrolled bill with a certificate attesting to the repassage of the legislation by the requisite two-thirds affirmative vote in each body.

PRINTING PRIOR TO ENACTMENT

Inasmuch as this paper is concerned with the printing of laws, it may be of interest to describe briefly the various printing stages of a bill before it becomes law.

Immediately after a bill has been introduced (usually in typewritten or holographic form) it is printed for reference to the standing committee having jurisdiction of the subject matter of the proposal. This, known as the introduced print, is set in 12-point

Footnotes at end of speech.

type and contains about 24 printed lines to the page.

After consideration by the committee, at the time of being reported to the House, the bill is reprinted in type of the same size, with the committee amendments indicated in italics and stricken-through type. This is known as the reported print.

When the bill has passed the House one copy is printed on blue paper in the precise form to which the House has agreed. This is known as the engrossed bill and is signed by the Clerk of the House attesting to the action of that body. It is then sent to the Senate with a formal message requesting the concurrence of the Senate and is reprinted and referred to a committee of that body. This is known as the act print.

When reported by the Senate committee it is reprinted showing committee amendments, if any, in italics and stricken-through type—

the Senate reported print.

Upon being passed by the Senate, if there are no amendments requiring House concurrence, the bill is reprinted, this time in 10-point type, as soon as it is returned to the House. This is known as the enrolled bill and is signed by the Speaker and the President of the Senate together with a certificate signed by the Clerk of the House attesting that the bill originated in that body. The original enrolled bill is then presented to the President for his action.

PUBLICATION UPON ENACTMENT Slip-Laws

As soon as a bill becomes law as a result of 1 of the 3 forms of Presidential action outlined above, it is assigned a public (or private) law number and a chapter number by the laws section of the General Services Administration; which also prepares marginal notes of various kinds as guides to assist the reader. These notes, of course, are not part of the law.

The public-law (and private-law) numbers run consecutively through the Congress regardless of the number of sessions, starting with the number 1 at the beginning of each Congress. Public laws are numbered in one series and private laws in another. The chapter numbers, on the other hand, run consecutively only through one session starting with the number 1 at the beginning of each session, and comprehend both public and private laws. For example, at the beginning of the first session of a Congress, chapter 1 may be Public Law 1, and chapter 2 may be Private Law 1. In the second session the sequence in numbering by the public-law and private-law designation continues whereas the chapter number designation starts anew.

The same type that was used for the printing of the enrolled bill is used again for the first printing of the law—in pamphlet form These familiar "slip-laws" constitute the official compliance with the requirement of publication called for in the definition of \$\sqrt{s}\$ law.

Unless a law contains a provision prescribing a different effective date it becomes effective on the date on which it is approved by the President. Usually 2 or 3 days' time are required thereafter for the printing of the slip-law, with the result that a law may have a binding effect upon the public for a brief period before being officially published or promulgated. Whether or not that situation requires a remedy is not within the purview of this article.

STATUTES AT LARGE

At the close of each regular session of the Congress the laws section of the General Services Administration publishes a bound volume containing the laws of the session in a chronological and numerical sequence. This is known as the Statutes at Large. In

Footnotes at end of speech.

recent years the volume and page number of the Statutes at Large are indicated also in the margin of the slip-laws prior to the publication of the bound volume, more or less on the same principle as the practice with respect to advance sheets of law reports.

By the terms of a statute originally enacted in 1895 the Statutes at Large are legal evidence of the laws contained therein and are accepted as proof of those laws in any court in the United States.

Although the Statutes at Large contain a comprehensive-index and table of contents in each volume, together with many helpful post and ante marginal notes, the volumes are solely a chronological arrangement of the laws in the exact form in which they were enacted. They are not intended as a consolidation or codification of the laws. In order to determine the present status of any law it is necessary to consult a code.

THE UNITED STATES CODE

The official United States Code contains a consolidation and codification of the general and permanent laws of the United States arranged according to subject-matter in fifty titles. The first six titles comprehend what may be termed political matters—the Congress, the President, the seat of the Government and the executive departments and officers and employees generally. The remaining 44 titles are arranged in alphabetical order ranging from Agriculture to War and State of the St

and National Defense.

The purpose of the United States Code is to show the present status of the laws, as amended, without requiring recourse to the scores of volumes of the Statutes at Large containing the original enactments and later amendments or superseding statutes. The effect of amendments on earlier laws is set out without repeating all the text of the amendatory acts.

The code is prepared by the Committee on the Judiciary of the House of Representatives. The current edition, known as the 1952 edition consists of six volumes and a second cumulative supplement containing the new laws and changes enacted during the 83d Congress is in preparation. New

editions are published every 6 years. When the first code was adopted in 1926 it was provided by law that it be prima facie evidence of the laws contained in it. During the last 10 years a program is being carried out to enact the code into laws, title by title. At the present time 11 titles have been so enacted, including title 18, Crimes and Criminal Procedure, title 28, Judiciary and Judicial Procedure, and Title 35, patents, all of which constituted substantive revisions as well as codifications. Each such codified title must, of course, be enacted by the Congress. The existing laws upon which it is based are specifically repealed and rearranged and simplified. The title may thereafter be amended directly without reference to the individual prior enactments of which it is composed.

The task of enacting all 50 titles into law—and then keeping them up to date by direct amendment is a gigantic one but one of great importance to the average lawyer who, day by day, is becoming more concerned with Federal statutes.

¹The initial printing, as a slip-law, is discussed infra.

A proposal that is amended after it has passed one House must be returned to that House for agreement to such amendment before being sent to the President.

³ For the purposes of this article, a bill originating in the House of Representatives is the subject of the process discussed.

Every Day Is Ladies Day

EXTENSION OF REMARKS

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the Democratic Digest for February 1955:

IN WASHINGTON, VA., EVERY DAY IS LADIES DAY

How does a lady get into politics? How does she go about running for public office?

It has been 34 years since the 19th amendment gave women the right to vote, but there are still many people around who think the ladies must follow a special set of rules to succeed in politics.

The story of the lady mayor of Washington, Va., and her all-lady government is a contradiction to this general belief.

Four years ago, Dorothy Davis, a young and pretty housewife, born and reared in Washington, Va., felt that she had a full-time job keeping house for her husband, George, a Government attorney, and raising their three children—aged 4, 7, and 10.

Today, she manages to do all this, as well as her public housekeeping job as mayor, attend national mayors' conferences, make speeches before civic and political groups, run a motel, escort foreign visitors around the Virginia countryside, and have a happy family life along with it.

Before the election of the all-lady government in 1950, Washington, Va., county seat for Rappahannock County, was just another of the little towns on the highway into the South. Surrounded by the magnificent Blue Ridge Mountains, its 245 residents, like those of so many towns, were reluctant to criticize its narrow main street, its dimly lighted side streets, and its historic buildings falling into a state of disrepair. These were familiar landmarks with which they had grown up, and few seemed to notice the gradual decay, or the need for any change.

But in 1950, Trial Justice B. M. Miller, a civic-minded native of Washington, surveyed his town with a critical eye and decided that something had to be done about it. As an incorporated town, Washington had its own mayor and city council, elected every 2 years. For a long time, it had become a routine affair, with little campaign activity on the part of the candidates, and even less activity on their part after they took office. It was time for action, decided Justice Miller, and the way to wake up the townspeople called for a startling idea-an all-lady slate of candidates in the upcoming election. His attitude, Dorothy Davis recalls, when he first approached her to run for mayor, was that women can't do any worse than the men had in the past, and they just possibly might do better. She agreed to run.

Justice Miller then persuaded a representative group of ladies to run for the council—Miss Ruby Jenkins, the county agent's secretary; Mrs. Louise Price, a school teacher; Miss Elizabeth Racer, a beautician; and three housewives, Mrs. Achsah Miller, Mrs. Dorothy Hawkins, and Mrs. Bobby Critager

Although the ladies give much credit for their first election to the campaign by Justice Miller on their behalf, today they stand on their own record. What 4 years of alllady government has meant is clearly dis-

cernible to the residents of this pleasant valley town.

The historic Confederate monument in front of the court house has been restored and the lawn around the old court house New street ets. Tarred building is neat and green. lights blaze on the side streets. shoulders on the pavement enable residents to park without fear of getting stuck in the mud, or obstructing other cars. Stop signs prevent travelers from speeding through the main street and offer some protection to New trash cans on the street pedestrians. corners aid in keeping the town clean and neat. A playground, the gift of an anonymous donor in admiration for the women's industry in sprucing up the town, provides safe recreation for the children.

After their first term, Mayor Davis recalls, "we felt we had to run again just to prove to ourselves that we were able to do it. I talked to people on the streets and went from door to door, asking people to vote for me," she added. "But in 1954 we did not even campaign." In a sense, that is true. But every new street light and every improvement in the town was a kind of campaign activity. The fenced playground, for example, was a constant reminder of what the mayor and council had accomplished.

In 1954, however, the all-lady government modestly stood aside and refused to file for reelection in order to give the men another chance. The voters, however, marched to the polls and wrote names on the ballots—all of them women—for a third term of office which began on September 1. Mayor Davis and four of the original council members, Miss Jenkins, Mrs. Price, Mrs. Hawkins, and Mrs. Critzer, with two new council members, Mrs. Alice Verner and Mrs. Christine Johnston, will govern Washington for another 2 years.

Although the ladies had no special rules on how to run for office or how to get into politics, they did have a set of rules for running the town that were different from the former male administration.

"It's all a matter of housekeeping," says vivacious Mayor Davis, "plus legal responsibility."

Mayor Davis explained it this way: "Since I didn't know anything about being mayor, my husband got me a copy of the Virginia Code on Municipalities, and I learned from that." For example, the young mayor learned that you can't run an incorporated town without a budget. It's illegal. And you can't levy taxes unless your budget exceeds your income. And you call a town meeting before you vote on the budget.

Then there is the matter of organization. This they didn't get from a book. In best housewifely fashion, the ladies organized into four "housekeeping" committees—the committee on streets and highways, committee on street lights, committee on weed cutting, and the committee in charge of trash removal. The budget-conscious ladies got contracts for weed cutting and trash removal, instead of hiring men by the hour as in former years. Much cheaper, and more efficient, leaving more money for other things. And the mayor candidly admits that she did "nag" a bit to get the highway department working on the roads.

Ruby Jenkins, only unmarried member of the council, also claims that she made no campaign for election in 1954. But as the county agent's secretary, Ruby is campaigning all year round without knowing it. For Ruby is the farmer's friend who helps him to get penicillin for his sick calf and does a hundred other things for her neighbors. She knows just where to get the best ham in the county. And she'll be only too glad to let you know when there's a good

antique sale coming up.

All of the ladies are conscientious about their jobs and attend the regular council

Most European nations publish regularly an official gazette in which statutes are set out, with an effective date some time subsequent to such publication.

meetings every Tuesday, at which Mayor Davis presides and votes in case of a tie. The fact that a tie vote happened only once, is an indication of the general agreement among the council members. In that instance, it was over the question of keeping licensed pets tied up—a question raised by some of the townspeople. Mayor Davis consulted the county board of supervisors on this problem and, on their advice, voted to give licensed pets their freedom.

As a result of the nationwide publicity given to the all-lady government, many visitors have come to the pleasant valley town. Mayor Davis' attendance at the annual conference of mayors, her talks before civic and political groups, stimulated interest in her government and brought an influx of visitors. In addition, there were official visitors including a delegation of Japanese men sponsored by the United States State Department, and a group of Government exchange students sent down by the United States Department of Labor, to observe a rather unusual example of democracy on Main Street, U. S. A.

With no hotel to accommodate the visitors

With no hotel to accommodate the visitors, the Davises took it upon themselves to build an attractive motel on the main highway, bulldozed out a lake for swimming, and installed an outdoor fireplace, which has developed into a pleasant tourist stopover in the scenic Blue Ridge Valley as well as a pleasant recreational spot for the Davis family themselves.

It would not be quite accurate to credit all the joys of living in Washington, Va., to the all-lady government, but certainly they have added to the pleasures.

And it would seem from their story that the answer to those perennial questions about how women can get into politics and public office is very simple: just get yourselves drafted by the men.

Social Security for Lawyers

EXTENSION OF REMARKS

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Bar Bulletin issued by the Boston Bar Association, January 1955, which I feel warrants the attention of the Members of Congress:

Social Security for Lawyers (By Henry A. Malkasian)

The recent amendments to title II of the Social Security Act conferred a distinction upon the professions of law, dentistry, medicine, and related medical fields. Individual practitioners, including partners, in these fields now remain with very few exceptions the only self-employed persons to be excluded from the old-age and survivors insurance (OASI) provisions of the Social Security Act. Indeed, with very few exceptions, every other breadwinner in our economy, whether he be an employee or self-employed, is by law includable in a Government-administered retirement system.

With OASI embracing such an extensive group of jobs and job holders, it would seem that compelling reasons should exist to justify the exclusion of a few professions, including the legal profession which is necessarily our prime concern. However, when the reasons pro and con are weighed, the arguments advanced by the proponents of

exclusion seem to be so far from compelling that they are not even convincing when compared to the reasons for inclusion. Nevertheless, due mostly to the general apathy of the legal profession as a whole, the spokesmen for exclusion were successful in having the Senate Finance Committee remove lawyer coverage from the bill as passed by the House.

I am not sure whether I can accurately summarize arguments proffered by the proponents of the exclusion of lawyers when such arguments seem to be confused and often self-contradictory. The prime argument, however, seems to be that OASI is a charity proposition, involving a Government handout, and consequently that it would degrade the profession to participate. This argument betrays an ignorance of the intent and operation of OASI. A succinct explanation of the operation, intent, and place in our national life of OASI was provided by President Eisenhower, who stated:

"Under old age and survivors insurance (OASI), the worker during his productive years and his employer both contribute to the system in proportion to the worker's earnings. A self-employed person also contributes a percentage of his earnings. In return, when these breadwinners retire after reaching the age of 65, or if they die. they or their families become entitled to income related in amount to their previous earnings. The system is not intended as a substitute for private savings, pension plans, and insurance protection. It is, rather, intended as the foundation upon which these other forms of protection can be soundly built. Thus the individual's own work, his planning, and his thrift will bring him a higher standard of living upon his retirement, or his family a higher standard of living in the event of his death than would otherwise be the case. Hence the system both encourages thrift and self-reliance, and helps to prevent destitution in our national life."

The provision for OASI is found in title II of the Social Security Act. Under section 201 thereof, a trust fund is created of the amounts paid in by those covered and by their employers in the case of covered employees. It is 100-percent contributory on part of the participants and their employers, and to my knowledge the Government has not contributed one dollar to the fund. This is entirely different from State old-age assistance, which is given to needy individuals who meet certain requirements. Under OASI, need of an individual or the amount of his wealth or that of his estate are not determining factors in either his or his family's entitlement to benefits or the amount thereof. Nor are the monthly benefits a uniform amount for all recipients. Individual benefits range from a minimum of \$30 a month to a maximum of \$108.50.

The argument that lawver inclusion would degrade the profession displays an unwarranted arrogance toward the vast majority of other professions, as well as for the many members of the legal profession itself who are covered. All members of the legal staffs of business corporations, all lawyers who are in the employ of other lawyers or of law firms (exclusive of partners), and all lawyers who receive corporate directors fees (in an annual amount exceeding \$400), are covered by OASI, and of course, most lawyers who are in Government employment are covered by a retirement plan. Have they degraded our profession by their inclusion in a Government-administered retirement plan? Have executive officers of corporations, bankers, professors, architects, engineers, and clergymen become degraded or lost dignity by being covered under OASI? seems self-evident. It is difficult for me to see how the dignity of the profession is aided the fact that lawyers' widows and minor children may be the only persons in their

particular situation who may suffer economically because lawyers are not covered.

The proponents of exclusion shift from the philosophical to the practical with their next argument. To put it simply, they say that lawyers don't retire at 65 and consequently it would be merely a costly waste of a lawyer's money to have him pay into the OASI retirement fund. The contradiction in the two positions is self-evident—How can a Government handout, or charity, be a bad bargain financially for the recipient? To partially answer the argument, however, maybe many more lawyers would retire if they had a pension from OASI to add to income from their own resources. Let us also bear in mind the many lawyers who are physically disabled and who cannot or should not be practicing after the age of 65. Further, whether a lawyer retires or not, he may some day leave a widow who would also be entitled to rights under OASI, or minor children who would be so entitled.

In any event, why not at least give each self-employed lawyer the option as to whether or not he wants to be covered? Such an option is provided for clergymen under the new law. Surely, if an individual clergyman is credited with enough sense, sagacity, and business acumen to be able to decide whether OASI coverage is advantageous to him, the spokesmen for exclusion of lawyers should at the very least concede that individual lawyers also are capable of exercising this same discretion. To hold otherwise is to lower that very dignity of the profession the maintenance of which is the keystone to their opposition to coverage.

Because the amount of benefits to be received upon retirement, and the time of enjoyment of the same, depend in each case upon the age of the individual, and his earnings, and indeed upon his survival (or the survival of his wife and minor children), it is difficult to generalize as to whether coverage would be a bargain or not. However, one is buying protection for himself and his family, and the only useful yardstick as to whether the investment is a good one pricewise is the comparative one. No insurance company, to my knowledge, sells any retirement policy, the terms and conditions of which are comparable to the terms and conditions of OASI, for premiums which are even close to the amount of premiums required by OASI. It certainly is the cheapest protection of its kind to be found today.

To illustrate, an accountant who became newly covered under OASI on January 1. 1955, becomes fully insured on July 1, 1956. Assuming that our accountant has attained the age of at least 65 years at that time, and that his annual earnings amounted to at least \$4,200 in the year 1955, and \$2,100 through the first 6 months of 1956, he can on July 1, 1955, retire and receive monthly benefits of \$108.50 each month for the rest of his life. If his wife is also 65 years old, or when she reaches such age, she will receive \$54.25 each month also. The total premium which he will have paid for such benefits will have been \$189, a remarkable rate of return. Of course, this favors newly covered persons who are close to or have already exceeded the age of 65 years. Younger persons will have to pay in for a longer period of time before becoming entitled to retirement benefits.

The attraction of coverage to the young members of the profession lies, or should lie, in the extremely valuable survivors benefits provided by OASI. By his coverage under OASI, not only is a person building rights to a pension for himself and his wife when he and she reach the age of 65, but in the meantime he is insuring his life for the protection of his wife and minor children or dependent parents. This aspect of OASI never seems to be mentioned by the proponents of exclusion nor is it alluded to by lawyers with whom I have discussed this subject matter. The insurance protection granted to the younger

participants by OASI is the same protection which a younger lawyer either cannot afford to purchase elsewhere or, if he has purchased it, he is probably groaning under the payments therefor. To these lawyers who can't afford to die, or who (because of insurance-premium poverty) can't afford to live, or to those who are uninsurable due to physical ailments, OASI coverage would be of incalculable value.

To illustrate once again with our accountant friend: If he earns \$4,200 in the year 1955, and \$2,100 in the first θ months of the year 1956, and if he should die after July 1, 1956, leaving a widow and 2 children under 18 years of age, his widow and children will receive \$200 a month until the oldest child reaches the age of 18 years. A reduction will be made at that time in such monthly benefits, and all benefits will cease when the youngest child reaches the age of 18, to be resumed when the widow reaches the age of 65 years. All this will have been bought with a total premium payment of \$183.

The argument advanced that lawyers do not retire at 65 and therefore that they would be throwing away their money by contributing to OASI seems rather unconvincing when one considers the insurance benefits provided to a covered person's widow and minor children. The financial welfare of his family after his death is just as much a legitimate concern of lawyers as it is of other husbands and parents.

It is true that under OASI certain contributors will contribute without ever receiving any benefits. If a covered person does not survive to age 65 and leaves no widow, minor children, or dependent parents, there will be no benefits; or if a widow remarries, she loses her benefits. However, this is no different from fire insurance, casualty insurance, or automobile liability insurance. OASI is similarly insurance which is payable upon the happening of certain contingencies such as that of reaching age 65, of having a wife reach age 65, or of dying leaving children under age 18. Are these contingencies of sufficient importance to the self-employed lawyer to insure against? The proponents of exclusion apparently think

I urge every self-employed lawyer to immediately familiarize himself with the provision of OASI. Only those provisions are referred to in this article as were deemed to be of general importance. He then will be enabled to make an intelligent decision as to whether the exclusion of lawyers from OASI is in the best interests of himself, his family, and the profession. Such a reading of the act will at least provide an informed body of opinion among those to whom this matter is of overriding importance when lawyer coverage is reconsidered in the Congress, as it surely will be. Valuable rights may be lost when too few speak for too many.

Liberation and Self-Determination

EXTENSION OF REMARKS

HON, ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. BOSCH. Mr. Speaker, we have heard much recently about the policy of liberation as an alternative both to appeasement of aggressive communism and to preventive war. I join with those of my colleagues who advocate the policy of liberation for enslaved and expelled peoples.

It is important, however, that we give some thought to what liberation requires in terms of specific foreign policy objectives and propaganda policies. To this end, I have asked unanimous consent to insert in the Appendix of the Record an article by Dr. Kurt Glaser, which appeared in the Ukrainian Quarterly, autumn 1954. Dr. Glaser is the executive secretary of Overseas Research, Inc., which is performing valuable work in the field of central European affairs and psychological warfare.

The article follows:

LIBERATION AND SELF-DETERMINATION

(By Kurt Glaser)

Americans in charge of radio output to Communist-controlled areas, faced with criticism, have tended to take refuge in reaction analyses, associational correlations, and other devices offered by psychologists to improve the technical quality of propaganda. Recently, however, there has been increasing awareness of a simple fact: Good communication begins with having something to say.

The "campaign of truth," however well staged, has limited appeal. It does not offer the victims of the Soviet power machine concrete hope for their personal futures. Representatives of the enslaved peoples, and Americans who are not content to leave them enslaved, call for greater positive content in American propaganda.

Positive propaganda implies concrete policy. The only meaningful statement which Americans can make to enslaved peoples are statements of American aims concerning their homeland. And if exiles are brought to the microphone, American endorsement of their statements is at least implied.

We can no longer choose whether or not to have a policy concerning nations now governed by the Communists. We have chosen: By beaming our broadcasts to enslaved nations over the heads of the puppet governments and by encouraging the political activity of anti-Communist exiles, we have committed ourselves to the need for policy. The only choice left is whether that policy shall be coherent, consistent, and in accord with American interests or the confused result of conflicting special-interest pressures.

Enslaved peoples have troubles beyond the mere fact of Communist control. All too often, political and economic struggles made their countries vulnerable to communism in the first place. Effective policy—and hence effective propaganda—must therefore go beyond the simple proposition of throwing out the present Bolshevist dictatorship. It must say something about the national aspirations of enslaved peoples.

Here, however, policymakers must overcome the existing disunity of anti-Communist forces. Many people feel that conflicts
within and among the enslaved nations cannot be settled before liberation and that it
is futile to try. Those who hold this opinion, but who nevertheless realize the need
for-concrete form and meaning in American
policy, have sought agreement on certain
basic principles. While these principles may
not apply themselves automatically after
liberation, it is hoped that they will provide
at least a basis for mediation or adjudication.

A doctrine accepted generally by those who think seriously about the problems of liberation is that of national self-determination on the basis of equality of large and small nations. This concept has the following to commend it:

- (a) It expresses the moral foundation of American political tradition;
- (b) It recognizes the national communities as political realities which, in the pres-

ent stage of human society, are stronger and more permanent than any government; (c) It mobilizes, within each enslaved na-

(c) It mobilizes, within each enslaved nation, powerful emotional forces of identification and loyalty, needed to give strength and cohesion to the anti-Communist movement;

(d) It is accepted by almost all political exiles and Americans with origins in the enslaved countries, however much they may disagree on other matters.

One reason why few object to self-determination is that, unless further defined, it may be stretched to mean very different things. A great Russian imperialist, for example, may argue that Ukrainians are Russians and that the Russian people as a unit should exercise self-determination. Ergo: it is wrong for the United States to support Ukrainian independence. Conversely, the principle could be applied to isolated settlements so as to justify German exclaves in Hungary and Rumania. When coupled with the concept of no-predetermination, self-determination may degenerate into a slogan for postponing rather than facing vital national issues. In this case, our mental processes dictate an unconscious presumption in favor of maintaining the status quo. Unless the question of the Russian Imperium is brought out in the open and subjected to a clear decision, policy will automatically become directed to liberating the Soviet Union as a unit and then deciding whether the non-Russian peoples are to be assisted toward independence.

Since the middle of the 19th century, self-determination as a moral and ideological force has led to the establishment of national states. This fact suggests that the principle commits the United States to encouraging nationalist ideologies as an anti-dote to communism. But is the national state the only proper expression of self-determination? Granted that the majority of Ukrainians want an independent Ukraine, it is equally obvious that very few Czechs advocate a national state of "Czechia." Some Czechs wish to perpetuate a unitary "Czechoelovakia," while others propose to federate with the Sudeten Germans, the Slovaks, and other peoples of the former Austro-Hungarian Empire. Either solution involves the self-determination of several nationalities.

Self-determination can lead to quite different results when exercised by different nations. It often affects the welfare of neighboring nations, national minorities and the population of mixed border areas. Thus, a liberation policy, to have meaning as propaganda and as a basis for post-liberation planning, must undertake to state how self-determination is to be applied in specific areas. Since we cannot consult the public in Communist-occupied countries, Americans must accept the unpleasant task of passing judgment upon the arguments and proposals of the various exile groups and on the personalities and motives of the exiles themselves. Whatever decision is made will provoke bitter criticism.

Even those agencies which proclaim most loudly that they do not judge or predetermine do so nevertheless when they select certain extles and reject others for employment in their radio stations and research projects. The extle with a well-paid professional job has money and time for politics and propaganda, whereas his confrere who drives a taxi or washes dishes is practically excluded from these activities. Every personnel decision involving an extle is in fact a choice affecting the shape of post-liberation Europe. Either we choose deliberately and with thought for the future, or we pick exiles with nice manners, who speak good English and "know the right people," and accept uncritically whatever policies they choose to serve up.

There is, of course, a danger that the attempt to apply self-determination to specific problems may degenerate into mere expedi-

ency which renders the principle itself meaningless. To avoid this contingency, it is necessary to examine the concept for its moral essence.

Civilization is by nature complex, and complex ideas are hard to explain. Mental laziness leads us to refer to the sum total of civilized values by the shorthand symbol "anticommunism." This sloppiness of thought permits even convinced collectivists to call themselves anti-Communists. Such concentration on what we are fighting against rather than for is not only bad propaganda: It deadens the philosophical processes which are the beginning of effective statesmanship.

In spite of its diversity in ideas, customs, languages, and interests, Western civilization stands or falls on one central doctrine: The absolute value of human personality. Agnostic and atheistic humanists have secularized the idea of personality as an ultimate value in itself. Such philosophies are, however, derivative and truncated. Because they cannot explain why the individual is valuable, they are ineffective against the more consistent Marxist materialism. In the main body of Western thought, each personality is valuable because individually created by a loving God, to whom each of us is responsible for what he does with his life.

The free society is based upon a central religious idea. Once human personality is accepted as of a supernatural value, the social problem is that of arranging the natural world so that human beings enjoy their God-given rights to life, liberty, and the pursuit of happiness. Some institutions, such as the family and the church, have a sacramental foundation. Others, such as the state, may and should support religious values, but are essentially secular in themselves.

Free government is based upon the self-determination of the individual within a divinely determined moral order. The tribe, the city-state, the medieval empires, and the modern nation-state are secular institutions. If they achieve moral worth as values and symbols, it is because they serve the development and expression of the human personalities which compose them.

In pre-Christian Europe, the only forms of social organization higher than the family were the clan and the tribe. The emperors and kings of the Middle Ages converted the Germanic, Slavic, and other peoples of Central Europe and organized them into dynastic monarchies. The local lords often shifted allegience from one monarch to another, so that boundaries were in a constant state of flux. Nobles and knights felt no repugnance against monarchs of other language or tribal orgin, and they were equally ready to fight against their closer ethnic relatives.

Nations as we know them today did not appear until early modern times. Only after the French Revolution did the idea take hold that each nation should have its own independent state. Since Central and Eastern Europe had been settled and organized on a tribal and dynastic basis, modern nationalism provoked a century of conflict culminating in two world wars.

Today, the nations of Europe have become genuine social organisms which express the personalities of their members. Since most Europeans are nationally conscious and treasure their national languages, cultures and traditions, the liberation of Central and Eastern Europe means the liberation of nations. The nations have a positive and important value for American policy, but this value is not necessarily absolute or eternal.

The "life, liberty and happiness" which the enslaved peoples of Europe seek are importantly but not entirely related to their national communities. Cultural and civic interests are national: Europeans want to use their own languages and follow their own customs at home, in the school and church, and in community life. They want to be fully qualified citizens and not members of minorities subjected to discrimination or forced assimilation. In short, they want to be themselves. These objections can best be realized through self-government of national communities.

But Europeans also want a higher standard of living: greater quantity and variety of food, better housing and clothing and wider cultural opportunities. They want to use their skills and resources to best advantage through access to raw materials and markets. They want to share in the life of the larger European community, they do not like to feel "isolated" or "provincial." Finally, they want military and political security against possible future aggression.

Whether both types of objectives can be fulfilled by national states depends on the facts in the individual case. To establish an independent state which is politically and economically viable, a nation must inhabit a compact and well defined territory. It must be large enough to function as a unit in the modern economic and military world, and it must come to terms with other ethnic groups within its borders. If such states are to enjoy peace over the years, they should not contain irridentist areas the people of which desire annexation to other states. Nor can border problems be solved successfully by expelling or forcibly resettling populations.

The Ukraine presents clearly the conditions for a successful national state. Experience indicates that the Ukrainian people cannot enjoy free development as a nation under political union with Russia. Geography as well as history tells us that the Ukraine is more than adequate as a political, economic and military unit. While there are areas of mixed population and divergent economic orientation along its borders, the Ukraine does not present any specially difficult boundary problems.

specially difficult boundary problems. In the Danube Valley of Central Europe the situation is quite different. Here, the multinational Austro-Hungarian empire had been an efficient economic and military unit. A certain German predominance remained as a relic from dynastic times, but the Austrian Government had made noteworthy strides toward assuring the rights of nationalities in the Austrian half of the empire.

When Austria-Hungary was carved up in the name of "self-determination," the successor national states of Austria and Hungary were too small to exist as economic units. They fell into a perpetual depression from which they never recovered. Masaryk Benes knew that an independent 'Czechla" would be an absurdity, and so they persuaded the Slovaks and forced the Sudeten Germans to join the new multi-national state of Czechoslovakia. The Prague Government tried to administer this artificial structure as though it were a Czech national state, with the result that Czechoslovakia fell to pieces when subjected to external pressure.

The nationalities of the Danube Valley are settled in such irregular patterns and so intermixed that national-state boundaries, however they are drawn, are certain to cause conflict. Any division into national states with resulting "minorities" would deny large population groups their rights of self-determination. Economically, the valley cannot prosper unless it is unified. Czech and Hungarian farmers and miners are natural suppliers and customers for the

factory workers of Vienna. The consumergoods industries of German Bohemia need Austrian and Hungarian markets. Politically, only a consolidated Danube state would be strong enough to prevent eventual domination of the valley by the Reich or to support a free Ukraine against a possible aggressive move by Russia.

An institute to study problems of Danubian Federation is already functioning in Salzburg with Austrian, Czech, Hungarian, Slovak, and Sudeten German support. Major attention is given to assuring equal rights to all nationalities regardless of national boundaries (e. g. Czechs in and Bratislava, Slovaks in central Hungary, Germans in Prague and Brno). Federationists feel that with advance agreement on this point, the boundaries themselves will dwindle in importance. Conversely, if discussions of ethnic and federal relations were to be postponed as in 1918 until after the liberation of national states, boundary and minority disputes might so poison the atmosphere that federation would be difficult or impossible.

It is argued that what exiles and Americans say and do may be of little importance; that after liberation, "homegrown" political leadership will make its own decisions. Actually, political exiles (for instance Lenin, Masaryk, Benes, Sforza) often have been successful in assuming or returning to power. It is quite conceivable that after a Soviet collapse an American military government may have to call the shots in any case.

Self-determination cannot be exercised until after political discussion, and today such discussion is possible only in the free world. There is much opposition to Communism and Russian imperialism behind the Iron Curtain, but it is largely inarticulate. Although the enslaved peoples will ultimately have to make their own decisions, American and other free radio stations have an important role in preparing them for doing so. It is essential that public opinion be molded in such a way that the forces of freedom all pull in the same direction.

Since states are means for achieving the free society rather than ends in themselves, Americans must be discriminating in drawing upon nationalism as an ideology to set against Communist propaganda. Nationalism is, no doubt, an explosive force, but will it explode in the right direction? It was, for instance, Czech nationalism, expressed in the desire to outmaneuver the Slovaks and the Sudeten Germans at all costs which led President Benes and his London exile government to sell out Czechoslovakia to Soviet Russia. Both German and Polish nationalisms were at fault in the dispute which set off World War II, and only Polish-German cooperation can secure unity of free forces today and peace in Northeastern Europe tomorrow.

In policy planning for Central and Eastern Europe, and in the selection of exiles to speak over American radio stations, encouragement should be given to that type of nationalism which seeks free development of national character and culture, and which recognizes the equal rights of other nations. The kind of nationalism which demands expansion of territory and power at the expense of others should be just as strongly discouraged.

Liberation is much more than merely driving out the present Communist dictators. It is the creation of a moral order without which true freedom is impossible. The specific measures required for this objective may be quite different in various areas—here a national state, there a federation and perhaps somewhere else an international district.

Americans are not infallible, but if we want to win this fight, we must accept the task of leadership which has been thrust

¹ For a detailed study of the growth of productivity and consumption in Austria-Hungary before 1918 and economic decline in the successor states after that date, see Frederick Hertz, The Economic Problem of the Danubian States. London, 1947, Gollancz, 223 pages.

upon us. To give American policy and propaganda positive content, we should take the initiative. We should sit down with our exile and expellee friends and work out provisional solutions to Central and Eastern problems which seem fairest to all concerned, and then bend our efforts to securing maximum support for this program.

A National Scholarship Program

EXTENSION OF REMARKS

HON, FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, I introduced a bill, H. R. 2211, on January 13, 1955, "to establish a program of financial aid to students in higher education." This bill was first developed by the United States Office of Education about 2 years ago in cooperation with some 30 national organizations in the field of education.

It provides a program of Federal aid by two methods, scholarship stipends administered by State commissions, and student loan insurance administered by colleges

Under leave to extend my remarks, I insert herewith an article which appeared in the Washington Post and Times Herald of January 27, 1955, which treats with my bill. The writer is Miss Malvina Lindsay, one of the keenest observers of the American scene writing in Washington today. Her gentle wit and grasp of any subject with which she deals has earned her a solid reputation and a deservedly large following.

The article follows:

TUTELAGE OF THOSE WHO'LL RUN THINGS (By Malvina Lindsay)

The new educational regime of 17-yearold Prince Don Carlos of Bourbon, who may some day be dictator of Spain, Generalissimo Franco willing, may seem a formidable one to many a college freshman.

He's getting geometry, trigonometry, and in addition what is vaguely called "mathematics" all in one dose, also geography (general and Spanish), economics, international law, social sciences, gymnastics every day, and preparatory military studies. He already speaks five languages. Later he'll go 2 years to a military academy, 1 to a naval academy, and wind up with air force training.

and wind up with air force training.

There's no mention of history, literature, philosophy. They will be needed, as will also a very large dose of social science if he expects to rule wisely, or even hold his prospec-

tive job in the world ahead.

Other young royal students of Europe, including Princess Beatrix of the Netherlands, now 17, and Princess Margarethe of Denmark, now 15, prospective rulers of constitutional monarchies, are now tackling the tougher phases of their education for their responsibilities.

In the United States, where tomorrow's leaders are as yet unveiled, there can be no special education of any selected person or Persons for important tasks ahead. Hence, as many as possible of those who have potential talent for public life—as well as for eclentific achievement—need the chance to go to college

go to college. •

How to provide this has long been widely discussed, but has resulted in little action.

President Eisenhower, in his budget message, pointed out the need for highly qualified scientists. The cry for engineers and technologists is a familiar one. But there is even greater need for leaders on many levels to understand the social and economic rumblings now shaking the world.

Those counted on to take the helm—or rather helms—in this country can do best, it is generally felt, if left free to find their

talents and to develop them.

An extensive private system of scholarships now opens educational opportunities to many bright students, but not to a sufficient number. Chief reason is the scholarship grants have too many restrictions.

Many of them are regional, others are available only to certain groups, still others are confined to certain colleges and certain studies. Often they are awarded on the basis of competitive examinations, which means they frequently go to students who would have gone to college anyway. Probably their main handicap is their financial limitation. In 1946-47 the average private grant was \$187.

A plan for an unrestricted system of scholarships, which would make college education available to a much wider range of promising students, is embodied in a bill introduced in the House by Representative Frank Thompson, Jr., of New Jersey. This was developed 2 years ago by the United States Office of Education in cooperation with about 30 national organizations in the field of education.

It provides a program of Federal aid by two methods, scholarship stipends administered by State commissions, and student loan insurance administered by colleges. Scholarships would go only to promising students unable to pay for higher education. No stipend would exceed \$800 annually and amounts would be granted according to need.

While even the highest stipend granted would not pay the full cost of a year at college, it would make the difference to many a bright student between staying on in college and falling out. It would enable many a talented high-school graduate to go on to college with some help from parents or from his own efforts. The loan insurance program would eventually be self-financing.

The top two-fifths of high-school graduates, as ranked by grades and intelligence scores, are regarded as especially desirable college material. In this group there are currently about 342,000 high-school graduates, according to the recent report, America's Resources of Specialized Talent, of the Commission on Human Resources and Advanced Training. Of these about 51 percent, or 174,000, enroll in college; 168,000 do not.

The will and ambition of students as well as their IQ's must be considered in any scholarship program. But it is estimated by educators that under a broader scholarship program the proportion of the top two-fifths who would seek to multiply their talents rather than bury them would be raised at least from one-half to three-fourths. Even that increase has great implications for the Nation's future supply of leadership and trained talent.

Suspension of the Copper Import Duty

EXTENSION OF REMARKS

HON, DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. REED of New York. Mr. Speaker, a bill, H. R. 3202, I have introduced today extends until June 30, 1958, the suspension of the present import tax on

copper. The present suspension will expire on June 30 of this year.

The bill provides for a 3-year extension rather than a 2-year extension. Otherwise, it is identical with the bill which I introduced last year. It is confined strictly to copper and should not be confused with the import tax on lead or zinc or any other mineral or metal. It is confined strictly to copper because the copper situation in this country is in a class by itself, with problems peculiar to that industry.

This bill, in continuing the law which expires on June 30, also provides the same appropriate safeguards to our domestic producers by requiring the termination of the suspension in the event the price of copper should fall below 24 cents per pound and remain at that level for a period of 1 month.

Last year I said:

America's high standard of living is, in part, dependent upon an adequate supply of copper. Similarly, our national security demands that copper be available for the manufacture of the implements which help to guarantee that security. Employment of millions of industrial workers is bound up with copper. More than half of the free world's supply of copper is consumed in the United States. Our strategic metals stockpling program also depends upon an adequate supply of copper.

There is not only no reason for medifying these observations, but, if anything, the world situation today emphasizes the validity of my remarks. Despite the fact that efforts are continually being made to expand domestic production, the additional tonnage being achieved will still leave a wide gap between domestic mine output and our requirements. The simple fact is that the domestic supply deficit—the difference between domestic crude production and deliveries-has been continuous since 1940 and averages one-third of our copper requirements. This deficit must be compensated for by imports, 85 percent of which come from the Western Hemisphere. If anything, the supply of copper is tighter today than when we last acted on similar legislation.

I have reason to believe that the continuation of the suspension has the support of the administration and of the overwhelming majority of the industry.

Research: A Great National Asset

EXTENSION OF REMARKS

HON, ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1955

Mr. WILEY. Mr. President, an article in the current issue of the Wisconsin Alumnus magazine describes the amazing variety of research work which is being carried on at the University of Wisconsin. Twenty percent of the total budget of that great institution is dedicated to research of all types.

It has long been my opinion that research in both the social and physical sciences is one of the distinguishing characteristics of the American way of life, and one of the most important contributing factors to our success as a nation. There at Madison, the effectiveness of research is being demonstrated throughout the entire year, as university scholars and scientists advance the frontiers of man's knowledge.

I ask unanimous consent that the text of this article be printed in the Ap-

pendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROLE OF RESEARCH

The average Wisconsin student, as an undergraduate, is likely to be little concerned with one of the university's major functions—the uncovering of new knowledge through research.

Not directly concerned, that is.

For his professors are active in research and scholarly effort. They have to be, just to keep up with their fields.

And with a constantly freshened outlook, teachers engaged in research can bring to their students a depth of teaching that is

invaluable to both.

It may even be said that some of our average student's best professors are teaching at Wisconsin largely because of the research freedom that's offered to them. The drawing and holding power of this intangible, together with availability of such research facilities as libraries and laboratories, is often as instrumental in keeping top professors contented as are the practical considerations of salary scale and housing conditions.

Probably the undergraduate's unfamiliarity with the wide scope of research activity at the University of Wisconsin is shared by most of the State's citizens. Certainly as this committee approached its task, it viewed research work in many fields as something of a rather nebulous nature. But we discovered many unsuspected things in our tour of university research facilities and in interviews with research people ranging from

deans to graduate assistants.

WHAT IS RESEARCH?

Research has been defined simply as "an effort to do things better and not be caught asleep at the switch." That's probably an apt definition, and translated into Wisconsin research it means such things as-

Successful identification and isolation by university blochemists of a substance in floral sweetpeas that causes a disease when eaten by humans or animals-a project instigated at the request of medical men who now see in the discovery the makings of an attack on arthritis and hardening of the arteries:

Development of a new natural cheese, procured with almost no hand labor and therefore will be cheaper for the housewife;

A new legal code for the State emerging from a cooperative effort among State government, bar association, and university research workers;

Greater efficiency in school administration

and in teaching techniques;

More chance of winning the battle against cancer; Wisconsin has the third largest cancer study center in the world; or

Better understanding of the reasons behind political and economic trends in Wis-

Research is often broken down into two types-basic research and applied research. It's the job of basic research to establish the basic facts of nature and human behavior that may be used as a launching platform for the more spectacular and more easily evaluated applied research.

Often there is but a thin line between basic research and that called applied. Not

only is the former fundamental to applied research; many practical discoveries are made by scientists with no definite inten-tion of finding anything of the sort at all. (Scientists have a name for this art of finding things one is not looking for-serendip-Some folks possess the art to a greater extent than others.)

In the university exists a further break-down of research. There is budgeted research, supported specifically by funds from State appropriations, gifts, Federal aids, and contracts. Most of this is scientific in nature.

Then there is related research, which the university expects of all its teachers . Funds for these projects (all closely related to their teaching function) are not reflected in the research budget, but are a part of the in-struction budget. By far the greatest per-centage of this is basic research or scholarly

Yet there is often a relationship between budgeted and this so-called related research, particularly in the natural sciences. fessor spending his allotment of related research time may be engaged in work similar to that which he is following in budget research.

WHY RESEARCH?

While the university feels strongly that good research pays off in good teaching, there are other strong arguments the university offers to point up the importance of research.

Probably it's not even necessary here to elaborate on the vast contributions that organized research has made to technological progress and our American way of living. was research, for example, that brought down the price of penicillin so that \$100 worth in 1943 would cost only a nickel today. As a matter of fact, it was hours and years of pure research that in the first place made it possible to discover the beneficial effects of that drug.

The State of Wisconsin has long recognized the importance of research and, by statute, Wisconsin specifically designates research as one of the functions of the university. It has gone further than this, and since 1919 has consistently appropriated money for general unspecified university research. The university declares that these appropriations (\$2 million in all) have been largely instrumental in building up a research tradition at the institution and in attracting more funds in the form of gifts and grants.

The university feels, too, that in order to carry on an informed mission of public service in agriculture and in other areas, continuing research is necessary to solve the prac-tical problems facing the people of the -not only through its own extension services but through other State agencies and private practitioners in various fields.

THE HOW OF RESEARCH

Research at the university doesn't "just happen." This is becoming more and more evident as research projects become more complicated and call for assistance knowledge from workers in various fields. The value of the close physical relationship between various colleges on the Wisconsin campus became apparent to this committee as it studied the interchange of resources among specialists in various fields-a process the university calls cross-fertilization.

Of course, there does have to be a starting place for research—the idea. After this comes an investigation-for while duplication in research effort is commonly supposed by the public to occur, upon analysis it's clear there's little to be gained by any investigator in repeating work done by others, except where duplication for checking purposes is desired. So the research worker maintains close ties with other workers in the field, through technical journals, meetings, and personal correspondence.

There are further questions: Is time available for investigating this new idea? money? How does it stack up against other ideas in apparent importance? If these first questions each get a "yes," the answers are still only tentative, because the project must be reviewed by department heads and deans if appropriations are needed. If no cash outlay is required, the chain is not so long.

It is the dean's task to pass judgment on the various requests and he then tries to keep his own fund requests at a reasonable level—that being defined as the most he can expect to get. What he actually gets, of course, is up to the university president, the board of regents, and the legislature.

Probably most budgeted research funds go toward salaries of research assistants, who offer minds as well as hands in providing the equivalent of the technical assistants used in industrial research. Some technical assistants are employed in the university, too, where the work is routine and not particulariy associated with a learning experience. It is possible, university officials say, that more money spent on stenographic help one form of technical assistance-would be of considerable value in relieving professors of routine detail.

In some instances, equipment costs represent a major outlay in a series of research projects. In many cases, however, researchers use joint facilities like the election microscope, the Numerical Analysis Laboratory, or farm plots. The university feels that the availability of these general-use facilities represents an important saving.

Ordinarily the university's role in research stops short of the development stage-that's left to commercial agencies. The true to a large extent in diagnostic work; there is no particular desire on the part of the university to compete with private

agencies. No single individual or group solely benefits from university research. All research findings-regardless of the source of supporting funds—are public property (excepting, of course, certain classified work undertaken for the Federal Government). are given as wide distribution as possiblethrough the University News Service and over the State broadcasting service stations and on WHA-TV, as well as in professional tournals and at meetings. Occasionally they find an outlet in books published by the

University of Wisconsin Press. As far as the individual professor is con-cerned, there's not much gold in the hills of It's usually not worth the effort research. of a scientist to take out a patent on a discovery; he would have to worry about establishing it legally, selling it, and waging a constant struggle to keep it from being infringed upon. And for what? Only 4 or 5 out of more than 50 Wisconsin Alumni Research Foundation (WARF) patents have brought in substantial sums, and only a dozen more have broken even with patent and developmental costs, The research worker also is aware that any development probably has been made almost entirely on State time. Occasionally, WARF assumes a patent, and allows the researcher, or research team, about 15 percent of net returns—if any. With all this, it has become traditional at Wisconsin that discoveries should be made public and no individual patents be taken out.

The average faculty member is much more apt to make some extra money as a consultant to some commercial firm than as an inventor. The university takes the position that a man's recreational time is his ownand if he wants to spend some of it in work, that's all right as long as it doesn't interfere with his university work. The whole subject, however, is considered a constant problem all over the Nation and an American Association of Universities committee is presently studying it (under the chairmanship of President E. B. Fred). University officials declare that

"the Wisconsin faculty has shown remarkable restraint in consultative work."

It is understandable why the university

feels it's at a disadvantage in ruling on extra income sources; in many cases, professors are making considerable financial sacrifices remain in teaching and research. And it is natural that usually the best staff members receive the most opportunities to do private consulting.

RESEARCH MONEY

About \$222 million is spent in this country every year to finance research in institutions of higher education. Of this amount, the Federal Government supplies on the average of 60 percent of the funds (and earmarks 95 percent of this for developmental research).

At the University of Wisconsin, the ratio of Federal support of research is considerably less than the national average, standing at 25 percent. University officials see two main

disadvantages to Federal support:
1. Federal support could easily turn into Federal control—there is less danger when reliance is placed on a variety of fund sources; and

2. Should national legislative policy drastically reduce research appropriations, a federally supported research program would be

left high and dry.
So at Wisconsin less than one-half of budgeted research funds is State appropriated (75 percent of these funds go into agricultural research). The other half comes from gifts and grants.

One-half of these gifts and grants funds earmarked for research comes from Federal One-fourth comes from the Wisconsin Alumni Research Foundation, and the

balance comes from other gifts and grants.

The grand total for all budgeted research in 1952-53 was \$5,595,694.

Since 1928 the Wisconsin Alumni Research Foundation has given more than \$8 million to the university, of which nearly \$6 million has gone directly into natural science research. (The other \$2 million has been used for special equipment, building amortization, fellowships, and the support of symposia.) Most WARF income has come from the vitamin D discoveries of Dr. Harry Steenbock, but the foundation also administers and develops other patents and conducts product testing. It would be difficult to overestimate the important part WARF has played in developing the university's research program.

Regardless of the source of research gifts and grants, professorial salaries are rarely paid from these funds. If the university is to have control over the research, it feels it must pay the salary of the principal investi-gator. There is also the chance that cutting off of any substantial amount of gift and grant funds would mean a very difficult adjustment in the faculty.

THE FUTURE OF RESEARCH

Indications are that the stockpile of basic knowledge is running low. The need for this country to keep up with the rest of the world in discovering this knowledge is Obvious. Traditionally, and successfully, the universities of this country—both private and public—have played a vital role in the Overall research pattern. Now, of all times, Wisconsin, and other States, will have to share the burden, or the Federal Govern-ment will be forced to step in to fill the

A large percentage of Wisconsin research, of course, is directed at problems of par-ticular consequence to this State. The university is pushing ahead steadily, and once in a while dramatically, in such fields as milk marketing, cranberry processing, statu-tory code revision, educational counseling, and sewage disposal. The list of research projects now underway runs into the hundreds.

In most fields research is becoming more complex than ever. In medical research,

for instance, it requires a team of scientists to make any substantial progress in the treatment of heart disease. The Enzyme Institute (which is financed almost entirely from gifts and grants) is proving valuable as a site for training scientists even beyond the doctoral level. There is every indication that post-doctorate training of this type will become increasingly important as time goes on. While the university estimates it can continue to conduct this post-doctorate training and allied research from gifts and the Institution feels it important that the State should give at least tacit approval to expansion in this area.

Need for expansion of research effort in the social sciences and humanities, too, is a conviction of the university. The logic here seems evident upon considering that many of the world's problems are of social rather than technological nature. Fortunately, social science research techniques probably will become more efficient—al-though more expensive—with more use of electronic machines and other mechanical

TOO MITCH OF TOO LITTLE?

Presently about 20 percent of the university's total budget is used for research, The administration considers this a good balance from the point of view of stimulating instruction, and would like to have this ratio maintained-even in the face of a great increase in undergraduate enrollment. The point, it says, is this:

"It's easy to say 'transfer funds from re-search to instruction' but that takes into account neither the financial structure of research, the need for the development of basic knowledge, the close relationship between research and teaching, nor the detrimental effect on the future standing of the university.

The Late Erland H. Hedrick

SPEECH OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. FLOOD. Mr. Speaker, will the gentleman yield?

Mr. BYRD. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Speaker, it is fitting and proper that this solemn and dignified ceremony take place in this great form of democracy as a tribute from this body to the life and memory of one of West Virginia's most distinguished sons.

Not only do I extend my heartfelt sympathy to the people of the congression district represented for so many years, and so ably, by Dr. Hedrick, but I extend that expression of sympathy to the entire Nation. For while it is true. his home town, his constituency and his State lost a good neighbor, a firm friend, and outstanding public servant," the United States lost a great American.

As many of my colleagues know, Mr. Speaker, in this distinguished body some Members become more close friends than others. I shall always be proud to declare that Dr. Hedrick was one of my close and personal friends. I often wondered why Congressman Hedrick, a learned practitioner of the ancient and noble calling of medicine, entered the rough and tumble arena of politics. By

knowing the good doctor as I did, and as long and as well as I did, I know from his great heart and from his practice of medicine and from his knowledge and love of his fellow men, there sprang this desire to bring his understanding and feelings to public service.

In performance of our duties in our great Committee on Appropriations of the House, year after year, in moments of great stress of soul searching in matters dealing with the lives and fortunes of America, and therefore, the world, I saw Dr. Hedrick stand firm in his belief in his God and country to always do the right thing.

I have had occasion, in the performance of our official duties, to visit various countries of Western Europe in company with the distinguished Dr. Hedrick. His charm and great sense of humor and deep appreciation of other people and other problems, gave us an ambassador of good will to these other people at a time that they and we needed understanding more than any other

I enjoyed the visits made by me to the home of the good doctor and his gracious wife. Accompanied by my wife, who I am pleased to say is a dear and close friend of Mrs. Hedrick, both in Washington during our years there and since, the warmth and pleasantness of hospitality for which West Virginia is famous, was another cause for increasing endearment of our friendship.

And so today, with this solemnity in the fullness of my heart, Mr. Speaker, I can look toward the heaven and say to my good friend Congressman Hedrick in the words of the poet, which so well typifies your service to the people and your country:

So live, that when thy summons comes to leave that shore, which never yet has seen the image of a homeward sail, may perfect peace be yours, and where you lie dreaming know that you have not lived and have not died in vain.

A National Academy of Diplomacy

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks, I wish to include a letter from Paul Harvey and an excerpt from his news of August 29, 1954:

RIVER FOREST, ILL., January 24, 1955. The Honorable J. ARTHUR YOUNGER, House of Representatives,

Washington, D. C. DEAR MR. YOUNGER: Congratulations on your effort to get the Academy of Diplomacy off the ground. This must come if we are

to match wits with the world. I will be most honored if the enclosed con-

tribution is of any value to you in this effort.

Let me know if there is anything more I can do.

Sincerely.

PAUL HARVEY.

Now the rest of the story. Twenty years ago they warned us of global war. They were right. Today we are being warned of global suicide. Every peace treaty has been nothing but an option on a bigger war. What's the matter? We can whip anybody outdoors. But every indoor bout we get beat. Our warriors can fight to the Elbe River. But our diplomats stop them there. Our soldiers can slug their way from Pusan to the Yalu. But our statesmen retreat to the 38th parallel. GI Joe American drags himself on his belly all over the bloody map of Asia while some Simple Simon in striped pants is giving it away over a cup of pink tea. We are entitled to a National Academy of Diplomacy. The men we train to die for our country are dead for nothing unless we have other men trained to win the peace for our country. If we can afford to put men through West Point and Annapolis and the Air Force Academy so we'll have capable officers to lead us in war, then we owe them an academy to qualify Americans to lead us to peace.

Listen to these honored names in our military history: Concord, Valley Forge, San Juan Hill, Argonne and Belleau Wood, Dakar, Normandy, Guadalcanal, Iwo Jima, Inchon and Pusan and Seoul. We won every one. Proud names. Names to make an American's

Listen to these names from our recent dip-Iomatic past: Yalta, Potsdam, Tehran, Quebec, Dumbarton Oaks. Places where we divided Berlin, sold out Poland, picked Tito over Mihailovich. Places where we forced repatriation, demanded unconditional surrender. Places where our President sat with a lean young traitor at his elbow and par-

celed out the world to our paper allies.

Ever since we recognized the bloody-rag flag of Red Russia in 1933 we've been spending our sons and winning wars and losing ground anyway. Every time one of our mag nificent military men got our enemies on the ropes, some compromising civilian policymaker has pulled the rug out from under him. Mind you, we should have a terrible feeling about people of this sort. Every time a Wedemeyer or a MacArthur, a Patton, a Van Fleet, or a Clark, or a Lawton has started to chase our enemies back home where they belong, somebody benched the winning pitcher. So we've lost a hundred million additional friends every year to communism since the war.

We need skilled diplomats. We desperately need capable, loyal, cagey, all-American diplomats. The kind who can go to the conference table with a poker face and a marked deck and an ace up each sleeve. kind of diplomat who would be as American as Churchill is British. And, mind you, I respect him for it. I'm proud of Winnie when he looks out for his people first. Now I'd like to see a few American statesmen

unafraid to wave the American flag.

Did you know that through the darkest days of World War II in the Pacific the Stars and Stripes were flying over the enemyoccupied Philippines? Because way up there in the jungle fastness of the Zambales Mountains of Luzon a handful of cavalrymen never gave up. They knew they'd die if they were caught, but they sweated it out. And on sunshiny days when the mountain passes were free of the enemy these American boys would unfurl Old Glory and let her fly in the breeze, lying there by the hour feasting on In 3 long years of enemy occupation of this territory the colors of our 26th Cavalry were never hauled down. Why, when Manila was being liberated and those boys made their way back through the enemy lines to present that flag to Gen. Douglas MacArthur it shook every man present to the marrow of his bones. Don't you promiscuous internationalists tell those lads not to wave our flag. I say if we'd had a handful like 'em running our diplomatic corps we'd never

have had to face that ignominious Good Friday at Panmunjom, where American lives were spent for nothing while our courage was left on base in New Mexico.

We need an academy of diplomacy now. We're alone and we're outnumbered. If you march Chinese, double-time, past a given spot four abreast and kill them all as they come kill them off 4 by 4 and every second, they'd still keep coming forever. We can't match that production. We don't breed fast enough. We're outnumbered and still we're scattering our strength when we should be concentrating it. Our sons are ordered to march in every direction while our diplomats advance to the rear. We need a national academy of diplomacy, which would select young men the way the FBI selects them—for qualifications suited to their assignments—not egg-head intellec-tuals of mongrel allegiance. Weed them out right at the beginning. Weed out the rum pots and the blabbermouths before they are assigned to the State Department, not after; and staff this institution with a faculty of tested and proved career Americans. Borrow for 2 years some of the capable, loyal, civilian professors and instructors now at West Point and Annapolis. Salvage the experience of that large number of retired military officers who have seen diplomacy at work and had to fight when it falled. But don't leave the faculty selection up to the politicians or we'll be right back where we are now. We need taint-free diplomats, not some ward-heeling puppet who has sold 150 percent of himself like a broken-down boxer.

At the national convention of the American Legion in Washington this coming week. Minnesota National Commander L. J. Willett is going to ask the American Legion's endorsement of a national academy of diplomacy. Maybe this is a start. If you have a delegate there, urge him to support this reso-

lution.

Back in my native Oklahoma, the Osage used to say, "White man fool Indian once, shame on white man. White man fool Indian twice, shame on Indian."

American Joe has been fooled too many times into fighting in too many jungles and rice paddies, in too much mud and up too many mountains, trying to win the very things his uncertain civilian leaders were giving away. It would be funny if it were not so terribly tragic.

So they shoot down our planes and imprison our citizens and ignore our protests. The right diplomacy could convict them for murder, but ours can't even get an indict-

Then when our disillusioned friends turn on us, we try to put out the fire by piling

on paper money.

In the three-and-a-half thousand years of recorded history, 8,000 peace treaties have been broken. Yet we continue to sell out our tangible resources and our irreplacable young sons in exchange for these worthless scraps of paper. Let's siphon off just one of those billions we're giving our friends and give our own next generation a break.

Give our own children a chance to be represented at the bargaining table by someone who knows what he's doing and who's doing it for us. Let's groom some Americans who know that red is more than a color and Hiss is more than a sound. Let's get our diplomats out of those little tweed panties and into some blue serge. And then him grow into them before we turn him loose to wage peace. Let's train and equip some solid, flag-waving fundamental Americans who are of one definite sex and one permanent allegiance. Men who will fight only to defend our national honor and our national security and then fight with every weapon in the newspapers to win.

United States of Americans have been smart enough to split the atom. To force matter itself to give up its secrets. But the

Kremlin's tyrants were enough smarter to pick our pockets of our secrets and talk us out of our warships. Remember Hitler lost with all his cannons. What Goebbels took with his typewriter. The strongest arms won't open a catsup bottle. But any housewife with know-how can.

What I'm saying is if we stay strong and get smart we can survive. Listen. There are 15 million Soviet citizens in slave camps. Fifteen million. That's 1 in every Russian family. The Soviet peoples are being forced to live under their own military occupla-tions. They're going to get mad. They're going to change management one of these days. Dictatorships always do. They die because they are rotten to the core. Remember that. Dictatorships are always most vulnerable deep within their borders. heaven's name let's quit attacking them on their fringes where they are strongest.

We need a National Academy of Diplomacy With only 100 percent Americans qualified to teach or to enroll. For only a total American is a fit opponent for a total Communist. We need men groomed to give our enemies some straight talk and us some straight

It's getting dark fast. We're close to the edge. Down there and just one step away from here is a super chamber of horrors Right in front of us and just one step. We can't feel our way any longer. We need lead-ers who are schooled, trained, who know their way around. History's pen is in your hand, Americans. You must write the rest of the story.

The National Legion of Greek American War Veterans

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. PHILBIN. Mr. Speaker, on October 1, 1954, I was very much privileged and highly honored to address a meeting of the National Legion of Greek American War Veterans at the 71st Regiment Armory in New York City. I am indebted to this outstanding organization of war veterans of Greek-American descent because at this meeting. I was honored with an award of the Cross of Merit of the Greek Legion.

In attendance were the national officers of the Greek Legion, National Commander Denys K. Zongos, Adjutant General Perry Voultsos, and members of Greek Legion Posts 1 and 3 of New York City and Ladies Auxiliary Post 2. Special guests included Col. K. Stefan Pomierski, the Very Rev. Canon John Malinowski, Commander Gust Zapnukayas of Post 1, and Mrs. Elizabeth Contogeorge, commander of Ladies Auxiliary Post 2.

Lt. Col. Perry Voultsos, adjutant general of the National Legion of Greek American War Veterans, made the presentation of the Cross of Merit and under unanimous consent, I include his remarks in the RECORD:

As a fitting reward for your concrete friendship and championship of the Greek cause wherever needed, for your everlasting moral support and undying affection for the Hellenic people, it is my sincere pleasure and proud privilege to present you, Congressman PHILIP J. PHILBIN, with the Cross of Merit of the Greek Legion, with the assurance that your name has been hewn in golden letters on the centuries-old granite of Grecian history along with the names of many other American Phil-Hellenes who championed the cause of Hellas, such as Daniel Webster, Howe, and Clay.

Mr. Speaker, I also include in the REC-ORD the text of my remarks at this memorable meeting of the Greek Legion:

REMARKS IN PART OF HON. PHILIP J. PHILBIN, OF MASSACHUSETTS, ACKNOWLEDGING RE-CEIPT OF AWARD AT CEREMONIES OF GREEK AMERICAN WAR VETERANS, NEW YORK CITY, OCTOBER 1, 1954

Colonel Voultsos, Canon Malinowski, Mr. Pomierski, distinguished guests, and members of this outstanding pro-American organization, it is very difficult for me indeed adequately to express my appreciation for the great honor you have conferred upon me, but I want you Colonel Voultsos, and all your associates and members, to know of my undying gratitude for your kindness, confidence and esteem. You may be sure that I accept this honor with fullest humility and with the recognition that it carries with it not only your approval of my contributions to the veterans and to the Nation and to all your people, but also a very high responsibility to continue to stand loyally and unflinchingly in the Congress for those great causes of government and humanity In which we are mutually interested, and which are of such moment to the cause of free government.

It is not my purpose tonight to burden you with extended speech. But really if I were Demosthenes I could not possibly impress upon you the very deep feelings of appreciation and the renewed sense of dedication which your most distinguished award has prompted within every ounce of my being.

Your organization, and its superb leadership is serving a very high purpose for this Nation. It has grown out of devoted service and unselfish sacrifice. It is based upon a demonstrated loyalty to our beloved country which will ever serve as an inspiration to all our citizens. It aims to serve in peace just as its members have served in war with fullest concern for the well-being, the safety, the security of this Nation and for the establishment of a just and lasting peace.

We live in a time of greatest peril. We are beset by an evil worldwide conspiracy that seeks the destruction of human liberty and aims to impose a thralldom and slavery upon free men and women everywhere. cannot be too vigilant in ferreting out the active agents of this conspiracy within our own Nation. We cannot be too determined in a standing up bravely, courageously and militantly before the great dangers which this conspiracy has caused throughout the world. It is a time for Americans to recap ture something of the fine spirit and noble patriotism and firm resolution which enabled you and your comrades to defeat angreat tyranny which was afflicting mankind and visiting our Nation with the threat of destruction.

You of Greek blood have a great and mighty heritage. Americans all, who have stood the acid test of the highest demands of Americanism with courage, valor, and devotion, you are descendants of one of the greatest races of all history, a race, a nation, and a people that has been mighty in arms, mighty in spirit, mighty in learning, mighty in its democratic orientation, mighty in its democratic orientation, mighty in its immeasurable contributions to civilization. Above all, you spring from a people whose inspiring family life, whose loyalty to spiritual values, whose love of religion and belief in God, which has been practiced for

centuries, typify a truly great and truly outstanding nation. For the Greeks have feit, as civilized

For the Greeks have felt, as civilized Americans have felt and still feel, that worthwhile human progress and belief in God Almighty are inseparable. The doctrine that without faith in the Divine Master no nation can long survive is a basic feature of Greek civilization—a doctrine which must be recognized more fully by all peoples of the earth if communism is to be successfully fought.

The achievements of the Greek people ring down through the ages with clarion sound of glory and grandeur. Pericles and the Golden Age, perhaps one of the few periods in all time when the fine arts, cultural life, and individual development in political and artistic values flowed in such a favorable climate.

The famed Acropolis, an historic monument which symbolizes a great culture, which has profoundly influenced human beings throughout the ages, a place of refuge and the inspirational center of glorious olden Greece, the place where Christianity took new and vigorous root, a place which still inspires the Greek people and the free world.

And Aphrodite, the goddess of beauty, typifying the magnificent art of the Greeks, not only beauty in the physical sense, but beauty of the soul, beauty of ideals, beauty of thought and culture.

And if time permitted, I could go on ad infinitum enumerating the monumental accomplishments of the Greeks, and I think that these glories should be recited frequently not only by your own people but by all true lovers of liberty and culture, because they exemplify so appropriately and beautifully the long successful struggle of man from the cave to the culture and civilization we enjoy at the present moment.

And let me remind you, my friends, that prophecy in the world did not die with the Delphic oracle. Faith in high ideals and undying determination to uphold them did not die when the Golden Age passed into history. We have visible signs, even unto the present hour and in contemporary times, in the heroic fight-an incomparable uphill fight characterized by bitter struggle and bloodshed—the heroic fight of presentday Greece and the present-day Greek people against communism which recently has electrified and inspired the free world. And like the Delphic oracle of the past, the success of that fight is a prophecy and a prediction and an assurance that in the future, just as the Greeks have done, all democratic-minded, liberty-loving, God-fearing peoples in the world following the leadership and example of our own great Nation and joining in a great human brotherhood embracing all those who believe in the true dignity of man and the sanctity of the individual soul will militantly defend and preserve our equaled, our unparalleled, our incomparable institutions of democracy and justice.

Yes, my friends; I could tell a long story of the glories and the grandeurs of Greece, of the sacrifices and devotion and indomitable spirit of your forbears, the Greek pecple-a story of war and a story of peace, a story of invincible progress through bloody struggle, a story of peerless culture shaped by statesmen, warriors, orators, sculptors, artists, writers, musicians, the drama, the stage, the harp, and lyre, which sounded in the past a song of hope, strength, and cour--which united the Greeks of ancient times and now sound again, here and elsewhere throughout the world, to defy the unspeakable enemies of freedom and to rally true lovers of liberty to do battle against its enemies, to liberate the enslaved, to give new hope and inspiration to subject peoples struggling and suffering under the pall of persecution and exploitation and abominable discrimination that debases the dignity of man and disgraces modern civilization.

There is another side to Greek culture as it has influenced our own great country and that is its scholarship. The logic, the rhetoric and the aesthetics of Aristotle are as realistic and vital and meaningful today as when first written. The ideals of Plato still beckon to those who are pledged to scholarship and freedom of thought. In fact, if you should subtract Greek culture from civilization, there would be no civilization as we know it today because it is a primary cornerstone of our modern political, social and ethical life.

It is pertinent to note in connection with present trends in our own Nation which so greatly disturb us that the Greeks of old were not materialists. They were profoundly spiritual in their approach. They did not embrace mechanistic, sordid philosophies of the jungle which consign human beings to the status of the beast, of which we hear and see so much today. They were idealists, they had their feet on the ground and their gaze turned towards the heavens and for that reason, despite their many contributions to the material world, their greatest triumphs will be found, not in the world of matter or of substance, but in the world of thought and the world of thought and the world of thought and the world of the spirit.

Realizing these things, my friends, it is easy for any of us, except of course the Maxists Communists with their evil designs on personal liberty, to understand why with unquenchable purpose the modern Greeks against powerful revolutionary subversion have gallantly and successfully potected their free way of life. And we of America, greatest free Nation in history, may well be proud that our culture is enriched, ennobled and perfected by the presence and loyalty of so mony devoted industrialists, inspired American citizens of Greek heritage. of all our country is fortunate and blessed indeed to have men like you and the members of your organization and stanch Americans of every race, color, and creed who are fired with the patriotism, the loyalty and devotion to stand by our country in time of peril and need. With God's guidance, with wise statesmanship, with renewed dedication to the great principles of America, let us go forward to grapple with the problems of the present without fear, compromise or appeasement, confident that in time through adherence to our ideals and unselfish service to our Nation and interest in the common problems of humanity, loyally united to those of common bonds, we will find a way, not only to protect the security of our own beloved land, but to usher in an era of prosperity, security and peace for ourselves and all mankind.

Colonel Coultsos, I thank you one and all. Keep up the good work for the cause of Greece—a Greece again reunited with historic Cyprus and your invaluable work for America, our own great country and its cherished ideals of freedom, democracy and justice.

Veterans' Educational Benefits Should Be Extended

EXTENSION OF REMARKS

HON, HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. DONOHUE. Mr. Speaker, I desire to include at this time the statement I presented before the House Veterans' Affairs Committee on January 25, at the public hearings being held on H. R. 587.

The statement follows:

STATEMENT OF HON. HAROLD D. DONOHUE, OF MASSACHUSETTS, BEFORE HOUSE VETERANS' AFFAIRS COMMITTEE ON H. R. 587

Mr. Chairman and members of the committee, I want to thank the chairman and the committee for the courtesy extended to me and congratulate you upon the expediency with which you are acting to deal with a problem affecting the lives of so many of our military personnel and veterans. Of course, I would expect nothing less from the committee on which I have had the high honor of serving for several years and therefore know so well the industry and competency of its individual members. I have the happlest recollections of my membership here, particularly under the spirited leadership of the acknowledged champion of veterans' welfare, my distinguished colleague from Massachusetts, the beloved Mrs.

Knowing the arduous schedule of this committee, as well as the multiple personal duties resting heavily upon each member, I have no intention of transgressing long upon

your valued time.

I am here to urge you to promptly consider and approve, I hope unanimously, this bill to provide that persons serving in the Armed Forces on January 31, 1955, may continue to accrue educational benefits under the Veterans Readjustment Assistance Act of 1952.

I think everyone will substantially agree to the need and the merit of this measure which, to my mind, affords but simple justice to the patriotic men and women who are now in the service, or will be by the end of this month. Any action to suddenly cut off these educational benefits is practically a violation of an unwritten understanding and virtual promise by the Government that persons going into the armed services in this period would have the privilege of pursuing their educational ambitions with Government assistance upon the termination of their enlistments.

Not the least of the aims of this bill is to remove any doubts in the minds of the persons affected and to make the extent of their entitlements quite clear, and unquestionably it will serve to do just that. It will, therefore, lift the morale of these young patriots and assure them the Congress has no intention of summarily taking away any of the benefits to which they understood they had a right. I submit that it is vitally important, more especially in the light of recent unfortunate developments in the Far East, that the morale of our military personnel, their families, and dependents be encouraged to a high level, and this proposal is designed to accomplish that objective.

We all understand that the need of prompt action on this measure by the Congress is great. I shall not, then, attempt to complicate consideration of this bill by introducing any discussion about granting educational benefits to those who enter mili-tary service in the future. I think that serious thought should be given to the extended projection of such benefits and I earnestly hope the committee will devote its attention to that subject in the near future. If, by any chance, such provision was included during the coming House action on this bill, I would be inclined to favor it on the basic ground that no one, not even the President, dares try to foretell what will develop from the dangerous venture upon which we are now embarked in the Far East waters and islands. I trust, therefore, we will have an opportunity to imple-ment this legislation before too long, if the majority of the membership feels such action would be essential.

I realize full well that this committee will conscientiously act upon this proposal, and I earnestly trust you will determine to favorably report it to the House without extended delay, because it is most impressively meritorious and just on its face value.

My thanks again to you all for your kindness and courtesy.

Gen. Douglas MacArthur

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. DORN of South Carolina. Mr. Speaker, it was fitting that yesterday the American people and the Congress should pause to pay tribute to one of the greatest military commanders the Western Hemisphere has ever produced. Gen. Douglas MacArthur. General MacArthur did not serve in one war, but in a series of wars. He fought for his country during a long period of national crises.

Space will permit me today to mention only a few of his great achievements. It would take many volumes to enumerate them all. General MacArthur made a great contribution to the security of America when he was Chief of Staff of our Army in the early 1930's. By his personality, tact in dealing with Congress, and his foresight, he was able to maintain through those lean years the nucleus of an Army, an Army and Officer Corps around which was built the invincible war machine of World War II. Few men could have obtained the appropriations necessary to maintain even that small nucleus during those days of economic distress.

General MacArthur's brilliant stand in the Philippines gave assurance and renewed confidence to the free world in 1942 when everything seemed to be going against us. General MacArthur, as commander in chief of the Pacific, never received over a small fraction of American manpower, nor did he ever receive any more than a very small portion of the industrial output of this great arsenal of Democracy. Notwithstanding this fact, he was able, by superb strategy, to defeat one of the greatest military machines of all history. When the war closed in Europe, General MacArthur and his valiant men had defeated Japan under the most adverse of circumstances. We will ever be indebted to him and his commanders for saving many lives by their miraculous efforts in the Pacific.

In command of our occupation forces in Japan following the war, General MacArthur rendered no less a service to the cause of human freedom. He would permit no joint occupation of Japan by the Communists. This policy was a marked contrast to the policy as followed in Germany. General MacArthur forestalled communism in Japan.

General MacArthur's leadership during the Korean campaign is unsurpassed in military history. My only regret is that he was not permitted to destroy the armies and supply bases of the Red Chinese. Under his command we could have stopped, for this generation at least, aggression in the Far East. We

would have bolstered the hope of a chaotic and depressed world. There would have been no Indochina and no Formosa emergency today.

Since his service in Korea, General MacArthur ably brought to the attention of the American people the significance of the Far East in world strategy. For the first time, the American people began to realize that the Far East is the key to Europe and possibly to the whole world situation. The Communists will not dare move in Europe until they secure their Asiatic flank.

By passing the resolution on Formosa this week in this House, I believe the foresight of General Douglas MacArthur has been vindicated. I wish for him many more very pleasant and happy birthdays. I believe that as time rolls by, the true worth of General Douglas MacArthur to the whole cause of world freedom will be more and more evident.

Mr. Speaker, I commend to the House the following article by Constantine Brown which appeared sometime ago in the Washington Evening Star:

MACARTHUR'S ACTION DEFENDED—BOOK BY GENERAL WILLOUGHBY DOCUMENTS THE REAL STORY OF THE FRUSTRATIONS WHICH PLAGUED THE GENERAL

(By Constantine Brown)

At the time of former President Truman's abrupt and preemptory removal of America's great military leader, Gen. Douglas MacArthur, from command of United States and United Nations forces in the Far East, public opinion in the main was too shocked and confused to see clearly the basic considerations involved.

Charges and countercharges, attacks on and defense of the departing general came so thick and fast that the purveyors of clarity and truth had a difficult time making themselves heard, and the easily self-evident facts of the controversy were obscured in a smoke screen of politics.

But the truth has gradually made itself known, and the incredible situation of "war without victory" has been underlined by the humiliating armistice signed last year with the Chinese Reds at Panmunjom. Through the fog of distortion and misrepresentation, General MacArthur has kept his own counsel. He made his position plain on his return to the United States from Japan, giving the Congress and the people the benefit of the facts he alone knew best.

Now, some 3 years later, comes an authoritative book crammed with revelations on the Korean war certain to be a bombshell to those Americans who subscribed to the "wrong war at the wrong time in the wrong place" theory. The book, soon to be released, is MacArthur, 1941-51, by Maj. Gen. Charles A. Willoughby, General MacArthur's chief of intelligence during those years, and John Chamberlain. Publication date is to be September 29 by McGraw-Hill.

Here, in documented, cold, clear type, is the real story of the futility, the frustration, the unbelievable vaciliation and timidity in high places that our foremost field commander had to face in his determined attempt to carry out the duties of his office and win the war his political masters had handed him.

Here is the irrefutable proof to set at rest for all time the constantly repeated charge that General MacArthur crossed the 38th parallel after the capture of Seoul in wiliful and reckless defiance of his orders. The vote of the U. N. on October 6 giving the general the explicit approval for the move is noted, and the orders of the Joint Chiefs of Staff in Washington are quoted.

But of more dramatic interest are the staff notes taken at the time of General MacArthur's flying visit to Wake Island, in response to a Truman summons in the fall of 1950 before the Chinese Reds had intervened in force in Korea. Here another favorite canard of the MacArthur haters is exposed for what it is. The facts behind the well-publicized and completely false report that General MacArthur pooh-poohed the possibility of Red Chinese intervention, and pledged the return of American troops from Korea before Christmas are revealed in these notes to be at best the product of a brisk imagination.

The record shows all too clearly that General MacArthur's headquarters had warned Washington and the U. N. repeatedly and consistently that the Chinese Reds were massing troops north of the Yalu. Clinching evidence on the wariness of the supreme commander on this point is to be found in his instructions to the 8th Army on its advance north of the 38th parallel—that it was to be a reconnaissance-in-force with provision made at all times for an orderly and prompt withdrawal should the Chinese intervene.

Americans perplexed to know the reasons why our Nation fought a war with a hand tied behind its back will be sharply amazed to know, too, how well tied that hand was. The unbelievable spectacle of a great nation fighting an all-out war with its military forces strictly enjoined against taking any measures to blast the enemy's bases, with no reinforcements available, and with constant preoccupation with the prejudices and purely national interests of its allies acting as a prohibition against truly effective action, is not a pretty one. It is safe to say no other such war has ever been fought in the history of mankind.

Not only was General MacArthur forbidden by the JCS to bomb the Yalu River bridges a ross which poured the Chinese Reds in numbers affording them overwhelming odds against the battered American and South Korean armies, but the presence of Chiang Kal-shek's 5 million men in Formosa was neutralized by the Truman neutrality order which, in effect, guaranteed the Peiping Reds that Chiang would not annoy them. Two entire Red armies were thereby released from duty on the mainland opposite Formosa and promptly dispatched to the Yelu for war on American troops.

That General MacArthur was able, in the face of these fantastic impediments, to conduct the Korean operations at all was little short of a miracle. But the record in the book shows that he not only conducted them despite all the obstructionism and defeatism from his own side, but conducted them in the superbly skillful manner displayed in his masterful tactics and strategy of the Pacific in World War II.

If the facts are known, Americans everywhere should have no difficulty in correctly appraising the world Communist conspiracy and the steps so obviously needed to meet it. In the record of General MacArthur's conduct of the Korean war can be found, in startling detail, all the facts we need.

Postal Financial Balance a Theory

EXTENSION OF REMARKS

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 6, 1955

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I wish to include the following editorial which appeared in the January 25 issue of the Cleveland News, entitled "Postal Financial Balance a Theory":

Postal employees of Cleveland, through their national union chapter, protest any philosophy of hitching postal pay to the prospects of a self-supporting Post Office Department, and they have a good point.

partment, and they have a good point.

Despite some reforming of rates and financing to be credited to Postmaster General Summerfield and Congress, the Post Office operation remains in a condition of considerable imbalance. The practical reason is that to raise rates on second, third, and fourth class mail to the point of making them pay their separate ways would be to raise rates so high as to destroy the usefulness of these promotional classes to millions who use, and benefit by them. They can be raised, but not to a support level.

To hitch postal pay to these half-intentional useful debits would be an injustice to one of the best organizations of workers in

the world's history.

Not only that, but postal workers are committed by the law to non-post-office Federal work for which there is little or no postal remuneration—such as alien registrations, civil-service staffing, pursuit of lost military veterans, information service for every Government department, even service as treasurers and collectors for semipublic-welfare drives.

It is to the post office's credit that effective this winter, it begun to charge other Federal departments for frank-mail usage and to raise some rates. We are heartily for Postmaster General Summerfield's valiant attempt to make the post office financial balance closer than it has been during decades of abuse and imposition on the post office by all of us. We are for President Elsenhower's purpose of getting Congress to raise rates to take care of at least part of projected pay raises. That is only good business.

But if there is a class of workers who should be protected from injustice because of their general public-service spirit, it is the postal worker class. The News does not intend to advise that their salaries rest on a profit-and-loss accounting.

Rescue at Sea

EXTENSION OF REMARKS

HON, GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I include an article appearing in the Washington Post and Times Herald, January 27, 1955, concerning another Coast Guard rescue at sea:

FUEL LOW, PLANE BATTLES STORM AT SEA FOR 2 HOURS, DITCHES BY RESCUE CUTTER

New York, January 26.—In a delicately tricky maneuver, a crippled four-engine military plane covered hundreds of miles of stormy mid-Atlantic today, then ditched near a Coast Guard cutter. Eight aboard were picked up safely.

were picked up safely.

For an agonizing 2 hours and 21 minutes, the plane groped through storm and gathering dusk toward the Coast Guard cutter Coos Bay, a tiny speck on the vast, turbulent

Then, minutes before nightfall, the plane found its target. The pilot brought his craft down expertly on the heaving, gale-swept sea. Waves ran as much as 13 feet high, the

wind was at 40 knots. Lifeboats plowed to its side and the survivors were whisked to safety, 15 minutes after the landing.

Radio was the thin thread that brought plane and cutter together. The plane, bound from the Azores to Bermuda, lost 350 gallons of gasoline when a lever was accidentally thrown. Short of fuel and 1,000 miles east of Bermuda, there was no hope of making a landfall.

The pilot radioed Bermuda, said he was bucking vicious headwinds and despaired of reaching land.

The cutter, informed immediately, changed course to intercept the plane, meanwhile guiding the pilot in its direction by radio.

Then, in a race against darkness, the two converged across hundreds of miles of angry ocean.

The plane came within an eyelash of losing its race, for total darkness would have made a rescue all but impossible in such heavy seas.

The Coos Bay skipper is Comdr. R. W. Vaughan.

Aboard the plane, a Military Air Transport Service craft, were Capt. Paul S. Evans, its commander, of Jackson Heights, Long Island, N. Y.; 1st Lt. Jack W. Suggs, San Anselmo, Calif.; Capt. Edward L. Cobb, Cincinnati; T. Sgt. William H. Brooks, Jr., Sapulpa, Okla.; Alc Robert P. Hodge, Chicago; A2c Timothy R. Braun, Visalia, Calif.; Jenkins Elliot, a crewman; and Navy Lt. J. G. Bowen, a passenger.

Thirty-seventh Anniversary of Ukrainian Independence

EXTENSION OF REMARKS

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. KEARNEY. Mr. Speaker, the centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human history. indomitable will for national freedom clearly crystallized itself in the old Ukrainian Kievan state from the 9th to the 14th century, in the Ukrainian Kozak state from 1648 to 1783, and more recently in the Ukrainian National Republic from 1917 to 1920. As one of the first victims of Soviet imperialism, Ukraine, since the very inception of alien Bolshevik tyranny, has proved to be the Achilles heel of the Soviet Union. The destruction of its national churches, the horrible man-made famine of 1932-33, the mass murder at Vinnitsia in 1937-39. and the vast purges and deportations decreed by Moscow have failed to exterminate the spiritual and moral resources for national freedom in Ukraine. The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free, and independent.

During the Second World War millions of Ukrainian patriots seized the short-lived opportunity of the German invasion to realize once again this hope, only to be frustrated in their valiant efforts by the scourge of another imperial-

ism. But this unbending will continues to be strong and powerful in the epic struggle of the Ukrainian Insurgent Army-UPA-against the evil forces of Soviet imperialism, and in the resistance

of the Ukrainian people.

As a nation of over 40 million peoplethe largest non-Russian nation behind the European Iron Curtain-Ukraine stands as one of our most important and natural aliles in the eventual defeat of Soviet imperialism. Its historic claim to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free Europe of tomorrow must be assured, if the foundation of permanent peace among freedomloving nations is to be impregnable.

The Late Burnet R. Maybank

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1955

Mr. DORN of South Carolina. Speaker, I have never before seen the State of South Carolina so shocked and saddened when they learned of the untimely death of our senior Senator, Burnet R. Maybank. Senator Maybank dedicated his life to the service of the American people. It is true that he represented the State of South Carolina, but his leadership and ability was felt in every State of the American Union and by the entire free world. Senator Maybank was a casualty of overwork and service beyond the call of duty, the same as many of our gallant soldiers in time of war. He worked long and hard on the floor of the Senate and in the committees for the people he loved.

After military service in World War I with the Navy, Senator Maybank began his political career as alderman in South Carolina's chief city, historic old Charleston. He subsequently became one of the youngest and ablest mayors of that great city. While serving as mayor of Charleston he ran for the governorship of the State of South Carolina at the age of 38. He was elected over a host of aspirants for the governorship, several of whom had a strong statewide political following. During Senator Maybank's administration as Governor, the miraculous modern-day progress of South Carolina was inaugurated. His leadership as Governor greatly contributed to that progress. 1941 he was elected to the United States Senate to succeed his friend, James F. Byrnes, who was appointed to the United States Supreme Court. Burnet Maybank was reelected to the United States Senate in 1942. In 1948 he was elected on the first ballot over four opponents. As one of the candidates in that race. I came in contact with the splendid sportsmanship and fine spirit of our senior Senator. After this experience, I had a higher regard for Senator Maybank than ever before. In 1954 Senator

Maybank was elected without opposition. This was the first time in the modern history of South Carolina that a United States Senator had been reelected without any opposition whatever in the primary. Senator Maybank was one of the few men since the War Between the States to be Governor and Senator.

As United States Senator, Burnet Maybank fought, among many other things, for preparedness. He worked untiringly for a great Air Force, Army, and Navy. He believed that the only road to peace was for America to be strong militarily. He ably represented the farmers and the textile industry of the South.

Space will not permit even a mention of his many accomplishments for our country. It would take volumes to cover his career and service to his people. Senator Maybank had a pleasing personality and was liked by people in every walk of life. The people of South Carolina had the utmost-confidence in his honesty, integrity, and ability. He will be greatly missed in Washington and in South Carolina as time goes on. We formed a warm personal friendship and I miss him greatly in my work here in Washington. Our friendship began when I served as State representative and State senator while he was governor.

Senator Maybank reared a splendid son and two fine daughters. He was a devoted father and husband. He left his family a great heritage and tradition of service that will inspire them. Senator Maybank told me upon one occasion in the cloakroom of the Senate, "That it matters not whether you won or lost, but how you played the game." This was the philosophy of Senator Burnet Rhett Maybank. My deepest sympathy always to his wonderful wife and loyal family.

H. R. 1601, Regulating Practice of Lawyers and Others Before Internal Revenue Service

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. REED of New York. Mr. Speaker, I have reintroduced in the present Congress a bill which I first offered last summer to clarify and extend the authority of the Treasury Department to regulate the practice of lawyers, certified public accountants, and others who assist the public in the determination of Federal tax liabilities, preparation of tax returns, and in the settlement of cases in dispute with the Internal Revenue Service. The new bill is H. R. 1601. The need for it was explained in my statement in the Congressional Record of August 4, 1954.

Apparently there has been some misunderstanding about the nature and purpose of this bill. It would not change anything. It would merely clarify and reaffirm what is actually going on, and has been going on for 40 years, in the field of Federal tax practice. Such clarification and reaffirmation are necessary only because local courts have attempted to change the established practice by holding that certain phases of Federal income-tax practice, which have normally been handled by accountants, should now become the exclusive property of lawyers.

The principal purpose of my bill is to affirm the authority of the Secretary of the Treasury to regulate Federal tax practice. The bill would also reaffirm the intent of Congress, as expressed in the Revenue Act of 1942, that Federal tax practice should not be restricted to the members of any single calling or profession. This policy is as sound to-

day as it was 13 years ago.

The proposed legislation would not grant to anyone any rights or privileges he does not have today. But its enactment should help to clarify a situation which has become needlessly confused in recent years.

National Commander in Chief of Veterans of Foreign Wars of the United States Makes Nationwide Broadcast of Organization's National Beliefs-In This We Believe

EXTENSION OF REMARKS

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of an address delivered by Merton B. Tice, commander in chief, Veterans of Foreign Wars of the United States, over the Mutual Broadcasting System on the evening of January 26, 1955.

In accepting the invitation to present this text in this manner, I am advised that permission was granted by the national headquarters, Veterans of Foreign Wars, for use of any or all of the script by any person representing the organization who is called upon for addresses during National VFW Week which commenced January 23 and expires January

Mr. Speaker, I am sure that the history of this great patriotic organization, commonly and affectionately called VFW, is so well-known to all the Members of this great legislative body that it is unnecessary for me to say anything about it. With honor and pleasure, therefore, I present the distinguished national commander in chief's words as given on the nationwide broadcast during this significant National VFW Week:

IN THIS WE BELIEVE

It is a time-honored custom for civilized mankind each year to take stock, to formulate new plans. For organizations, as well as individuals, a new year provides a time for inventory, and a point of reference for the formulation of new objectives, with reten-

tion of the best of the old.

With this procedure in mind, the Veterans of Foreign Wars of the United States desighates the week of January 23-29 as a time to invite attention to that part of its new Plans that are believed to be in the national interest.

And at the top-legislative wise-were Placed the objectives of our organization in the vital field of national security.

This, because we are keenly aware of the Pitfalls and the perils of this fateful era in Which we "co-exist" in the cold war. Many areas—both in the Occident and the Orient are veritable tinder boxes that could spark the world to dreadful flame overnight.

Never in our national history has it been more necessary for America to be alert. And never has the strength and protection of our Armed Forces been of higher value to the Nation. The forces of the free world and hydrogen bombs comprise the major deter-

rent to open war.

We are told that an "atomic deadlock" may be expected in 5 or 6 years. Now what does this mean? It means—with but slight stretch of the imagination—that the United States and the Soviet Union could destroy each other-this in ultimate devastation, irrespective of which nation drops the first bomb, or fires the first shot.

And neither a slight superiority by either nation in bombs or manpower would—in the event of an "atomic deadlock"—affect the destructive result. These are awesome

facts-but they must be faced.

Only by maintenance of armed might with bombs and planes in readiness-will the catastrophe be deterred or averted. A wise man once said: "War breaks out overnight-but peace never does."

Robert Lovett, when Secretary of Defense, Put it this way: "We must make an effort to get the only insurance that works— strength." And he added: "We tried peace through weakness for generations, and it didn't work."

Because of the ever-present danger of national apathy in the critical field of national defense, the Veterans of Foreign Wars themed its 1955 program to the security of

the United States.

We submit, that: Without adequate security, all other American values-including representative government, individual freedom, social benefits, and economic resources—would be jeopardized. As citizens and taxpayers, we shall insist upon intelligent economy in the operation of gov-ernment, but will oppose "pinch-penny" economy at the expense of security for the United States, and reasonable care for those who have borne the brunt of battle, and their widows and orphans.

After serious study of our present defense Posture, and a consideration of measures proposed to strengthen it, we are agreed to favor strongly a system of Universal Military Training, or, in lieu thereof, a workable reserve program enacted by amendments to present present laws. The VFW, along with other major veterans' organizations, has been familiar with-and favored in general-the triple-barreled manpower plan and program recently submitted by President Eisenhower

to the Congress.

The creation, for the first time in our history, of a large combat-ready reserve is one of the most realistic steps ever taken for equitably sharing—in a democratic way the citizens' responsibility for the defense of the Union. Too often in the past we have bought time with the lives of men.

We favor the maintenance of the most Powerful offensive-and-defensive Air Force in the world, together with an adequate Army, Navy, Marine Corps, and merchant marine. We consider the National Guard Plan for defense against enemy sneak air attack well thought out and feasible. We

urge all veterans to do their utmost for civil defense. And have made our plans accordingly.

It may surprise you to learn that there are about 21 million veterans in the United States. Fundamentally, we base veterans' rights on recognition of their service to the past security and maintenance of the Nation.

Many are aged and ill. Therefore, in this category we shall urge the maintenance and expansion of the Veterans' Administration hospital and medical program in order to insure to the veterans of all wars adequate hospital care and medical treatment.

As an organization we hope that plans will be developed for the educational and vocational training of the dependent children of deceased combat veterans. (We support such a program by our VFW home at Eaton Rapids, Mich.) All such training of youth will greatly enhance the value of these young people to our Nation.

The decreased value of the dollar compels serious consideration be given to increased rates of compensation and pensions—with a liberalization of pension eligibility require-

ments.

We believe the housing loan program should be liberalized and its regulations more

effectively protected.

As overseas veterans we shall never forget what we learned in our military service. We all found out early that adequate and competent personnel-with good morale-promotes national security to a high degree. order to achieve this end now, we advocate laws that will restore fringe benefits previously granted members of the Armed Forces, and the expansion of hospital and medical care for their dependents.

It is the bounden duty of the Government to protect the rights of our fighting men in every reasonable way. For this reason, we believe that the most drastic action—short of war-should be taken, if required, to secure the release of all American prisoners of

war held by the Communists.

Yes, this is a critical juncture in our relations with the fanatical Communist world. However, don't you agree that the 11 United States airmen prisoners in Red China should be returned, and an explanation given of the 900 other Americans missing in Korea who have never been accounted for?

They who created this Nation were not

cowards-shall we be appeasers?

Furthermore, it is of contemporary relevance that we strongly oppose the admis-sion of Red China to the United Nations. In fact, many of us feel that United States prisoners in China are being held for the ransom price of admission to a seat in the United Nations. This is the way international gangsters do business.

As an organization, the Veterans of Foreign Wars has always supported the United Nations. On the other hand, it is felt that the sovereignty of the United States can be maintained only by a determined resolve to oppose all efforts to convert the United Nations into some form of utopian world gov-

ernment or Atlantic Union.

The time has not arrived in the history of nations when its most powerful and democratic state can safely delegate its vital state affairs to other nations—no, not even to those who profess to be our friends. Aid, advise, protect, and defend within the framework of our commitments, but let us do all this under the provisions of our Constitution-and at our direction. Our immediate defense problems must definitely be kept in our own hands.

In order to provide a time for thought on our national sovereignty, our Constitution, and the many freedoms it gives us, the VFW sponsors each year on May 1, Loyalty Day. Congress has been asked to designate it as such. It is a day of rededication to that which has made our country great—a time when free men and women may pause to give thought to a major American convic-

tion, denied by the Communists, that God gave us the right to freedom.

But one should also ponder-he did not guarantee it.

That poses the question, How may you and I maintain those libertles which it seems each generation must struggle for? On the collective action taken, on the collective answer of the people, depends our survivaland that of western civilization.

As Secretary Dulles said recently: "This struggle for peace cannot be won by pacifism, or by neutralism, or by weakness." And it could be added that inadequate prep-

aration means failure to survive.

A word as to the home front. A salient feature of our democratic system-and much commented upon by foreign visitors-is our zealous concern in the way of aid, care, and support of the aged, the unfortunate, the sick, and underprivileged. No nation in his-tory has ever done more for its people. There is still much to do.

We are generally agreed that in the field of community service there is room for allindividually, and particularly organizationally. Our highly effective community service program has grown through the years. In fact, it, and the loyalty day program, have won several top honors from freedoms foundation at Valley Forge. Basically, it is a program predicated on a citizen's responsibility to his neighbor and fellow man.

This duty of man to man has seldom been more practically exemplified than by the 80year-old Dr. Albert Schweitzer, the Alsatian born philosopher, theologian, and medical missionary to French Equatorial Africa. Nobel Prize winner—called the universal man of the 20th century—wrote:

"Whatever you have received more than others in health, in talents, in ability, in success, in a pleasant childhood, in harmonious conditions of home life, all this you must not take to yourself as a matter of course. You must pay a price for it. You must render in turn an unusually great sacrifice of your life for other life."

The great Schweitzer is proof of man's

kinship to God.

His work is the ultimate in community service and democratic endeavor.

He is a high exemplar of practical religion and the Golden Rule.

In this present death struggle between Christianity and communism-between all religions and Marxism-few will deny the all-powerful spiritual factor. As Americans, we believe in a world under God. We know that our Founding Fathers traced rights—called by them "unalienable"—directly to our Creator. We believe that the religions and ethics of Protestant, Catholic, and Jew lead directly to the altar of the One God.

The message of Christ was: "Love the Lord, thy God, with all thy heart, and thy neighbor as thyself." The message of Marx was: "Divide and conquer. Religion is for fools. Sow the seeds of hate."

It is because of the doctrines of Marx, Lenin, and Stalin that free men confront the most formidable challenge of modern history. Only force-in being-and the knowledge of great potential force, can stay the hand of international communism. Next, we believe, a spiritual revival, the force of vital religion, the faith of our fathers, will comprise the strongest vanguard against the spread of communism-while the memory of those who died for the country will inspire the living to maximum efforts to retain what our heroes have perished for.

The memory of those who fell at Lexington, Gettysburg, Chateau Thierry, in Africa, Europe, and those who died on distant isles and in the far wastes of the Pacific, will What an enormous debt we owe them. May their devotion to freedom's cause forever be enshrined in the warm heart of

America.

They, and such immortals as Washington, Jefferson, and Lincoln, gained and preserved the sublime spirit of liberty that underlies our Constitution—things beyond price: freedom of press and civic policy, freedom of speech and assembly, freedom of religion and conscience, and freedom of political life and individual convictions.

For these incomparable jewels, the product of untold sacrifices—my heritage and yours—every true American will fight to maintain and preserve—yes, even though it requires the pledge of life, fortune, and sacred honor.

It is a question of everything or nothing.

"For what avail the plow or sail, Or land, or life, if freedom fall."

Short of War

EXTENSION OF REMARKS OF.

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks, I include therein a very thoughtful and forceful editorial from the New Bedford (Mass.) Standard-Times entitled "Short of War," and urging a strong policy regarding our efforts to secure the release of the American airmen and presumably others imprisoned in Red China on trumped-up spy charges.

It is certain that a strong policy and a strong attitude is required if we are to protect properly our own fighting men and our own American citizens against the tyranny and oppression of Red dictators and to maintain our prestige among the nations of the Orient, indeed among all the nations of the world.

The imprisonment of American fighting men and others on fictitious charges and contrary to the specific provisions of the Korean pact constitutes, not only a breach of the agreement, but also it is a definitely unfriendly and inhumane act toward this Nation and toward humanity. It should be noted, however, that it is but one of several such acts in recent months, demonstrating an aggressive, belligerent spirit and an unfriendly pur-

All Americans recall with indignation the unwarranted shooting down of our planes while engaged in a legitimate peacetime mission. Such outrages show a studied contempt for this Nation and its armed services and is aimed purposely at demonstrating to Asian nations that Russia and her satellites eagerly embrace every opportunity to insult and commit unlawful, belligerent acts against the United States. What are we going to do about it? How long will it be possible to live in so-called peaceful coexistence with such international gangsterism openly flouting and violating the sacred code of men and nations?

The American people want our American airmen released and they want indemnity for their illegal capture and imprisonment. If they are not released. this Nation cannot afford to overlook the fact. We must act speedily and decisively, diplomatically, economically, and in every other necessary way short of war to free these fighting men, to redress the grievance which has been pointed up by the calloused illegal treatment that has been meted out to them.

There must be no further appeasement of international brigandage. insist upon the recognition by the Soviets, their puppets, and all other nations, of the rights of American nationals and especially the rights of American fighting men.

I hope the executive department of the Government will continue to press in the United Nations, and in every other way, for appropriate redress in these cases.

The New Bedford Standard-Times editorial follows:

SHORT OF WAR

President Eisenhower has told the Chinese Communists what they wanted to hear: that the United States will not consider war to obtain the release of the 13 Americans im-prisoned in Red China on "spy" charges, even if all efforts short of war should fail.

Mr. Eisenhower has pledged that the United States Government will take every step "humanly possible within peaceful means" to free the Americans. While he intended his words to offer assurance to the families of the imprisoned Americans, the statement gave assurance to the Chinese Communists instead.

The President has tipped off the Peiping government that the United States will not use the one measure the Chinese Reds fear: war. By showing his hand, Mr. Eisenhower destroyed whatever effect formal protests and threats of reprisal might have had. words of the United States have been stripped of their strength because the President has said that these words would not be backed

by armed force.
This is not to advocate that the United States declare war on China because 13 Americans have been imprisoned. The point is, if the President had not made his illadvised statement, the threat of war, rather than war itself, might well have been suf-ficient to win the release of the Americans.

If the United States Government could convince the Chinese Communists that the American people are angry enough and courageous enough to fight, if necessary, to win the release of the 13 prisoners, they would be set free without a fight. Obviously, threats are of no value when the Chinese know the will sanction only President means."

There was a time when Mr. Eisenhower was not so hesitant to give unqualified support to Americans in the Far East. During the presidential election campaign of 1952 the publisher of The Standard-Times, Basil Brewer, sent a telegram to Mr. Eisenhower questioning whether it would be wise for the United States to "take the chance of withdrawing from Korea" and whether the Korean war would be brought to an end by Eisenhower "with the American boys still in Communist prison camps." In a letter of reply to Mr. Brewer, dated Oct. 24, 1952, Mr. Eisenhower said, "We are not going to withdraw from Korea and leave our boys in Communist prison camps."

The facts of the matter are, we are withdrawing from Korea and we are leaving our boys in Communist prison camps.

On July 26, 1953, President Eisenhower halled the Korean armistice with these words: "In this struggle we have seen the United Nations meet the challenge of aggression, not with pathetic words of protest but with deeds of decisive purpose."

Now that the Chinese Communists defiantly have broken the Korean truce terms by refusing to free American prisoners of war, the President has reverted to "pathetic words of protest."

There are men in America today who still favor "deeds of decisive purpose," but they get no encouragement from the White House. Senator Knowland, of California, called for a blockade of the China coast as a means of

forcing the Reds to release the Americans. Congressman Lane, of Massachusetts, suggested Chiang Kai-shek and his Nationalist forces be encouraged to step up raids on the Chinese mainland if the prisoners are not freed. Other Members of Congress are op-posed to following a policy of "piecemeal appeasement," as Senator BUTLER, of Maryland, described it.

The military might of the United States can be an effective force for peace only if it is feared by our enemies as a potential force for war. Words of protest have no strength in themselves; they must derive their strength from men, guns, ships, and planes which stand ready to back them up-President Eisenhower, by ruling out the use of armed force in behalf of the 13 imprisoned Americans, has reduced this Nation's formal protest to an empty, meaningless gesture.

The Late Erland Harold Hedrick

SPEECH

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1955

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. BYRD. I yield to the distin-guished gentleman from Masscahusetts.

Mr. McCORMACK. Mr. Speaker, just as the hearts of many are filled with sadness today, so is mine. In the passing of Erland Harold Hedrick, I lost a personal friend, the State of West Virginia lost a great son, and the Nation lost one of its most distinguished citizens.

Dr. Hedrick was a man who had many friends, irrespective of political party, and irrespective of station in life. No words but kind words were ever spoken by him or of him. He was a fine public servant devoted to the interests of his people. We will all miss him, but the memory of him will live unblemished, untarnished, and unstained.

Mrs. McCormack and I wish to join with the gentleman from West Virginia who has so eloquently spoken in extending regrets to Mrs. Hedrick and the family.

THE ROSE STILL GROWS BEYOND THE WALL Near a shady wall a rose once grew,

Budded and blossomed in God's free light, Watered and fed by morning dew, Shedding its sweetness day and night.

As it grew and blossomed fair and tall, Slowly rising to loftler height, It came to a crevice in the wall,

Through which there shone a beam of

Onward it crept with added strength, With never a thought of fear or pride, It followed the light through the crevice's

And unfolded itself on the other side.

The light, the dew, the broadening view Were found the same as they were before; And it lost itself in beauties new, Breathing its fragrance more and more.

Shall claim of death cause us to grieve, And make our courage faint or fail? Nay! Let us faith and hope receive: The rose still grows beyond the wall.

Scattering fragrance far and wide. Just as it did in the days of yore, Just as it did on the other side, Just as it will for evermore.

Sky No Longer Limit, Savants Predict in 30-Year Air Forecasts

EXTENSION OF REMARKS

HON, RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. BOLLING. Mr. Speaker, one of the largest of the many great business activities which are located in the heart of America, Kansas City, Mo., is TWA-Trans World Airlines.

In connection with the 30-years-ofservice anniversary which TWA celebrates this year, TWA recently held a very interesting symposium which is described in the statement which follows: SKY NO LONGER LIMIT, SAVANTS PREDICT IN 30-YEAR AIR FORECAST

Passenger airliners 30 years from now will fly 2,000 miles an hour at altitudes above 15 miles and may be powered with nuclear energy, according to a symposium of leading aeronautical and astronautical scientists sponsored by Trans World Airlines at the Hayden Planetarium last night.

With Ralph S. Damon, TWA president, in the role of moderator, the symposium endeavored to raise the curtain for a 30-year look into the future as foreseen by Dr. Werhner von Braun, Chief of the Guided Missiles Division at the United States Army's Red Stone Arsenal; Dr. Fred L. Whipple, Chairman of the department of astronomy, Harvard University, and Hall Hibbard, vice President of engineering, Lockheed Aircraft

Referring to the 30-years-of-service anniversary which TWA celebrates this year, Mr. Damon emphasized his company's interest in the progress of the next 30 years and announced a \$100,000 prize competition intended to stimulate advanced thinking in

aircraft design.

TWA will offer a grand prize of \$50,000 to the person, his heirs or assigns, who this year submits the most accurate description of commercial aviation 30 years from now, Mr. Damon said. All entries will be micro-filmed and placed in a sealed repository at the dedication of the new TWA maintenance base in Kansas City, Mo. The repository Will be opened in 1985.

A second phase of the competition will offer \$50,000 in prizes for a 30-word sentence on airline service today, providing an ag-gregate \$100,000 awards in TWA's cosmic contest, which opened January 26 on a Worldwide basis and will close July 31, 1955.

Some of the forecasts at the Hayden Planetarium Tuesday night exceeded the role of commercial aviation and touched upon the possibilities of manned space stations, robot-like rocket ships, and freedom from gravitational attraction.

Dr. von Braun's predictions, included a statement that the 1985 commercial air-liner will probably not differ greatly in size from today's Super Constellation, but that the overall design will be quite different. The rocket expert does not believe that the airliners of 1985 will be powered by rocket motors, however. Instead, he suggests novel

types of jet engines such as the ram-jet. Dr. Whipple, on the other hand, expects the commercial airliner of the future to be much bigger, and possibly to accommodate Passengers in the wings rather than in the body of the plane. He sees jet propulsion as the motivating force, but adds that "the Power will be derived from some sort or nuclear conversion plant-in other words, a marriage between atomic energy and jet

propulsion." Dr. Whipple also envisions converter-type aircraft capable of rising directly off the ground like today's helicopters.

Mr. Hibbard, while cutting Dr. von Braun's estimated speed to 1,500 miles per hour, adds some 20,000 feet of altitude. He foresees vertical-rising aircraft, particularly on local service airlines. And he suggests that low operating costs of turbo-propeller cargo planes may mean that freight and cargo will eclipse passengers as a source of revenue for the airlines. "All mail and parcel post," he predicted, "will be carried by air."

At the same time TWO released statements by a number of other leading figures in the aircraft industry, relating to avia-tion 30 years from now. Among those whose statements were released were officials of Boeing Airplane Co., Canadair Ltd. of Mon-United Aircraft Corp., Douglas Aircraft Co., Convair, General Dynamics Corp., Glenn L. Martin Co., and Vickers-Armstrong Ltd., aircraft division. A pioneer airplane designer, Mr. William B. Stout, who designed the first all-metal aircraft, also contributed a statement.

Highlight of some of the statements fol-

"The next decade * * * will see jet transports widely accepted on airline routes of the world. * * * The piston engine will still play an important role and the turboprop will find its proper place in the efficient transportation of passengers and cargo at medium high speeds." (Mr. Edward C. Wells, vice president of engineering, Boeing

"Traffic volume on the world's airlines (will) grow * * * to about 500 billion passenger miles per year * * * to be handled by a fleet of aircraft 3 times the size of the present * * * all of these aircraft to be turbine powered." (Mr. J. Geoffrey Notman, president and general manager of Canadair Ltd., of Montreal.)

"The volume of traffic, especially in coach and cargo categories, will be multiplied sev eral times over. There will not be much growth in size of aircraft but there will be much more frequent schedules and many new routes." (Mr. Arthur E. Raymond, vice president, engineering, Douglas Aircraft Co.)

"In the short-range, high-density traffic, intercity category, some form of helicopter or convertiplane vill surely be in successful operation." (Gen. Joseph T. McNarney, president of Convair, a division of General Dynamics Corp.)

"Engines may be gas turbines, or even atomic, and there may well be some direct-lift devices incorporated." (Mr. George R. Edwards, managing director, Vickers-Arm-strong, Ltd., Surrey, England.)

"Essentially all commercial transportation in 1985 will be via air in vehicles operating on principles not yet conceived." (Mr. G. S. Trimble, vice president, advanced design, Glenn L. Martin Co.)

Yes, There Is a Farm in Brooklyn

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. ANFUSO. Mr. Speaker, until just a few days ago it was my impression that there was just a tree growing in Brooklyn, but now I have discovered with some surprise that we also have a farm in our great borough. Of course, we have

many wonderful youngsters who grow up to be fine and respectable citizens, but that kind of a crop would hardly come under the label of "farming"

I believe I am the first Member of Congress from the city of New York to serve on the House Agriculture Committee. Notwitstanding the fact that we have only one farm in Brooklyn, a tree and some flower-pot farmers, the citizens of my borough are extremely interested in agricultural affairs as consumers I hope to be of service to them and to others living in our great urban areas by bringing consumer problems into closer relationship with agricultural problems.

Mr. Speaker, I should like to insert into the RECORD a brief article carried by United Press earlier this week. The following article appeared in the Miami Herald on January 25, 1955:

THERE'S A FARM IN BROOKLYN, TOO-NEW YORK CITY CONGRESSMAN IS SURPRISED BY REVELATION

New York .- A New York City Congressman recently named to the House agriculture committee learned with amazement Monday there is a farm deep in the heart of his home borough of Brooklyn.

The farmer, who travels to the city on Saturday nights aboard a BMT subway, was just as surprised to find that after 40 years of tilling Brooklyn's fertile soil he at last has someone to listen to his troubles sympathetically.

The Congressman is Representative Victor L. ANFUSO, a Democratic lawyer, of New York's Eighth District, covering the densely populated Williamsburg and Greenpoint sections of Brooklyn.

There isn't a farm in his whole district. In fact, there is only one licensed farm in the whole borough, which has a population of more than 2,795,000, including the Brooklyn Dodgers.

The farm, in the Canarsie section, is owned by Italian-born Alfonso Fiero, who started out with 60 acres 40 years ago and now has only a little more than 10 acres of tomatoes, peas, beans, spinach, and other truck crops.

On a clear day, Fiero can pause at his work, look into the west and get a fine view of the Empire State Building.

"It's news to me that there are any farms

in Brooklyn," Anguso said.

Fiero doesn't know how long it will be before the Nation's biggest city swallows up his farm. Several factories are nearby and houses almost encircle his patch of land.

He employs 5 farmhands and has 3 greenhouses, a 3-family farmhouse, a summer kitchen, and a barn for his plow, seeder, duster, cultivator, weeder, and other equipment.

He has no water worries; his crops are irrigated by turning on an aluminum sprinkler system connected to a city water main. And he has only a few blocks to drive to take his harvest to the Brooklyn terminal market, situated on land he once owned.

But there are problems to farming in the city, and he wants Anguso's help in solving them. The biggest difficulty is price com-

petition.

ANFUSO said small farmers all over the State made the same complaint to him and he is going to do what he can about the situation.

Mrs. Fiero is spared much of the kitchen work of most farm housewives, for she goes shopping at the neighborhood supermarket,

On Saturday, when farmers all over the country are driving long distances to town for a weekly outing, the Fieros just hop on the subway, ride to Times Square, and go to a movie or a Broadway play.

A Report on South Vietnam

EXTENSION OF REMARKS OF

HON, CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to commend to the attention of my colleagues an article written by Mr. Joseph Buttinger, and appearing in the current issue of the Reporter.

In view of our deep interest in the fate of southeast Asia, I believe that Mr. Buttinger's personal observations on the conditions in south Vietnam warrant careful consideration. These are, of course, the observations of one American who visited Vietnam recently; other observers may have arrived at different opinions. Some press reports, for instance, would lead one to believe that the situation in south Vietnam is not as encouraging as Mr. Buttinger asserts.

Nevertheless, I feel that Mr. Buttinger's observations and comments contain some food for thought and will prove of interest to the membership of this body.

The article follows:

AN EYEWITNESS REPORT ON VIETNAM

(By Joseph Buttinger)

If you started out to visit a man who was reported to be dying and met him on his way to work, you could not be more sur-prised than I was last October when I visited south Vietnam, a country supposedly on the verge of collapse as a result of Communist infiltration.

Before leaving the United States, I had come to accept the unanimous verdict of our newspapers and magazines, and thought of my trip as a tragic opportunity to see an Asian country just before it was taken over by communism. That is how I felt when I went to Saigon on behalf of the Interna tional Rescue Committee to set up a relief operation for refugee intellectuals from the Communist northern half of Vietnam.

Among the politically sophisticated, the idea that communism in Asia can be stopped by other than drastic military means has long been abandoned as wishful thinking. corollary is that because we are unwilling to go to war for Vietnam, the southern half of the country will follow the north

into the Communist Camp.

Once in Vietnam, it did not take me long to feel that I had been grossly misinformed, and the longer I stayed there the more this feeling was borne out by the facts I learned. I came to realize that the information about the hopelessness of the Vietnamese situation was of French origin. For different reasons, before and after Geneva, the French have had a vested interest in maintaining that there wasn't much chance for an independent Vietnam. Like a doctor who has failed repeatedly in the treatment of a patient, the French have some reason for being dismayed at every evidence of the patient's vitality.

Yet this evidence exists. It has been said repeatedly in the United States press that the Premier of Vietnam, Ngo Dien Diem, is politically inexperienced. Actually some of the old French colonialists call Mr. Diem an American puppet, which is strange considering that they know through their own experience that for once they are dealing with nobody's pawn. Because he is firm, he is called "rigid"; because he is honest, he is called "politically inexperienced"; because he does not advertise himself, it is said he cannot win popular support; and because he is the first Vietnamese Premier who dares disobey the weakening French, it is said he is "unable to compromise."

SHOOTING DOWN CANARDS

Now let us look at the record:

As to the army, the dismissal of General Nguyen Van Hinh as chief of staff of the Vietnamese Army points up more than a dozen cases that could be cited. Not one of our correspondents saw that the fight between the premier and General Hinh pivoted around the most important political issue in Vietnam since the shooting stopped. They saw only a personal quarrel between two ambitious men. They did not understand that for the Vietnamese this was the test of whether their new independence would be genuine and permanent or merely another colonialist maneuver.

General Hinh was no doubt well liked by many foreigners, but with the Vietnamese people and the army General Hinh was about as popular in 1954 as Pierre Laval was with the French in 1944. Support for the premier has been growing ever since he proved, by winning out against General Hinh, that he is a stronger man than any of his French-supported predecessors and all the remaining puppets of the colonialists in his army and administration.

Some correspondents continue to report that the armed politico-religious sects of South Vietnam are proof of disunity and their frequent clashes signs of serious dis-order in the country. Anyone familiar with recent Vietnamese history knows that the present administration has inherited them from the colonial regime. These sects are the Hoa Hao, the Cao Dai, and the Binh Xuyen. On Christmas Eve, Defense Minister Ho Thong Minh announced a cease-fire with the Hoa Hao after a sharp fight had resulted in the defeat of its forces by government troops at Longxuven.

According to a January 10 dispatch from Homer Bigart to the New York Herald Tribune, Gen. Trinh Minh The, a former Cao Dai leader, had earlier placed his anti-French, anti-Communist guerrilla army of 5,000 men at the disposal of Premier Diem.

The third sect, the Binh Xuyen, operates the houses of prostitution and gambling establishments in Saigon and also controls the local police. Mr. Diem has issued a cease-and-desist order to its leader, Gen. Le Van Vien. The closing of the brothels would drastically reduce the revenue not only of the Binh Xuyen but also of quite a few French-sponsored high personalities, who have made fortunes on gambling and prostitution.

Another feather in Mr. Diem's cap is the impressive and successful refugee evacuation from the north. According to the latest figures some 600,000 have now come south.

The Premier's recent creation of a propaganda campaign at the village level and the recruitment of 10,000 Vietnamese to do the job is an adroit move-particularly for a man who has been criticized for his lack of public-relations sense. The effort is in-tended, of course, to counteract earlier successes scored by Communist Vietminh propa-

French critics of Mr. Diem have said that a Communist underground administration controls about half the territory of South Vietnam, and that an election would give the Vietminh 80 percent of the vote. A recent 70 mile trip by the premier through the villages of central Vietnam gave the lie to Mr. Diem attracted great crowds of enthusiastic demonstrators, and foreign correspondents accompanying him reflected their surprise in numerous dispatches.

Other hopeful signs are defections from the north. The latest of these, which occurred early in January, was that of the mayor of Hanoi and his associate, a member of the Vietminh delegation to Geneva.

POSITION NOT POWER

There is one big question that no American reporter in Vietnam has failed to ask: Why didn't the Premier use the power he was given 6 months ago to clean out corruption, to establish the authority of his government over the whole territory of the south, and to combat Communist infiltration? The simple answer is that he was not given power but merely an exalted position when he was appointed by Bao Dai.

Whatever power Mr. Diem had the day he took office consisted of his popularity as the only outstanding nationalist leader who had never agreed to become a puppet either of the colonialists, the Japanese, or the Vietminh, all of whom had wooed and subsequently maligned him for his refusal to serve causes that were not his country's. During its first months, the government of a nominally independent state had control neither of the army nor of the police. Both were commanded and controlled by Frenchsponsored officials of doubtful personal and political reputation. It is a testimony to the Premier's skill and strength that he has been slowly acquiring the power that he should have been given 6 months ago and that the story of his short term in office has finally become one of progress and consolidation.

THE ISSUE: INDEPENDENCE

The real issue of Vietnam-misunderstood, neglected, or purposely left out of the pie-ture—has never been communism but nationalism. Indochina's fight for national independence made the Communist Vietminh strong. Its power and its victory in the north stemmed from the French refusal of independence for Vietnam. The Vietminh uses no Communist slogans; its propaganda is all concerned with the fight for national independence. Even today the Communist line does not mention any specific social or economic issue. Communist propaganda lives on the presence of the French in Indochina.

What Vietnam needs is not millions of dollars but thousands of experts. It needs technical advice and aid. It needs political support. It needs our help in free-ing itself from the remnants of a decaying colonialism. We should send there an am-bassador with sympathy for the people's national aspirations, an understanding of their social and political problems, and the authority and strength required for a difficult political job.

It may be said that there is no time for this, for elections are supposed to take place next year. But if the present rate of progress in south Vietnam continues, then the United States and the free world have a right to ask that free elections be held in the country as a whole-though it is difficult to see how elections in the Communistdominated north can be free. If elections are to be free, we must reconsider the Geneva agreement, which did not insist on U. N. supervision or any other guaranty. Time would be needed for that, but time is exactly what the consolidation of freedom and the firm establishment of a democratic order would require.

WHAT LECLERC SAID

The French Army has lost a war against a people determined to fight for its national independence. It will lose again if the struggle for Indochina should once more become a military struggle. Only the people of south Vietnam can wage and win a war against Communist infiltration and aggression. May the leaders of the French Nation soon learn what one of their generals-Leclerc-understood as long as 8 years ago: "Anticommu-nism will be a useless tool as long as the problem of nationalism remains unresolved."

Appendix

One Hundred Years of Spiritual Blessing

EXTENSION OF REMARKS

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES Friday, January 28, 1955

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an inspiring sermon entitled "One Hundred Years of Spiritual Blessing," delivered by the Reverend John F. Streng, D. D., pastor of St. John American Lutheran Church in Beatrice, Nebr. Dr. Streng delivered his sermon on Sunday morning, September 5, 1954, at the opening of the annual Nebraska State Fair in Lincoln; and the sermon has been appropriately referred to as Nebraska's centennial sermon. What Dr. Streng said should be read by every American.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

ONE HUNDRED YEARS OF SPIRITUAL BLESSING

SERMON POINTS FOR DISCUSSION

I. The rise and fall of any nation can be traced without fall to its attitude toward God and man.

II. From the hilltops of history we may

now review an inspiring pageant of progress.
III. No subversive movement to overthrow

God or government can succeed except the people serve false gods.

IV. Wars cannot deplete a nation's industry as quickly as indifference and greed of

the citizens.

Deuteronomy 11: 7-12: "But your eyes have seen all the great acts of the Lord which He did. Therefore shall ye keep all the Commandments of the Lord which I command you this day; and you will be atrong and go in and possess the land, whither ye go up to possess it. And that you may prolong the days in the land which the Lord swore to your fathers to give them and their seed, a land that floweth with milk and honey. For the land that thou goest to possess is not as the land of Egypt from whence you came out, where you sowed your seed and watered it with your foot as a garden of herbs; but the land you go to possess is a land of hills and valleys, and drinks water of the rain of heaven. A land which the Lord thy God cares for. The eyes of the Lord shall always be upon it, from the beginning of the year."

This is a glorious Sunday morning. It wahers in an historic hour in the centennial celebration of our beloved Nebraska. Millions of citizens in America and abroad have read about our current century of progress.

From time immemorial, clans, tribes, nations, empires, have been inwardly impelled to rally fellowmen and foreigners, freeman and faithful, in spontaneous celebrations commemorating significant events. All such demonstrations are designed to impress God and man.

One scripture text from the Book of Deuteronomy is such an ancient preamble of dedication. It calls upon an infant nation to sing its national anthem of joy over odds of the past and fatth in the future. It was not the first or foremost call, to worship the God of heaven and earth, who rules with truth and grace. Adam and Eve, first on earth, received God's mandate to institute the family and subdue the created world of plenty. It was a divine directive that the family unit shall be fundamental to the Nation. God urged them to set aside seasons of gratitude, during which all would gather, to offer first-fruits and other thankoffering, and invoke future divine pleasure.

T

History shows that the rise or fall of any nation can be traced without fail to its attitude toward God and man. The first of the Ten Commandments: "Thou shalt have no other gods before Me," and the gist of the Golden Rule: "Do unto others as you would have them do unto you," are history's most reliable barometer for measuring a nation's poverty or prosperity. Our beloved America, settled by Pilgrim fathers, exhausted from oppression and persecution for conscience sake has always been a haven of refuge, All who desired liberty for themselves and posterity have been welcome.

American pioneers courageously confessed their belief in God and good government. And this conviction was everywhere impressed upon American life. Our national anthem declares: "And this be our motto: In God is our trust." Our national perfect prayer pleads: "Our Father's God, to Thee, author of liberty, to Thee I sing." Both our American coins, coveted and cherished as a universal symbol of progress, and millions of letters and packages, franked with 3-cent stamps, proclaim a ringing challenge of courage and faith to all the world, namely: "In God we trust."

Even the revised standard version of our Pledge of Allegiance states that, under God, ours shall be a Nation, indivisible, with liberty and justice for all. These few examples show how inseparably interwoven American life is with the Christian religion. We, the people, have inherited a grave responsibility to maintain this high and holy standard.

And now Nebraska has reached a significant milestone. On May 30, 1854, President Franklin Pierce signed the Kansas-Nebraska bill. A single stroke of a powerful pen opened 5 million acres of Indian territory to settlement by the white man. The trinity Omaha, Otoe, and Missouri Indians, through Chief Logan Fontanelle, had ceded homestead rights to the United States Government as public domain. Hundreds of future farmers and fortune hunters poured across the mighty Missouri River to stake claims. Local government centered in claim clubs from which the idea of the free homestead movement was born. And when in the course of human events and human nature, claims and counterclaims caused feeling to run high, President Abraham Lincoln signed the act on May 20, 1862; and today, down Beatrice way, the site of the first homestead has been preserved.

п

From the hilltops of history we may now review an inspiring pageant of progress. Nebraska's saga of settlement has been emphasized all this year in story and song. Today's centennial State fair, through colorful historical pageant, will pay tribute to sturdy pioneers. Their undaunted courage to most danger is an inspiring challenge to us today. No frontier has yet been closed to exploration and exploitation. It would take volumes to sing the praises of the Cornhusker State. Political, military, religious, and industrial leaders have generously broadcast the story of the white spot of the Nation. Poet and peasant have contributed applause and appreciation. Nebraska's 11lustrious sons and daughters from every walk of life have received citations of merit.

Factual and fanciful experiences of the past remind us of our text. Moses, man of God, leader of a migratory tribe of international fame and fortune, had brought his people to the border of a new land. He submits to them three fundamental terms of public interest: (1) Remember the sweat, blood, and toil of your forefathers; (2) recall the vast and valuable inheritance now before you; (3) reimburse God Almighty for his divine leadership and love. Surrounding their heroic Commander in Chief, the 12 tribes of Israel listen to the reading of a new charter of freedom and an original bill of rights which promises priority over all nations.

Its ringing challenge is still evident. We and our children have inherited a land whose possibilities of perpetual prosperity are even now beyond human concept or calculation. How deeply humble and grateful we need to be to prove worthy of such fabulous reward. Engraved in stone over the enchanting entrance to our State capitol, are these words: "The safety of the State lies in the watchfulness of the citizen." We honor the forthright faith and fortitude of all who uphold this principle. Most of us remember that it was laid down in God's word from the beginning of time.

What Moses told his people has proved to be the wisdom of ages. His audience was composed of many tribes; so Nebraska's river-coast line was settled by a diversity of persecuted, privileged, and prejudiced people. From Peter Sarpy, squawman and carpet trader, to the Honorable William Jennings Bryan, Gilbert M. Hitchcock, and other lilustrious heroes, from Mother Moses Merrill to the late lamented Bess Streeter Aldrich and similar heroines, an unbroken chain of builders add dignity and noblity to Nebraska's history. Only a sprinkling of the 2,732 persons recorded in the 1854 census had a vague opinion of the magnitude of the task of developing virgin soil. The shortsighted saw only the fleeting fortunes of their day; the stouthearted dreamed of a great empire.

A hundred years have passed. Today, several million strong, from western Nebraska plains, noted for hospitality and harvest, to the eastern empire famed for industry and institutions, we gather together to ask the Lord's blessing. Cross-country covered wagon furrows, eroded and erased by time and tide, cannot obliterate our hall of fame, Nebraska's roll of honor includes a long line of men and women serving church and State. Their names have been carefully and correctly inscribed upon the archives of our State Historical Society records. There should somehow be a mandate that every Nebraskan shall spend some time among those

halls to receive added strength and poise for the future.

Thank God for the chaste, colorful Constitution of our United States. Therein the Almgihty Creator find not mere mention but as author of liberty, is given rightful rec-What a masterpiece of clear ognition. thinking to insist that all men are created equal and endowed by their Creator with certain inalienable rights. What a glorious proclamation to tell the world that no government may bestow or remove inherent birthrights. Let us carefully guard these fundamentals in the thorough education of our children from the little one-room schoolhouse to the spacious halls of the university. Let us this day lift united hands and hearts to God in thanksgiving, and forget not to honor those who laid down their life on the battlefield, that we might enjoy a safe shelter and shrine of freedom. Let neither jealousy nor hatred divide our people. There is no room in our Constitution or country for those who scheme to depose Almighty God, or deny liberty and justice to the outnumbered, or seek to overthrow our Government deliberately. Today's complex life and problems can easily be solved by a sane return to the simple suggestions of Jesus Christ, Saviour of man. Nineteen hundred years ago he was hung on the Cross on Calvary, because he refused to conform, because He defended rights and responsibili-ties of the individual. He died to make men holy, and He died to make men free, a truth which He advocated. And when again learn to place moral over material obligations, three-fourths of our national fear and frustration will miraculously disappear.

ш

Let church and state in all their departments emphasize anew and again that no subversive movement to overthrow God or Government will succeed except the people themselves serve false gods. Among voices, from the President of the United States to the parent in the home, there is a passionate plea to preserve our God-given heritage with might and main. Chaplain John Donnelly, now stationed at Tempelhof, Germany, writes in a recent issue of the Con-GRESSIONAL RECORD: "Today the world is in a state of emergency surpassing any in history. Back of all this ferment of nations is the great conflict. While in 2,000 years the religion of Jesus Christ has brought under its sway some 500 million, in one generation the anti-christ religion of communism has brought under its absolute control 800 million behind an Iron Curtain and many more in every continent.

Arms and ammunition cannot destroy godless forces that bore within the human soul. We need to demonstrate a worthy patriotism and a united front against any evil combination. Let our homes remain bulwarks of Christian examples and influence. Let our schools stand as frontiers of good citizenship. Let our churches be citadels of brave-hearted, faithful children of God. Let our State and National leaders show the way to the Prince of Peace and His passion for service. No people in history have been so highly favored as we. Nebraska's youth is inheriting a rich land. Unlimited sources and resources of mine, water, field, and forest becken for development. What will we do with God's generous gifts? Will you help build a world based on honesty and integ-rity? Will you remember the law and love of God as did your forefathers in shaping a new nation?

The Mayflower Compact, the Pilgrim's Chorus, Declaration of Independence, and other sacred citizenship documents point the way we must go that it may be well with us. Please listen to this postcript to our Declaration of Independence: "For the support of this declaration and with firm reliance on the protection of divine providence,

we mutually pledge to each other our lives, our fortunes, and our sacred honor." Are you willing to pledge your life that America might live? Will you give generously and gratefully of your fortune that our institutions may remain and our Government keep watch o'er the ramparts of the world? Do we have any sacred honor left today, that our children may see that it is really an un-American activity merely to eat, drink, and be merry?

The seal of the great State of Nebraska declares: "Equality before the law." Is that still our standard of judgment? The constitutional debates of 1787 inspired Father Washington to exclaim: "Let us raise a standard to which the wise and honest can repair; the event is in the hand of God." Are we willing to subscribe to this declaration? What is our standard today? Morals or just money? Selfishness or service? Honesty or discretion? Courage or fear? May God give us men and women who place honor above profit, God above gold, Jesus Christ above the prophets of doom and gloom, virtue above vice.

IV

Wars and rumors of wars cannot deplete a nation's integrity in a century as swiftly as indifference, greed, and selfishness can in a decade. Moral righteousness is a matter of the human heart. Let righteousness be in the people, of the people, and for the people. "Our Father, to whose sleepless eye the past and future stand on an open page, like babes we cling to Thy protecting hand; change, sorrow, death are naught to us if we may safely bow beneath the shadow of Thy throne a hundred years from now." (Mary A. Ford, in a Hundred Years From Now.)

So let us conserve soil and soul that God may visit us with His goodness. So let us teach our children and children's children that they may hearken unto the voice of God and government. Then another century of unlimited prosperity and peace will God grant to those who do His will. Amen.

The Federal Reserve System

EXTENSION OF REMARKS

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES
Friday, January 28, 1955

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address on the subject The Federal Reserve System Is Unique, delivered at Syracuse, N. Y., on January 18, 1955, by C. Canby Balderston, a member of the Board of Governors of the Federal Reserve System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FEDERAL RESERVE SYSTEM IS UNIQUE

(Address of C. Canby Balderston, member, Board of Governors of the Federal Reserve System, at Syracuse, N. Y., on Tuesday, January 18, 1955)

Why is the Federal Reserve System unique? As to its basic aims, it is not peculiar in the sense of being markedly different from the central banks of other countries. Its aims, however, are different from those of a commercial bank. This may explain why commercial bankers sometimes find its workings as difficult to comprehend as do nonbankers,

The importance of a central bank stems primarily from the influence that it can exert over the money supply. The importance of this function has been sensed ever since the establishment of the Federal Reserve System in 1913, although the particular problems and emphasis have changed. When, prior to 1913, the National Monetary Commission studied the need of this country for a central bank, it was particularly concerned with averting the financial panics which had occurred every few years because of the inflexibility of the then existing monetary system. It was also concerned with the development of one which would be more responsive to the needs of trade, Specifically, it wished to give the country an elastic currency, to facilitate the discounting of commercial paper, and to improve the supervision of banking.

Since then, the basic economic and financial changes have taken place; old problems have been solved, and new ones have developed. Concern with the monetary sup-ply has remained, however, even though there have been changes in emphasis. More attention has come to be placed on influenc ing the volume of demand deposits than of currency. No longer is a close relationship supposed to exist between fluctuations in the volume of commercial paper and in the volume of money. Central banking has come to be recognized as more than an aid in averting panics; it can make a positive contribution toward a healthy economic growth and a stable dollar. Related to these goals are such cherished aims as a rising standard of consumption; sustained high employment for the breadwinner; stable values for widows who live on savings, and for those who do the saving.

The problems of assisting to control the supply, availability, and cost of credit are highly intricate. In dealing with them, our central banking system has the tremendous responsibility of so influencing money and credit conditions as to assist in promoting economic stability and growth. By stability I do not connote a dead level of economic activity, but one that moves steadily into higher and higher ground. The supply of money, now of course consisting mainly of bank deposits, is a more potent factor in our economy than a century ago when house holds were more self-sufficient, and barter was a bigger factor in commerce. Today money passes from person to person and from institution to institution in accordance with millions of decisions to buy or to sell-If the supply of money becomes excessive in relation to the goods and services available, prices tend to rise; if the converse is true, prices tend to fall. Therefore, if the value of money is to be stable and to assist the economy to move steadily upward, its supply must be harmonized with the flow of goods.

The impact of the general supply of money upon the economy and upon nearly all citizens is so great as to make it a matter of pub lic concern. Thus, supervision and control by the Government is required. The apportionment of credit among individual borrowers, however, is not a matter for Govern ment, but for private lenders. To determine, on the basis of intimate knowledge, which businessmen and which firms are good risks is one of the important contributions of an independent, private, commercial banking system. It is the responsibility of the central bank to exert an influence over the total amount of money, but the selection of the particular customers to whom loans are to be made is, and should be, left to the discretion of commercial banks. The role of the Federal Reserve is potent and indispensable. but it operates indirectly through relatively free and uncontrolled markets, so that there will be a minimum of interference with our essential freedoms.

Let me emphasize here that the quality of loans is as important, and of as great

concern, as is the quantity. The Federal Reserve influences the general availability of money, but the competitive forces of the market largely determine the extent and manner of its use. Although the initial responsibility for soundness rests with the makers of individual loans, it is of interest to the system, also, that the use of credit be sound and productive.

I turn now to the philosophy that pervades the Federal Reserve and guides its methods.
The point has been made by Chairman Martin that its philosophy may be likened to the concept of trusteeship. Trusteeship involves Obligations that extend beyond mere legality. It involves the highest ethical and moral standards in the carrying out of the mandate Issued to the trustee. While that mandate is in force, it implies the courage to take actions, however unpopular they may be at the moment, that the trustee believes to be best for the country and its economy. Naturally, the trust indenture of which we are speaking, that is, the Federal Reserve Act, is not irrevocable, because it may be changed at the will of the Congress.

In bringing about this trustee arrangement to deal with the highly complex problems faced by a central banking system, the Congress is to be credited with foresight in the degree of independence with which it has surrounded the system. The nuances of has surrounded the system. independence are not easily spelled out. They involve an opportunity, like that of the Judiciary, to act objectively without favor and without fear, free of private pressures on the one side and partisan political pressures on the other. Such objective action re-Quires full recognition of the real needs and interests of all concerned, along with recoghition of their important roles in a properly

functioning economy.

The Federal Reserve as a central banking system has a combination of public and private elements in its organizational structure. Through long decades, different countries have experimented with the relation that the central bank should have to Government and to private enterprise. Once the Bank of England was owned privately. George Washington is said to have owned some of its shares. Now, its shares are all owned by the British Government. The Bank of France is also nationalized, as are all of the central banks of Russian-dominated Eastern Europe. In Belgium, the state owns one half of the national bank. Indeed, Mr. Roger Auboin, Director General of the Bank for International Settlements, has observed recently that the number of state-owned central banks in the world is greater than those not so owned. Whatever its form of ownership, a central bank must obviously be operated for the public good. And to be so operated, it should be independent of both political and financial interests.

The Federal Reserve Act provides for a unique combination of public and private elements which is peculiarly adapted to the altuation in this country. It provides for a Board of Governors in Washington which has an Independent status in the Government structure and reports directly to Congress. In order to prevent the inflexibility and lack or local knowledge that usually goes with Overly centralized authority, it provides for a structure of 12 district banks, 24 branches, and some 250 directors. There is also a Pederal Open Market Committee, which is composed of both Board members and Re-

serve bank representatives.

This structure may seem cumbersome, but it provides a mechanism by which decentralization of functions can be combined with such coordination as is essential to unity of action in the matters that require it. Within it, functions that can best be carried out locally are performed by the Reserve banks and their branches, while policy decisions on a national scale are made by the Board of Governors, and by the Open Market Committee

The Board of Governors is composed of 7 members appointed by the President, and confirmed by the Senate. It has authority to establish the reserve requirements of member banks, within limits set by statute, and to establish margin requirements for purchasing and carrying stocks. It has the authorto review and determine changes in discount rates proposed by the Reserve banks, to approve the appointment of their chief officers, and to appoint three members of each of their boards of directors.

The Federal Open Market Committee is composed of the 7 members of the Board of Governors, together with the presidents of 5 Reserve banks. The 5 Reserve bank posi-tions are rotated among the banks, except that the president of the New York bank is always a member. This Committee makes all decisions concerning System open-market operations, which influence the level of un-

borrowed bank reserves.

The district banks and their branches perform numerous operations that can be done best at the local level through personnel in close touch with local conditions. They administer the discount function, and their directors customarily initiate discount-rate changes. The district banks and branches comprise an immense network of economic intelligence through which the System is kept informed as to the changing problems and conditions in business, and within the commercial banks themselves.

The local directors, most of whom are businessmen and bankers who tend to abhor waste and inefficiency, provide an effective check upon the operating performance of the reserve banks. Six of the directors of each reserve bank are elected by member banks, which own all the stock. Such ownership is often viewed as a compulsory contribution by member banks to the capital funds of their reserve banks, rather than as proprietorship in the strict sense. Nevertheless, member banks tend to keep in closer touch with their reserve bank because of their stock ownership, and their representation on its board of directors.

The banks in each district are divided into three size groups, each of which elects one banker and one representative of commerce, industry, or agriculture. Three directors, including the chairman, are appointed by the Board of Governors. All of these directors must be free from banking connections. The directors, both those elected by the commercial banks and those appointed by the Board of Governors, bring to Federal Reserve problems a variety of experience. It must be emphasized, however, that although they have different backgrounds, their function as directors is not to represent special interests, but to serve the public.

President Woodrow Wilson, Senator Carter Glass, Paul M. Warburg, and the others responsible for the founding of the System were sensitive to the delicate balance needed between public control, and domination that would destroy the rights of individuals under our free-enterprise system. Accordingly, they contrived a system whose structure is distinctive in central banking. It is partly governmental, partly private.

The Federal Reserve reflects in its design a touch of genius. Its founders recognized that the United States had a heterogeneous population, tremendous variety in its industry, commerce and agriculture, and a banking system that contained thousands of different units. Some of these were national banks, some not. Had the United States been as small as England, with just a few private banks whose heads could be brought quickly into conference around the same table, the solution contrived by the designers of the Federal Reserve would have been different. But just as problems of size and mass are reflected in the structural design of the short-legged hippopotamus and the long-legged giraffe, so are the problems of this country's banks and commerce reflected in the Reserve System. There is a legend in Africa that the giraffe was designed by a committee. So, in effect, was the Federal Reserve, except that the result has more symmetry.

Among the freedoms that American citizens enjoy is the freedom of enterprise. Like the former Chairman of our Board, Mr. Thomas B. McCabe, I look on the Federal Reserve System as one of its great bulwarks. It is my view that business executives have a particular responsibility to see that the various aspects of that freedom are defended. Mere lip service is scarcely adequate.

If borrowers had not enjoyed it for so long as to take it for granted, they would place great store upon freedom of choice in the securing of credit. If an entrepreneur could get a loan only by applying at the office of some government agency, or if there were only one private banking institution to which he could turn, he would suspect that considerations other than his ability to repay were taken into accounts. Freedom to choose one's bank was not among the freedoms listed in the Atlantic Charter, but this freedom would seem very significant indeed if it had to be rewon.

Then, there is the freedom that we associate with the choice of a job. Job opportunities have been so abundant during the past decade as to provide wide election to men and women entering the labor market. During the first half of this decade, about 700,000 new workers had to be absorbed each year. In the first half of the 1960's, however, it will be necessary to provide job opportunities each year to 1.2 million youngsters. That will be the period during which the war babies will be seeking employment. To enable young people to choose the jobs best suited to their respective tastes and abilities will call for a high level of employment, and the full use of our productive resources and facilities

And then there is the freedom to buy what one chooses. Consumers who have the requisite buying power now enjoy a selection of products neither known, nor imagined, when I was a boy. This abundance is to be credited chiefly to the spectacular advances in technology. As Dr. Kenneth Mees has pointed out, the rate of technological advance has been increasing at a rate that has itself been increasing. But the point that is appropriate here is that the ability of businessmen to manufacture and sell new things has been aided by their ability to secure the requisite funds. In the main, these funds have come from private sources.

And so, there are certain economic free-doms in addition to the traditional freedoms of speech, religion, and conscience. preservation of these freedoms, infinitely precious to all citizens, is a particular responsibility of those who are part of the business community.

Tribute to Robert H. (Sam) Baldock, of

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Friday, January 28, 1955

Mr. NEUBERGER. Mr. President, Robert H. (Sam) Baldock, of Oregon, is one of the great highway engineers of the Nation. Many of the road-building reforms instituted under his leadership have spread to the rest of the Nation for example, rural freeways which are not saddled with tolls.

Mr. Baldock celebrated his selection as Oregon's engineer of the year only recently, and I should like to ask that there be included in the Appendix of the Record an article in tribute to this unique public servant. The article was written by Ann Sullivan, and published in the Oregonian of January 23, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BALDOCK MOVES METHODICALLY, WHETHER AT WORK OF AT PLAY

(By Ann Sullivan)

There is no compromise with fact and truth in one of Oregon's most conscientious citizens, Robert Hugh (Sam) Baldock, veteran chief highway engineer.

Baldock, boss man under the highway commission of the expenditure of some \$50 million a year on Oregon's highways, Saturday was named "engineer of the year" at an annual dinner meeting of the Professional Engineers of Oregon at Portland's Columbia Athletic Club.

A framed certificate, presented by H. Loren Thompson, president of the engineers, honored Baldock for his lifetime of outstanding service to his State and to the profession of highway engineers.

highway engineers.

"As State highway engineer, he has pioneered in research and the principles of highway design and construction," the certificate

Commissioner William A. Bowles brought greetings to Baldock from the city of Portland.

This recipient of many professional honors, known nationally and internationally for his pioneering work in highway design, building, and financing, faithfully tackles almost everything he does with a scientific, analytical mind.

That goes not only for engineering problems, but the bridge he plays well, the monthly poker game, the Saturday golf games (rain or shine), his reading and thinking habits.

GOOD JOE TO FRIENDS

Yet there is wry, good humor, and kindliness behind his almost-tight mouth and his rimless glasses (for nearsightedness). And his friends—of which there are many—call him not only a gentleman, fine consistent golfer, admirable companion, and good sportsman, but a good Joe.

White-haired Sam Baldock was born July 6, 1889, in Trinidad, Colo., a cattle and coalmining town on the old Santa Fe Trail. He was 1 of 2 children (a sister, Ruth, died at 14 from scarlet fever). His father was a cattleman.

The son attended Trinidad High School for 3 years, then New Mexico Military Institute for 2, obtaining a little college credit there.

He almost made it through the University of Colorado in 3 years, but was short about 10 percent of his course. He was supposed to be a member of the 1914 class, but actually received his bachelor of science degree from the University of Oregon in 1938 after some correspondence work.

HONORARY DEGREE CONFERRED

The following year he wrote a thesis and obtained his civil engineering degree. In 1946 the university conferred on him the honorary degree of doctor of science.

Coming west to get a job (after his marrying Austa Marshant in Colorado in 1913, she died in 1946), he came first to Idaho.

Most of his undergraduate work was in mining and railroad engineering.

He took a job there that summer as inspector and instrument man on the building of a dam, powerhouse, and transmission lines. Later in the year he came to Portland, taking a job for 6 months as a transitman for the Northwestern Electric Co.

Then to Astoria, where the port commission was building docks in bid to make its city leading port of this State. In 1915 he took a job with the State highway commission, still a transitman—the surveyor who reads the angles.

He remembers well that first job, and

He remembers well that first job, and thinks of it every time he whizzes over the swooping four-lane Pacific Highway across the same spot—about 7 miles south of Cottage Grove.

It was in Pass Creek Canyon, a mile of highway costing \$5,000, and it was one of the big jobs in the State at the time. This 20-foot-wide roadway was built with horses and scrapers and wasn't even graveled until quite a bit later.

It carried all of maybe 30 vehicles a day, most of them horse drawn.

Said Baldock with a twinkle, "Yes, you could drive from Portland to the California line in those days at an average of 10 to 15 miles an hour, it was so rough."

DEPARTMENT STARTS SMALL

There were about 50 people employed by the highway department then. Today the department has 3,000. Yearly highway expenditures now are about \$50 million. In 1915, what Baldock recalls was "a heavy construction year," total outlay was \$600,000.

Baldock lived all over the State in those days, wherever the jobs were. He was a transitman until 1916, when he became locating engineer, in charge of making the location of new roads. He laid out almost all of U. S. 30 from Arlington to Ontario.

In 1919 he became division engineer, in charge of the eastern Oregon division. In 1925 he became maintenance engineer; in 1930, assistant State highway engineer, and in 1932 was elevated to the top post, when Roy A. Klein went to the Bureau of Public Roads.

TOP LAYMAN IN CHURCH

He is a member of the New York Academy of Science, the Highway Research Board, Washington, D. C., the University Club in Portland, is a Scottish rite mason, and a member of the board of vestry of St. Paul's Episcopal Church in Salem, where he is past senior warden, top layman's job.

Baldock is a member, also, of the Newcomen Society of England, Tau Beta Pi, the American Society of Civil Engineers, and the American Association of State Highway Officials.

He is listed in the international blue book of world notables. Probably his top award was received in 1950, the George S. Bartlett award for distinguished contributions to highway progress.

In 1939 he was invited to read a paper at the International Road Congress at The Hague. He could not go but did send his paper, a report on the nonskid features and the light-reflecting properties of paved-road surfaces.

TAKES TO AIR OFTEN

He travels widely and is a member of United Air Lines 100,000-mile club. In fact, he has already passed his 200,000-mile mark in air travel.

In 1939 he was chosen by the Department of State to attend the Third Pan-American Highway Conference in Santiago, Chile.

Possibility the four highway accomplishments for which he is best known are these:

1. He originated the technique of oiling roads, beginning experimentally in 1923 in eastern Oregon when he was division engineer there. It is national practice now. 2. He pioneered in geometric highway design.

In order to correlate all the factors of design to one standard, he said by way of explanation, "we selected as a standard, the speed at which motor vehicles could operate safely. That standard was adopted in Oregon in 1936. The Nation adopted it in 1946, a decade later."

WEIGHT TAX AUTHOR

3. He is author of the weight-mile tax for trucks, devising it in 1937. The legislature adopted it in 1947.

4. The highway department's system of study of highway economics, believed to be one of the first in the Nation to do so. We keep an account of every highway, determine its earnings, measure its present worth, and keep track of its depreciation.

and keep track of its depreciation.
Somewhat of an innovation, too, is the Oregon Highway Department's use of scale models of highways and highway projects. Baldock said they were developed because few laymen could read blueprints.

In order to sell our ideas, our artists first drew sketches, then finally the scale models were adopted (first: the new Columbia River highway) which not only helped the public to understand but helped the engineers themselves.

Oregon is one of the first States to build rural freeways without tolls, and of these Baldock is extraordinarily proud, particularly the new Wilsonville cutoff between Portland and Salem, where wide, planted center strips break glare of oncoming lights.

About all of his engineering decisions Baldock is a firm taskmaster, studying carefully first with scientific approach and then staying with his findings in spite of outside pressure.

"An official," he explains his system. "should search for the truth and make his decision based on fact and truth and not be swayed therefrom except when additional facts may point to an error in the first decision. There should be no compromise with essentials. A decision should be made on the basis of affording the greatest good to the greatest number at the lowest cost."

And he stuck ever so tightly for two bitter years to the need for Salem's one-way grid system, finally adopted and finally liked even though some of his best friends were inconvenienced.

BOSS SETS EXAMPLE

Two department rules he enforces strict! fare no drinking on the job and no families traveling in State cars. Employees who don't follow suit get fired. He obeys them himself to the letter.

His main floor office in the shining white highway department building is in the Center and East Summer Streets corner, a big room with a huge relief map of Oregon, attractive colored photographs of many of the State's natural assets, a conference table, desk, and neat bookcases.

Baldock usually eats lunch at home, which is catty-corner through the building across the street at the Royal Court Apartments. He and the present Mrs. Baldock (Verona Lehmer, whom he married in 1947—she was a widow of an engineer; the families had been friends) live there in a pleasant, small-

ish double apartment.

Lunch is usually light (favorite, crab au gratin) and is often followed by a couple of hands of cribbage, with Mrs. Baldock getting pretty good now at knowing his system with fives.

Baldock has three children by his first marriage, Robert M., Bonnie, and Dorothy. Bonnie is now Mrs. Perry Andrews, of Los Angeles. The son, an engineer for the Forest Service, has two children, Robert Hugh. 14, and Janet, 10.

Mrs. Baldock has one daughter and two granddaughters of her own.

Baldock, wearing mostly grays and blues, is a neat, almost natty dresser, liking conservative ties and Homburg hats—and he has

a special rain outfit for golf.

His good friend and golfing partner (others of the foursome are frequently William Rector, a private accountant, and Col. Leonard Hicks, who operates an accessory business) is Rev. George Swift, rector of St. Paul's Episcopal Church.

TWO MEET ON COURSE

Reverend Swift merrily remembers the first time he met Baldock. It was on the Salem Golf Club course. Said the rector:

"He was having some trouble with his putting, and he expressed himself * * vigorously, as befitted the occasion.

Then he said, 'Young man, what is your business?' I said I was rector of St. Paul's Episcopal Church. This was the only time in our 25 years of golfing together that Mr. Baldock seemed at a loss to express himself.

"He's an interesting man, whether he's talking about his impressions of a great book he has just finished, the solutions to a complex engineering problem, or just how he made an eagle that time on the No. 14 hole on the Salem golf course."

Norman P. Mason

EXTENSION OF REMARKS

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, January 28, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a highly informative and interesting article on the career of the present Federal Housing Administrator, Norman P. Mason. This article, which appeared in the December 19, 1954, issue of the newspaper Il Progresso, highlights Mr. Mason's qualifications for his important position.

There being no objection, the article Was ordered to be printed in the RECORD,

as follows:

N. P. MASON, FEDERAL HOUSING COMMISSIONER, TACKLES HOT POST WITH BUILDING INDUS-TRY FULLY BACKING HIM TO DO A GREAT

(By Carl Soresi)

Washington, D. C.—One of President Eisenhower's most troublesome problems Elsenhower's most troublesome problems earlier this year was a cleansing of the wide-ly publicized windfall scandal that was brought to light in the Federal Housing Administration. Profiteering builders had made millions during World War II out of PHA insured loans. The Nation, Eisenhower felt, demanded rectification.

After lengthy consultation to seek the man he felt could do the job, the President named 58-year-old Norman P. Mason—a man widely respected in building trade organizations and one whom Eisenhower felt could muster the big hand needed to help get the FHA back in its honored place. From the job that quiet-spoken, shrewd "Yankee" Mason has been doing to date, President Elsenhower is not regretting his choice. On the contrary, he considers Mason one of the brightest recruitments of his administration.

Mr. Mason is no novice to the building industry—and one might safely say he has been in it since he was a baby. He was born in the little town of Willsboro, N. Y., in 1896, where his father had been sent by the New York. York & Pennsylvania Co. to build a wood

pulp mill. Logging and lumber mills were the Mason table talk.

In 1910, father Mason moved to Plattsburg, N. Y., to establish his own builder's hardware business. There, young Mason finished high school at the age of 15 cum laude and won over his father to let him work in the store. Soon Mason could talk intelligently with builders about the recondite items in the world-from butt the latest in hinges to the advantages of steel mitre boxes.

In the evenings he would turn to his hobby, amateur radio, working far into the night on his 1-KW set. Came World War I and Mason enlisted in the Navy aboard a troop transport as a radioman, where he stayed until 10 months after the war's end ferrying United States troops back home

from the European front.

Mason got back into the building business, but this time determine to help foster new techniques in the burgeoning building trades. He was 27 when he moved to Chelmsford, Mass, to operate the Wm. P. Proctor Co., dealing with saw mills, lumber yards, and a box manufacturing concern. Mr. Mason's son, David, today carries on the family business.

One of the west ways to serve the building business. Mason felt, was to take leadership in the trade organizations which were then becoming major operations. Mr. Mason has risen to the top in these organizations in

the intervening years.

One of his early ventures was the Cooperative Reserve Supply Co., a cooperative ware-house of lumber dealers. Later he served with the National Retail Lumber Dealers' sociation, rising to the presidency of that

major trade organization.

In his unending attempts to develop and foster new techniques in the building trades, Mason encouraged technical research being done at the Building Research Institute, where he is chairman of the Board of Governors of the National Academy of Sciences. From new methods of securing a hip roof, to fuller uses of laminated wood arches in churches and warehouses can be traced back to men such as Mason who have uncovered new avenues in the construction world.

Prior to his FHA commission. Mason became known in Washington as one of the top men in the building trade organizations-and enlarged his circle of friends in the industry through his work as a leader

in the field.

One of his major contributions was as a member of the President's Advisory Committee on Housing, which made the recommendations last December that served as the basis for the new FHA mortage law that has brought vast relief in an otherwise cautions mortgage market. Optimism in the field, expressed in liberalized loan regulations, has

been justified.

Mr. Mason is an avid student of economics, constantly inviting his friends (he is a prolific letterwriter) to give their views on the Nation's economic conditions. From these private surveys, Mason says he would surprised to see 1,400,000 new houses started next year in the United States.

During World War II, Mason served as a much sought after consultant in the building trades to a variety of wartime Government agencies, among them the National Housing Agency, Office of Price Administration, and the National Production Administration.

Mr. Mason is a director of the United States Chamber of Commerce, serving for the past 4 years as chairman of the chamconstruction and civic development committee.

Experienced executives both inside and outside the Government's interest in the building trade concede that Mason has been doing a bangup job cleaning out the title 6 inequities in the FHA-which led to the recently exposed windfall profits scandals.

Mason is for new ideas and more liberal policies to help enlarge the building of United States homes—but all, as he puts it, within a respectable framework.

He is an avid Eisenhower man, reciprocating the President's loyalty 100 percent. gears his work as FHA Commissioner on a threefold principle: adequate housing, modernization, and house rehabilitation. In his latest job, Mr. Mason assumes leadership of 20-year-old institution that has insured \$26 billion in building loans, and this year has chalked up a 31-percent increase in loans over last year, thanks to the new FHA law in which he played a major role.

At home, Mr. Mason likes to spend time with his charming New England wife, Helen, charting new trails to go hiking on and better skiing conditions in their native Ver-mont-Massachusetts area. He is an accomplished photographer, and loves to give illustrated travel talks, which can be gained without too much prompting.

Building better houses in America is more than a responsibility in our economy," says "It is also a big part of our way of

"If, by any regrettable action, we should be letting down the growing business of building better houses for our citizens," he adds, "we are clearly letting down our Na-

Senator George and the Formosa Resolution Debate

EXTENSION OF REMARKS

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Friday, January 28, 1955

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an excellent article entitled "George's Dramatic Moment," written by Doris Fleeson, and published in the Washington Evening Star for today.

There being no objection, the article was ordered to be printed in the REC-ORD, as follows:

GEORGE'S DRAMATIC MOMENT-GEORGIA DEMO-CRAT ACCEPTS PRESIDENT'S PATRIOTISM IN THE GREAT TRADITION OF THE LATE SENATOR VANDENBERG

(By Doris Fleeson)

Senate debate on the Eisenhower resolution was wrapped up in one dramatic minute when a measured promise came from the lips of the revered Walter F. George, of Georgia.

"Not Chiang Kai-shek, not Chinese Nationalist officials, no admiral and no officer of the line will decide how we shall protect Formosa," intoned the chairman of the Senate Foreign Relations Committee. "It will be a personal decision of the President of the United States."

Senator George then stated the thesis on which doubting Members of Congress-and there are many, many of them from both parties and all factions—hang all their hopes.

"I believe the President of the United States is a good man, dedicated to a peaceful world. I believe what he says.'

Senator George had been called from the joint session in honor of President Magloire of Haiti to hear read on the telephone the statement the White House proposed to make. A copy of it was in his hand as he took the floor.

In it, the President reserved to himself the decision to use United States forces for anything other than "immediate self-defense or in direct defense" for Formosa, Democrat GEORGE accepted and defended it in the great tradition of the late Senator Vandenberg, Republican, which assumes the veracity and patriotism of the President of the United States

Mr. Eisenhower had earlier called into conference his Cabinet, the Joint Chiefs of Staff, and the National Security Council. He had been stirred by a complex of reasons.

The testimony of General Ridgway, Army Chief of Staff, before the Senate Foreign Relations and Armed Services Committees was in the headlines. Testifying with reserve in deference to the President, General Ridgway he was not consulted when Joint Chiefs discussed the President's Far Eastern plans as he was away and his deputy was not authorized to speak for him. (Admiral Radford, Joint Chiefs of Staff Chairman, who had been quoted by a House committee as saying the Joint Chiefs of Staff were unanimous, agreed this was so.)

He believed that strikes against the mainland or in defense of Quemoy by air or sea power would draw in ground troops. He said the Army was overextended already and did not have the nearly half a million troops needed to win a mainland foothold.

The same headlines showed Secretary of Defense Wilson characterizing the Formosa situation as "just a ripple" and saying there

were no plans to increase the Army.

All this would be dynamite if Admiral Radford should be proved wrong in his estimates that only sea and air power were neces-Senators, praising Admiral Radford's intellectual integrity, point out Admiral Radford refused to rule out the use of ground

The President also faced senatorial anxiety over the question of who would have the power to order United States task forces to attack Red China. Several Senators had bluntly said Chiang wanted to go back to the mainland on the backs of American doughboys.

These doubts have great political potential at home and abroad. One shrewd Senator has said that the easiest thing to do politiwas to vote against the resolution. The President, he argued, can do what he wants anyway and if something goes wrongas well it might—then the no-sayers can say "I told you so."

Senator George's efforts have carried the day and the outcome is not in doubt. But Senators who raised the issue believe that they have helped to force the President to harden his position with respect to the Chinese Nationalists and the military who would risk war.

New Year's Day, 1955

EXTENSION OF REMARKS OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES Friday, January 28, 1955

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very illuminating and beautiful New Year's Day statement which was made and distributed by a fine citizen of the State of Connecticut, and my good friend, Frank S. Brainard.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NEW YEAR'S DAY, 1955

Two years ago, when the present administration assumed the functions of our Federal Government, it was generally accepted that infinite patience on the part of our citizens would be needed if economic collapse or international eruntion were to be avoided. To our surprise, the President himself has led the way in this respect, by setting an example for the Nation. A feeling of relief attended the display of firm patience with which this famous warrior has matched the sword-rattlers, at home and abroad, and his dignified self-control in the face of adverse criticism has revealed a concept of Presidential decorum unknown to the White House for years.

On this first day of the year of our Lord, 1955, and the independence of the United States the 179th, therefore, I commend to you the resolve to continue support of this man who, as Supreme Commander of the Allied armies of the world, consumated the mightiest armed assault of all time and how now, mindful of the sacrifices of fellow Christians from Calvary to Korea, is engaged in waging the greatest struggle of his career, in the cause of peace. Sincerely,

FRANK S. BRAINARD.

NEW HAVEN, CONN.

War Against Nixon Hits Social Graces

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. HOSMER. Mr. Speaker, under the heading "United States Politics Too Rough?" a recent edition of the Long Beach Press-Telegram carried a story by Washington Columnist Walter T. Ridder which should cause those waging the attack against Mr. Nixon to pause and reflect. Here are Mr. Ridder's observations:

WASHINGTON .- Are American politics getting too rough? The question has been much in the public print in recent days largely because of the speech of which Senator RICHARD NEUBERGER divested himself bitterly castigating by implication Vice President Nixon for his campaign speeches.

The question arose at a dinner here the other night. A prominent Democrat who for the past 6 years or so has been sojourning abroad returned to his Washington home. An old friend called him to welcome him back to the United States of America and to invite him to a small dinner. The gentleman accepted with alacrity.

"Before you accept too hastily," said the prospective host, "I want to tell you that Vice President Nixon will attend and perhaps you won't want to come.'

The gentleman assured the host that he would most certainly attend the dinner, but, as he said later, it started him wondering what had happened in the United States that the presence of the Vice President forces a host to fly warning signals before he asked

people to his house for dinner. "Have we gotten to the point," he inquired, "where everyone in Washington reads off the guest list before allowing people to accept a dinner invitation?" He was assured that such was not the case, yet there was just enough meat to the question to

make the answerer pause.

American politics have, of course, always been rough. One is reminded of Senator

Henry Clay walking a plank which in his days covered Washington's muddy paths and encountering one of his political enemies. coming in the opposite direction. One or the other had to step down.

"I never," said Clay's opponent, "step out of the way for a cur."

Without blinking an eye, Clay replied:
"I always do," and promptly got out of the

In the past, the tendency has been to slam hard and often in the political arena but, in general, act as relatively civilized persons on social occasions.

The Legislative Organization and the Processes and Procedures of Congress

EXTENSION OF REMARKS OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. PELLY. Mr. Speaker, as a combody I have gained a growing admiration for the legislative organization and the processes and procedures of Congress. I think all Members will agree. however, that in certain respects, due to the vast area of legislative jurisdiction and the complicated structure of our Government, there has developed on the paratively new Member of this great one hand some duplication of committee effort, and on the other hand, preemption by some committees of the functions and responsibilities of others

It was gratifying recently to learn of the new policy of more clearly defining the investigative powers of committees to avoid duplication. It seems to me it would be appropriate also to give attention to transgression in committee jurisdiction. I have in mind the experience in this body of attempts, some of them successful, to legislate by appropriation.

Let me cite a case which points up this inherent weakness whereby the Appropriations Committee could indirectly influence the entire policy of our vital defense program. Obviously the Armed Services Committee is continuously studying our defense needs. In all frankness, the members of the Armed Services are the only Members of this body, on the basis of their studies and information, particularly in closed hearings, to competently deal with certain vital matters of policy as they apply to national security. Much information is given the Armed Services Committee which cannot be repeated in the public debates in the House. In military affairs the rest of us have to pretty well go by their recommendations.

Recently the chairman of the Appropriations Committee was quoted by the press as having said he was against the aircraft carrier construction program. The danger I see is that the views of the distinguished gentleman from Missouri. sincere as I have no doubt they are, might result in legislation of defense policy through an appropriation bill.

In other words, the opinion of the very informed and respected chairman of the Armed Services Committee, the gentleman from Georgia, and members of his committee, on a subject like this certainly is the one we should follow.

Let me just quote four paragraphs from the testimony of the Secretary of Defense before the House Armed Services Committee on January 26, 1955:

I would now like to discuss our retaliatory capabilities. We have provided in our military program very powerful retaliatory forces in the Strategic Air Command of the Air Force. In addition, a great retaliatory capability exists in the carrier striking forces of the Navy, and in the tactical air units of the Air Force and the Marine Corps. Our policy calls for flexibility and versatility in the employment of existing forces. We are prepared to use our total resources in the most effective manner appropriate to the particular situation.

The buildup of the Strategic Air Command of the Air Force is continuing. This part of our retaliatory force will increase in numbers, but more importantly in quality as the remaining reciprocating engine bombers are replaced by modern jet aircraft. The B-36, long the mainstay of the long-range strategic forces, will be replaced by the B-52, the new long-range jet bomber. The longrange strategic fighter units in the Strategic Air Command forces are scheduled to be reequipped with supersonic fighters possessing a nuclear capability. These forces are being maintained in a high degree of readiness. Some of these forces are capable of operating directly from the continental United States; all are capable of operating from bases scattered around the globe. Local air defense for bases in areas outside the continental air defense system is being improved.

The carrier striking forces will be augmented by 1 additional carrier and 1 carrier air group this year. More importantly, both the carriers and the aircraft are being rapidly modernized, the carriers both through the conversion of existing carriers and the construction of new carriers, and the aircraft through the replacement of old models with the new aircraft now in production.

the new aircraft now in production.

I am sure you are all familiar with the new Forrestal class carriers, the first of which was launched about a month ago. These new carriers, as well as other carriers that are being modernized, will be equipped with newly developed aircraft with improved nuclear capabilities, such as the A3D and A4D, and very high speed fighters such as F9F9, FJ4, and F3H. Our carrier-based airpower increases the flexibility and dispersion of our retaliatory power.

The chairman of the House Appropriations Committee was quoted in the press recently as charging that the Navy's proposed new superaircraft carrier is outmoded and as urging Congress to scuttle it.

On the other hand, the chairman of the Armed Services Committee, following the testimony of the Secretary of Defense before it, commented:

I am glad that you have noted that our carrier striking forces will be augmented by 1 additional carrier and 1 carrier air group this year. And in that connection I want to say that I am glad to note that the budget contains funds for the construction of a new carrier capable of carrying modern aircraft that can deliver our most modern weapons.

So we find a divergent viewpoint between two committee chairmen. In the course of events, I think it is safe to predict that the full Armed Services Committee will sustain the President and the Defense Department recommendation. Just for the sake of argument, assume for the moment that the Appropriations

Committee follows its chairman and takes a different view. Therein, it seems to me, would be a case of legislation on national policy by failure to appropriate.

The House could, and I am sure would, in an instance like this, resolve the argument in favor of the proper committee—the Committee on Armed Services. But the danger lies in the natural tendency of Members of the House to support a committee on any measure reported by it.

In other words, unwittingly we might scuttle our aircraft carrier program and our national defense policy. I am sure we will not; but we might. All of which points up a possible weakness in our jurisdictional organization to which Members of Congress, it seems to me, should be ever alert.

The Formosa Situation

EXTENSION OF REMARKS

HON, HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. REUSS. Mr. Speaker, under leave to extend my remarks, I wish to make clear my position on House Joint Resolution 159.

The President has asked that the Congress join the administration in affirming the readiness of the American people to flight, if necessary, to prevent the invasion of Formosa. Since we have the ability to defend Formosa, and since it is important that Formosa's 10 million human beings and its strategic real estate do not fall into Communist hands, I support the resolution.

But I would be happier if the President, who has moved with admirable speed so far as Congress is concerned, had taken equally speedy steps to invoke the United Nations as the shield behind which the forces of the free world may rally.

The President's message recognized that the security of Formosa is properly a matter for the United Nations, and says, "We would welcome assumption of such jurisdiction by that body." But the administration has so far failed to place the Formosa question before the United Nations

The President, in yesterday's message, has shown that he knows how to invoke the jurisdiction, such as it is, of the Congress. There is, in fact, a much more precisely established method of invoking the jurisdiction of the United Nations. Under the uniting-for-peace resolution adopted by the General Assembly of the United Nations on November 3, 1950:

If the Security Council, because of lack of unanimity of the permanent members, falls to exercise its primary responsibility for the maintenance of international peace and security in any case where there appears to be a threat to the peace, breach of the peace, or act of aggression, the General Assembly shall consider the matter immediately with a view to making appropriate recommendations to members for collective measures, including in the case of a breach of the

peace or act of aggression the use of armed force when necessary, to maintain or restore international peace and security. If not in session at the time, the General Assembly may meet in emergency special session within 24 hours of the request therefor. Such emergency special session shall be called if requested by the Security Council on the vote of any seven members, or by a majority of the members of the United Nations.

The prerequisites of General Assembly jurisdiction have been satisfied. That there is a threat to the peace, the President's message abundantly establishes. That the Security Council, because of the U. S. S. R.'s intransigence, is falling to exercise its responsibility to secure Formosa against aggression is equally apparent. Although the General Assembly is not now in session, an emergency special session may be called on 24 hours' notice.

Under the uniting-for-peace procedure of the United Nations, the General Assembly may recommend to members exactly the kind of action designed to resist aggression which the President has asked that he be empowered to untartake on behalf of this country. It may call for a cease-fire, or ask its members to meet aggression with armed resistance.

To fail to take steps to use the uniting-for-peace procedure lays us open to the charge that we are trying to go it alone. So long as we let the unitingfor-peace procedure lie dormant, we are not doing our best to marshal the forces of the free world to our side.

Daily Prayer for Peace

EXTENSION OF REMARKS

HON, CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following Dally Prayer for Peace, written by Mr. Robert B. O'Boyle, of San Jose, Calif. I commend this prayer to the attention of my colleagues.

DAILY PRAYER FOR PEACE

(By Robert B. O'Boyle)

My dear Father in Heaven and Saviour of mankind, as this day begins, I offer my prayer to Thee, seeking divine guidance and succor in all my undertakings throughout this day. Help me to be strong and great in the fear of God and in the love of right-eousness.

Make me strong spiritually, mentally and physically. Throw Thine arms of protection around all of Thy children everywhere. Go with them and with us, dear Father, all of the way.

Lead us. Thou omnipotent Ruler of the universe in all of the things we do that they may be pleasing in Thy sight.

Grant us eternal peace and may this supplication, so reverently offered to Thee, be heard and answered in Thine own way, with the assurance that peace will be everlasting.

We also pray that when our work which Thou hast planned for us to do here upon earth, has been completed, that Thou will call us home to be with Thee and Thy host forevermore.

This is my daily prayer. Amen,

Let's Not Waste Our Fighting Manpower

EXTENSION OF REMARKS

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1955

Mr. SMITH of Mississippi. Mr. Speaker, under leave to extend my remarks, I include the following article by Lt. Gen. Robert W. Harper, United States Air Force, retired, as told to Hodding Carter. This is worthy of the attention of all Members of Congress as we approach the problem of legislation in regard to military personnel. The article follows:

[From the Saturday Evening Post of December 11, 1954]

LET'S NOT WASTE OUR FIGHTING MANPOWER (By Lt. Gen. Robert W. Harper, USAF, retired, as told to Hodding Carter)

(Lt. Gen. Robert W. Harper, the dean of military educators, was commander of the Air Training Command when he retired last summer, after 30 years in the Armed Forces. Twenty-nine of those years were served in the Army Air Corps and its successor, the United States Air Force. World War II and its aftermath brought him one top job after another-Assistant Chief of Air Staff for Training; director of the Air Force Division Military Government in occupied Germany; and commanding general of the Air Transport Command. In the spring of 1948 he assumed command of the Air University at Maxwell Air Force Base, Alabama. There he drew up the plans for the long-needed Air Academy, which is to be located at Colorado Springs. That fall he took over the Air Training Command. A graduate of West Point, class of 1924, General Harper is rated a command pilot. His decorations include the Distinguished Service Medal with Oak Leaf Cluster and the Legion of Merit. He is now practicing law in Harlingen, Tex.-THE EDITORS.)

I'll begin with three stories, true stories about angry people. One concerns a row between top-ranking Russian officers and myself in Berlin. Another has to do with an American citizen whose home, built 150 years ago by his forebears, is situated near an airbase. The third is about a newly enlisted Air Force cadet.

The Russian story goes back to 1945, when I was director of the Air Force Division in our military government setup in Germany. That wa sthe year the Russians told us we couldn't have free access to Berlin by air. Yet we had to have air corridors; the ground approaches to the German capital were in Russian control.

The Russian officers were acting under orders. So was I when I met with them. I told them we needed those corridors. I said we were going to get them. Toward the end, angered as I'd never been in my whole life, I was pounding the desk with my fist. Well, we got three air corridors, and when the Russians blockaded Berlin in 1948 it was a good thing we had them.

Don't think the Russians backed down because I pounded a desk and talked tough. They gave in because they decided we meant what we said; that we were prepared to go to any necessary lengths to get the corridors.

And most important of all, they were convinced that we had the military strength and the will to act. So much for the first story.

I didn't get angry with the American of the second story, nor did any of my officers. But he got mad at us, plenty. His lovely ante bellum home lay near one of our southern airfields, which had been used during World War II for basic flight training. The propeller-driven planes in use then didn't make enough noise to disturb the house-holder and his family. When the field was converted to jet training, however, and the runways extended toward his home, the noise was often deafening. Sometimes it seemed to the family that the jets were coming right through the roof.

The owner demanded that new runways be built in another direction, even that the field be closed down to abate the nuisance. After all, he said, his folks had been there a long time before we came. The base commander explained that neither the field nor the runways could be whisked away.

This only made the man angrier. He felt that the Air Force was trampling on his rights as an American. Finally, the base commander spoke up to him. Sure the noise was bad, he said, but it was a friendly noise. Without those jet trainers and the young men in them, we might all be hearing hostile planes whose pilots didn't care what any Americans thought about anything. I think that softened our neighbor, even though he may still dislike the noise.

The third story is about a cadet who turned up at headquarters at Waco, Tex., where cadets are first sent after joining up. He, too, was angry, and he got permission to see the commanding officer to tell him why. I was there on an inspection trip and sat in on their meeting. The cadet said that he had been in the Air Force less than a week, that he had been sold a bill of goods by a recruiting team, and that he wanted out. We had been having trouble with overzealous recruiters, and we knew that if this boy wanted to get out, he'd deliberately wash out later. Some of them do. So we told him that we'd see that he was released to the draft.

A few days later, the CO of the base ran into him. The youngster was trimly uniformed, and jaunty. The CO asked him whether he still planned to get out of the Air Force. The boy took off his cap, exposing to view an extremely butch haircut. He'd been trimmed down to quarter-inch bristles.

"Guess I'll stay in, sir," he said, grinning.
"I'd be ashamed to go home with a haircut like this."

And he did stay in. He's still in the Air Force, and he's a fine officer; and all of us know that the haircut had nothing to do with his decision.

What do these stories add up to? Well, there's the enemy who limits his aggressions when faced by an opponent's strength and determination. Then there's the independent American citizen, and so many like him, more aware of his rights in a free country than of the enemy threats to crush those rights. And there's the cocky, wisecracking young American, perhaps home-spoiled and undisciplined, but potentially the best fighting man and the most intelligent anywhere, the boy who stands between the enemy and the irate householder.

Because that enemy is strong and dangerous, our Air Force has to be the best in the world. The year it becomes second best is the year the United States can expect to be attacked. My job as commander of the Air Training Command was to see that we never became second best. But the efforts of professional military men aren't enough to guarantee air supremacy. We must have backing from average citizens and above-average youngsters.

When I won my wings 30 years ago, oldline generals and admirals were laughing at military aviation and hampering its prog-

ress. Our Air Corps had Just begun to use photo-reconnaissance planes—60 years after a civilian balloonist had proved to the Union Army in the Civil War the value of aerial observation. Military pilots of the early twenties were still flying wire-braced biplanes. In basic design they showed few improvements over the Wright brothers' first flying machine of 1903.

And in 1925, the year I entered the Air Corps, Gen. Billy Mitchell had been court-martialed and convicted of "conduct to the prejudice of good order and military discipline" because he had rightly accused the Army and Navy of incompetency and criminal neglect in their attitude toward air-power.

That was how it was when I started flying. Less than 25 years later, when I took command of the Air Training Command, we were in the jet age. For the next 6 years my assignment kept me away from my home and family more than two-thirds of the time. Except on Sundays, my rising hour

was 5 a. m. or earlier; we were just that busy. I had no complaint about my schedule. But I did object to the instability of purpose with which we entered the jet age, and to the indecisiveness of our Government's plans for the Air Force. In the briefcase that I carried all the time were plans for every size Air Force from 48 wings to 137. I needed a variety of plans because congressional and military opinions on the proper size of the Air Force sometimes changed between the time I left my head-quarters for Washington to review new programs with the Chief of Air Staff and the time I got there.

This uncertainty was bad enough. But equally serious and more long-lasting problems faced the Air Training Command when we entered the jet age. One of them still confronts us. For the first time in this half century of intermittent war, we and our probable allies are far outnumbered by the combined forces of our probable enemies. Their warmaking resources and production are expanding constantly in a steady approach to our own level. Since we can no longer count on turning out the most of everything, our goal now is to produce the best of everything, in men and material.

It was sheer quality which gave our Air Force superiority in the Korean conflict. To win those air battles, we had to train men for jet-age combat far faster than we wanted to or thought possible, and this was done with no lowering of standards. The Air Training Command takes pride in an air victory won against a numerically superior enemy, at a time of governmental indecision as to the Air Force's proper role and required size.

Of the men now on duty with the Air Force, 95 in every 100 have gone through one or more of the Air Training Command's schools. Thirty percent of our airmen are enrolled in the Air Training Command at any given time; so are hundreds of fliers and technicians from friendly nations. It's the biggest school in the Nation, perhaps in the entire world.

These youngsters have to learn jet flying, air-borne electronics, cryptography, radar operation, and score of other complex skills. Two hundred thousand airmen were trained last year in 40 career specialties. Enrolled in the Command's 42 bases, they attended a combined total of 270 courses—airmen whose average age is 19 and whose average education is 11th grade, and cadets who need have only a high-school education to qualify for pilot training. In World War II the minimum requirement was 2 years in college.

First of all we have had to teach these unmilitary-minded boys the military facts of life; the most important fact being the reason they're being trained. I think we've done a better than fair job of teaching in

the past 6 years. If we hadn't, I doubt that we'd be strong enough today to keep our freedom.

I know that the men we've turned out at Waco, at Biloxi, at Randolph, and everywhere else in the command are superior to any They proved it in other pilots and airmen. Korea against heavy odds. They've passed most thorough physical, mental, and aptitude test given to Air Force men any-where in the world. We wish they had a higher average education, but it's already higher than the average for any other nation's airmen. It's the best Air Force anywhere, and the safest. In fact, it's provable that the boys in the Air Force are a lot safer than their civilian friends.

But we can't get enough young men or keep enough of them in the Air Force. Airmen are volunteers, and the present rate of volunteer reenlistment is low. As the Air Force builds toward the 137-wing goal, we are constantly short of trained manpower. Flying in the jet age calls for skills which take at least 2 years to learn. The volunteer is in for only 4 years. If he won't reenlist, we have to start afresh with his green replacement. Why can't we get all the airmen we want? And why can't we keep them when we get them?

First of all, our pilot requirements are stiff, as they must be if our Air Force is to excel. Of every 400 boys who seek to become flying cadets, only 100 get past the physical, mental, and psychological barriers. Of these 100, only 65 come through as flyers. Among the 35 failures are some who wash out deliberately, boys who find out that they are afraid to fly or who discover an overmaster-

ing dislike of military service.

There is a shortage of cadet applicants, and this is in great contrast to World War II. when would-be pilots volunteered in swarms. One trouble is that we have oversold the jet age, fostering an absurd belief that the jet flier has to be a sort of super-

Many potential cadets, having been sold on the superman nonsense, feel that jet flying is beyond their ability. This supposition has is beyond their ability. This supposition has been clearly disproved since we lowered our education requirements for cadets. Highschool graduates are handling today's complex machines with no more trouble than college graduates had with the relatively simple airplanes of World War II.

Another handicap to enlistment, and reenlistment, is the half-war, half-peace existence we are leading. The young airman, in training to fight for his country, meets too many civilians who treat him shabbily. Too often they gouge him, espe-cially in rents. A couple of years ago 7 sergeants at 1 of our bases got fed up with mistreatment by some of the townspeople, particularly the landlords. They converged on the directors of the local chamber commerce and cited their grievances. The community's newspaper played up the story, and it was widely printed throughout the Nation. Some reforms followed immediately. Everyone on the base was proud of those sergeants for speaking up like American citizens, and the upshot was that morale on the base and military relations with the townspeople have been excellent ever since.

There are other reasons for our enlistmentreenlistment problem. American voungsters know that our pilots accomplished prodigles in Korea, against odds as high as 10 to 1, but too few know that the odds wouldn't be so one-sided today. Then there are boys who assume that guided missiles will soon make pilots obsolete; they may prefer a technical civilian education to fit themselves for push-button war. But that kind of war isn't going to happen for a long, long time.

Cadets resent difficulties about marriage; so do airmen in the lower grades. A cadet can't marry while he's a cadet. An airman below the rank of staff sergeant has a tough time supporting a wife, because his married man's allowance is woefully inadequate. This helps explain why only 1 airman in 4 reenlists. How can we keep air superiority with a turnover rate like that?

Some of our most intelligent boys won't reenlist because they want to finish their interrupted education under the GI bill of The educational advantages under this bill are far greater than anything we can offer for reenlistment. Others are lured away by the aircraft and electronics industries, which can pay the ex-airman much more than the Air Force can for the skills which the Air Force taught him at great expense.

In a 3-year period ending last fall, the Technical Training Air Force, a part of the Air Training Command, graduated its mil-lionth airman. Half of them were replacements for men who didn't reenlist, and each man's training cost the Nation \$14,000.

The financial inducements of civil life seem doubly attractive to young men who doubt that military life offers a stable future. Their young wives object to financial hardships imposed on today's career soldiers by legislative blindness or the military's zeal to economize. We're all in favor of real economy. But I doubt that the Nation has benefited financially through the nibbling away of such fringe benefits as the post exchanges, the commissaries, and adequate medical care for dependents.

The men in the Air Force-and the Army and Navy, too-feel that they are being dis-criminated against by congressional acts which have taken away minor benefits they once enjoyed. If those benefits aren't restored, the rate of enlistment and reenlistment is going to drop further, dragging down with it our ability to defend ourselves.

The problem of attracting volunteers is complicated further by psychological factors. If most of our people were acutely aware of the urgent need to maintain the best Air Force, our young men would react as Americans always have in time of national danger. But too few of our boys recognize our peril or understand the obligations of citizenship. Many of our recruits are burdened with doubts and cynicism which handicap the Air Force, the Nation, and the boys themselves. The cynicism is mostly directed against our political leaders; the doubt arises from ignorance of the reasons behind political and military decisions.

The work of informing and indoctrinating young airmen has become the heart of the Air Force training mission. The American soldier, being a free man, must understand what he is fighting for, and why, to be animated by a sense of purpose. But the Armed Forces are having to do too much teaching of values which should have been taught in the family, the school, and the church. aren't at fault; their elders are. On this point my views coincide with opinions of chaplains, psychologists, and medical officers in the Air Training Command. These are the men who come closest to discovering an airman's mental and moral outlook.

Our young men are better physical specimens than their fathers were, and they are better able to handle the tools of the machine age. But many of those who come to us betray a lack of instruction and moral discipline at home. Too many of them are ignorant of the implacable nature of communism and its threat to our freedom. Chaplains have told me that boys who seek their counsel often complain that they were not given, either at home or in school, a meaningful concept of duty to country or any familiarity with words like honor and responsibility. These lacks, I know, are especially marked in boys who come from broken homes.

Certainly I am no pessimist, but 6 years of Air Force schoolmastering has convinced me that we must recognize our problems

and our mistakes. We have recognized most of them in the Air Force itself, and we are trying to do something about them.

We know we must give the airman pride in his unit and in the military profession. We can do it through devices as old as the history of arms-the military band, the dress uniform, the distinctive unit insignia, and all the colorful reminders of past glory and present esprit de corps. Now that we achieved stability in the proposed size of the Air Force-no change in the 137-wing goal is likely for a long time-we can also offer reasonable security and a future to the man who enlists and the Reserves hesitating to remain in the service.

Within the military organization itself we can provide more off-hour optional schooling, giving enlisted men and cadets much of the education which they now quit the services to seek. We can give ample reenlistment inducements, including cash bonuses, which not only benefit the airman but also save the high cost of replacement training.

The Air Force continuously tries to bring the public and the Military Establishment closer together. To this end I established, a little over a year ago, the Air Training Command Advisory Board. It is a group of 24 leaders in science, education, personnel management, technical training, flying training, public relations and business administration. think their advice can be of great benefit to the Air Force and to the Nation.

We Americans should remember that we were the first people to achieve powered flight and the first to develop power from the atom. Some of us seem to have lost faith in our technological progress, our unity, and the rightfulness of our cause. Some of us see only disaster and doom in each new scientific development, instead of rejoicing over these reinforcements to our strength.

We should remember how strong we are, and remember, too, the great roots of our strength—our climate, our mineral resources, our access to sea and air lanes, our ability to produce food in great surplus.

Add to those advantages our industrial and technological superiority, the size and nature of our population, our political philosophy and freedom and high level of education. And now, having achieved military preparedness, we have the happiest aggregation of factors for national security of any people anywhere.

When I say this, I am thinking again of the Russians I faced in Berlin. They know, perhaps better than we, that the United States cannot be second best, either in the air or in our hearts.

Decent Housing for Low-Income Families

EXTENSION OF REMARKS OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mr. O'HARA of Illinois. Mr. Speaker, with great interest I have read the address of the Commissioner of the Public Housing Administration, Charles E. Slusser, at the dedication of Concord Homes, of Beaumont, Tex., on January 21, 1955. By unanimous consent I am extending my remarks to include the full text of Commissioner Slusser's remarks.

I commend its careful reading to my colleagues, especially those who reside in communities of smaller population and have not the help of personal experiences in understanding the problems of the larger urban centers. I trust that in the 84th Congress there will be greater understanding of these problems and an earnest cooperation in furnishing the answers.

Decent housing for families in low-income brackets remains a challenge which we in the 84th Congress will meet. In the past there has been bitter controversy which I sincerely hope will not continue into this Congress when after reexaminations and reappraisals entered into with open minds we should be able to enact a housing act neglecting no segment of our population.

Commissioner Slusser's address fol-

Speaking at dedications such as this is a task I welcome. This is not because I relish the sound of my own voice—I can name quite a few others to whom I would rather listen—but because I enjoy talking about low-rent public housing and what it does for its tenants and the communities of which it becomes an integral part.

As Public Housing Commissioner, I draw quite a few of these assignments. That comes with this job. And given the same subject and, basically, the same facts, it is hard to avoid a similarity in approach.

We pay tribute—as we should—to those who have given of their time and effort; we cite the need for structures such as these, as we should; and we dwell on our hopes for the continuance of the program.

This performance has danger in it. Boredom and routine would inevitably creep into it. And they would do this, despite the dedicated efforts of many of us, because of the sameness of our message, were it not for one thing.

one thing.

The United States Public Housing Commissioner is not granted the boon of temporary blindness.

He cannot drive through your cities and turn his eyes away from the slums and what they contain. It is his duty to observe, and then do his best to correct, change, and help remove the eyesores that afflict this Nation and replace them with the modest, but livable and attractive quarters such as you see about you.

If there is one man in this country who has been forced to look upon the worst of his country, it is I—even as it was with my predecessors. When a distinguished citizen comes to town, he is usually shown the best business section, the finest residential areas, the gayest amusement centers. The Public Housing Commissioner goes on a tour of the slum areas. He may see the best, but he always sees the worst.

It is as if the friends of public housing fear the occupants of the Public Housing Commission's chair would lose the incentive to do battle in the name of our lowest income group. It seems perhaps to our friends that they are compelled to keep constantly before us a picture of the homes that have fallen into disrepair and ruln in many of our great cities.

I can understand this thinking. Our public housing units are numbered in the thousands—our substandard homes in the millions. Yes, there is much left to be done.

It is because of the immensity of the task before us that I welcome the opportunity to speak on such occasions as this. It is for precisely the same reason that I deplore the cold war, that for some lack of logic must be carried on between the advocates of public housing and certain members of the real-estate fraternity. It is time we faced not each other, but instead confronted a few of the more salient housing facts, and—to borrow a phrase from the more international of our columnists—tried a little of the theory of peaceful coexistence.

There are more than 8 million substandard homes in this country. I would like to see them all replaced by private enterprise, but that is just not coming to pass. Today the construction industry is producing at a rate of a million and more new homes each year, but most of these are going up in the suburbs and the outlying regions. The 8 million substandard homes, the slums, the blighted areas, the breeders of disease, crime, juvenile delinquency and horrendous municipal expense are not being eliminated except by governmental action, such as public housing brings.

Now I place no blame for this on the homebuilders. Their profits must be quick and tangible, where public housings are long range and not easily apparent. The private builder's ability to clear a slum site, construct, and derive a profit from the very lowincome class served by public housing is slim, indeed. He does not have the power of condemnation, the financial resources, nor most important, the moral duty that is the Government's.

Yet, because of this, should we tolerate the continued existence of slums of these revenue producers for rapacious landlords? I think not

There are those who think the problem can be solved in terms of easy credit and guaranties against risk. All the perils of inflation and socialism that we have been warned against for 100 years lie down that road. The Federal Housing Administration is a businessman's venture. The more we get the Government into the act, the more we invite Government to take over, the more abuses we contract for, and the more trouble we make for ourselves.

ble we make for ourselves.

I think it is time that we marked out a few spheres of influence and stayed within them. Our average public housing tenant has an income of around \$2,000, far below the amount necessary to afford even the cheapest standard housing. For these slum dwellers, the Government should work toward providing the decent, safe, sanitary homes that public housing offers to further enrich the city that uses it. That should be its province, because within that income limit the only profits to be had are those derived from human misery.

Having drawn that line, let us then get on with our new concept of urban renewal—and more power to private enterprise for whatever it can reclaim from the encroaching slums. But where that is impossible, where time and neglect have gutted a structure and left it an inviting menace for fire to consume and with it human lives—before that happens—let me and the other friends of public housing wield the public housing sledgehammer—before time runs out on us and into newspaper headlines.

There are enough substandard homes, enough slums, to keep public housing, private enterprise, urban conservationists, and anyone else who wants to get into the act, busy for the next decade and more. Let us parcel out the jobs to whomever can do them best. I am not bragging when I say public housing is best at clearing slums. We have moved in on hundreds of them.

I have crisscrossed this country since becoming Public Housing Commissioner, and I tell you the progress of America is truly a wonder to behold. But sometimes we are so intent upon the future that we overlook today unintentionally. We must not permit the gittering skylines, the superexpressways, and the fine residential subdivisions to overshadow the less attractive side of the municipal scene. We cannot afford to ignore the slums or the people who live there—no less our neighbors than those who live in penthouses or in the brandnew suburbs.

I think we have made significant progress in rehousing the ill-housed. Perhaps here in Beaumont you know the pros and cons of public housing. I understand you received a thorough indoctrination in the subject a

few years ago in preparing for a referendum vote on the continuation of your own lowrent housing program.

But there is still more to be said. The national story of low-rent public housing needs telling, but not so much as the local story.

It's only human nature to say "No" to something new—something unfamiliar. There are always the youngsters who, when offered asparagus for the first time, decline politely but firmly, saying: "I never ate it, but I don't like it."

We have a responsibility for letting our neighbors know the purpose and value of low-rent public housing. I try to tell the story as often as I can, but it is your job too, just as it is the job of the hundreds of local housing authorities throughout the country.

For some time, our opponents have raised the cry of subsidy against us. This has been muted somewhat of late since we began listing other governmental subsidies which have widespread approval and dwarf that of public housing. Now the cry is that public housing does not pay taxes, and you can expect to hear more of it.

Our opponents are splitting a hair there. If public housing does not pay taxes, it makes payments in lieu of taxes. And these are invariably more than the taxes collected from the slum properties which we replaced. So our opponents say that the payments are not enough—that private enterprise would be forced to pay more. Perhaps, but the point is we are building where private enterprise is not, returning to the municipalities on the average three times what they once received from private enterprise. We pay up a lot of back taxes, too.

I do not like the idea of the Government renting houses. But I like less the fact that too many of the people of our great cities are living in slums and under conditions that call for municipal services out of all proportion to their numbers. When you write and talk of subsidized homes, think also of how you are doing it with your taxes. Are you paying a little—the average man less than the price of a package of cigarettes in a year's time—so that a million and quarter of your fellow citizens can trade the living hell of a slum for a decent, sanitary, home? Or are you paying a lot that is expended in the extra police, fire, hospital, and social welfare calls that a slum area inevitably makes?

Subsidy? Which would you rather subsidize—a slum or a decent home?

As for grouping public-housing units, I would rather build individual units cut to individual needs, but you cannot construct honesysuckle cottages on the isle of Manhattan. Neither can you produce them for Chicago's teeming millions, nor in your own rapidly expanding metropolis. We are not perfect, however, and working with private enterprise, I have hopes that this program can, in the not too distant future, be turned more closely to the path of individual initiative and progress and at less cost to the Gov-To that end, I have approved work ernment. on a couple of experimental projects, both of which may, in the not-too distant future, prove of value. Until they, and whatever other plans we develop for better housing and fewer slums, become operative, I ask of you citizens, of your congresstional representatives, the opportunity of sending the public-housing legions into battle against

Beaumont is fortunate in that it has the unselfish services of a group of public-spirited and farsighted citizens who recognize the position of public housing in the municipal structure for what it is and what it should be. I am speaking of such men as the late J. S. Edwards, your first chairman; the late K. C. Withers, also a board chairman—and Charles Smith, who is among us. All have carried the torch of enlightenment.

We are dedicating Concord Homes tonight because of what they have done.

I want to pay tribute to your present board of commissioners: Kirby McGown, O. B. Archer, H. H. Matthews, R. L. Hooker, and your master of ceremonies, Carl Levy. The majority of these men have served you since the housing authority was first organized in 1941. They have served you faithfully, as has Kelly Smith, your executive director.

Concord Homes would gladden the heart of the late Congressman J. M. Combs, a man whose career in Congress from this district was marked by support of this program in all its phases. It is from the records of such men as he that I draw the inspiration for the thoughts I have expressed here today.

I do not know what action the new Congress will take with respect to low-rent public housing. But we do know that President Eisenhower in his January state of the Union message to the 84th Congress once again recognized the need for more low-rent housing. I feel certain that he will continue to recognize that need as long as we have slums.

I think his intention is to give private enterprise every opportunity to move against the blight and despair that stalk our cities like a tiger. But I think there is more to the picture than that.

President Eisenhower is a man who lives close to the heart of America. No one in government is more burdened with doing what must be done. It is his lot to cast up his accounts, the good with the bad, and make the tough decisions. Like the Public Housing Commissioner, the President cannot close his eyes to the bad side of our housing picture, our slums. So I cannot see him neglecting the public housing weapon as the best eradicator yet produced.

We Are United on Defense of Formosa

SPEECH

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. LANE. Mr. Speaker, the world witnessed a remarkable display of American unity this past week.

It crystallized suddenly in support of a bold stroke in foreign policy that had heretofore been weakened by confusion, indecision, and appearement.

It was the true spirit of America speaking up for what is right and just.

Serving a clear warning to the Chinese Communists that if they persist in disturbing the peace by seeking to conquer Formosa and the Pescadores, they will be treated as outlaws against the world community, and will suffer a disastrous defeat

Although there may be some difference of opinion concerning our right to prevent the Communists from taking over the offshore islands of Quemoy and Matsu, there is none whatever concerning Formosa and the Pescadores to which the Reds have no claim whatsoever.

Both international law and strategic necessity justify our defense of Formosa and the Pescadores,

This stand will hearten anti-Communist forces throughout Asia; will restore the prestige of the United States; and will place justice above expediency in the settlement of international disputes.

We are pleased that the President sought the endorsement of Congress.

It demonstrated our unity to the world, and it will give a psychological boost to every human being who longs for peace, and security against aggressors.

The Communists have suffered a serious setback.

Proving that whenever the United States is true to its fundamental conscience and its courage it wins the support of freedom-loving people everywhere and raises the hopes of Chinese and Russians who long for the day when they will be liberated from the Communist yoke.

The Power of a Positive American

EXTENSION OF REMARKS

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the Record, I include a very timely and interesting address delivered by Miss Georgia Jackman, a member of the editorial staff of the Troy Free Press, before the Business and Professional Women's Club of that city as follows:

THE POWER OF A POSITIVE AMERICAN
(By Georgia Jackman)

"Are we missing the boat in our presentation of the fight in national security?" was my thought one night in early November as I sat in a meeting of the national security committee at the home of Helen Erdsiek, the chairman. Helen and her group were preparing the program which they have presented tonight—the things to do should there be an atom or hydrogen attack. This is very important information for all of us.

However, I kept feeling that there should be another phase to our national security which would be something we could all be doing now—not just some time in the future if and when there was a bomb dropped.

Then came the thought: We hear so much about communism and how to recognize it; but how about us, you and me? Are we the kind of Americans we should be, the "positive" kind of Americans, who have faith in our country, who make the Golden Rule the measuring stick for our feelings toward our fellowmen at home and abroad, citizens who live our American way of life in such a manner that people all over the world will know that we are a nation of individuals bound together for a single purpose, that of being a democracy which leads people to fame and teaches us to think for ourselves? (It is amazing how much material comes your way when you begin to think along new lines.)

We are members of a system of government based on the dignity and freedom of the individual. This system was created 178 years ago by the men who wrote our great Constitution of the United States, incorporating into it the Bill of Rights among the many other measures of great foresight. There is no other like it and there never has been. Let's not forget this, for it (our democracy) will work only as long as we make it operate successfully.

Senator Stuart Symington, junior Senator from Missouri to the United States Senate, wrote in his creed in 1952: "We Americans are not only characters in the living book of democracy; we are also its authors. And so it falls upon us to decide whether the chapters that are to come will tell a story of retreat or continued advance."

How are we going to meet this challenge? Are we going to sit by criticizing what others are trying to do without making any effort ourselves to make this a better America?

It was my privilege to attend the luncheon meeting on Saturday during the annual meeting of the Missouri Association held last November in St. Louis and to hear Dr. R. C. S. Young speak on Why I am an American. Dr. Young, at present director of admissions, Atlanta division, University of Georgia, is a Scotchman by birth and came to America—the land of opportunity for him—2 years after World War I. He was 19 years of age at the time and had served in the English Army during the war.

Dr. Young urged us to conserve our way of life, saying that we have lost a lot we will never get back. We have many in America who do not really appreciate our way of life—we have just grown up with so much of which other peoples know nothing.

We take our freedoms, our possessions, our luxuries as a matter of course. Our Constitution emphasizes our right to life, liberty, and the pursuit of happiness. Much of our happiness is gained in helping others—we are a nation of Christian people, believing in the brotherhood of man. We are most in the brotherhood of man. We are most willing to help people help themselves, but many of us are getting tired of helping those who don't seem to want to help themselves. but want to help the enemy. There is but one way to teach Americanism, and that is to live it. You can talk forever on this theme of democracy as it is in America, but people in other lands-and some people right here in our midst, enjoying our privileges and freedoms-do not seem to comprehend You have to live peace, security, and all of the heritages we have to be real Americans-positive Americans.

Our Nation came into existence proclaiming it a philosophy of life, a philosophy which believes that institutions exist for men and not men for institutions, and that the happiness of the poor and humble is of as much importance as the happiness of the great and the proud.

We Americans are a people who have come from many nations and from many parts of the world. The blood which flows in our veins courses down through the ages, from many different races. Our cultural background, our religious life, and the customs of our people are many and varied. Many of us are directly from another country—some of one, two, or many generations from our overseas parentage—but now we are all Americans. Let us be positive in our loyalty to and our thinking of our country—let's not be hyphenated Americans.

Dr. Young says that Americans have never asked for nor wanted anything but the opportunity to work and to live; that we have taken America and built the only aristocracy of people in the world who are willing and want to work. "In America we never move horizontally, but always vertically," he said. "We don't follow blindly in our fathers' way; we go our own way, always upward." He knows from his own experience that the will to work is the key which opens every door in America, and maintains that we are "the democracy of a people with a vision." He feels that we have been selling America short and that it is time to wake up—to give our people the American ideal: reboost America.

In building a better America, in selling our people on the American idea, we are building a rampart on which to stand against one of the greatest threats to our way of life—communism.

The Communists have their books which contain the doctrines and the blueprints on which the totalitarian regimes of Soviet Russia and its satellites are based. They describe in precise detail what people must do, think, and believe under the Communist system.

David Sarnoff once wrote, "Dictatorship is brutal because it is brittle. It cannot bend; it can only be broken. It cannot lead its people; it can only drive them." Yet there are many who would have us live under a dictatorship—communism. In contrast to life under communism, Mr. Sarnoff continued: "Democracy, on the other hand, is resilient. It bends without breaking. It sways to the left and to the right, it returns to the point of normal balance. It calls for leaders, not for drivers. A free people can be led a greater distance and to greater heights than a slave people can be driven."

Have you given much thought to this menace—this Communist threat which comes from within our country today? Some of it is prevalent in our own community, whether you may know it or not. Frequently, mail coming into our offices under bulk mailing, throwaways, etc., contain decidedly pink propaganda, which we would recognize if we took the time to read it before giving it a toss into the wastebasket.

In a Memorial Day address in St. Louis last May 31, Senator Thomas C. Hennings, Ja., senior Senator from Missouri to the United States Senate, warned us of this menace, when he said that the threats upon our liberty at home, the violation of our cherished freedoms in the name of patriotism are deplorable evidences that we still have a long way to go. Far from cementing our people in the bonds of fellowship, they are building up an atmosphere of fear, suspicion, distrust, and hysteria.

A fear is growing up in us, fostered by the very menace spoken of by Senator Hennings. Its chief purpose is to weaken our thinking. It is a corrosive element being introduced to destroy the very precious ingredients of the freedom we are pledged to maintain.

It is only through constant vigilance that we can protect our ideals—protect our integrity as a nation. Senator Hennings, in an address at Valley Forge on June 13, 1954, had this to say: "Our very greatness has lulled us into a complacency—into a carelessness, if you please—that could leave us an easy prey to the machinations of a would-be Hitler."

Conclusive evidence has been presented, too. via radio, television, and newspapers, that within our own borders communism is a grave danger. We have learned that communism has its paid agents among us and that there are persons of American citizenship now serving the cause of subversion for the regime of the Kremlin.

I agree most heartily with Senator Symington when he said, "America cannot shut its eyes to the fact that fear has become rampant in our country; not only the fear of communism, but also fear of some of those engaged in searching out and uncovering Communists." He continued, to warn us that: "There is no room in this country for dictatorial power, whether it be exercised by a legislator, a Government official, or a ruler. There is no place in our democracy for a grand inquisitor. In my opinion," he said, "there is no place for one-man investigations, or for peremptory summons to inquisition. We can and we must search out communism and fight it to its death, but we must do this with the weapon of democracy, democratically applied."

One our our greatest weapons against communism, I feel, is Christianity in all of its strength and power and glory. We are a Christian Nation now, but how long will we be able to hold this line of defense. We

need to keep our faith in God, do our utmost to help Him build a kingdom which will leave no place for the isms of the world, of which communism is the greatest at present.

When George Washington left the Presidency of these United States, he spoke to his people of many things dear to his heart, urging that all should remember that it is the duty of every individual to obey the established Government. Nowhere in his address did he suggest that some individuals might set themselves above established governments and with impunity flout the laws of our land.

Shall we continue to live as Americans, a prosperous Nation, full of opportunities for everyone who has the will and desire to work? Or are we going to become a Nation full of fears, allowing subversive groups and individuals to take it over?

You will have to make the decision—freedom in America or slavery under communism. It isn't a pretty picture, is it? but it is the only choice left to us. We are going to have to demonstrate by our conduct at home and abroad that we are capable of leadership, but most of all, that we are worthy of leadership. We must show how Americans are thankful for their blessings—thankful for our opportunities—that we are indeed "one nation, under God, indivisible, with liberty and justice for all." Only when we have fully demonstrated our American way of life and our worthiness of leadership can we hope to truly become the leader of the world and take our place among the great nations of the universe.

It is up to you and me to help make this come about. Our country can only be as strong as our weakest citizen. Only through our constant help in this job of reselling America to ourselves and the world, will we be able to make democracy live and let communism fall by the wayside.

Think courageously, act courageously. Be positive in your thinking and doing, in your presentation of being an American to your neighbors. The power of such positive Americans will be without measure. Be one of the best.

Calls 1040 Worst Income Tax Form of Any Administration

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1955

Mr. O'HARA of Illinois. Mr. Speaker, Dr. George M. McBean, who offices at 25 East Washington Street, Chicago, Ill., and resides at 6935 South Chappel Avenue in the district which I have the honor to represent, sends me a letter which I am extending my remarks to insert in the Record for the reading by my colleagues. The letter follows:

Today's Time magazine, page 18, has an editorial concerning income tax, taken from Milwaukee Journal. It's worth reading. I am 80 years old living on small income from my own savings. I have a small annuity purchased when I was 65—pays \$320 per year. Now I will bet you \$1 United States currency that neither you nor any of your assistants can figure out how to estimate the tax on that.

The article in the January 31, 1955, issue of Time to which Dr. McBean refers, follows:

INCOME TAX FORM THE WORST EVER—THE MILWAUKEE JOURNAL

This should be a great year for the tax consultants. It could be a great year for psychiatrists, too. The taxpayer who gets to work on that new "simplified" tax form No. 1040 is going to need one or the other—and probably both. Last year, Congress rewrote the tax laws, in part to simplify them. The Internal Revenue Bureau proudly said that it was going to make things much easier for the taxpayer to make his report by issuing new and "simplified" forms. The final product? Form 1040. Save us from simplicity.

Form 1040 not only contains the normal gobbledygook of tax forms, it has added some more, among which that of schedule J, "Exclusion and credit for dividends received from qualifying domestic (United States) corporations," is a beaut. This isn't a tax form. It's a maze that keeps you jumping from page to page, column to column (even double columns), line to line, and back again. The Government ought to pay prizes for solving it. This year the Ides of March becomes the Ides of April; the tax laws allow 30 more days for filing your tax. It isn't enough. If you have to use form 1040, the deadline ought to be at least the Ides of July. It is the worst income-tax form ever put out by any administration.

Death of James G. Thimmes

EXTENSION OF REMARKS

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Friday, January 28, 1955

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial from the CIO News of January 24, 1955, mourning the death of a great American and a good friend of mine, Mr. James G. Thimmes, the vice president of the CIO and of the CIO Steel Workers of America.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JIM THIMMES

James G. Thimmes, a vice president of the CIO and of the CIO Steelworkers, a staunch trade unionist and our warm friend, is dead.

All in the CIO who knew and loved Jim Thimmes mourn his death, for we can ill afford a loss as great as this. Jim Thimmes was a worker's worker * * * a trade unionist from the tips of his toes.

He fought always for equality and justice and that "ray of God's sunshine" of which his old friend Philip Murray so eloquently spoke. He fought for his ideals at the collective bargaining table, in the halls of Congress, and of State legislatures, and on the picket line when the going was toughest.

Jim Thimmes was a big man, but his voice was soft and all of his instincts were warm, human, and genuine. He believed so completely in the justice of the labor movement that he devoted his entire life and all of his energies to the cause of labor.

The United Steelworkers, the union he loved the most, quite naturally mourns him most. But all the men and women of the CIO, whom he aided in his years of service in Chicago and California, prior to his election as a vice president of the USA-CIO—and all the thousands whom he assisted in

the years since his elevation to high union office-share that sorrow.

For they all know him as a stanch disciple of democratic trade unionism, a fighter, worker, and a good American.

Jim Thimmes was stricken on Christmas, during a few days of relaxation with his family. In their hour of grief, his wife and his five children, have our sympathy; for their grief is our grief.

Jim Thimmes is dead. But his spirit will live on in the Steelworkers Union, in the CIO, and wherever union men and women gather.

The Situation in Formosa

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Friday, January 28, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two fine articles which appeared in the press Within the last 2 or 3 days. The first is by the distinguished columnist and author, Thomas L. Stokes. It is entitled "Morse Spreads His Conscience," and Was published in the Washington Evening Star of January 27, 1955.

The other article is entitled "Two Faces East," and was written by the distinguished columnist Miss Doris Fleeson, and was published in the New York Post of January 27, 1955.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

> [From the Washington Star of January 27, 1955]

MORSE SPREADS HIS CONSCIENCE - HE MAY HAVE TO WAIT FOR HISTORY TO PROVE WHAT HE SEES AS THE FOLLY OF DEFENDING ISLAND FAR FROM FORMOSA

(By Thomas L. Stokes)

Senator WAYNE Morse, Oregon Independent, was thinking out loud for a great many of us when he posed to the Senate, as it began debate on Formosa, the dilemma of Widening the defense of that Island to Quemoy and the Matsus along the mainland.

He bespoke the worries that plague many of us when he showed how we ourselves might be hailed as aggressors, contrary to international law, should our military leaders interpret the vague language of the Eisenhower policy resolution as authority to strike at the mainland and thus involve us in an Asian continental war .

It may turn out to have been a historic speech.

Of its courage there is no doubt, if you appreciate the tension now in this city. The Senator spoke up boldly where so many of us let our desire to conform silence us, and that last seems to be true, in fact, of many Members of the House who went along quietly to pass the resolution, as well as of the Senate.

It was quite an experience to sit in the Senate gallery and listen to the slender, earnest Oregon Senator. For he was giving voice to the anxieties in your own mind He was saying what you had thought as you looked at a map and saw how close to the great body of China cling the islands which how are in all our headlines. You tried to imagine yourself way over there on that other side of the world, and wondered what you would think if you had always lived on that continent, on the other side of the Pacific Ocean, about the intentions of another great nation far across that ocean which now had its warships deployed along

Maybe this is heresy in these trying times, just the idle thoughts of a human being. Yet they come, and we might as well be honest about them, and honest, too, about making it plain that we recognize this is no simple problem, but a complex one, involving the ambitions of ruthless men in China who so often do not act like human beings at all. So it's wise not to speak up and express any doubts.

But there is a man down there below doing that, a Senator, and as we watch and listen we see ourselves in him. He, too, has looked at a map. In fact, he has brought one into the Senate Chamber. It sets there on a rack back of the rows of seats. As he talks he gets earnest attention from an unusually large number of Senators, including Senator KNOWLAND, of California, the Republican leader, for whom the new Eisenhower policy is a victory. The California Senator is just as solemn in victory as at any other time.

Senator Morse is trying to give us a reasonable, rational course in a complicated

and dangerous situation.

He makes the case for the defense of Formosa and the Pescadores Islands just offshore of Formosa-the defense until the United Nations can be induced to move in, as it should, and as President Eisenhower has invited it to do. As a matter of fact, we long ago assumed responsibility for the defense of Formosa which, when Japan gave it up at the end of World War II, was left in an unsettled state as to where and to whom it belonged. Formerly it belonged to China until it went to Japan after her victory in the Sino-Japanese War toward the end of the last century.

Another look at the map shows us that Formosa, lying not far from the Philippines, about the distance from here to New York, would be dangerous in the hands of a potential aggressor, which Red China has shown herself to be, and so it must be maintained in the chain of defense, including Japan and the Philippines to stop an aggressor and preserve the peace of the world. That is sound logic, and was the case of Senator

MORSE.

But, says he, there is no logic and no support in international law for us to move under any circumstances upon Quemoy, the island which is just a short, 3-inch gun pitch from the mainland and from the port of Amoy, nor upon the Matsu Island. he said, are clearly China's. As such they are now in controversy between the two war-ring parts of China, Red China and Nationalist China. We would be invading China's sovereignty if we moved into that area of conflict and also involving ourselves in a civil war and running the danger of getting ourselves into a war on the mainland, which likewise, is the fear of Gen. Matthew B. Ridgway, Army Chief of Staff, as he explained it to the Senate Foreign Relations and Armed Services Committees. He does not have enough troops for such a war. Senator Morse said a continental Asian war would not be a matter of a month, or a year, or perhaps even 10 years, and reminded the Senate that no one ever has conquered China.

Thus the Senator opened the argument for amendments to exclude Quemoy Matsu specifically from our defense sphere. Two such, sponsored by Senators Kefauver. of Tennessee, and HUMPHREY, of Minnesota, both Democrats, were voted down by the two committees before the resolution was reported.

The man with the map who bespoke our fears and tried to express our best instincts, may be bowled over in the melee-but we are glad he spoke up, even if he has to wait for history to mark his act and raise a memorial.

[From the New York Post of January 27, 19551

> TWO FACES EAST (By Doris Fleeson)

Washington.—The Eisenhower resolution on Formosa is 3 days old and it is already crystal clear that it is a medal showing a different face to each of the opposing forces in the struggle over United States policy.

It draws a defense line at Formosa and the Pescadores and it seeks a cease-fire under United Nations auspices between the Chinese Nationalists and the Communist government of Peiping. This side of the medal is for our anxious allies and for those who fear that the objective of Chiang Kai-shek is allout war with United States participation to regain the China mainland.

The other side of the medal invokes for Chinese Nationalists and their powerful political friends here a picture not just of a safeguarded Formosa and Pescadores but such protection and related positions and territories as may seem vital to the President who will of course be advised by the

military.
When it is realized that the present Chairman of the Joint Chiefs of Staff is Adm. Arthur Radford, an avowed apostle of a naval blockade of Red China and the bombing of mainland installations, the pull of the pro-Nationalist side of the medal is readily apparent.

Senate debate has already proved that the pro-Nationalists like what they think they see in the resolution more than the Senators, who are determined to protect but to neutralize Formosa, care for the picture shown to them.

When Senator Morse, Independent, Oregon, had concluded an impressive review of his apprehensions regarding the resolution, Republican Senate Leader KNOWLAND jumped to his feet and attacked him for "misleading Peiping" and "endangering the security of the country." This line is calculated to discourage Morse's probing.

It was Knowland's first public utterance, when ordinarily he does not mind denouncing a Presidential position on foreign policy almost before it is spoken. His smiling silence indeed, has been perhaps the most significant aspect of the situation. It signified consent—and Knowland has never hitherto given consent to anything that did not represent unflinching support for Chiang and all Chiang's works.

It is said privately by responsible sources that the President himself is committed to the cease-fire, that he will never consent to be drawn into war on the mainland of China. The question is: Does Senator KNOWLAND know this and is it all right with

Senate debate will be directed toward clearing up what Morse has called "the alarming implications and broad scope" the Eisenhower resolution. It will be en-lightening to watch both the Knowland faction and the extent to which Eisenhower spokesmen explain the President's own attitude.

The technique of the medal with two attractive but different faces is distinctively John Foster Dulles'. The Secretary of State in his career here has been adept at putting something for everybody in his foreign policy moves to hide or smooth over the deep divisions in his party on that issue.

This time, however, the sharp legal brain of Morse and the intuitive political insight of Senator Humphrey, Democrat, Minnesota, sniff war in the Dulles technique. They will try to get plain answers which will explain the true goals of the administration.

Appendix

Joint Resolution To Provide for a Commission on Communism

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. FLOOD. Mr. Speaker, I have introduced in the House a joint resolution to provide for a commission to make available information as to the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic communism which reads as follows: Joint resolution to provide for a Commission

to make available information as to the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic

communism

Resolved etc -

ESTABLISHMENT OF THE COMMISSION

SECTION 1. (a) There is hereby established a Commission to be known as the Commission To Make Available Information as to the Basic Differences Between the Theories and Practices of the American Way of Life and the Theories and Practices of Atheistic Communism (in this joint resolution referred to as the "Commission").

(b) The Commission shall be composed of

11 members as follows:
(1) Two Members from the Senate of the United States, appointed by the President of the Senate;

(2) Two Members from the House of Representatives, appointed by the Speaker of

the House:

(3) Three members appointed by the President from among individuals each of whom is a member of the standing committee on American citizenship of the American Bar Association, and who have been nominated by the board of governors of the American Bar Association:

(4) Three members appointed by the President from among individuals each of whom is a member of the Association of American Colleges or the American Council of Education, and who have been nominated by the respective governing boards of those organigations: and

(5) One member appointed by the President from private life, to be Chairman of

the Commission.

(c) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

DUTIES OF THE COMMISSION

Sec. 2. The Commission-

(1) shall make a study of the testimony relating to the theories and practices of atheistic communism which, since the end of World War II, has been taken under oath by the Internal Security Subcommittee of the Senate Judiciary Committee, the House Committee on Un-American Activities, the House Select Committee to Conduct an Investigation of the Facts, Evidence, and Circumstances of the Katyn Forest Massacre. the House Select Committee To Investigate Communist Aggression and the Forced Incorporation of the Baltic States Into the U. S. S. R., and by any other standing committee of the Senate or House of Representatives, and by any agency in the executive branch of the United States Government; and on the basis of its study, shall prepare material for a book, incorporating only testimony taken under oath by the committees and agencies referred to above, selections as to give the fullest possible information as to the theories and practices of atheistic communism: and

(2) shall prepare suggested curricula of studies, suitable for us in the teaching of courses in schools, colleges, and universities, which will make clear the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic communism, and for this purpose it shall be the duty of the Commission to review all pertinent data available to it.

QUORUM

SEC. 3. Six members of the Commission shall constitute a quorum.

COMPENSATION OF MEMBERS OF THE COMMISSION

SEC. 4. (a) Members of Congress who are members of the Commission shall serve without compensation in addition to that received for their services as Members of Congress: but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(b) The members from private life shall each receive \$50 per diem when engaged in the actual performance of duties vested in the Commission, plus reimbursement for travel. subsistence, and other necessary expenses incurred by them in the performance of such

STAFF OF THE COMMISSION

SEC. 5. The Commission shall have power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of the civil-service laws and the Classification Act of 1949, as amended.

EXPENSES OF THE COMMISSION

SEC. 6. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, so much as may be necessary to carry out the provisions of this joint resolution.

AVAILABILITY OF RECORDS AND DATA

SEC. 7. To the extent necessary in order to enable the Commission to carry out the purposes of this joint resolution, the Commission shall be permitted to have access to the records and data of committees and agencies referred to in section 2.

APPLICABILITY OF CERTAIN LAWS

SEC. 8. Service of an individual as a member of the Commission or employment of an individual by the Commission as an attorney or expert in any business or professional field, on a part-time or full-time basis, with or without compensation, shall not be considered as service or employment bringing such individual within the provisions of section 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes (5 U.S. C. 99).

REPORTS

SEC. 9. Upon completion of its work, but not later than December 31, 1955, the Com-mission shall submit to the President a report containing the textbook and curricula of studies referred to in section 2. Not later than March 1, 1956, the President shall submit the Commission's report to the Congress, together with such comments and recommendations as he deems advisable.

TERMINATION OF COMMISSION

SEC. 10. The Commission shall cease to exist on the 30th day following the date on which the President submits the Commission's report to the Congress.

Mr. Speaker, this is the answer to communism.

There is absolutely nothing in this resolution which will in any way interfere with the local administration of the educational systems of the United States. The proponent of this resolution firmly believes that our educational systems belong on the State and local level and not in the Federal Government. The proposed Commission is to function as a purely advisory body to the Congress of the United States. The work of this Commission is to be made available for future action by the Congress if deemed advisable. Let it be understood that the proponent of this resolution states that he emphatically believes that the Federal Government must not interfere with our educational systems as established in this country.

TEACHING THE PRACTICES OF ATHEISTIC COMMU-NISM-DILEMMA

Today the United States of America finds itself suspended on the horns of what appears to be an impossible dilemma-atheistic communism as one horn and organized confusion the other horn. Every right-thinking person admits the existing danger to the free world in the armed atheistic communism marching throughout the world, but they are at a loss as to how to combat the menace. Thus we have organized confusion as to what our youth should be taught concerning atheistic communism. The people are completely confused and befuddled because of the many nebulous newspaper headlines of the past 3 or 4 years. They question the purpose and validity of many writers on the subject of communism. Yet the fathers and mothers of the youth who are going to be the real fighters against atheistic communism want the facts taught to their children. At the present time it is admitted that no textbook acceptable to all the people is available, but such a textbook can be made available without the Government interfering in any way with our educational system.

THE STRUGGLE FOR THE MINDS OF YOUTH

Much has been published in recent years concerning the atheistic Communist system forcibly taking the children

from their parents at an early age and placing them in state-controlled schools. Older people know the reason for this inhuman practice, but do our children understand this destruction of the family. This practice is diametrically opposed to our way of life, but this system must be explained to our youth. Transportation facilities have caused the world to shrink and the aggressiveness of atheistic communism forces the United States of America to maintain a farflung Military Establishment which must be manned by our youth. We all appreciate that youth wants to know the cold, hard facts of atheistic communism, but it must be based on unimpeachable testimony. The leaders in education and legal professions have a mandatory duty to make available to our youth the truth about the practices of atheistic communism in order to better equip them to fight it, not only physically but mentally as well. There is one saying we all understand: "We never fear anything we know." Thus our youth will be better prepared to withstand the cruel and inhuman treatment they can expect to receive at the hands of their captors if they should become prisoners of war. Testimony verifying such treatment has been recorded by a Senate committee from survivors of POW camps in Korea. The newspapers have carried headlines of this cruel and inhuman treatment, but they have not given the detailed and accurate account so necessary for the youth who must face this possible situation. It is not enough to say, "Let the military teach them."

CAN YOU ANSWER THIS QUESTION?

Every speaker on the subject of communism sooner or later is faced with this question from the youth in his audience. "Why is everybody against communism or the Russians?" Can you answer that question from the floor in a few wellchosen sentences within the time allocation or would you have to spend hours in reply to satisfy the inquisitive mind of youth? Youth must see and hear in order to believe. We all know that theory is required but it is what is put into effect or practiced that counts. Atheistic communism and its practices cannot stand the light of truth, but this light must be lit with the torch of facts not fancy or The Congressmen who have stood before public audiences telling the truth they have learned from their investigations into atheistic communism are always asked these questions, "Why haven't we heard about this work of your committee before-this is the real thing." 'Why aren't these facts as you have given them tonight taught in our schools?" These are concrete, hard-hitting questions which the Congressmen find almost impossible to answer.

WHO IS TO BLAME?

No one person, group, Government agency, or congressional committee can be blamed for this incoherent situation concerning atheistic communism which exists today. The fact is that this inherent danger from atheistic communism has been ever present and known by many people, but in recent years it has suddenly burst on all the people and our leaders have not known how to cope

with the problem. Yes, aggressive action has been taken by a great many different individuals and agencies with the result that we have created a muddled chaotic situation which permits those dedicated to the cause of atheistic communism to skillfully continue their nefarious methods to divide the people of America. We have all the necessary tools and instruments to thwart them but no basic plan of concerted action. Because of our own failure to think clearly and unemotionally are we going to stand by and allow others to keep us in a state of chaos and permit to rise in this country a system of fear and suspicion which the enemy has so successfully used throughout the world. To put it simply, are we going to let the system we are fighting destroy us from within by turning our people against each other without just cause and not in accordance with our own system of justice. The answer lies in pulling together documented facts concerning the practices of atheistic communism-facts which are irrefutable and already proved before the bar of public opinion. There are those among us who will question these facts, but then the burden of proof will shift to their shoul-

NATIONALISM ON THE RISE

During World War II American GI's visited in many foreign lands and mingled with people who had never seen or heard about America. These GI's were typically normal, individual Americans with an appreciation of freedom which is theirs under the American system of selfgovernment. These people had never seen such freedom in action, if in fact they had ever heard of such freedom. In their countries such liberty and prosperity was never heard of or permitted. Thus the American GI's left these people in a state of wonderment and dazed condition to return to their homes and ask, "Why can't we be like that?" Who asks such questions?-naturally the youth of those countries.

Then in the wake of departing American GI's the merchants of propaganda and deceit move in as agents for atheistic communism. They fan the imagination of the youth in those countries with promises never to be fulfilled but still very effective in their appeal. Subversion becomes rampant and mob psychology among the youth prevails with telling effect in country after country. All the strings being carefully and skillfully manipulated by subversive agents of atheistic communism appealing to the youth of the country. If you doubt this statement, look at the record in Indochina and what happened while the free world slept. Thus, America has a duty to make available to the world the cold, hard facts concerning the practices of atheistic communism and this can be done by congressional action now.

THE FUTURE

It is self-evident that America must maintain a strong military establishment for years to come and this can only be done by the training of our youth. During the course of military duty most of our young men will have to serve overseas at one of our 49 bases on foreign soil. This tour of duty will necessarily place them in direct contact with the natives of the country where the bases are located. America has now discovered with deep chagrin one glaring defect in our educational system, namely, the proper method of teaching foreign languages. Great strides have been made toward correcting this defect, but let us not forget that our young men also need a good knowledge of the practices of atheistic communism. In many lands the natives are uncertain and hesitant about the form of government they want. Therefore, it is only fitting that our young ambassadors of the American way be prepared to discuss the merits of selfgovernment as practiced in the United States and intelligently point out the fallacies in the so-called self-government as practiced in the U.S.S.R. and its satellites. The same result will be obtained at home as well as abroad if irrefutable proof is presented to our youth during their formative years. Much has . been said about our so-called materialism-well let us get real material and present the facts in approved concrete form that cannot be denied.

ACTION OF THE AMERICAN BAR ASSOCIATION

May it be said to the everlasting credit of the Pennsylvania Bar Association which resolved this problem at its 1954 session and the American Bar Association through its standing committee on American citizenship they have come face to face with the problem. Last August before the 77th annual meeting of the American Bar Association this standing committee presented a recommendation as amended by a suggestion of the board of governors which is as follows:

Whereas the American Bar Association believes that enlightened citizenship requires intelligent understanding of world problems, free discussion and courageous thinking: Be it

Resolved, That there be adequate teaching of the principles of the Constitution of the United States and the facts of the theory and practices of our Government thereunder in all educational institutions of each State; and be it further Resolved. That students at appropriate

Resolved, That students at appropriate levels of education in educational institutions of each State be made acquainted with the theory and practice of communism in order to demonstrate its inherent fallacies and its threat to the privileges and liberties of free peoples; and be it further

Resolved. That the Association stands ready to implement the purposes of this resolution by alding in the preparation of suitable material and otherwise through its standing committee on American citizenship.

This matter was ably handled there by the Honorable Walter M. Bastian, circuit judge of the Court of Appeals of the District of Columbia. A number of amendments were proposed, including one which was also acceptable to the committee using the exact language of a comparable resolution adopted by the Pennsylvania Bar Association. After much debate the resolution and proposed amendment were laid on the table.

What action will the House take? Some action should and must be taken due to the present day world conditions which show no sign of abatement on the part of the apologists for atheistic communism. I raise this question of

teaching the practices of atheistic communism in our schools, therefore, I propose a solution or plan. Is there a solution or plan? The answer is "Yes,"

definitely and unequivocally.

Since the end of World War II the Congress of the United States has conducted numerous hearings and investigations concerning the practices of atheistic communism. The major portion of this evidence and testimony has been taken under oath. The hearings have been held not only in the United States but also in London, Frankfort, Munich, and Berlin. The testimony of witnesses has been taken in public before audiences and in a legal atmosphere.

This data on the practices of atheistic communism was meticuously compiled and taken many times at great personal risk for the witnesses' lives or those of his relatives or loved ones still behind the Iron Curtain. Many of these witnesses were recognized and reputable leaders in their own countries before they were forced to leave the aggressive action of atheistic Communists. These men know the facts, their testimony cannot be denied.

There are thousands of Americans who are unaware of the painstaking and careful task their Representatives in Congress have performed in recent years. Furthermore, the money used to record this evidence was furnished by the American taxpayer. Thus, the taxpayer should receive a return on his investment to his children in our educational institutions.

Many Americans are rightly concerned about who is sponsoring what in this field of atheistic communism: They are also concerned about what material their children should read and study on this subject.

No one who believes in the American system of self-government and fair play can possibly object to having the sworn testimony of witnesses who have lived under atheistic communism presented to their children in textbook form. What is more, any tendency or attempt to discredit such testimony on the part of any teacher would result in the students asking, "How do you know—were you there—these men have lived under atheistic communism?"

Last year Congress outlawed the Communist Party in the United States. How many educators or lawyers can cite clearly and concisely the chain of events that led to such a law? Is there a book available today which traces a course of history begining with the Smith Act? The youth must be told the reasons for this action on the part of Congress and what better way than to reproduce word for word the sworn testimony of men who have lived under atheistic communism.

Actually if Congress were to create a Commission to provide the necessary funds for the compilation of a textbook on the practices of atheistic communism, they would be doing their duty and the people would be receiving the facts that they paid for gathering in the first instance.

In addition, everyone in the United States would know the source material of such a textbook—who, where, when and how it was compiled and could object before its publication. The Congress of the United States would have to vote on such a textbook before it could be made available to our educational institutions.

Mr. Speaker, I urge the adoption of the resolution.

Parade With Brass

EXTENSION OF REMARKS

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. REES of Kansas. Mr. Speaker, under unanimous consent granted by the House, I am including an impressive sermon delivered by Louis Evans, D. D., LL. D., former pastor of the Hollywood Presbyterian Church, and presently representing the Presbyterian Church on a nationwide basis. I believe Members of Congress and others who read the Congressional Record will be deeply impressed by this splendid message. This sermon was delivered at the National Presbyterian Church, Washington, D. C., on August 22, 1954.

Our text is found in 1st Kings, 14th chapter, verses 25 to 27:

"And it came to pass in the fifth year of King Rehoboam that Shishak, King of Egypt, came up against Jerusalem; he took away the treasures of the house of the Lord and the treasures of the King's house; he even took away all; he took away all the shields of gold that Solomon had made. King Rehoboam made in their stead shields of brass and committed them to the hands of the captain of the guards who kept the King's house. And it was so that as oft as the King went into the house of the Lord the guard bear them and brought them back into the guard's chamber."

It would be interesting to know who was the first clergyman who discovered these three verses couched in the maze of historical record. I am quite sure every preacher has preached on that subject since then. This matter of making the best out of hard ways. It is strange that this incident should find its way into the sacred, scarce pages of Holy Writ. What has metallurgy to do with spiritual life? What is God saying to us

You remember the story. Solomon had died. His reign had been one of unprecedented prosperity, luxury, power, statecraft, and war. His treasuries were full and his armies were strong.

Then Solomon died and depression settled in the land. Rehoboam lost half of his followers; 10 of his tribes had deserted him, and only Judah and Benjamin were left, who were still loyal to him. Probably sensing this disunity, Shishak, the Egyptian Pharoah, came down like a wolf on the fold, depleted his forces, and the nation fell. Egypt made off with the treasures. They carried off the shields of gold that had once been carried in the kingly parade, and with these shields went all their precious metals. Now what would Rehoboam do? The shields of gold were gone. How he had come down in the world. Was it worth while to parade and march at all? He said, "Gentlemen, we shall take these brass shields and shine them up; we shall give Judah as much splendor as we can"; and they preserved the royal

dignity of the realm: they did the best they could—they paraded with brass.

Is the historian making light of him? I hope not, for there is nothing more commendable in the human race than this gift of making the best of it when things are difficult.

Our sermon today is more of a personal nature. At least, it would seem so at first until we remember the strategy of how we feel as individuals. "U. S." spells "us." When a car goes to pieces, it goes to pieces part by part; when a nation goes to pieces, it goes to pieces unit by unit. Nations and cars are built up in the same way. If you are at peace, then you contribute to the peace of the world; if your heart is in chaos, then you contribute to the chaos of the world; there is no better contribution that you and I can make to the whole of the cosmos than to be brave and to be faithful in particular.

So let us look today at the glory of making the best of unfortunate circumstances. This is an important subject, since there will come a day to all of us when the shields of gold will be gone. The Shishak of life will bear down upon every life at some hour and carry away our shields of gold, and we will wonder then whether it is worth while to parade along with Benjamin and Judah. You and I are living in the days of Egyptian invasion. That is inevitable. Along beside every mountain there lies the necessary valwith every light there goes the necessary shadow; the clouds must come with the rain: Napoleon had his Austerlitz and he had his Waterloo; Jesus Christ had His triumphal entry and He had His Golgotha; you and I have our weddings and our funerals: that is life

We saw it in business during the depression: The Shishak of Egypt swooped down upon our Nation in the throes of a terrible depression, and the savings and business of many were swept away and their coffers became empty. For many, the shields of gold were gone. We saw the dreams of men and their financial castles destroyed in a single day. They turned the keys in the office doors their establishments and left them forever. Men suffered defeat and emptiness, and yet we say them going to work and coming home with courageous hearts, living on slaughtered rations, parading with the shields of brass and courage, nobility and joy. This, to us, was the miracle of the hour. Hadfield, the English psychologist, once said: "The increasing pressure of modern life, with all its anxieties and cares, constitutes an ever augmenting tax upon our strength. It is hardly surprising that nervous breakdowns are common and that nerve fatigue is the disease of the age, yet we are called upon to witness exhibitions of power which fill us with wonder." That is true particularly when God is on the inside.

He was an aged man, successful in business, who had saved up a considerable amount for his old age. As his pastor was visiting with him in his parlor he was suddenly called to the phone. In standing there, his pastor heard him say: "What? All of it's gone; all of it? All right, I will see you in the morning." All his fortune had been swept away by a crash of the market, but, tossing back his fine gray head, he said to his pastor: "Well, God knows where my treasures are." That is the test of life, after all. If the atomic bomb should explode now, if the market should fall, and all the shields of gold be gone, what would you and I have left in the things of the spirit? This is our true worth.

We also see the brass parade in many a home.

When you step into some homes, into some single rooms, you see that the material glory is partially departed. You see a piece of bric-a-brac here and there; you see a teak table that is quite out of place in its present environment; you see an oil of assimilated

prosperity and a greater day, and yet here they are; the heads held high and the hearts full of singing, though they might have missed the mortgage by a single payment.

That is true in marriage. Many a young couple has started out under the happiest auspices, parading with shields of gold. She saw in him a tower of strength as she gazed up at him. He seemed to sum up all the virtues which she desired in a man. She dreamed of a great career for him; visions of him as prince in whom she would find chivalry, thoughtfulness, and idealism. Then she discovered as the years passed that she had been mated to quite an ordinary fellow, and the practical phases of life sort of suffered the loss of the festival. She suffered great delusions, and the regal march was ended. She realized she had married quite an ordinary soul. She had but seen him through a lover's eyes, and the shields of gold were gone.

Or, on the other hand, he thought he saw in her first a shrine at which he could worship, a woman full of tenderness, thoughtfulness, God, idealism, as he looked at her through the golden screen of love. Then he found her to be a rather heartless worldling, shallow, thoughtless. He had married a mediocrity, and the adoration had died out and the gold had gone. Shishak with all his hosts of the mediocre had swept down and the shields of the gold of romance had departed. Now what should they do—desert the kingdom? No, Benjamin and Judah were still left, and they could parade with the baser metals of patience, long suffering, love, faith, forebearing, and tolerance, and the world would never guess that Shishak had visited their home, as they paraded with brass, although the glory had departed from Judah.

A woman came into my office sometime ago; her little fists were clenched in despair. And she said, "Dr. Evans, I can't go on with it any longer. I can't stand his bloated drunken kiss upon my lips; the children are afraid of him, and he isn't even trying. I can't go on any longer." I said, "Let's talk to God about it." We had a word of prayer and I said, "Will you try it for 1 month more?" She said, "All right, sir." As I bade more?" She said, "All rights, sil. "Goodby, her goodby at the office door, I said, "Goodby, "Goodby," "Goodby," sir," she said, and went out. But I did not have to wait for a month; she called up within a week and said with ecstatic voice, "Dr. Evans, it happened. Christ found him and everything is happy as a marriage bell and the children are happy, too." That did it. I have met many women who said to me. "Dr. Evans, if I'd only waited a little longer." I have never heard a woman who said to me, I walked out." "I waited too long before She had paraded with shields of brass and God had changed the brass back to gold again. This is sometimes a reward of the faithful.

Sometimes we see the brass parade in the realm of service.

Is it worthwhile for Rehoboam to parade with simply 2 ruling nations when he might have had 12? Many a great play upon the stage has falled because those who played the bit and extra parts did not realize the importance of what they were doing. They all wanted to play Othello, Romeo, Caesar, and they forgot the unseen stars that make up the Milky Way.

I have seen many a man in business who because he lost a certain job or did not attain the one to which he had aspired began to

pout because the glory was gone.

Some men are constantly decrying the fact that they have had insufficient education and cannot make good with the shields of brass. D. L. Moody had not been beyond the third grade in grammar school; he never had a great command of the English language. One day, in the Crystal Palace in London, in the loge were sitting the King and Queen

of England and several noblemen. He began to read his text, "And to none was the prophet sent, save unto the widow Zerapheth," but he could not proounce it. He said "Unto but he could not pronounce it. He said "Unto none was Elijah sent save to the widow Zera—." Mr. Sankey, sitting behind him, said, "Zerapheth, Mr. Moody, Zerapheth." He tried again, but failed, Finally, he lifted up his eyes to heaven and said, "Dear God, have mercy upon a man who can't even speak his own language." The type of man who had only shields of brass, shone them up and shook all England that day in a great parade.

There must be times, too, women wonder if it is worthwhile as you labor in the home without benefit of parade, missing the gold and glitter of public The splendor gone, no songs in acclaim. the air, sharing the burdens of others, humoring tired hearts, no Solomonic processions, no banners, no buntings, no banquets, nobody at the station when you leave for the trip and no crowds to greet you when you come home, save a few faithful pairs of arms around your neck, missing undoubtedly at times the golden chalices of the unusual drinking from the brass cups of a word of kindness here and there, and laboring for the smile of God, the wellspring of your beautiful duty.

She was standing at the sink, was a high school girl, washing dishes with her mother. As she gazed at the greasy water on her hands, she said, "O mother, how can you stand to wash greasy dishes three times a day?" To this her mother answered, "My dear, I'm not washing dishes, I'm building a home."

She saw the power of the gold in the brazen duties.

Do you so look upon your unadorned task? The typewriter as you type your brisk monotonies, do you not realize how necessary you are to the wheels of industry, to the making of the laws of this land, and to the march of progress?

As you preside there at the counter in the department store, where a customer always pretends to be right, do you not realize that there is where people are clothed, there is where they are fed, where a toy brings joy to a child's heart?

As you stand there in the drugstore and putter among the shelves, do you not realize that you are handing out sleep for the restless and health for the sick?

When you are down there in that mine, do you not realize that as you are streaming with sweat that that perspiration is incense poured out to God in holy service, that you are the right honorable collier, partner of God in giving warmth to the world?

In that hospital amid the smell and odor of sickness and dying, remember that you are hurling yourself between humanity and death.

He was visiting a tugboat and he noticed that a colored boy with a rag in his hand had shined up an old tugboat engine until it was practically glistening. All the while he was humming a happy song. He said to the colored boy, "Sam, what are you so happy about?" The colored boy, looking down at the machine, said, smilingly, "You see, sir, I got a glory." So the visitor wrote these lines:

"Oh, you gotta get a glory in the work you do A Hallelujah Chorus in the heart of you Paint or tell a story, sing, or shovel coal, But you gotta get a glory, or your job lacks soul."

We must allow Christ to take our seeming job of brass and change it into a calling of gold. It was said of Christ, "Who for the joy set before Him endured the cross." It did not say, "For the fun set before Him." It is no fun to be crucified, but it was a joy even to endure that pain because it helped

and saved humanity. He took the cross, a brazen instrument of torture, and changed it into a symbol of the gold of love. Do that with your job; make it into a calling of God.

The same thing is true of old age. How many let their shields tarnish with the years for lack of activity? Saul, more aged now, hears them calling in the streets, "Saul has slain his thousands, but David his ten thousands," and then jealousy sets up. Do not sit down and stop parading. Do not sit there waiting for eternity—work for eternity. I was addressing a congregation in a certain State a summer or two ago, and they all seemed over 60 or 65. The man sitting next to me said, "You can't do much with can you?" I said, "Certainly. They can do a great deal." As I rose to my feet, I said, "Remember a lot of baseball games have been won in the last inning, and a lot of touchdowns on the football field have been made in the last quarter." You and I cannot rest until the whistle blows-we must serve Him forever, and then we go on serving Him in His temple.

"God, keep my heart atune to laughter when youth is done;

When all the days are grey days coming after the warmth, the sun.

Keep me, then, from bitterness, from grieving, when life seems cold,

Keep me always serving, loving, believing, as I grow old."

But this duty of brass—how brazen it is. "All I hear about is duty—to my wife, chlidren, husband, society, vows, responsibilities, business, this and that—the brass of duty, duty."

"Are there not times when I have the right to evade duty, when I have a right to rattle my chains and curse the things that bind me, why should I be shackled? Why is my life not my own? Why should I be held down? Why do not I have the freedom I crave? But this day, after day, month after month, year after year, parading with brazen duty till death ends it all."

But my friend, you are not at your best when you talk like that. It was Dr. James Stuart, of Scotland, who said, "Take your pen and a sheet of paper and write down at the top the order of the value of things that challenge you to be your best at different times. At the top of course, is the grace of God, then come duty and love; bracket them together." That was true, wasn't it? Things would have gone to pieces a dozen times if it had not been for duty, would they not?

In the 19th century there were a lot of women whose lives had been touched by scarlet sin, outcasts of society who were very grateful that Josephine Butler once lived, as others were grateful for Florence Crittenton later on. It happened Josephine Butler was a woman of considerable social parts and wealth, too. She had a daughter, golden haired, who was the joy of her life. As she was driving into her estate by way of the circular driveway, in her coach and four, her daughter was watching her from the balastrade of the balcony and ecstatically, she waved at her mother, lost her balance, and fell to the pavement below. When Josephine Butler stepped from her carriage, it was to look down at the dying form the greatest treasure she had. Her daughter died, and the gold was gone. Could she parade with brass now? Stricken, she went to a nearby neighbor, a Quaker woman, who said this to her, "God hath taken to Himself her whom thou didst love, but there are many forelorn hearts who need that mother love of thine. Go to —— Street, number —, and knock." She went and there she met 40 girls, once lost and in peril, being cared for in Christian sympathy and understanding, and into that labor Josephine Butler threw herself. When her ship was about to go down thus was she rescued by duty.

When she thought that the parade was over, the king was dead and the kingdom had vanished, it was duty that steadled her, and what a parade when she bore before her the shields of brazen duty, polished with love,

when the gold was gone.

My friend, when Shishak's invasion strikes you, whatever his soldiers are with their sharp spears, when they divest you of whatever was your treasure and of whatever kind, do something better than give yourself to brooding and introspection. Take the shields of dutiful toil and march with them, and if your house is empty of things held dear, "don't let the seven devils come in and indwell it"-fill it up with service to God and men.

This is true in times of bereavement. went to see the Taj Mahal in India some years ago, that beautiful white marble or alabaster monument a man erected to his wife. He had inscribed upon her tomb where she lies these word, "The light of my palace has gone out." There was an underground passage by which he went from his throne room to kneel at her cataphalque day after day and eat out his heart, but the world seldom guessed it, for they only saw him going about his realm, seemingly lighthearted and brave, healing and helping, sustaining and comforting his people. He had polished the brass of loneliness and kept it burnished with wholehearted service. You must do the same.

We congratulate those now who have suffered bereavement and walk alone bravely. Somehow that pain and sorrow, grief have given them a clairvoyant sensitivity which enables them to help another out of his or her sorrow, their particular morass of despondencies. Sorrow has become an ally in-

stead of an enemy.

It is so with the brazen nations. Not for a hundred years have we American known what it is collectively to bear the burden of a domestic war and march with the brass of bankruptcy, bombed cities, and rubbled homes. God give us the understanding to know how difficult it is for some nations to parade with the brass.

There is Belgium-that brave little country—her beautiful boulevards ground to powder by the march of military brutes; bombs destroyed her galleries of beauty, and her cathedrals that took generations to build, are gutted and her hearthsides are in ashes. Was it worth while to parade again, to rebuild their cities and stand strong?

Someone has pictured civilization as an old woman sitting atop a pile of rubble in a bombed city, quietly unraveling the knitting it had taken her 200 years to make. How easily we destroy what we build up at great

cost-that is war.

And there is Korea, once tranquil, faithful; revivals had swept men on to God. Then Shishak and war and the Red hordes, and starvation, hunger, massacre, and death.

Now we see her bravely rising to parade with brass amid the debris. Four times as many young men are entering the seminaries of Korea for the Christian ministry than ever before in history and now she is rising to march again; and there is America sending her the "brass of necessity" and, better yet, handing her the white cloth of Christian fellowship, and helping her shine up her shields as they march with God in another brave day.

O God, give us the grace to understand without suffering equally. I hope that these words are not altogether true, the words by Laurence Binyon:

"Only when we are hurt with all the hurt

untold.

In us the thirst, the hunger, and ours the helpless hands,

The palsied effort vain, the darkness and the coldThen, only then, the spirit knows and understands

And finds in every sigh of brotherhood out beneath the sun

The human heart that makes us infinitely one

Dear God, do not make it necessary for us to see the passing of all our gold to understand how hard it is to parade with brass.

Then there was Germany. She drank too deeply of the wine of nazism, became drunk with power. Her progress was in gadgets rather than in God, in inventions rather than in spiritual intentions. Then Shishak came and sent Germany reeling, bankrupt, her industries gone, her cities rubbled, her art no more. The judgments of God. Was it worth building again? "What is the use?" Germany well could say.

But we understood in part, I think, even the heart of those whom we fought for we, too, had been partially truant. So an allied soldier, after he had seen the German prisoner, his uniform stained with red of blood, march into prison camp, wrote:

"When I first saw you in the curious street Like some platoon of soldier-ghosts in grey, My mad impulse was all to smite and slay.

To spit upon you-tread you 'neath my feet. But when I saw how each sad soul did greet My gaze with no sign of defiant brown, how out from tired eyes looked spirits broken down.

How each face showed the pale flag of defeat,

And doubt, despair and disillusionment, And how were grievous wounds on many a head.

And on your garb red-faced, was other red; And how you stooped as men whose strength was spent,

I knew that we had suffered each as other, And could have grasped your hand and cried 'my brother.'"

-Joseph Johnston Lee.

Thank God for America. Gentle giant, big brother, with the golden shields of prosperity stooping like a Good Samaritan over a tired and wounded world; going to those lands, where Shishak has marched, with understanding, with Marshall plan checks like white linen cloths of mercy to polish up the shields of brass. Hurling down from the airlift route the brass of necessity upon a stricken Judea. God bless the world and the brass parade.

Financial Aid to Higher Education

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include the following timely, challenging, and effective editorial, the third of a series written by the McGraw-Hill Publishing Co., Inc., relating to the situation confronting many of the Nation's private higher institutions of learning:

FINANCIAL AID TO HIGHER EDUCATION: BUSI-NESS AID FOR OUR COLLEGES-VOLUNTARY OR INVOLUNTARY?

Previous editorials in this series have shown that:

As a group the Nation's independent, privately endowed colleges and universities are in grave financial trouble, and

There are many different means by which business firms can extend a helping hand to these institutions.

This editorial, one of a series devoted to the financial problems of higher education, submits this proposition: If business firms do not voluntarily go to the financial aid of higher education, there is every prospect that they will soon be providing more financial support for higher education involuntarily, through taxation.

If this prospect materializes, one of the basic elements of a well-balanced system of higher education-a strong array of independent colleges and universities-may well be dangerously weakened if not destroyed. And in the process a potentially crucial bulwark for freedom of enterprise in the United States-that same strong array of independent colleges and universities-will be under-

Acceptance of these propositions implies absolutely no disparagement of tax-supported colleges and universities. These have an indispensable role in the total system of higher education in the United States. Leaders of these institutions would be among the first to agree that their position is strengthened by a strong system of independent institutions, supported privately rather than by political agencies.

What is the evidence that in one way or another, voluntarily or involuntarily, business will be giving more financial support to higher education? One impressive part of this evidence is provided by the recent rapid increase in the proportion of college and unistudents attending tax-supported versity

institutions.

RAPID SHIFT IN ENROLLMENT

In the fall of 1952 tax-supported colleges and universities enrolled about 7.5 percent more students than the independent institutions. In 1953 this percentage was doubled. And in 1954 the tax-supported institutions enrolled 26 percent more students.

In the case of students entering college for the first time the relative growth of the tax-supported institutions recently has been even more striking. In 1952 the number of beginning students in the tax-supported schools, as reported by the United States Office of Education, exceeded those in the independent colleges and universities by 35 percent. In 1954, just 2 years later, this figure jumped to 49 percent.

Why has the proportion of students attending tax-supported colleges and universities been increasing so rapidly? There are many reasons. But a dominant reason is that, in order to keep going at all, the inde-pendent institutions have been forced to make large increases in the prices they charge for instruction. The purchasing power of their endowment funds has been cut in half by price inflation. The capacity of the wealthy to supplement their endowments by gifts, as they have done in the past, has been greatly reduced by high taxes. As a result these schools have been forced to rely increasingly on higher prices for instruction (tuition as it is called in academic circles) to make both ends meet.

Since 1940, the independent colleges and universities have raised their tuition fees by an average of about 60 percent. This is considerably less than the increase of about 100 percent in prices generally since 1940. And it is nowhere near enough to prevent the faculty members of the independent colleges from faring miserably in terms of salaries, a major national importance to matter of which we shall return in this series. But the increase in tuition fees of the independent colleges has been much greater than the increase in the fees charged by the taxsupported schools. And that price differential increasingly tends to shunt students into the schools which are supported chiefly by taxes. Independent colleges now charge, on the average, about \$580 per year for a full course of instruction while the tax-supported institutions charge, on the average, about \$240.

BIGGER TAX BILL IN PROSPECT

A large increase in the total enrollment in our colleges and universities during the next decade is in prospect, particularly when the great increase in births during World War II is reflected in the number of young men and women of college age. With a total of 2.5 million students at present enrolled in our institutions of higher learning, it is estimated that the total will be over 3 million by 1960.

If this trend continues most of the anticipated increase in college and university enrollment will be concentrated in tax-supported institutions. Indeed, if the shift toward tax-supported institutions that has occurred in the last 3 years were to continue over the next 6 years at the same rate, about 2 million of the 3 million students anticipated in 1960 would be in tax-supported colleges and universities and 1 million in independent schools. In 1950 there was a 50-50 division in enrollment. This shift would mean, of course, a corresponding increase in the tax bill for tax-supported education. And of this bill, we can be sure that an ample share would be assessed against business firms.

NO EASY SOLUTION

The best way, of course, to put a brake on a soaring tax bill for higher education is to help the independent institutions get in shape financially to carry a larger share of the student load. For most companies the development of a mutually satisfactory program of financial aid for higher education is a complicated process. In fact, it is so complicated that some companies with an initial disposition to provide financial help are inclined to despair of working out a mutually constructive plan.

If, however, the leaders of business will contemplate seriously the only available alternative to their extending voluntary help to our independent colleges and universities, their determination to work out a plan will be strengthened. For that alternative involves a grave weakening of our system of higher education, together with an involuntary increase in the financial support of higher education by business. The increase would come through higher taxes. Contemplation of such an alternative should, if necessary, toughen the will of business firms generally to do everything possible to extend financial help to our independent colleges and universities.

Time To Take a Position

EXTENSION OF REMARKS

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. JONES of Missouri. Mr. Speaker, the House Committee on Agriculture will soon begin consideration of legislation proposing to restore fixed price supports at a level of 90 percent of parity on the basic commodities.

It has been stated that farmers cannot hope that much in the way of constructive or even helpful legislation will come from this Congress. I am certain there are many individuals, including some leaders in the Republican Party, and certainly the top officials in the Department of Agriculture who hope that Congress will do nothing in the way of amending Public Law 690 of the 83d Congress, which took away from the farmers of America some of the supports to which agriculture is entitled.

I am not disposed to believe that the restoration of the 90-percent supports would be approved by the President, who, in all probability, would go along with the recommendations of his Secretary of Agriculture, whose advice he has followed in the past, and I think there is grave doubt that any bill benefiting the farmer and approved by Congress would receive the approval of President Eisenhower and become a law. Certainly I am not so naive as to believe there is sufficient support to pass such a law over a Presidental veto.

However, I do believe that now, and the sooner the better, is the time for Congress to act. Now is the time for the responsibility to be fixed. I, for one, do not want anyone to be pointing out at any time in the future that Congress, through its inaction, is willing to accept and endorse the present law.

Mr. Speaker, I hope our Committee on Agriculture will quickly approve legislation which would restore to the American farmer the same equitable treatment that is extended to the other segments of our economy.

I hope that every Member of Congress will take time to read the message addressed to them in the current—February 1955—issue of the Progressive Farmer, and take the advice offered in the editorial, About Farm Prices: Congress Should Act Quickly, which is, under leave granted to extend my remarks, herewith reproduced:

ABOUT FARM PRICES: CONGRESS SHOULD ACT QUICKLY

To our E-nators and Representatives from the Southern States:

DEAR FRIENDS: As the 84th Congress gets underway, what is the very first major economic subject that should have your attention?

Unquestionably, in our opinion, it is the serious situation caused by low farm prices. And the worsened situation that exists because of (1) the relatively low prices the farmer gets for what he sells and (2) the relatively high prices he must pay for what he buys.

Nor is this a case where we are simply giving you somebody's opinion, theory, hearsay, or belief. Please study on this page an authoritative chart based on the official figures of the United States Department of Agriculture itself. As compared with the official 1910–14 base, "prices received" by farmers now stand at only 239 percent, while "prices paid" (including interest, taxes, and hired labor) are 279 percent. And while the overall farm parity ratio on December 15, 1953, was 91 percent, by December 15, 1954, it had dropped to 86 percent.

In view of this bad and worsening situation, can you Senātors and Representatives, chosen from primarily rural States, afford to look on with complacency? Or can you afford to be unconcerned if you turned to the recent "1955 Forecast" issue of one of America's leading publications concerned

with economic trends, the U. S. News & World Report, and noted on page 67 a table headed "The Climb in 'Real' Income''? (Average weekly pay, after Federal taxes, with adjustments for increases in living costs since 1950, first year of Korean war.)

Then followed a table prepared after long and careful study by economic experts. It shows net weekly earnings or "weekly buying power" of 20 lending classes of employed people in the United States in 1950, 1954, and their "estimated income for 1955." Here are figures for one dozen of the most important of these 20 occupations:

	Buying power in 1950	Buying power in 1954	Estimated 1955 buy- ing power
Average factory worker	\$57.19	\$59.70	\$61.37
Auto worker	69.01	71.54	72.84
Steelworker	64.18	68, 14	71.32
Soft-coal miner	66. 44	66, 84	69, 26
Machinery-manufacturing			
employee	63, 92	67, 15	67, 82
Farm-implement worker	61.61	64. 36	65: 50
Railroad worker	58, 16	62, 27	64. 41
Schoolteacher	56, 63	61.28	64. 25
Federal employee	60.74	60.87	63, 60
Textile worker:	48. 22	45, 59	46, 62
Clothing worker	43.02	41.91	43.03
Farm owner	42.10	39, 52	37. 24

What are the two most remarkable things developed by these statistics about 20 different occupations?

1. For all 20 occupations, income increased from 1953 to 1954—with only 3 exceptions, the farmer being one.

2. For all 20 occupations, income is expected to increase in 1955 with only one exception. What is that one? Again the farmer.

And why is the farmer suffering? Is it because he is less industrious, less efficient? Is he falling down on his job of feeding and clothing America? Not at all. On the contrary, all this is happening when the American farmer is reaching a degree of efficiency unprecedented in his own occupation—and hardly equaled by workers in any of the other occupations in America. In 1910 one farm worker produced only enough farm products for himself and 6 others; in 1953, enough for himself and 17 others. In other words, in 1910 it took 35 Americans out of each 100 to produce crops and livestock to feed and clothe America; in 1930, only 25; in 1945, only 18; and in 1954, only 14.

Under such conditions, is it not high time for all five agencies that might do something about this matter to hear "the firebell at night," and do something about it? And what five agencies do we mean? Here is our list:

1. The President of the United States.

2. The United States Senate.

3. The House of Representatives.

4. Our farm organizations—Farm Bureau, Grange, and Farmers Union.

5. The Secretary of Agriculture.

We are not passing on the justice of their complaint, but many farmers now say this—that many to whom they looked for help have seemed more concerned about reducing price safeguards for farmers than about checking this terrible price-squeeze that is bringing trouble to hearly all small farmers and many large farmers as well. And right here we might add two other agencies that farmers are watching—and have a right to watch—with real concern and purposefulness. What are these two? Here they are:

6. The Democratic Party.

7. The Republican Party.

What did the Republican presidential nominee of 1952, and present President of the United States, say about farm prices in 1952? Let's see:

At Brookings, S. Dak., on October 4, he said: "The Republican Party is pledged to the sustaining of the 90 percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent parity, with the guarantee in the price supports of 90."

At Kasson, Minn., on September 6, he said: "As provided in the Republican platform, the nonperishable crops so important to the diversified farmer—crops such as oats, barley, rye, and soybeans—should be given the same protection as available to the major

cash crops."

Not only did the Republican nominee say these things, but the Democratic nominee said: "The Republican nominee has climbed on my platform." The Democrats promised in 1952—and again in 1954, "We'll do better by farmers than the Republicans have ever done."

Well, now the Democrats have Congress and the Republicans have the administration and farmers are ready to hold both parties responsible for what they do or fail to do right now—in 1955.

The National Planning Association has already predicted that unemployment will rise this year and thereafter unless Government and industry act to increase consumer buying power and industrial production. What terribly disappoints us is that the President is trying to increase consumer buying power only by increasing hourly wages for labor, while proposing nothing important about the more desperately needed increase in consumer purchasing on American farms.

WHAT IS JUST PARITY PERCENTAGE?

More and more a radically new attitude toward this whole problem of parity seems absolutely necessary if farmers are ever to get out of the terrible financial squeeze in which they are now caught as shown by the chart on this page. Somehow or other our city people and the city press (alded, alas, by some in our own Department of Agriculture and some agricultural leaders) have spread abroad the notion that full 100 percent parity prices would mean inexcusable prosperity for farmers—a sort of all-thisand-heaven-too situation where farmers would be carried to the skies on flowery beds of ease. This is not only not true but it is the absolute reverse of truth as proved by these demonstrated statistical facts which the Progressive Farmers has more than once mentioned:

 In 1949 farm prices stood at 99 percent of parity—and yet the average net income per farm person was only one-half that of the average nonfarm person.

2. In 1951 farm price were 107 percent of partity—and yet the average net income of farm workers and industrial workers compared as follows:

For farm workers_______ \$1.718
For industrial workers______ 3,416

Plainly, therefore, 100 percent parity will not give farmers real prosperity, but only a fairly decent income. They should never be content with anything less than 100 percent. On products for which any variable price-support formula is set up, it should be at 85 to 95 percent of parity—not 75 to 90. And where farmers are willing to provide their own production control and reduce their acreages or other production factors in order to make production fit expected demand, then we believe price supports should be guaronteed at 95 percent of parity instead of the 90 percent which has proved unequal to the task of giving farmers the decent income to which their efficiency entitles them. To restore 90 percent price supports may be all that is expedient as to this Congress, but who can say farmers do not honestly earn the definitely larger percentages just suggested?

California's Natural-Gas Situation

EXTENSION OF REMARKS

HON, HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. SHEPPARD. Mr. Speaker, I am deeply disturbed by reports from southern California that a recent cold snap there caused a serious shortage of natural gas, which required emergency measures to keep our industrial plants functioning and our citizens comfortable in such highly unusual California weather.

Shut-in storage wells had to be put on production at Goleta. The Southern California Gas Co. withdrew about 100 million cubic feet of gas from storage daily. Industrial consumers were cut off from their normal supply and were forced to fall back on standby fuel—which, fortunately, was available in the form of fuel oil.

Meanwhile, householders who rely on propane, or other liquefied petroleum gases, to heat their homes, were faced with an even more acute problem. I am happy to say that, after considerable effort on the part of the LPG companies, as they are called, they were tided over the cold spell. But, it was touch and go.

Now this was just a temporary cold front, seldom encountered in southern California. However, it has serious overtones for the future, for California, although a large producer of natural gas, has recently become dependent on other States for just about half of its natural gas supply. As late as 1946, we were able to produce all our natural gas needs. But, because of our tremendous population growth and the increasing popularity of this fuel, only 7 years later we were forced to import 41½ percent of our supply.

Only a year later, that figure was 49.7 percent, an increase of 8 percent in just 1 year, and it is still climbing.

These and other vitally important statistics on California's natural gas situation explain why the people of southern California are genuinely concerned with this problem.

Many representative groups in California have recently adopted resolutions calling upon this Congress to amend the Natural Gas Act and thus help to preserve that part of our supply which reaches us from other These great institutions, as well as some of the States' leading newspapers, are reflecting the great concern of the people of California when they call upon us for action, for they know that if the Federal Power Commission is permitted to clamp price controls on the production of natural gas it can mean only that the supply of this fuel available to California will shrink dangerously and rapidly while at the same time the demand for it is skyrocketing. For, Mr. Speaker, they know that the hard fact is that price controls of whatever kind have never created plenty; they always have created and always will create scarcity. And scarcity can only mean higher and higher prices.

It costs an average of \$100,000 to drill a well, and who is going to gamble that much money in such a risky undertaking if Uncle Sam is going to place a low ceiling on his profit? Only recently, in California, the Ohio Oil Co. abandoned as a failure a well

which had been drilled to 21,482 feet at a cost of \$21/4 million.

In my State both household users and industrial users have a large stake in seeing to it that an abundant supply of this fuel is available. The number of gas customers in California, for example, jumped more than 50 percent between 1946 and 1953—from 2,210,000 to 3,326,-000.

It is also a vital factor in our supply of electricity, for the Los Angeles Department of Water and Power estimates that in the next 30 years about 50 percent of its fuel needs will come from natural gas.

Those who are interested in the industrial development of southern California—and, indeed, in industrial development everywhere—must be concerned with what is happening right now in Oklahoma. There has come to my attention an attractive leaflet published by the Oklahoma Development Council, 135 Northwest Second Street, Oklahoma City, Okla. Here are three important paragraphs from this booklet:

A new situation is diverting billions of cubic feet of unsold natural gas from prospective interstate markets and making it available for use only within Oklahoma.

Formerly, there were plans to sell much of these huge, uncommitted underground supplies of gas for use outside the State. But because of the recent imposition of Federal regulation over gas produced for interstate sales, producers are abandoning this market in making new contracts for gas sales. They now plan to hold this gas for use within the State.

Locate your new plant in Oklahoma where you will not be faced with dwindling supplies of natural gas as a result of Federal regulation. With ample gas available for long-term contracts free of Federal regulation, Oklahoma offers the ideal location for industrial expansion.

Thus, the people of California know that the absence of corrective legislation gives them pause for many reasons. Federal price controls on production will eat into California's source of supply from two sides—it will destroy the explorer's incentive and it will keep at home in Texas, Oklahoma, and elsewhere, supplies of gas which, we have seen, are sorely needed in California.

United Nations Division of Narcotic Drugs

EXTENSION OF REMARKS

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. PRICE. Mr. Speaker, under leave to do so I herewith include in the RECORD a resolution adopted by the Wood River unit of the Illinois Woman's Christian Temperance Union.

The Wood River unit calls upon the United Nations to disapprove the recommendation of the Third Committee to remove the United Nations Division of

Narcotic Drugs to Geneva. I wholeheartedly endorse this resolution. The resolution follows:

Wood River, Ill.
The Honorable Melvin Price, of Illinois,
House of Representatives,
Washington, D. C.

MY DEAR MR. PRICE: By the unanimous request of the Wood River unit of the Illinois Woman's Christian Temperance Union, I am requesting you to contact Secretary of State John Foster Dulles and our Ambassador to the United Nations, Henry Cabot Lodge, to use their influence with the United Nations Secretary General Dag Hammar-skjold requesting him not to accept the recommendation of the Third Committee to remove the United Nations Division of Narcotic Drugs to Geneva. You know, as do we, that such a move would give Red China full control of the sale and distribution of those Your little child is probably deadly drugs. not of school age, but even the first grades are being induced to use such drugs. Please insert this request in the CONGRESSIONAL RECORD.

Very sincerely,

Mrs. Maub Whiteman,

Corresponding Secretary.

Oil Imports

EXTENSION OF REMARKS

HON, WINFIELD K. DENTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1955

Mr. DENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include two statements calling attention to the need for curtailment of the present heavy flow of foreign oil imports into this country. One is the statement made by Mr. Alfred A. Kiltz, of Evansville, Ind., president of the Independent Oil Producers and Land Owners Association of Indiana, Illinois, and Kentucky, before the House Committee on Ways and Means January 28, 1955, during hearings on extension of the Trade Agreements Act. The other is my statement to that committee on the same day, pointing out both the immediate injury that unrestricted importation of oil does to independent oil operators and the workingmen of the coal industry and the potential harm of this policy to our international relations and the national security.

The statements follow:

STATEMENT OF ALFRED A. KILTZ, PRESILENT, INDEPENDENT OIL PRODUCERS AND LAND-OWNERS' ASSOCIATION OF INDIANA, ILLINOIS, AND KENTUCKY, JANUARY 28, 1955

My name is Alfred A. Kiltz, of Evansville, Ind. I am president of the Independent Oil Producers and Landowners' Association of Indiana, Illinois, and Kentucky. I am a director of the Illinois Oil and Gas Association; the Indiana Oil and Gas Association; the Indiana Oil and Gas Association; the Endiana Oil and Gas Association; a member of the Governor's Oil Advisory Committee of the State of Indiana, and of the regulatory practices committee of the Interstate Oil Compact Commission. I am also chief counsel of the Farm Bureau Oil Co., Inc., and the Petroleum Department of the Indiana Farm Bureau Cooperative Association, Inc., of Mt. Vernon, Ind. These two companies operate 300 miles of crude

oil gathering lines throughout Indiana, Illinois, and Kentucky; purchasing about 20,000 barrels of crude oil per day from independent producers. They refine about 10,000 barrels per day, selling their excess of crude purchased over refinery requirements to other refiners of the Midwest. They operate a 230mile finished products pipeline to central and northern Indiana, and furnish more finished petroleum products to the farm than any other company in Indiana. These companies are strictly farmer-owned and have always depended for crude supply upon oil produced in Indiana, Illinois, and Kentucky, by independent producers. They have worked closely with independent operators during the last 15 years, making available materials and equipment; loaning independents about \$20,000,000 for operations and development; buying their crude oil and extending them pipeline facilities. Most of the crude of our area has been discovered by independent wildcatters.

Eight years ago, the Tri-State basin was producing about 500,000 barrels of crude oil daily; the price was stable and there was no difficulty in disposing of crude oil in excess of local refinery requirements. In fact, the obtaining of crude oil was upon a competitive basis.

Today, strange situations are developing in the basin, a thousand miles from any sea coast and in the heart of America's bread This Tri-State basin now produces only 264,000 barrels of crude oil per day as compared to the former 500,000 barrels only 4 percent of United States production; yet, we are told that we must pro-rate production because we are flooding the market with crude. When the absurdity of this is pointed out, we are told that fabulous new supplies from the Northwest are flooding into our Middle West. We investigate and find that Colorado, Nebraska, Montana, Wy-oming, and North Dakota have a combined production of only 483,000 barrels per day or 71/2 percent of the United States total. We made a fact-finding trip to the Northwest during the latter part of last June and determined that it could not be this area's production which was causing distress in our Tri-State basin.

The situation has become steadily worse with independent operators being unable to make pipeline connections for their new wells, even though such wells might be located within a few feet of an existing gathering line. Independents must be able to sell their oil in order to obtain loans with which to continue development and wild-catting.

Upon last July 1, one of the principal pipeline companies purchasing oil in the tri-State basin, prorated all gatherings and purchases down to 70 percent of June runs. Upon the following July 9, another principal pipeline purchaser and gatherer of the area did not prorate, but reduced the price of crude 12 cents per barrel, from \$3.02 to \$2.90. This disturbed the entire financial structure of the independent producers; the drilling of development and wildcat wells immediately began to drop off. Drilling rigs were stacked or made an exodus from the basin. Mass meetings were held by independent producers. Farm Bureau, the only remaining large purchaser of independent crude trying to hold the line against proration and price reduction, was besieged with pleas to take on connections; but its own tanks were full and crude oil could not be moved and sold to other refineries normally purchasing Farm Bureau's excess crude oil. The use for tri-State crude had suddenly dried up. Imports of foreign crude through faraway seaports were supplanting the crude oil of our tri-State area.

During the middle of last July, I was sent to Texas by our independent producers and there advised with Gen. Ernest O. Thompson, chairman of the Texas Railroad Commission—in our opinion the leading authority in the world today upon oil. He advised that he had obtained the promises of major importers that there would be a voluntary regulation of imports; that all States should cooperate in prorating production until the situation had adjusted itself; that the difficulty would be all over in 6 weeks and normalcy would be restored; and everything would rapidly fall into balance. This information was delivered to a meeting of independent producers of Indiana, Illinois, and Kentucky, July 23, 1954, and they agreed to voluntarily prorate production if pecessary to help the situation.

That was July 23, not 6 weeks ago, but 6

That was July 23, not 6 weeks ago, but 6 months ago. Instead of imports being voluntarily regulated, as promised, they have steadily increased to the alarming figure of 1,443,000 barrels of crude and products per day. General Thompson apparently foresaw this as early as last September 23, when he said in a speech at Evansville, Ind., "If we let the importers dry up the lifeblood of domestic production in this country, then the responsibility must be upon those men. They may perhaps be great corporate officials, but the question has come right down to this point today: Is their loyalty greater to their stockholders than it is to America?" I might add that the applause was loud and prolonged.

Interviewing the general last week, January 19, in Dallas, his simple statement was, "All promises have been broken."

We now know what has happened to us in our tri-State basin. Imports of foreign crude during December to the east coast of the United States alone amounted to 649,000 barrels per day, of which 240,000 per day were from the Middle East and the balance from Mexico and South America. The east coast refines 1,013,000 barrels per day. Thus there has been a 64 percent displacement of American crude with foreign crude upon the east coast. A major portion of needed crude formerly moved from the Southwest around the gulf and Atlantic seaboards by tanker to eastern refineries. Today it is being moved by river barge and pipeline into our Middle West. It is crude hunting a new home with all the attributes attached thereto and we have been unable to compete with it.

More and more independent drilling rigs are shutting down in Indiana, Illinois, and Kentucky. Lending institutions, which finance the independent operator, are taking another look before lending. Pipeline connections are more difficult to make. Excess crude over refining requirements cannot be disposed of. As of this coming February 1, Farm Bureau is ceasing to buy and disconnecting 2,000 barrels per day of crude being produced by independent operators. The tanks are full and there is no alternative. Can they sell to someone else? Can they stay in business? The future only holds the answer. Last week identical resolutions of bipartisan authorship were passed unanimously by both houses of the Indiana General Assembly, as follows:

"The national oil and gas policy adopted in January 1949 and endorsed by the independent oil producers of Indiana and of the several other oil-producing States recognizes as a basic objective the assurance that the United States shall have an adequate and available domestic supply of petroleum products for all peacetime and emergency requirements.

"The first fundamental principle of the national oil policy, formulated by the National Petroleum Council, states that due consideration should be given to the development of foreign oil resources but the paramount objective should be to maintain conditions best suited to a healthy domestic industry which is essential to the national security and welfare.

"The national oil policy further states that petroleum imports should serve to sup-

plement and not supplant domestic supplies and not retard necessary domestic exploration and development efforts. This is a sound policy. Adherence to this policy is essential to our national well-being, security, and expanding strength as to oil.

"This accepted policy provides a place for petroleum imports and an opportunity

for healthy foreign trade.

"The continuation of present excessive foreign imports of oil violates that policy. Wasteful inventories have accumulated and production has been substantially curtailed in Indiana as well as in other oil-producing States. Fair and equitable relationships between imports and domestic production are not being maintained. The independent producer of oil and gas has been thrown into a serious economic situation and ultimately will be forced to abandon all exploratory and producing operations. This would be a serious threat to and could cause present oil and gas known and proven reserves to be used and exhausted. ploration and the continued search is necessary to maintain a reserve replacing the requirements for daily demands and consumption. These are perilous times in Amer-We are living in an era of the hydrogen bomb. Our continued existence as individuals and as a nation depends upon our ability to build and fuel the weapons In this race for survival, the doof war. mestic oil industry is the backbone of the defense of our Nation.

"Two world wars have proven this beyond any possible doubt. The importance of domestic oil in any future wars is evidenced by the fact that our defense planners recognize the logistical problems of moving imported oil by sea during a time of war. Let the American people make no mistake as to the basic issue now involved; a healthy capable domestic oil industry or the false and uncertain security that lies in the reliance on foreign oil: Therefore be it

"Resolved by the Senate of the Indiana General Assembly:

"Section 1. We urge the Congress of the United States to recognize this situation affecting an important industry of our State and its economic well-being and that some measure of limitation on the import of foreign oil should be enacted as a part of H. R. No. 1, the extension of the Reciprocal Trade Agreements Act, in order to maintain a healthy domestic oil industry.

"SEC. 2. The clerk of the Senate shall transmit a copy of this resolution to each Member of the United States Congress and Senate from Indiana and one copy to the clerk of the House Ways and Means Committee, Washington, D. C., and that a copy be sent to all governors of the various States, together with the request that their States adopt similar resolutions."

We feel that what is happening to us can and will spread with like results over the entire Nation unless the floodgates are at least partially closed upon foreign crude. We of the tri-States of Indiana, Illinois, and Kentucky are presently witnessing the exodus, retirement, and disappearance of the independent operator and wildcatter who has found 80 percent of America's crude reserves. If we become dependent upon foreign crude and that oil is suddenly denied us, if we suddenly need more oil from and for America, the independent wildcatter simply won't be around any more. Born with Drake's well upon Oil Creek, Pa., in 1859; growing into full stature and furnishing America's petroleum needs in peace and in war; he will have passed from the scene as an American institution and the frantic trumpeting of Gabriel horns will not bring about his resurrection.

STATEMENT OF HON. WINFIELD K. DENTON, OF INDIANA, BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS, DURING HEARINGS ON H. R. 1, 84TH CONGRESS, JANUARY 28, 1955

I am Congressman Winfield Denton, representing the Eighth District of Indiana. I want to thank the chairman and members of this committee for their courtesy in granting me time to appear here today and express certain views of mine with regard to the extension of the Trade Agreements Act.

First, let me say that I am emphatically in favor of the reciprocal trade program, and always have been. I know the advantages to this country of easy and friendly trade with other nations of the world and what such trade does to enhance our position in international affairs; and I would not in the slightest way want to cripple our progress toward the long-range objectives of the

reciprocal trade program.

But I am here today on behalf of the workingmen of the coal industry and the independent oil operators, who have already suffered considerable distress, and face still more critical injury from the operation of the Trade Agreements Act in its present form. Yet, I believe the serious and sincere grievances of these important groups in our national economy do not oppose the original and legitimate aims of the reciprocal trade policy.

I have, of course, heard the common expression that everybody favors reciprocal trade—but wants some one item or industry protected. I hope I am not guilty of such a charge; and I believe that the well-being of our domestic oil and coal industries is of such peculiar and far-reaching importance to the national security that it can be considered almost in a category apart from the

question of trade policy.

At the end of World War II, this country was importing crude and refined oil products at the rate of slightly more than 300,000 barrels a day. Since that time, oil production in the United States has been curtailed and restricted, without a corresponding reduction in oil imports, so that, for the years, total oil imports have been at a rate in excess of 1 million barrels a day-more than three times the rate at the end of World War II. Estimates of the import situation for the early months of 1955 show that oil may now be coming in at the rate of a million and a quarter barrels a day. And, where oil imports supplied 5 percent of the United States market prewar, they now are taking up about 15 percent of the market in this country.

A very significant part of the oil products imported is made up of residual oil, or heavy fuel oil. Being the last byproduct of the refining process, which operates at very low cost in certain foreign areas, this residual oil can be dumped on the east coast of the United States at prices so low that it easily displaces coal in the market for industrial fuel—pushing coal aside at the rate of 1 ton for every 4 barrels of residual oil.

This fuel oil was being imported at the rate of 45 million barrels a year at the end of World War II, and the influx has steadily increased until it nearly tripled last year at 131.8 million barrels, which took up about a quarter of our domestic market for residual oil. The coal equivalent of the oil imported in 1954, if this coal could have been produced for the market, would have meant jobs for 24,000 American coal miners.

I might go on reciting figures of this sort, but I expect that other witnesses will have amply supplied the committee record. By now, I don't think there can be much doubt of the severe impact that oil imports cause in our domestic market for both oil and coal. What I want to emphasize is the serious effect that excessive importation of oil will

have on the national security and our international position, in the long run.

The oil industry is of such a nature that it cannot maintain stable production or meet normal increases in demand by depending on existing supply sources. It must constantly seek new fields and prove up new reserves. This requires continuous exploration and discovery operations, which, as is well known, involves the drilling of many dry holes for the finding of a few good producing wells. Many risks of money and effort go into the development of even a 1 percent increase in United States oil production, or, for that matter, merely the holding of the existing level of output.

Experience in this country has shown that more than 75 percent of the wildcat wells are drilled by independent operators, and that these independents have discovered probably an equal percentage of new oil reserves. These men are the real pioneers in the industry, and their ranks are the source of the initiative and enterprise that must constantly be employed to keep up and improve productive capacity.

But they must be able to sell what they find, to raise capital to go and find more. Unlike the giants of the oil industry, the independent operators cannot go into lush foreign fields to reap profits which can set off the risk and cost of bringing in new production in this country. They cannot hedge operating costs by shipping in cheaper foreign oil. And the more of such oil that is imported, the less the independents are able to sell on the home market.

So long as imported oil is in heavy supply, domestic wells are sharply prorated and the allowable production per well continues to be reduced. These two factors—the curtailment of the market for domestic oil resulting from excessive imports and heavy proration made possible by imports—combine to destroy the independents' incentive and financial ability to continue exploration for new wells. If no remedy of this situation is provided, the result will soon be a serious cut in production capacity, for the independents who make the vital new discoveries of oil reserves will be driven out of the industry.

This is not a matter that can be put aside until the appearance of some grave national-defense emergency. Proven reserves and production capacity must be kept always ready to be thrown into use as soon as any war might break out. Practically speaking, almost no new oil capacity can be developed once we should become involved in a military emergency, for materials and manpower are drained off to meet more immediate needs.

Rear Admiral Briggs, of the Munitions Board Petroleum Committee, who appeared before the House Small Business Committee in June 1949, said that the military authorities are concerned over conservation of petroleum reserves in the ground in those areas representing the greatest probable accessibility during war. However, the admiral emphasized—and I quote: "First consideration for preparedness must be in a high level of developed production in those areas. Oil reserves that must be developed after the start of a war will probably contribute only minor quantities to that war effort, but shut-in production is an immediate military asset."

Most of our oil imports now come from Venezuela and the Middle East. Any enemy submarine activity in the Caribbean Sea would make it difficult for us to continue bringing in oil from Venezuela in time of war, and the great ocean distances separating us from the Middle East would make imports from that area all but impossible. Further, as Admiral Carney, now Chief of Naval Operations, told the Petroleum Sub-

committee of the House Armed Services Committee in January 1948: "The Middle East oil is vulnerable from the military standpoint under any circumstances. The fields are vulnerable to attack, pipelines and pumping stations are vulnerable to sabotage and attack, and I think we would be assuming too much to insure full availability of the capabilities and capacities of Middle East oil."

I think from that it should appear that we must take every precaution to avoid any dependence whatsoever on outlying foreign sources of oil for defense and military needs. And to maintain the health of our domestic oil industry, the only sure supplier in time of emergency, we must avoid undue damage to it from imports at any time. Not even the strongest advocate of free trade will say it should be achieved at the expense of national security.

As to the matter of proration of oil production, which complicates the import question, I can only say that some such system is certainly essential for the conservation and planned use of a vital national resource. But, if proration of oil production is good for the United States, it should be good for Venezuela and the Middle East. Actually, their economies are so heavily dependent on oil production that they should have even a greater interest in its careful conservation than we have in our own.

In the practical sense, it is not good policy in the long run for the United States to maintain a trade program which encourages American companies to exploit and excessively drain away the natural resources of these other countries. We want the friendship of their people, not only for now but for years and decades ahead. We do them no real service now by taking great quantities of the oil they are sure to have need of 25 or 50 years from now. Heavy American imports of oil may lend a flush of prosperity that is a temporary advantage to the Latin American and Arab countries, but it is wrong for us and harmful to them in the long run.

Gentlemen, I have endeavored to show the weakness of our present trade program, as relates to oil, in the light of international policy and our national security.

I now offer the following proposals for your consideration while deliberating on H. R. 1:

1. That United States imports of crude and refined oil be restricted to a quantity not to exceed 900,000 barrels per day;

2. That United States imports of residual fuel oil, or similar heavy oil, be restricted to a quantity not to exceed 5 percent of the total permitted crude and refined oil imports;

3. That if, prior to the expiration of the Trade Agreements Act, as extended, international policy considerations should make it imperative that the United States afford a market for greater quantities of crude and refined oil than stipulated under the first and second proposals above, the proper authorities of the executive department shall be authorized to purchase, for national-defense stockpilling purposes, additional amounts of these items, or either of them, insofar as is feasible;

4. That the committee urge as strongly as possible upon the Chief Executive the advisability of seeking international agreement among interested nations upon the proration of oil production in the interest of mutual security.

Again may I thank the committee for the privilege of appearing before it on this matter and express the hope that my remarks may be of some value in its deliberations.

Channel Job Most Vital to Lower Bucks

EXTENSION OF REMARKS

HON. KARL C. KING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. KING of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include the following editorial from the Bristol (Pa.) Daily Courier of January 8, 1955, entitled "Channel Job Most Vital to Lower Bucks":

CHANNEL JOB MOST VITAL TO LOWER BUCKS

No time should be lost nor effort spared in defogging administration thinking on this \$90 million upper Delaware channel project.

Last fall Congress authorized it without

any local contribution provision.

Since then some of the bright lads in administration circles have turned up with an idea United States Steel should ante \$18 million toward the cost.

If steel should be assessed then it would follow that other industry already doing business along the river from Philadelphia to Morrisville faces a sizable Federal bite, not to mention those innumerable firms planning to move closer to the open hearths.

It seems to us this is a fuzzy, an inane, and a patently unfair approach to a program so immediately vital to the expansion of the upper Delaware Valley region, to the growth of the Nation's industrial might.

President Eisenhower should lower the boom on the smart boys and clear the decks for achievement of this deepwater channel in accordance with congressional intent.

The Nation's inland waterways, of which the upper Delaware is a very important one, and their development to fullest possible advantage is a Government responsibility.

To evade such responsibility by slapping an assessment on industry, whether it be United States Steel or anybody else, is perversion of obligation and unjustifiable penalization of interests contributing immeasurably to national welfare and to the country's progress.

It's just as incongruous to require industry to pay for Delaware River improvement as it would be to make every community guarded from catastrophe by the Nation's system of flood-control dams to open its pockethook for the protection it gets.

pocketbook for the protection it gets.

The Delaware Valley expansion program, and most of it will be centered in this region, will hardly get underway until the deepwater channel becomes a reality, or, at least, until there is assurance of reality without prohibitive penalty against firms desiring to expand or to move here.

Already some 30 companies are dickering for sites along the upper Delaware.

Obviously these firms, or most of them, will hesitate finalizing plans and closing deals if the highly necessary channel project becomes a subject for needless controversy over who's going to pay the cost. Quite possibly some of them may skip the whole deal.

Exceedingly clear is the need for clarifying the situation.

There is nothing complex about clarification. The Government should simply do what Congress mandated: Deepen the channel to 40 feet and pay for it.

We in Lower Bucks County should be more than passively concerned about this Delaware River project. No great imagination is required to see

the future here—2, 5, or 10 years hence.
Already this extreme southeastern end of
Pennsylvania has become an important industrial center.

Its inevitable growth and expansion may not depend entirely on a deepened Delaware to accommodate oceangoing river traffic.

But there's no doubt whatsoever that the beginning and the completion of the \$90 million project would accelerate progress with fascinating swiftness.

THE EDITOR.

North Dakota Senate Requests Suspension of Acreage Controls on Durum Wheat in 1955

EXTENSION OF REMARKS

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks, I include the following concurrent resolution just passed by the North Dakota State Senate:

Senate Concurrent Resolution D
Concurrent resolution requesting the Secre-

tary of Agriculture of the United States to suspend acreage controls on durum wheat during 1955

Whereas North Dakota produces approximately 85 percent of all durum wheat grown in the United States, and the Legislature of the State of North Dakota is vitally interested in the production of this crop; and

Whereas approximately 85 percent of the durum crop planted in North Dakota during the 1954 crop season was lost due to rust, making the year 1954 the third consecutive year in which the production of durum wheat was far below normal and below the needs of the United States; and

Whereas because durum wheat is far superior to other grain in the manufacture of macaroni products, the shortage of durum wheat has handicapped the entire macaroni industry: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That the Secretary of Agriculture of the United States is hereby urged and requested to suspend acreage controls upon the planting and raising of durum wheat during the year 1955, and that permission be granted to plant and raise durum wheat upon any acreage displaced from production by acreage controls upon other grain; and be it further

Resolved, That the secretary of the senate forward copies of this resolution to the Secretary of Agriculture of the United States, to the North Dakota congressional delegation, and to the chairman of the respective Committees on Agriculture of the United States Senate and House of Representatives.

C. P. DAHL,
President of the Senate.
EDWARD LENO,
Secretary of the Senate.
K. A. FITCH,
Speaker of the House.

KENNETH L. MORGAN,

Chief Clerk of the House.

Congress Action Gives Clear Warning to Reds

EXTENSION OF REMARKS

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. AYRES. Mr. Speaker, Mr. John S. Knight is one of the most respected editors in the country. The following editorial appearing in the Akron Beacon Journal for Sunday, January 30, 1955, is one of the best I have seen on the Formosa issue:

CONGRESS ACTION GIVES CLEAR WARNING TO REDS

(By John S. Knight)

President Eisenhower is getting the support he needs in the Formosa crisis.

By overwhelming majorities, both the House and the Senate have said that the United States should defend Formosa, the Pescadores Islands and closely related localities with whatever force may be required.

The world now knows that this isn't the

The world now knows that this isn't the Dulles brand of bluff and backdown that almost got us into the Indochina mess during the critical battle of Dien Bien Phu.

This is the real thing; not State Department bluster.

Military intervention in Indochina would have ignited the wrong war at the wrong place. We had neither the available ground troops for duty in Indochina nor suitable targets for what he sometimes describe as the massive threat of our airpower.

Formosa is different. It is vital to our Pacific defenses. If the Chinese Reds overran Formosa, both Japan and the Philippines would be outflanked by the enemy.

Moreover, Formosa can be successfully defended.

If Chou En-lai is determined to liberate Formosa and thus risk war with the United States, the military advantages should be on our side.

My only criticism of Eisenhower's action is that it was delayed too long to gain the maximum psychological benefit.

More than 4 months ago, the following comment appeared in this column when the guns of Red China were shelling the island of Quemoy:

"Why don't we say that any aggressor moving against Formosa does so at his own risk?

"Instead of feeding the people a lot of double talk about military decisions and defending the vital interests of the United States, let the President speak up and say that any attack upon Formosa means war with the United States.

"The Communists would understand that kind of talk. If they are bluffing about Formosa, we will have called their bluff.

"If they attack, they can be soundly defeated without any assistance from our allies who intend to sit this one out.

"So, speak out, Mr. President. Let's not get sucked into a war by diplomatic bungling and the pattern of general involve-

"If we have to fight, let's do it on our own

"Tell the Commies now that we mean business."

It was my thought at the time (September 19) that Red China, undefeated in war and muscled up with newly acquired power, would try shoving us around to see how far they could go

Since then, the Commies have fired upon our planes, thumbed their noses at the U. N.'s attempt to gain freedom for our imprisoned airmen, picked off Yikiangshan Island from Chiang Kai-shek's Nationalist troops and are now forcing evacuation of the Tachens.

The President's decision to act came none too soon, but it was done in exactly the right way with full respect for the role of Congress.

Red China is finally on notice that the United States will fight if we are pushed too

The responsibility for war, if it comes, is clearly not ours.

Although Congress responded to the President's statesmanship with full measure of support, a small group of Senators marred the proceeding with some injudicious and unrealistic flyspecking on the Formosa resolution.

Senator Hubbert Humphrey, of Minnesota, offered an amendment limiting the defense area to Formosa and the Pescadores.

Had it been adopted, the Humphrey amendment would have prevented any retaliation against the Chinese mainland in case of attack, thus repeating the blunder made in Korea where the Reds enjoyed the luxury of a privileged sanctuary across the Yalu River in Manchuria.

Senator ESTES KEFAUVER, of Tennessee.

Senator Estes Kefauver, of Tennessee, favors placing Formosa under United Nations supervision. A good theoretical argument can be made for that point of view but Formosa would fall while the "statesmen" were still debating in the big glass house on New York's East River.

At a later date, when and if the present crisis is over, serious consideration can be given to the Kefauver proposal.

Then we have Senator RALPH FLANDERS, of Vermont, who won no laurels for objective thinking during the McCarthy hearings, mouthing the nonsense that "this is preventive war."

He was properly rebuked by Senator Wil-Liam Knowland, the Republican minority leader, who said: "There is not a scintilla of evidence * * which could lead any reasonable person to believe that the purpose of the resolution is to engage in a preventive war, or that its purpose was aggression against the Communist regime or any other regime on the face of the earth."

Senator WAYNE MORSE, the Independent from Oregon, also found it impossible to stay out of the headlines. Morse, in his characteristic loose-tongued fashion, warned against the President's trigger-happy military advisers.

He pictured Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, as favoring preventive war and said that sort of action will get us unnecessarily into a third world war.

The Oregon Senator failed to specify how he would cope with the problem facing President Eisenhower.

Senator Russell B. Long, of Louisiana, expressed apprehension lest Chiang Kai-shek and his friends get us involved in an all-out war with China, even if this should mean war with Russia.

The opinions held by these individual Senators are challenging, but not persuasive.

President Eisenhower has no thought of unleashing Chiang Kai-shek for an assault upon the mainland of China. This irresponsible view was first urged in the 1952 campaign by a group of Republican Senators and Congressmen of whom the kindest thing that can be said is that they were appallingly ignorant of the true situation.

The President has never engaged in saber rattling. He is against preventive war. It was Elsenhower's decision to keep out of Indochina.

We must therefore believe that the President is not trying to start a war, but to prevent one.

Let the Humphreys, Kefauvers, Flanders, Morses, and Longs remember this: Formosa is vital to our defenses.

Chou En-lai, whose troops fought ours to a bloody stalemate in Korea, says he intends to conquer Formosa.

The United States is pledged to defend Formosa. Moreover, self-interest dictates that course of action.

The President, in keeping with constitutional procedure, asked Congress for authority to defend the island against Red attack.

The Congress has granted that authority without the crippling restrictions imposed by the United Nations upon our military commanders in Korea, and now being urged again by a few addle-headed Senators.

This time, the President can act as military necessity requires. While United States air and naval forces are deployed in the Formosa area "for defensive purposes," they can be used for offensive action at the discretion of the President.

That means if war comes, Uncle Sam won't have to fight with one arm tied behind his back.

Are we risking war by granting this authority requested by the President?

Of course.

But the greater risk to our security is to let Formosa fall to the Communists.

Our defense lines must remain in the far Pacific, and not be withdrawn to the coasts of California, Oregon, and Washington.

In backing the President, the Congress has reflected the will of the people.

The decision, war or peace, is up to Chou En-lai and the Pelping government.

In praying for peace, we shall be ready for war.

Consider Decadent France

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Punxsutawney Spirit of January 28, 1955:

CONSIDER DECADENT FRANCE

Ever since history began there has been an irreconcilable conflict between those who believe in powerful and paternalistic government, and those who believe in placing the greatest possible limitations on government's authority over the lives and liberties of its citizens. That conflict continues today, in intense form. And without going into debates of theory, there is one fact that is undenlable—the paternal government is a might begetter of bureaucracy. It has to be. For, obviously, the more government does, the more people it needs to do it. And these people, human nature being what it is, assume all the power and importance they can.

Time, in a recent issue, tells a remarkable little story of what bureaucracy (aided and abetted by contributory factors) can do and has done in one essential field of enterprise in one country. The country is France, and the field of enterprise is housing. Time's article, which is based on a report made by French Socialist Deputy Albert Gazier to the National Assembly, begins with this sentence: "France, long one of the most enlightened nations in the world, is backward to the point of primitivism when it comes to putting a rcof over people's heads." The bare facts, presented without embellishment, will seem incredible to most Americans.

In Paris the average age of buildings is 83 years, and one-quarter of all the apartments are without running water. In the provinces things are still worse-the average age of buildings is 120 years and only a third of the rural population of 20 million has running water in their homes. In beautiful and famed Brittany 45 percent of the homes have earth floors. Twenty-five percent of all couples who married in 1948 are still looking for homes of their own, while they live with parents or stay in hotels or kitchenless furnished rooms.

The deputy blamed all this on lack of initiative, excessive costs, and old-fashioned building methods, but Time observes, "Being a Socialist, he did not add another of France's basic difficulties-bureaucracy. Deputy Gazier told only half of a sad story that helps explain France's divisions, frustrations and sullen hatred. More than 2 million French families live in houses built be-fore the Battle of Waterloo."

How did bureaucracy contribute materially to such a situation? For one thing, the government has rigid rent control laws that hold legal rents to ridiculously low levels. It's impossible for owners to pay taxes and keep their properties up. So no repairs are made, and there is no private construction of new housing for people of limited means. There have been some municipal apartment developments, but only a favored few have benefited from them.

For another thing, the French bureaucis so dense and so immersed in red tape that it takes some 15 months to obtain a permit to build a house. And the French building contractors seem to be in the same kind of a rut. For, even after a permit is granted, it takes an average of 21/2 years to

get a house built.

A badly housed people, like a badly fed people, is unstable and unhappy. So it's only fair to conclude that France's housing situation has contributed materially to her grave present problems-problems that are of the utmost concern to the whole western defense alliance.

Thirty-seventh Anniversary of Ukrainian Independence

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. FLOOD. Mr. Speaker, of the ancient and medieval Ukraine relatively little is known; one thing we do know, however, is that the country was overrun and ravaged many times by invaders from the East who inflicted much suffering on the Ukrainians. When the wave of invaders receded, the Ukrainians were able to regain their full independence. recoup some of their losses, and rebuild their homeland. From the late Middle Ages down to the middle of the 17th century, they were successful in preserving their independence. But then, by a treaty signed in 1654, between the Russian Czar and the Ukrainian leaders. their independence was placed in jeopardy and soon after that the Ukraine became part of the Russian Empire.

One might justifiably say that virtually all of the Ukraine's misfortune and the misery of its people stem from that treaty signed almost exactly 300 years ago. From that time until 1918 Ukrainians living within and outside of their beloved land thought, dreamed, and studied little else than ways of obtaining the independence of the Ukraine.

With the signing of the treaty of 1654 the independence of the Ukraine vanished into history. For once under the oppressive Russian rulers, the Ukrainians were forced to abandon their national traditions and to be attached to the great Russian family. In other words, the Czar's government set out to Russianize, by compulsion if necessary, all Ukrainians. Imperial decrees banned the use of Ukrainian as an official language. In schools the teaching of Ukrainian was not permitted, and the whole country was treated as a colonial adjunct of the Imperial Russian Government. And that Government ruled over it with a ruthless hand.

During all those years, however, the Russians were not able to denationalize the Ukrainians. The more oppressive the hand of the Government, the more the Ukrainians resented and rebelled against their overloads. At the same time their yearning increased for the return of the glorious days gone by. As a result, Ukrainian nationalism was kept alive as a powerful living force in the country. At the same time the idea of freedom and independence was carefully nursed in their hearts. Finally, some 250 years later, when they saw their chance for independence in 1918, they seized upon it and proclaimed the Ukrainian National Republic. The day of that proclamation, January 22, 1918, is a momentous landmark in recent Ukrainian history. Since then it has been customarily celebrated as a great Ukrainian holiday.

The republic which the Ukrainians proclaimed was a fragile being-young. weak, and beyond the reach of aid from its sympathetic friends. It was surrounded by powerful enemies. All of these were ready, at any moment, to pounce upon the new state and put an end to its existence. Most dangerous of these foes were the Communist Russians. Even though some 35 years ago we had our misgivings about the Communists. we did not know their inhuman methods and their real aims in the same way we know them today. The Ukrainians, who were their neighbors, had quickly diagnosed the evil character of Russian communism and for that reason fought it with all their might. In the end, of course, they had to yield to brute, superior force. In 1920 the Ukraine was overrun by the Communists. Independent-minded able-bodied men were placed under arrest, subjected to indescribable tortures, and many were put to death. It is impossible to say how many million innocent Ukrainians lost their lives under this most abominable of tyrannies.

Today that fair land of riches and plenty, that fertile home of the peasant. is a deserted and desolate steppe land as far as liberty and freedom are concerned. It is, one might say, a large prison camp where some 40 million toilers are crushed by the grinding, all-powerful steamroller of Moscow. There is no freedom of movement, no freedom of expression, and

the Communists have even tried to eliminate freedom of thought. Under such circumstances, of course, patriotic Ukrainians are not allowed to celebrate their independence day. However, we in this country are glad to join with all Americans of Ukrainian ancestry in the celebration of that day and ardently hope that soon the Ukrainians will have the freedom to do the same in their beloved homeland.

Courage, Men of Congress

EXTENSION OF REMARKS OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial from Labor's Daily of Friday, January 28, 1955:

> COURAGE, MEN OF CONGRESS (By Willard Shelton)

Once again the Members of Congress are facing one of their toughest questions— whether to raise their own salaries and the salaries of the Federal judiciary. Once again the suggestion must be made that they should pluck up their political courage and vote for what they know to be needed and right.

Many people would feel grateful for an income equivalent to the \$15,000 paid a Federal district judge or the \$12,500, plus \$2,500 annual expense account, paid Members of Congress. These sums are three times as high as the average earnings of Americans.

But relative facts must be taken into consideration. A man competent to be a Federal judge could make 3 or 4 times his judicial salary in private law practice. is a limit, in times of high taxes, to the sacrifice a judge feels willing to impose on his family, and 60 Federal judicial vacancies have piled up in 2 years.

Many State judges are paid far more than Federal judges. In New York City a munic-ipal judge, with only limited jurisdiction, is paid \$25,000.

The \$15,000 paid Federal district judges, according to Attorney General Brownell, is equivalent to only \$6,000 in terms of 1939 buying power, taking into consideration higher taxes and inflation.

A Member of Congress has extraordinary expenses. He must maintain two homesone in high-cost Washington and the other in his home district. He must travel occa-sionally to his district or State, and only one such round trip each session of Congress is reimbursable.

A Member of Congress may avoid the capital's party circuit as he would the plagueand many of them do. But he cannot avoid some entertainment of constituents, certain campaign expenses not covered by contributions, some social obligations.

The issue may be summed up in simple terms: do we want to make membership in Congress or a place on the Federal bench an office that only rich men, or at least people with independent private incomes, can afford?

If we rise above pettiness, the correct answer surely is that judges and Congress-men should be paid enough to cover the extraordinary expenses of office, to give them a reasonable chance to be free of harsh financial anxiety, to be independent and untempted by undue influence.

The thing that makes the Congressmen quiver, of course, is the fear that if they vote themselves a pay raise they may be vulnerable to political attacks at home. That is why, for sheer election reasons, the proposal of salary increases for judges is always tied to proposals for the relief of Congress.

But in the years before the war, before inflation and before high taxes, the \$7,500

But in the years before the war, before infiation and before high taxes, the \$7,500 salary of a Congressman gave him greater financial independence than he has now. His take-home pay, in terms of purchasing power, has been severely cut.

We are not going to get and maintain the highest standards of personnel in Congress and the judiciary unless we are willing to

pay for them.

If any citizen thinks his own Congressman or Senator isn't worth a higher salary, the answer is to get rid of that official and elect someone who is worth the money.

Friend in Spain

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a very fine editorial entitled "Friend in Spain," which appeared in the December 7, 1954, edition of the News and Courier, Charleston, S. C.

The News and Courier, of Charleston, S. C., is the oldest daily newspaper in the South, running continuously for over 150 years. Conservative without being reactionary, yet progressive in terms of national policy and liberal under the Constitution of the United States, it is truly representative of the majority of the thinking of South Carolina.

The enclosed article demonstrates the alertness for which this paper is renowned. Recently the Spanish brigantine Juan Sebastian De Elcano paid a visit to Charleston. Aboard this training ship were Spanish midshipmen and many fine officers and enlisted men alike. The News and Courier carried a special article each day while they were in port written in Spanish for the convenience of these fine visitors. I have never known a newspaper to do this before-certainly not in my part of the world. Representatives of the Spanish Government expressed to me their deep appreciation for this service. member of the crew was highly pleased because it gave them first hand information from home, news of world events and demonstrated to each of them a friendliness not expressed better any where in America.

Mr. Speaker, my people have a great affection for the Spanish people. My daily newspaper reflects this esteem.

FRIEND IN SPAIN

If all the foreign journalists who tour the United States are as friendly and industrious in interpreting our country to their readers back home as is Andres Revesz, of Madrid, our State Department would be fully repaid for financing their American travels.

Our judgment in this respect is based on several clippings Mr. Revesz has sent us of his writings about Charleston both in his own newspaper, ABC, and in other Spanish publications. We assume he has done the same for other American regions which he visited.

Mr. Revesz, whose phenomenal memory was the subject of an article in the News and Courier when he came to Charleston last spring, has forgotten little that he heard and saw. His latest word picture, illustrated with attractive pictures of the College of Charleston and St. Michael's spire over tiled rooftops, is entitled "Se Baila en Charleston"—They Dance in Charleston.

The article fills a tabloid size page in ABC, one of Spain's leading newspapers. The first sentence sets the tone of the article "If Talleyrand had known about Charleston, he might have mentioned it along with Versailles, relating to the joy of life." Mr. Revesz compares Charleston also to Andalucia, though our latitude is to the south of that delightful province of Spain. He says Charleston is a sort of American Cordoba without the Mohammedan influence. And he says the architecture and the gardens give "a magical impression very different from what North America signifies for us (Spaniards)."

We are flattered that Mr. Revesz singles out the News and Courier, where he paid a journalistic courtesy call, and several Charleston individuals for special mention. Mr. Revesz, foreign editor of ABC, is a journalist of distinction and a person of extraordinary range of knowledge. We look on him not only as a friend, but as an ambassador of goodwill. We hope he will not long delay his return visit to our country—and to Charleston, "con sus jardines y sus danzas"—with its gardens

and its dances.

Resolution Opposing SCS Changes

EXTENSION OF REMARKS

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. EDMONDSON. Mr. Speaker, the following resolution was recently adopted by the Caney Valley Soil Conservation District Board of Supervisors, with headquarters at Bartlesville, Okla.:

RESOLUTION 8

Whereas soll and water conservation, upstream flood prevention, reforestation, and wildlife developments are national problems, the solution of which affects all our people; and

Whereas the President's Committee on Intergovernmental Relations recommended that the Soil Conservation Service be turned to the States for financing and to the landgrant colleges for making policies and administration; and

Whereas the land-grant colleges were established for education and research rather than making of policies or the administration of laws established by the State Legislature or National Congress; and

Whereas the committee did not consider the wishes of the 2,600 soil conservation districts now working with the Soil Conservation Service or consider the advice of the minority member of the committee, Herschell D. Newsom, president of the National Grange: Now, therefore, be it

Resolved by the board of supervisors of the Caney Valley Soil Conservation District in regular meeting January 4, 1955, That they

go on record as favoring the present policymaking and administration of a national coordinated program in soil and water conservation and upstream flood prevention rather than having 48 separate units that would result in an unrelated and incoherent program; be it further

Resolved, That the board of supervisors urge their State and national legislative representation, Senator Frank Mahan, Representatives Carl Staats and Clint Beard; Senators Robert S. Kerr and A. S. "Mike" Monroney, and Congressman Edmondson; and Gov. Raymond Gary to do all in their power to prevent the adoption of the recommendation of the Chairman of the President's Intergovernmental Relations Committee submitted September 30, 1955; be it further

Resolved, That a copy of this resolution be spread upon the minutes of Caney Valley Soil Conservation District board of supervisors' meeting January 4, 1955, and a copy be sent to Gov. Raymond Gary, Senators Robert S. Kerr and A. S. "Mike" Mononey, State Senator Frank Mahan, Representatives Carl Staats and Clint Beard; Frank C. Dunaway, president of the Oklahoma Association of Soil Conservation Districts and to the Oklahoma State Legislative Council, State Capitol, Oklahoma City.

Burma Offers New Defense Line

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of Sunday, January 30, 1955:

BURMA OFFERS NEW DEFENSE LINE

(By Joseph Alsop)

RANGOON, BURMA.—Here in Burma, which boasts the ablest and most realistic government of postwar Asia, the price we are paying for the fraudulence of our Asian policy is alarmingly evident.

is alarmingly evident.

The news from home indicates a great, sudden stir about the Chinese Communist threat to the offshore islands of Formosa. But why is this? In view of the record of the last 2 years, why on earth is anyone ruffled by the Communist seizure of Yikiangshan?

There was a first Munich in the form of the Korean truce. There was a second Munich in the form of the surrender in Indochina. There was a transparent fake in the form of the toothless Manila treaty. And in the treaty with Chiang Kai-shek, specifically excluding the offshore islands from American protection, there was the equivalent of an engraved invitation to the Communists to seize those islands.

In the face of this record of retreat and appeasement, people at home are surprised by the natural, the downright inevitable, results. They are surprised because the retreat has been masked by a loud, hucksterish drumfire about "unleashing Chiang Kaishek," "recaptured initiatives," "massive retailation," "strengthened outposts" and the

The bad joke is that the Burmese and the Indians, who desperately desire to avoid an unnecessary war, have been just as much deceived by the loud talk as our own people. The loud talk in Washington has made these Asians think American policy warlike when it has really been the precise reverse. In Burma we are blamed not for appeasement,

which can be justly charged against us, but for aggressiveness, of which we are conspic-

uously guiltless.

If appeasement was needful, we ought at least to have tried to reap its natural benefits and reinsure it as best we could. In particular, we ought to have told the Indians and Burmese, "Well, we are going to follow your ideas about the right conduct of affairs in Asia, so let us get together to cope with the resulting situation."

We have not only failed to do anything like that. We have even virtually ceased communication with Rangoon and New Delhi. The mounting concern caused by the loud talk in Washington was one cause of this development. But there have been other causes.

There has been no American ambassador in Delhi for many months. There has been none here in Rangoon since last July.

The junior diplomats who are holding the fort here are good, hard working men who show all the worst effects of treatment given to the Foreign Service in the last 2 years. The American representation in Rangoon today has the approximate dynamic effectiveness of an old wet washrag. And this is true despite a danger and an opportunity that should intensely preoccupy the American policymakers.

The danger can be simply defined. With no one to speak up for our side, Burma has slipped since last year. The big power, China, has begun to convince the little power, Burma, that her sweet words can really be relied on. Men like Premier U Nu and his two remarkable chief collaborators, U Ba Swe and U Kyaw Nein, are not really deceived, but they are beginning to be immobilized.

The opportunity can be equally simply defined. It is the opportunity to mobilize Burma. The appeasements of the last 2 years have produced a new situation in Asia. American power is no longer sufficient to hold the balance true. The political and moral authority of the free Asian nations, and in particular Burma and India, are desperately needed to prevent a general collapse. That is another result of our recent policy which it is high time to face squarely.

The opportunity is in Burma, because here in Burma the leadership sees the position in Asia more clearly than that in Delhi. The danger to Burma of a Communist triumph in Thailand can never be forgotten by the government in Rangoon. Therefore it is here, if anywhere, that the needed effort can be organized to hold Cambodia and Laos, the approaches to Thailand, which now have, for the long run, at least as much importance as the Formosa approaches or, indeed, as Formosa itself.

The last 2 years' policy of retreat may well have been desirable. Yet the wise commander, when he retreats, is careful to organize a new defense line for the new position he has occupied. Our policy makers have instead been too busy protesting that they really were not retreating; so no shadow of a new defense line has been organized, and the task of organizing one is getting harder by the month.

Against Reduction

EXTENSION OF REMARKS

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I in-

clude the following editorial from the Army Times of January 29, 1955:

AGAINST REDUCTION

It is significant that the President's decision to drastically reduce the Army's strength has had its most disturbing effect, in Washington at least, on men whose work has brought them in close association with atomic and missile warfare. Almost to a man, in opinions voiced publicly or given in confidence to reporters, these experts are opposed to reducing the Army. They include not only military men but scientists and Congressmen on committees concerned with defense—all men who have reason to know something about atomic horror.

They are opposed to any great reduction in our ground strength for at least two clearcut reasons. The military leaders and some scientists foresee a need in future warfare for more, not fewer, ground troops than we have used in the past. In the face of a potential enemy's possible use of nuclear weapons, dispersal of troops will have to be rule. Small groups of highly mobile specialists must be spread over a wide area. Because of radiation danger, no massing of headquarters organizations in captured cities will be possible. Indeed any massing, anywhere, of top command personnel would invite their elimination at one blow. Yet all of these groups, scattered though they are, must be capable of being pulled together quickly to take control of ground which, for one reason or another, is given up by the enemy.

Disturbing to many Congressmen, too, is the admission implied by the Presidential directive that this country has pinned its defense hopes almost exclusively on the airplane and the atom. They see this as the sort of policy which before World War II led the French people to suppose that they were secure behind their supposedly impregnable border fortresses. Combined with the cut in ground force, it also notifies the Communists that we will not have the strength to oppose effectively any piecemeal aggressions the Reds care to indulge in. Moreover, it is acknowledged even by the air enthusiasts that another type of Red aggression—infiltration by guerrillas—can only be stopped by troops on the ground.

As we've said, all of these things are well understood by the experts. Fortunately, their apprehension in the face of the proposed Army cut is making itself evident to others who will deal with the question when it comes up in Congress.

Free Distribution of Natural Gas Vital to Southern California

EXTENSION OF REMARKS

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. McDONOUGH. Mr. Speaker, there should be no hindrance placed in the way of the production and distribution of natural gas which is so vital to the health, welfare, and industrial expansion of the Nation. I voted against Federal control of the distribution and rates of natural gas during the 83d Congress. I submit herewith an article and an editorial from the Los Angeles Times on the urgent need for free distribution of natural gas without Federal control:

[From the Los Angeles Times of December 31, 1954]

NATURAL GAS ISSUE VITAL TO SOUTHLAND— UPSET OF POWER BOARD'S CONTROL WILL BE SOUGHT BEFORE CONGRESS

(By Ed Ainsworth)

With the temperature at a frigid 41°, southern California yesterday watched with particular interest a congressional situation shaping up over its principal industrial, cooking and heating fuel—natural gas.

A vital issue on natural gas is to be settled at the session opening next Monday.

Congress will be asked to enact legislation setting aside a United States Supreme Court decision under which producers of natural gas supplying interstate pipelines have been placed under the jurisdiction of the Federal Power Commission.

AIM OF ENDEAVOR

Independent gas producers and major oil companies have joined hands in the effort to have the producers of natural gas restored to the status they held until the Supreme Court decision was rendered last June 7. If they are not, the proponents of the legislation assert, there inevitably will occur a shortage of gas for interstate pipelines and a consequent increase in the price of gas.

How does this affect California?

IMPORTANT FIGURES

In southern California alone we import by pipeline 715 million cubic feet a day of natural gas, according to the Southern California Gas Co., and approximately the same amount goes to northern California. This means a yearly total in southern California of some 260 billion cubic feet of gas imported for industrial and home use. This total is placed at somewhat in excess of 50-percent of the amount used in this area.

The imported gas comes from Texas fields via El Paso in a pipeline some 1,000 miles

CONFERENCE CALLED

Spokesmen for the producers of natural gas have arranged for a conference in Washington this week with Representative Clamer Ergele, of California, who is to become chairman of the House Interior and Insular Affairs Committee before which the proposed legislation may go

legislation may go.

It is asserted by those who seek to have Congress set aside the Supreme Court legislation that Federal regulation of producers of natural gas is a step toward socialism and that prices of other commodities such as wheat, corn, potatoes, cotton, coal, copper, and lead might just as well be regulated by the Government.

Attention is called to the fact that the Federal Power Commission itself on numerous occasions refused to take jurisdiction over the producers and gatherers of natural gas and announced that its regulatory power went into effect only when the gas was in the interstate pipelines.

In fact, a Commission order in 1947 stated: "Independent producers and gatherers of natural gas can sell and deliver such gas to interstate pipelines and can enter into contracts for such sale without apprehension that in so doing they may become subject to assertions of jurisdiction by the Commission under the Natural Gas Act (of 1938)."

ACTION ON TIDELANDS

In pointing to the basis for the fight to have Congress clarify the law so as to upset the Supreme Court decision, it is stressed by the proponents of the change that the same thing was done last year by Congress in restoring title of the tidelands to the States.

The Natural Gas and Oil Resources Committee states:

"Working under highly competitive conditions in providing the country with an abundant supply of gas, the producer must have an incentive to take the financial risks involved in searching for and developing new gas supplies. Federal regulation and price fixing removes this incentive."

PRESENT SITUATION

"Under Federal regulation certain terms of the producer's present contracts, including agreed-upon prices, have been suspended, and he has no assurance with respect to realizing prices which he may negotiate in the future. Facing this uncertainty in his dealings with interstate pipelines, the producer may understandably seek to sell uncommitted reserves to growing markets within his own State.

"The household consumer now pays bargain prices for natural gas and the cost of gas has risen far less than the cost of living and commodity prices in general. But if gas for interstate transmission becomes scarce, the consumer will pay a higher unit cost for gas—since most costs related to the transmission and distribution of gas remain about the same regardless of the volume of gas flowing through the pipes."

EFFECT OF CONFLICT

"State conservation programs are designed to effectively regulate the production of oil and gas. The Federal Power Commission has been given authority to regulate natural gas production for an entirely different purpose. The conflicts arising from these two divergent programs of regulation will create a natural tendency on the part of the producer to avoid Federal regulation by not making sales to interstate pipelines."

[From the Los Angeles Times of January 20, 1955]

REGULATING THE PRODUCERS OF GAS

The board of directors of the chamber of commerce stands for the interests of gas consumers, we believe, when it endorses the proposal that gas producers be exempted from Federal regulation. This regulation, imposed by a recent interpretation by the Supreme Court of an old Federal statute, seems to have no good purpose, and should be done away with.

A CHANCY BUSINESS

The fact is that the production of natural gas is a highly competitive business; there are between 4,000 and 5,000 separate companies engaged in it and they furnish lively enough competition so that no regulation is necessary. But more than that, those who bring natural gas to the surface are engaged in a chancy and speculative business, and if they are denied the possibility, through Government regulation, of considerable profits, they will not stay in business.

There are big companies, to be sure; but there are also many small ones. Those who seek natural gas are wildcatters, for the most part, also seeking oil. The production of oil is not regulated at the Federal level, nor at the State level in a number of States including California; and gas production is in most cases a byproduct.

There is the additional fact that the cost of gas at the well is usually not more than 10 percent of the bill presented to consumers: 90 percent or thereabouts is represented by distribution costs. And the distribution is already regulated. The Federal Power Commission has full jurisdiction over interstate pipelines.

REGULATION IS DIFFICULT

The Federal Power Commission, incidentally, does not want the job of regulation; in nearly a dozen cases it refused to take over the fixing of prices to be paid gas producers. In the case that reached the Supreme Court involving the Phillips Petroleum Co., it was equally unwilling. But the Court held that regulation was its duty and it is currently wondering how to go about it.

With so many producers regulations is a dimcult if not almost impossible task.

That natural gas is a desirable fuel everyone knows; but that it has a monopoly of the fuel fields is far from being the case. There is competition from coal, from oil, from electricity and (at least potentially) from atomic fission. In California we produce about half our gas from our own oil fields, and the local production would not be under the Federal Power Commission in any case. The regulation would only apply to the gas we import, mainly from Texas.

Oil companies would find Federal regulation a great handicap, adding to their costs and introducing a lot of fussy red tape. After the Phillips case was decided, a number of large companies considered the practicability of setting up separate corporations to handle their gas production. But obviously this would involve great difficulty, and there is no reason to suppose the public would benefit from it. Every time a business expense is incurred, somebody has to pay for it, and that somebody is almost invariably the ultimate consumer.

DEPRESSING EFFECT

As indicated above, gas has competition from other heat-producing materials or methods. But gas also has competition from gas. The States along the northern border, already served to some extent from Texas, Louisiana, and Oklahoma, are looking to connection with the vast gas supplies of Canada; and the North Dakota field is also promising. Minneapolis is not at Texas' mercy; if the Texas price is too high it can buy elsewhere.

The most pressing reason for abandoning, or rather for not undertaking, regulation of gas production is the depressing effect such regulation would almost certainly have on the exploration for new fields and new pools, known as "wildcatting." For a number of reasons, including national defense which requires oil in vast quantities, we can hardly afford to discourage the wildcatters. Our laws encourage their operations, and rightly; the 27 percent depletion allowance given by the income-tax law, which Congress has repeatedly refused to change, is reflected in the continual discovery of new fields and new zones.

The Federal regulation of gas production is not a good idea. It would do much more harm than good; and the general public would not be benefited by it. Regulation is for natural monopoly; and gas production is not a natural monopoly.

Postal Rate Increase Long Overdue

EXTENSION OF REMARKS

HON, ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. CEDERBERG. Mr. Speaker, I am today inserting in the Record an editorial from the Boston Herald and another from the Washington Star, which set forth my thinking quite adequately in regard to the postal rate increases on first-, second-, and third-class mail, which I believe are long overdue.

The very fact that postage rates on letters are the same that they were in 1932 indicates to me that the Congress has not faced up to its responsibility as far as the revenues of the Post Office Department are concerned, since we are certainly all aware that costs—no matter whether they are in the Post Office De-

partment or in our own personal lives or our personal businesses—have gone up tremendously since that time. The same situation exists as to second-class mail. Second-class rates are only about 3 percent higher than in 1932. On third-class mail, which is known as business mail, the expenses exceeded the revenues in 1954 by \$147 million.

It is difficult for me to understand, in view of these facts, why any Member of Congress should not be willing to vote for adequate rate increases as proposed by this administration. I intend to vote for these proposed rate increases because I believe that, as a Member of Congress representing the citizens of my 10th Congressional District of Michigan, I would be derelict in my duty to them if I did not vote for these rate increases. I do not believe that we can expect the average taxpayer of this country to subsidize the users of the mails-whether they be individuals, business houses, or otherwise. Of course, I am excepting from this category religious and charitable organizations.

When we stop to consider that about 75 percent of the first-class mail handled in this country is that of business concerns, and that only 25 percent of it is attributable to individual use, then it seems to me that there is no excuse whatsoever in not being sure that these business houses—whether they use first, second-, third-, or fourth-class mail—pay the expense of handling letters and other mail matter.

There has been little or no opposition to this from the users of the mail, except in a few instances, but there has been no major concerted effort on behalf of business to block any rate increases, because after all businessmen are just as aware of the fact that the costs of handling mail have gone up as have costs in their own particular business. Therefore any opposition would not be sincere. They realize that their opposition would certainly be inconsistent in comparison with the costs of other operations of their business.

As a member of the House Post Office and Civil Service Committee I intend to do all that I can to see that the users of the various classes of the mails pay a just rate for this service. I cannot in good conscience expect the citizens of my district to pay from their tax dollars to support the users of the mails.

The President has wisely proposed salary increases and new classification schedules for postal employees, and I intend to support him in this regard, as I have done in the past. If the recommendations are adopted—and I hope that they will be—and the requested rate increases are denied, the postal deficit will be about \$500 million annually. Such a deficit, in view of the fact that the postal rates on first-, second-, and third-class mail have never kept pace with the increased costs, is in my judgment unthinkable.

There are those who fear that there may be political repercussions if the postage rates are increased. I take the opposite view, as I feel that there will be political repercussions if they are not increased. You can fool the American

public just so long, but as soon as they become fully informed—as they will be—that their tax dollars are subsidizing the users of the mails at the rate of over \$1 million a day, they will soon require an accounting of the activities of their representatives in this regard.

I believe that it is time that we approach this problem in a realistic, businesslike, and nonpartisan manner, so that we can, through our positive action, assure this Nation of a modern postal system, adequate not only for today's needs but capable of handling the additional needs which will arise as our economy expands during the coming years.

The Boston Herald editorial of January 22, 1955, appropriately asks "Why shouldn't the Post Office Department make money" and calls the mailing of a letter or parcel in the United States the biggest bargain on earth.

That editorial follows:

Too BIG A BARGAIN

Why shouldn't the Post Office Department make money, or at least break even, rather than lose it at the rate of a million dollars a day?

The mail is big business. Why shouldn't it be good business, as it is in most European countries?

There are a number of reasons. We have the lowest postal rates in the world. Our postal system, unfortunately, is in politics. Our mails cover tremendous space and distance. The costs, labor and mechanical, are high. The franking privilege extended to Federal legislators alone costs \$1,500,000 per year.

There is not too much we can do about labor and mechanical costs. Some post offices can be closed. Some employees can be discharged. Perhaps more automatic machinery can speed up the process.

There is nothing we can do about space and distance. The West and the East, the South and the North, will always be so many miles apart.

It is probably hopeless to get the post office out of politics or wrest the franking privilege away from our legislators, although both are desirable.

But we can do something about postal

Mailing a letter or a newspaper or a book or a parcel in the United States has been called the biggest bargain on earth. It darned near is, too.

It costs 3 cents to mail a letter in the United States. According to a New York Times survey made last year, it costs 8.5 cents to mail a letter in Sweden; 9.6 cents in Germany, and 4.17 cents in England.

The 3-cent rate has been in effect for 25 years. While the cost of just about everything else has doubled, and even trebled, the cost of mailing a letter has remained the same. What could be less realistic?

President Eisenhower has asked for an increase in mail rates in order to cut down the huge postal deficit and cover a pay raise for postal workers. We hope the Democratic Congress will go along with him on this necessary measure. The American people and their businesses can afford it and would, in fact, benefit from such a step.

Only yesterday, in its Sunday edition, the Washington Star expressed the hope that Congress would act forthrightly on the postal-rate bill.

That editorial follows:

SEPARATE, BUT RELATED

Postmaster General Summerfield, a stickler for carefully wrapped parcels, sent his postal-pay and postal-rates proposals to Congress in a well-tied package. But it did not take congressional leaders long to unwrap the bundle and lay the postage problem aside for later consideration. This is the same procedure followed last year—with disastrous results, namely, a Presidential veto of a non-revenue-providing pay bill. Congress ought not make the same mistake twice in a row.

It is proper to handle the postage question in hearings apart from those called to consider a pay increase for post-office workers, but it is hiding one's head in the sand to contend that there is no relation between the two subjects. The administration has held that one should not be passed without the other as a companion piece. The postal deficit has been cut under the Summerfield regime from about \$500 million a year to between \$300 and \$400 million. The 5-percent pay raise and fringe benefits recommended by the administration would add about \$170 million to the deficit.

Mr. Summerfield again, therefore, has asked that the postal service be put more nearly on a self-sustaining level through increased rates on letters and on secondand third-class mail. There is always an outcry against such proposals. The issue to be decided is to what extent the Government is to continue to subsidize mail costs. No Postmaster General has ventured to suggest that the whole postal system should be self-supporting, but many have urged Congress to reduce the deficit—and hence the subsidy. It is to be hoped that the new Congress will act as forthrightly on the postal-rate bill as it plans to act on postal and classified pay legislation.

Armed Forces Educational Benefits

SPEECH

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 587) to provide that persons serving in the Armed Forces on January 31, 1955, may continue to accrue educational benefits under the Veterans' Readjustment Assistance Act of 1952, and for other purposes.

Mr. KEARNEY. Mr. Chairman, I am wholeheartedly in support of this legislation. I, too, add my commendation to the chairman of the committee on the speedy work in reporting out this bill.

To me, it would be unfortunate and unfair for this House to deny benefits to those veterans now in the service and who would be affected by the President's proclamation. As a member of the Veterans' Affairs Committee of the House, I am very much in favor of early hearings on other bills before the committee for further extension of benefits.

With the present bill before us it is necessary for its speedy passage as an indication of our willingness to give justice to those now in service or who enter before January 31, 1955. It would not be fair to cut off education benefits upon which they have relied. To do so would be a breach of faith.

I earnestly urge my colleagues to support H. R. 587 with a unanimous vote.

Chemicals in Food

EXTENSION OF REMARKS

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I ask permission to include the following copy of an address I made before the 10th annual meeting of the food, drug, and cosmetic law section of the New York State Bar Association on January 27, 1955:

CHEMICALS IN FOOD

(Speech by Hon. A. L. MILLER of Nebraska, at the 10th annual meeting of the section on food, drug, and cosmetic law of the New York State Bar Association, January 27, 1955)

The increasing use of chemical additives, hormones, and vitamins in the production and processing of food has raised a problem as far as public health is concerned.

The select committee of the filst Congress which explored the field of chemicals in foods and cosmetics came to the conclusion that existing Federal laws dealing with the problem are not adequate at this time to protect the public against the addition of some of the new chemicals, hormones, and vitamins that go into the production of food.

There is hardly a food on the markets of today which has not had some chemicals used in or on it at some stage in its production, processing, packaging, transportation, or storage. In this vast, complex problem, it is necessary that proper precautions be taken to make sure that no acute or chronic poisoning may develop.

The food and drug law, when first adopted, and the several amendments which have been added with the regulations, was designed for the purpose of safeguarding the public health. It is the law to those who deal in the manufacturing, processing, and packaging of food. This law provides sort of a badge of integrity and honesty, setting up a yardstick of standards designed to pritect the public and those dealing in all the phases of handling food. This endorsement is coveted.

Tremendous progress in the science of food technology has been made in the past few years. This scientific progress has run ahead of the law, and the amendments of 1938 seem no longer sufficient for this day. In a tough economic and competitive world, there will be some who want to cut corners and apply methods or use chemicals that have not been adequately tested. These new problems require legislative and administrative attention. I am hopeful that all interested groups will cooperate in a constructive legislative approach to the problem.

It is indeed fortunate that industry has been able to enrich and improve foods by adding certain vitamins and minerals or other additions of chemicals which enhance their nutritive value. The American people should give a vote of thanks and be mighty proud because the scientists of the country and the processors of food have worked diligently to solve some of the serious food problems of the Nation. They have applied the knowledge thus gained to the benefit of the public.

As a medical man, I recognize that the addition of many vitamins, minerals, and hormones to food has brought a real benefit to the human diet. I am certain that many dietary diseases have been disappear

ing because industry and scientists have found a way to improve foods through the addition of new materials. This progress must continue.

The public has learned to have confidence in the manufacturers and chemists who deal with food. The public has confidence in the administration of the food and drug law. Any new legislative approach should enlarge and insure the confidence of all groups.

Living conditions have become so complicated that the responsibility of making determinations in this huge, complex field now seems to call for new, modern legislation to spell out and set up a new yardstick to conduct the business of governing chemicals and internal secretion uses in the production of food.

PESTICIDE LEGISLATION

It will be recalled that the 83d Congress passed a bill which I introduced to regulate the use of pesticides and insecticides in the production of food. The bill was a product of all groups interested in the problem. It met with their approval and would not have been possible without many conferences and the full cooperation of all concerned. As we propose the new amendments to the present law, I hope we may have the same type of understanding and cooperation that we had with the groups interested in the law governing pesticides.

THE FOOD LAW

A careful study of the present provisions of the Food and Drug Act brings one to the conclusion that the act is inadequate and cumbersome in operation. In fact, some sections cannot be administered. You who are familiar with section 406, must recognize how difficult it is for the manufacturer and the chemist to operate under that section. The food manufacturer, to obtain approval for the use of an ingredient, must first allege that the proposed ingredient is poisonous or deleterious, which, if properly interpreted, would mean that he proposes to use certain chemicals that would be injurious to health. I can understand why a food manufacturer would resist making such a statement or admission. The food manufacturer must also be prepared to prove that the chemical is required in order to produce food properly.

Few tolerances for food ingredients have been established under section 406. Section 402 defines as adulterated any food which contains any poisonous or deleterious substance in a quantity which ordinarily renders the food injurious to health. The section also sets up certain tests in respect to the added substances. It would seem to me that manufacturers of food are met head on with many difficulties created by section 402 and It would also seem that the burden of proving that certain substances are not harmful should not be placed upon the Government. It ought to be possible to spell out in rather clear detail the procedures that should be followed before a chemical is added to food.

NEW LEGISLATION

Let me suggest that a new amendment should require that:

1. Any new additive to food shall be completely pretested as to safety in order to protect the consuming public.

There should be an advance submittal of the pretesting evidence to the Food and Drug Administration.

 This evidence should be evaluated and the food industry should be given a definite answer within a reasonable time.

4. Under penalty for violation, no new additive should be added to food without the complete scientific pretesting and the official evaluation by the Food and Drug Administration.

5. If the Food and Drug Administration gives the green light, then this additive can be used.

6. If the Food and Drug Administration gives a negative reply as to the safety of the additive and the manufacturer differs with the evaluation and insists on using it regardless of the negative reply from the administration, the bill should authorize the Food and Drug Administration to enjoin its use. It is possible at this point or before the enjoining action that the evidence of the safety might well be passed on by an impartial board of experts. Their decision should be given in a reasonable length of time.

7. A provision should be added that, in the event of the manufacturer being enjoined by the FDA, a United States district court will appraise the evidence and decide the issue, which, of course, could be subjected to a higher judicial review. Some objections have been offered to a judicial review.

It is hoped that the new legislation, when introduced, will represent the composite and objective thinking of the majority of the chemists and food manufacturers. I know you are all interested in the vital problem of chemicals in food. I do not want to be dogmatic and insist that the changes I suggest would cure all of the deficiencies in the present Food and Drug Act. The principal purposes for which we have food laws is to protect the health of the public. This should have preference over economic factors.

It should not be necessary for the Government to assume the responsibility and the expense of proof that a chemical is harmful before it is used. Under the present law, the chemical can be used and the Government is frequently helpless and the consumer unprotected.

Industry should be willing to assume the burden of the proper studies on acute and chronic toxicity of the chemical before it is used. To require otherwise, might mean several years of costly experimental work and meanwhile the manufacturer could continue to market the product unmolested despite the question mark of whether it is harmful. It is for that reason that I would propose a board of experts to pass upon these disputed questions.

BOARD OF EXPERTS

As to the personnel of the Board of Experts, I would presume that the President, through the Food and Drug Administrator, might request several professional societies dealing with the chemical question to nominate individuals to represent them on the expert panel. The following organizations might be asked to participate in setting up such a panel: United States Public Health Service, American Chemical Society, American Society for Pharmacology and Experimental Therapeutics, American Society of Biological Chemists, Institute of Food Technologists, Society for Experimental Biology and Medicine, and others.

The Board should have the right to invite testimony or opinions of specialists in particular fields in addition to those of representatives or applicants and the administrator. The members of the panel would naturally be adequately compensated for their services and expense.

CHEMICALS NOW IN USE

Since a great many chemicals have been used for a long time and no tolerance has been set, it would seem that the Federal Drug Administrator should not have the authority to go back and force the testing of these chemicals and present a determination that they are harmful unless he has overwhelming evidence that such is the case. Then a review of all evidence and a finding should be made. Chemicals, long used, might well be folded in under what we call a "grandfather clause"

LEGAL STEPS

I personally like the idea of an impartial group of experts, of which the Public Health Service might be a member, in order to pass upon some of the evidence presented to the Food and Drug Administration. They would be used only in case of a disagreement as to the effect of the proposed chemicals. Certainly a manufacturer who has an adverse decision from the FDA and from the Board of Experts would have little chance of expecting a United States district court to overrule the expert opinion. Nevertheless, I am convinced that the section which would permit the FDA to enjoin a manufacturer and a section which would permit the manufacturer to appeal to the highest court should be a part of any new judicial procedure. In my humble opinion, no administrator of the law should want or expect the power of a life and death sentence over a chemical which a manufacturer might propose to use. The administrator should welcome the support of experts and the decision of the court. It seems to me this procedure would be the proper democratic process that should be observed in this great land of yours and mine.

HORMONES IN FOOD

They have the limited approval of the pharmaceutical section of the Food and Drug Administration.

While it may seem a little farfetched to bring in the question of the use of diethylstilbestrol or some antibiotic drugs, they are actually being used to produce food. Many of these hormones are chemical in nature. Their use represents a revolutionary approach to the production of meat and food. I believe their use represents progress which if not harmful, should be encouraged. As these new, both known and unknown, estrogens are used, we must be sure that they are not harmful to the human race.

Experiments have been carried out with the use of female hormones, now in common use on meat animals, on a group of women who have passed the menopause, Many of these women again exhibited all the symptoms of an active sex life plus sore and swollen breasts, just as during their menstrual periods. The question must be raised as to what effect the injudicious use of these sex hormones may have upon the reproductive organs of the male or female. Cold creams—indeed, it is a great wide field which calls for intensive research. This research is now being carried on, and I am sure some answers may soon be found.

A number of these estrogens and chemicals are potent and dangerous and cannot be purchased in a drugstore for medical purposes without a physician's prescription. Some of the hormones have been used by the medical profession to alleviate menopause difficulty, dysmenorrhea, and other male and female medical problems. Diethylstilbestrol has been used in the fight against prostatic cancer.

Our own body produces numerous hor-mones, male and female. They determine our moods, our actions, our growth and development. They even control the pitch of our voice or how tall or short we might be. I am certain more precautions should be taken in permitting these drugs to be made available to the general public without a medical certificate or prescription. we are on the threshold of a whole new world in the matter of producing meat from the proper uses of certain hormones. Proper evaluation of their use must be made. I do believe a go-slow sign should be erected until all the scientific research has been evaluated and it can be definitely deter-mined that no harm will result in their long, continued use.

URANIUM AND FOOD

It has been my privilege in the past year to visit the Brookhaven Laboratory on Long Island, and to witness there the great progress being made in the several uses of uranium. Probably the largest stockpile of uranium in the world is at this laboratory. It is amazing the things accomplished in the production of crops and the control of diseases both in man and the plant world. There seems to be no limit to which the isotopes and mesotopes may be used in the effect upon and in the production of food. It is my humble opinion that, in the years ahead, the effects of uranium on the production and processing of food may well dwarf the effects of the hundreds of chemicals now in use for the same purpose.

The military is greatly interested in the preservation and treatment of food by the uranium byproducts. Certainly, many new horizons are being opened by the scientists who are breaking down the heretofore unknown secrets of nature.

ANTIBIOTICS

The use of certain antibiotic drugs and chemicals have, in many instances, posed a real problem to the manufacturer of food. It has been shown that the milk from one cow given penicillin to control mastitis can destroy the cheese-starting culture from the entire herd of cows. The use of these anti-biotic drugs in the treatment of animal diseases must be considered a chemical which is not without its hazards to the human race. The new chemicals that are now in many built-in feeds not only help to control dis-ease, but they stimulate the growth of the animal and even cause the cows to produce more milk. These substances are not only drugs, but also must be considered a part of the chemical additives now going into our food supply.

Many physicians are reporting an increasing number of patients who are sensitive to penicillin and other drugs who have had no previous history of receiving the drug. We must be sure that penicillin, streptomycin, aureomycin, and other drugs or chemicals are not retained in the animal products to be consumed by the human being in such amounts as to cause toxicity to the user.

These new drugs and the new research being carried on today will tomorrow unfold a great new world, made better by the unceasing efforts of those who have contributed to their development. Progress cannot be stopped. You men in the legal profession, and you who deal in the business of furnishing food to a hungry world, are a part of a great parade in which progress must not outrun our scientific evaluations of the new drugs and chemicals offered in this rapidly changing scene.

It is no secret that scientists have been able to produce a product that looks, tastes. and smells like butter, yet has not one bit of animal fat in its production. It is made entirely from coal-tar products and is, of course, synthetic. It is also possible to produce what looks like a loaf of bread, tastes like bread, smells like bread, and stays soft for many, many days, and yet has a minimum amount if any, of the good old ingredients that our grandmothers used in making bread. The synthetic loaf can be produced without wheat or shortening. Farmers, and those interested in agriculture, are quite concerned be-cause a great, flourishing, ambitious chem-ical industry is now substituting many of the products of nature such as egg yolks, wheat, fats, oils, and animal fats for hundred complex chemical formulas. This progress has a tremendous impact on agriculture.

In all of this scientific progress, we must make sure that the public in the end is not being used as a guinea pig. These new scientific products of the mind and laboratory will always be knocking at the door of the food industry, demanding recognition. The claimed advantages of foods which have these chemicals added or substituted for

natural products are legion. Indeed, some of these foods are improved in appearance, texture, flavor, and quality. Some of these foods are cheaper to produce and process. All of you engaged in the business of producing food must ask the question over and over: Have these new chemicals been adequately tested before being placed in the food channels of the world?

There is considerable talk in the halls of Congress about reviving a committee similar to the old Delaney committee which would again explore, in public hearings, the question of chemicals in foods and cosmetics. This would also include the controversial use of fluorides in water to control dental caries. This business of fluorides in water is probably the most controversial facet of the entire problem. I personally have the feeling that constructive legislation can be formulated and adopted by Congress without further public hearings.

We line in a great, growing, dynamic country. The population of the United States has just about doubled since I graduated from medical school in 1918. The Census Bureau tells us that there were 4 million new babies born last year—4 million new mouths to feed. There may be 300 million people in the United States by 1975. They will require food.

We could join the nation of have nots in the next quarter of a century unless scientific research tells us how to produce more food on the same 462 million productive acres we had 25 years ago. Because of soil erosion, the productive acres are actually decreasing. We must conserve and maintain our fertile acres by using every new soil-building and food-producing chemical we have. We must, at the same time, have a wise and safe use of every conservative pesticide that will protect our crops in the future from the invasion of pests and insects.

We are the best-fed people in the world; but actually without scientific progress and without using the knowledge which comes from scientific investigation, we would be eating and breeding ourselves out of a home.

eating and breeding ourselves out of a home. I have tried in this short paper to outline briefly and to stimulate your thinking on some of the problems confronting the food industry. We are all a part of this great parade of progress. If we do a good job now, future generations will bless us and live proudly and contentedly in a world made better because of the scientists' contributions to a better way of life.

Disabled Veterans' Disability Compensation

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record, I include the following news item from the Boston Post concerning the cut in disability compensation by the Veterans' Administration of disabled veterans employed by the Federal Government, and State, county, and municipal governments:

VA PENSION CUT FOR MEN ON UNITED STATES JOB

Disabled veterans employed by the Federal Government will lose their disability compensation in a new economy wave sweeping the Veterans' Administration, State Veterans' Services agents from Maine to Virginia were told at their annual midwinter conference at the Hotel Kenmore yesterday.

The Government's move, scheduled to include State, county, and municipal employees at a later date, was revealed by Edward J. Cunningham, supervisor of veterans' services in Massachusetts. He said abolition of disability pensions to Government employees is being undertaken regardless of the seriousness of the employee's war injury.

"The plan is part of the overall Government operation to reduce and where possible abolish payments of disability compensation or pension," he said.

"They reason a veteran working full time for the Government is paid 100 percent of his wages. Therefore, a percentage of compensation, be it 10 percent or 100 percent, is in excess of total wages his job guarantees."

In his report to the agents, Cunningham said claims of public employees would be the next to be slashed. He revealed personnel records of such employees could be readily obtainable from local municipal agencies.

WARN OF SLASHES

The State supervisor and other officials warned slashes in both disability compensation and pensions are underway in Boston. "While they await the VA's decision, rat-

"While they await the VA's decision, rating boards are being forced to review cases as much as 10 years old," he said, "with orders to reduce or abolish them.

"Some cases already acted upon come pretty close to violating the law. In its efforts to carry out the economy orders, the VA is canceling pensions of veterans who earned \$2,600 in addition to their pension, though the law permits them to earn \$2,700."

Yesterday's session marked the opening day of the National Veterans' Services Directors conference, held in conjunction with the State's midwinter conference. The directors will continue their sessions at the Hotel Statler today, where they will be addressed by Senator Saltonstall.

Tomorrow morning they will be honored by the city with a breakfast at the Statler, attended by Mayor Hynes. At noon they will be feted by Governor Herter at a luncheon in their honor which will bring their 3-day session to a close.

The Italians Among Us

EXTENSION OF REMARKS

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. JOHNSON of California. Speaker, in the 11th Congressional District of California, which I have the honor to represent, are a great many persons of Italian descent. Some of them are immigrants who have been naturalized. Many more are the sons and daughters of Italian parents. They are engaged in all of the occupations and professions which are carried on and practiced in the district. Several Italian papers are published in the district. There are leaders in every segment of our economic, professional, and cultural life in the 11th district whose racial strain is Italian.

In the Readers Digest, January 1955 edition, is an interesting article telling

of the accomplishments of some of the Italians in the United States. It is a very illuminating article.

On the first day of this session of Congress I introduced a bill, H. R. 772, which has for its purpose the assignment of unused quotas of the McCarran-Walter Act to nations who have population problems. I had particularly in mind that perhaps some Italians could use a part of these unused quotas. Italy has a difficult population problem which could be partially solved by the transfer of these quotas to Italy. Over the long span of history, Italy has made large contributions to the civilization of today. In government, religion, the arts, science, culture, literature, and in practically every field of human endeavor Italy has made significant contributions.

Unfortunately a few of the Italians who have entered our country have done things which have been disgraceful and brought ill will toward their native land. But they are in a tiny minority and they are thoroughly hated by the great body of useful and law-abiding Italians. Under leave to extend my remarks, I include the article above referred to, which I hope every Member of the Congress will read. It follows:

THE ITALIANS AMONG US (By Albert Q. Maisel)

Forty-eight years ago young Luigi Salzarulo left the village of Bisaccia, high on the mountain spine of Italy. As he departed for America the gentle ringing of the church bell seemed to say, "A rivederci—Till we meet again." Later, however, an earthquake cracked the bell in Bisaccia's campanile and the people were too poor to have it recast.

In the summer of 1953 a gray-haired American arrived in Bisaccia to attend a festa. Life had been kind to Louis Salzarulo. Over the years he had advanced from a penniless immigrant to freight-train master for the Pennsylvania Railroad in Richmond, Ind. He had sent all six of his sons through college. At 70, retired on a pension, he still kept busy in civic affairs. Now Bisaccia's 7.000 people had gathered in the piazza to hear the Archbishop of Conza bless the bell that Salzarulo had had recast for them in memory of one of his sons, an American major killed during World War II.

After the speeches the bell rang out clear and true. Salzarulo assumed that the ceremony was over. But his townspeople—on both sides of the ocean—had a surprise in store for him. In the town hall the parish priest drew back a drape of Italian and American flags and asked his guest to translate the English wording of a bronze plaque. Choking with emotion, the once-illiterate immigrant read: "From the people of Richmond, Ind., to the people of Bisaccia, Italy, in recognition of the high esteem in which we hold your native son and our fellow citizen, City Councilman Louis Salzarulos."

In all but details, the story of Councilman Salzarulo might well be the story of most of our citizens of Italian birth or descent. Italians formed the last, and largest, of the great waves of immigration that broke upon our shores; four and a half million of them entered our doors before the tide finally ebbed in the early 1920's. These Italian-Americans have given their muscles and their hearts and their sons to their adopted country. They have created a cultural interchange—in art and song, in cuisine and customs—that has made all Italy a little bit American and given all Americans some share in the great Italian heritage.

Ever since Columbus, sons of Italy have played a large and continuous role in the history of the United States. Italian explorers serving under foreign flags were frequently recorded, mistakenly, as Britons, Frenchmen, or Spaniards. Thus John Cabot, who first planted the British ensign on American soil, was born Giovanni Caboto, in Genoa. Giovanni da Verrazano, who explored New York Harbor 85 years before Henry Hudson "discovered" it, was a Florentine sailing for France. Cofounder of Detroit and its commandant for 10 years was Alfonso Tonti, whose daughter was the first white child born there. At least eight of the priests who founded the Spanish missions in California were Italians.

As early as 1622 the Virginia Company

As early as 1622 the Virginia Company sent 16 Venetians to Jamestown to set up a glass works for the making of beads for trade with the natives. The Dutch in 1657 induced 300 Piedmontese to settle around what is now New Castle, Del. Other Piedmontese came to Georgia in the early 1700's to set up mulberry plantations and a silk

In Revolutionary days William Paca, believed by many authorities to be a greatgrandson of one of the early Italian settlers of Maryland, was a signer of the Declaration of Independence. Philip Mazzei, a native of Florence who migrated to Virginia in 1773, wrote a series of ringing articles in the struggle for independence. "All men," he declared, "are by nature created free and equal to each other in natural rights"—words later used by Thomas Jefferson in the Declaration.

Over the following seven decades Italian artists designed and executed hundreds of bronzes, marbles, and murals for public buildings in Washington, D. C. Most renowned was the fresco painter, Constantine Brumidi, who spent 25 years creating the historical murals in our Capitol.

Jefferson turned to Italy when he suggested the recruitment of Italian musicians to expand the Marine Corps Band. Ever since, most of its members have been men of Italian birth or descent.

The first director of the Metropolitan Museum of Art was Luigi Palma di Cesnola, a Civil War general who had won the Congressional Medal of Honor. When he took the post in 1879 the museum was little more than a grandiose paper project. When he died in 1904 its collections were among the world's finest and its influence had led to the founding of other art museums in almost every major American city.

With the 1880's the artists and craftsmen coming from Italy began to be outnumbered 1,000 to 1 by peasant farmers, anxious to leave the overpopulated, eroded regions of Sicily and the lower half of the Italian boot. By the time they arrived, the free land of the United States frontier had been almost entirely taken up. Too poor to purchase established farms, they gravitated into teeming colonies in our industrial centers, the natives of the same old-country region or village clustering together out of sheer loneliness, often following the same occupation. Thus, almost all Italian icemen and coal dealers in New York were natives of Apulla. And if you met an Italian knife grinder, he probably came from the town of Campobasso.

Most of these immigrants could qualify for only the humblest kind of labor—ditch-digging, asphalt-laying, hod-carrying. Their poverty and their numbers, up to 15,000 arrived in a single day at the immigration peak, disturbed some Americans who doubted whether this country could absorb such vast hordes of seemingly ill-equipped peasants.

They need not have worried. In the free air of the New World unsuspected well-springs of adaptability and talent were released with explosive rapidity. In a single generation millions of Italian-Americans have come to occupy positions of distinction in every field of endeavor.

In sports they first broke through to prominence in boxing, where even the unlettered might succeed if they had enough brawn, coordination, and drive. About 1910 a fiery little featherweight named Joe Carrora began working the round of the fight clubs. "Who ever heard of a fighter raised on spaghetti?" roared the matchmakers, who were used to Sullivans, McCoys, and McTigues. One manager finally agreed to try him out in a preliminary bout, on condition that he change his name to Johnny Dundee. After his first bout the name didn't matter; Dundee won by a knockout. He ended his long career the undefeated champion of his class.

Soon other ambitious kids emerged from the little Italies of our cities to follow the same trail. Among them were Cannonball Martin, born Vitorio Martino; Lou Ambers, whose neighbors knew him as D'Ambrosio; and Packey O'Gatty, whose birth certificate read Pasquale Agate. In recent years many Italian fighters, such as Tony Canzoneri, Fred Apostoli, Rocky Graziano, have won championships without benefit of pseudonym. The current heavyweight champion, a division where experts long predicted that stocky Italians would never excel, is Rocky Marciano.

It took Italian-American youngsters only a few years longer to reach the top in bigleague baseball. By 1932 Tony Lazzerl of the New York Yankees made the annual all-star team selected by the Baseball Writers' Association. Soon fans were discussing the relative merits of Vic Lombardi, Dolph Camilli, the Di Maggios, and Phil Rizzuto. Today there are more than 30 major leaguers of Italian origin, representing 7½ percent of the big-league roster—twice the proportion of Italian-Americans in our total population.

Distinction in eollege football came as another milestone. In measures both the eagerness of young Italo-Americans to acquire higher education and the increasing ability of their parents to afford it. The first Italian names to appear on the All-American rolls were those of Getto of Pittsburgh in 1928, and Carideo of Notre Dame in 1920 and 1930. During the 1954 season such outstanding players as Ameche, Guglielmi, Varrichione, and Consentino sparked their teams on college fields.

Meanwhile other Italians were revealing a genius for enterprise. These were the padrones: Interpreters, employment agents, contractors, politicians, and labor leaders all rolled into one. They supplied labor gangs to railroads and roadbuilders. On paydays they accepted small savings deposits, and some graduated into banking. Outstanding was A. P. Giannini who, amid the ruins of the San Francisco fire, set up his Bank of Italy in a small store. Within a few years the bank was financing vineyards, truck farms, coal routes, and restaurants for Italians in California. Today it serves non-Italians as well, and is known as the Bank of America, with more branches than any other bank in the country, and among the top four in deposits, loans, and assets.

Thousands of other business ventures started in the same way, by meeting the needs of fellow Italians. Small eating places in Italian neighborhoods, for instance, were soon discovered by non-Italians with appreciative palates. More and more American mouths watered for chicken cacciatore, minestrone, cannelloni, ravioli, scaloppina, veal parmigiano, and a host of other Italian specialties. There are now more than 15,000 such restaurants, some in communities where other Italian influences have scarely penetrated.

Importing firms bring in olive oil and cheeses. Supermarkets carry scores of varieties of Italian foods, from antipasto to zucchini. Pizza pies, recently put out in quick-frozen form, have been popped into the ovens and onto the dinner tables of millions of American homes. At the same time America was also changing the eating habits of its Italian citizens. As their consumption

of milk and meat mounted, the children grew taller and more slender than their parents; the grandchildren are turning out to be taller still.

In music the "new" Italian-Americans literally surged to success. Song burst naturally from their untutored throats, and this gift they passed along to their children. To the children also they gave the best musical training they could afford out of scanty and irregular earnings. And again, in one generation's span, the youngsters rose to the top. Just to recite their familiar names is to tell the story: Rosa Ponselle, Mario Lanza, Frank Sinatra, Perry Como, Liberace, Guy Lombardo, Ted Fiorito, and literally hundreds of others.

Teaching, singing, playing, and writing music, they have rocked the rafters of the Metropolitan and set the teen-agers dancing to a million juke boxes. Small wonder that the president of the Musicians Union is named James Caesar Petrillo, and that in fully a dozen recent, best-selling recordings—from Cara Mia to the Little Shoemaker—the lyrics are sung in Italian.

The college-educated children of the "new" Americans have gone on to distinction in the professions. In New York City alone, for example, there are more than 2,500 lawyers of Italian descent. A number of them serve as judges.

Some 15,000 Italian-Americans have become physicians, and many are leaders in their fields. Among New Haven's Italian-American physicians, for example, 10 percent hold professorships at Yale. And last October Dr. Antonio Pisani, son of an immigrant Italian shoemaker, was designed outstanding general practitioner of the year by the Medical Society of the State of New York.

In the academic world Italo-Americans have spread beyond the teaching of Italian or art or music. One of our foremost authorities on the English language is Prof. Mario Pel, of Columbia. Prof. F. J. Bruno is professor emeritus of Washington University's School of Social Work. Pietro Belluschi is dean of the School of Architecture at Massachusetts Institute of Technology. These are but a handful out of hundreds.

Unfortunately for others of Italian descent, the sordid activities of a small segment—the underworld racketeers—have too often shifted public attention away from the real achievements of the great body of Italian-Americans. Studies have shown that our citizens of Italian origin do not have a peculiar propensity for racketeering, mayhem, and murder. Arrests and convictions of Italians are no more frequent, per hundred thousand in the same age and sex brackets, than for any other immigrant group, and they are slightly less than for our citizens of native stock.

If our country has had its Capones and Lucianos, it has also had Mayor LaGuardia, of New York, and Mayor Rossi, of San Francisco. John Pastore, Governor of Rhode Island, went on to become the first United States Senator of Italian descent. Currently Italian-Americans head the city governments in Cleveland, Baltimore, Meriden. Fitchburg, Mount Vernon, and at least two score smaller cities. Far from being swept into office on a bloc of Italian-American votes, these men won primarily on their platforms and their records.

Twice in recent years the loyalty of Italians in America has been put to a major trail. The first test began with the coming to power of Mussolini and his blackshirts. Il Duce spent large sums cultivating Americans of Italian descent, and after our entry into World War II 600,000 Italian immigrants who had not yet completed their naturalization were required to register as enemy aliens. Only about 200, however, had to be interned. The rest were so obviously loyal

that by Columbus Day of 1942—only 10 months after Pearl Harbor—the Government relieved them of their enemy alien status. More than 550,000 Italian-Americans served in our Armed Forces and played an invaluable role in the Italian campaign by convincing the Italian people that America came not to conquer but to liberate.

The second great test came when postwar Italy was in the throes of the election struggle of 1948. The Communists, well heeled and well organized, seemed on the verge of coming to power. Many Italian-Americans had relatives and friends in Italy who had gone violently over to the Red side. Spontaneously, from a poor kitchen here, a richly appointed living room there, Americans with Italian names wrote to their relatives in Italy. By March 1948 thousands of missives, expressing the hope that Italy would retain its new-won democracy, were on their way, and by April the New York post office was handling a million letters a week.

Whether the Communists would have won, instead of losing as they did, had the letters not been sent, no one can say. But never again need anyone doubt that the Italian immigrants and their offspring have become fully American in the best sense of that word.

Today a great and growing part in bringing American literature, art, movies, styles, and techniques to Italy is being played by Italian-Americans, thousands of whom—like Louis Salzarulo—have revisited the towns of their birth or the places where their fathers or grandfathers came from; and, in return, all America is today receiving and gladiy accepting the product of Italy's new renaissance, from Necchi sewing machines to the movies of Mangano and Lollobrigida. Thanks to the Americans with an Italian flavor, the old two-way stream now flows faster than ever, bearing a freight that enriches both countries.

Is a Strike-Bound Plant Able To Fulfill a Contract?

EXTENSION OF REMARKS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. ZABLOCKI. Mr. Speaker, last week I received a telegram from Mr. Allan Graskamp, president of local 833, UAW-CIO, at Sheboygan, Wis., which I wish to call to the attention of the membership of this body.

The telegram pertains to the contract recently awarded by the Department of Defense to the strike-bound Kohler Co., of Kohler, Wis. Mr. Graskamp raises a question about the ability of the Kohler Co., to properly fulfill the terms of the contract under existing circumstances. Since during World War II we have heard about certain instances in which munitions procured through some firms proved to be defective, I felt that Members of Congress-and particularly members of the Appropriations and Armed Services Committees-would be interested in any information which could possibly aid in preventing such occurrences in the future.

While I do not presume to pass any judgment on the validity of the state-

ments contained in the following telegram, since I do not possess the information necessary for reaching a decision on this subject, I wish to insert the telegram in the RECORD for the information of the membership:

SHEBOYGAN, WIS., January 27, 1955. Hon. Clement J. Zablocki,

New House Office Building, Washington, D. C.:

Deeply appreciate your interest in Kohler strike shown by introduction of Governor Kohler's letter proposing arbitration and, in view of your interest and concern, we are sending you herewith text of a self-explanatory telegram sent today to President Eisenhower, Army Chief of Staff Ridgway, Acting Senate Majority Leader Clements, House Ma-

hower, Army Chief of Staff Ridgway, Acting Senate Majority Leader Clements, House Majority Leader McCormack, Senate Minority Leader Knowland, House Minority Leader Martin, Armed Services Committees Chairmen Vinson and Russell, Labor Secretary Mitchell, and Defense Secretary Wilson.

The full text follows:

"We believe current world tension makes it absolutely necessary that American military personnel be assured of an adequate supply of top-grade ammunition of all kinds.

"The sole manufacture of key components of one particular type of 105-millimeter shell is Kohler Co., of Kohler, Wis. It received the contract last November despite the fact that Kohler Co. has been strikebound for 10 months. If a Pearl Harbor occurred tonight, it is doubtful that the Nation could depend on production from this company.

"We wish to call your attention to the possible unnecessary loss of American lives because of the uncertain quantity and quality of the basic shell components.

"We urge you to check with the Defense Department on Kohler Co.'s contract performance. We especially urge you to check on whether the delivery scheduled at Kohler Co. already has been set ahead 30 days because of the fallure of initial production to come up to specifications.

"As you know, Army procurement regulations require that a contractor be responsible and capable of fulfilling production standards.

"A skilled, experienced work force is restrained from doing the work in Kohler Co.'s shell department by the company's past refusal to engage in honest collective bargaining. A National Labor Relations Board complaint charges Kohler Co. is guilty of surface bargaining and that the company has 'demonstrated an irrevocable determination to frustrate and defeat the statutory goals of collective bargaining as defined in section 8d of the Labor Management Act.'

"The union has accepted Wisconsin Governor Kohler's suggestion that this dispute be arbitrated. Kohler Co. has refused.

"As combat veterans of World Wars I and II and the Korean conflict, we question the wisdom of allowing an employer with this irresponsible record to be the sole producer of an item of war.

"We ask that the Kohler contract be reassigned to a responsible contractor until this strike is settled. We know from firsthand experience the peril to American troops when shells are defective or when ammunition arrives too late.

"Reassignment of the Kohler Co. contract until the strike is settled will assure a steady flow of these vital 105-millimeter shell components."

Will deeply appreciate your insertion of this wire as sent to named persons in the Congressional Recomb for the information of Members of the House.

ALIAN GRASKAMP,
President, Kohler Local 833, UAWCIO, Sheybogan, Wis.

Address of National Commander Seaborn P. Collins, of the American Legion

EXTENSION OF REMARKS

HON, EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by National Commander Seaborn P. Collins, which I hope many will have an opportunity to read:

Address by National Commander Seaborn P.
Collins of the American Legion, Before
the Women's Forum on National Security, Washington, D. C., January 27, 1955.

Every year since 1946 has included 1 or 2 weeks which deserved the oft-used adjective "critical." Certainly, this is one of those weeks.

We all share at this time a feeling of inadequacy. It is almost as if we were spectators, watching a contest on the playing field, rooting for our team and hoping that they know their signals and can execute their plays. Yet this is the ultimate contest. At stake are the lives of our countrymen and the honor and freedom of our country.

Decisions made this week in Washington—in Peiping—perhaps Moscow—will vitally affect the Nation's security which, thank God, is your avowed concern. As private citizens, we cannot predict with any assurance the outcome of this present crisis. We cannot tell whether Formosa will remain a refuge for freedom or become a new Corregidor. We can, however, acknowledge the problem, consider its meaning to America, and seek out the facts which will enable us to understand and solve it in the light of reason and right. That after all, is the purpose of your meeting here.

Because we are Americans, conscious of our duty as citizens, each of us feels a sense of personal responsibility for national policy. There are some among us—some in this room—upon whom the responsibility falls with particular brutal force. I am sure that I speak for every delegate to the Women's Forum when I say that our hopes, our prayers, and our confidence are with the President and the Congress and the other officials of Government who must lead and act in our name.

Three days ago the President announced a policy which clearly defined our Nation's decision to protect an island and a people whose protection we had pledged. The Congress has indicated overwhelming approval of that policy. I believe that these actions were needed, that they are wise, and that—best of all—they truly express the spirit and the will of the American people.

Negotiations and compromise are necessary factors in international as well as human relations.

We of the American Legion hold that our Government should always leave open the way to honorable negotiation and compromise. We submit, however, that there comes a time in dealing with the Communist aggressors when negotiation can do no good and compromise can lead only to defeat. In our judgment, that time has come in Asia,

Today, for the first time we know, and the Reds know, the line which American arms will defend around Formosa. For once, it is their bluff that has been called—not ours. On that vital front, they must choose now between making war and ceasing aggression.

No American finds comfort in the circumstances which made necessary this new

Formosa plan. None of us—and least of all the mothers and wives who sacrifice the most in war—want to see the alternatives to war narrowed.

But there is another, more basic American philosophy at work here—and you and the millions of other women you represent proved long ago that you know it well. That is the American love for freedom—the inbred American desire to defend, at all costs, the dignity and liberty which are man's gift from his Maker.

That is why I believe that all who care

That is why I believe that all who care and think seriously about the future security of the United States must be encouraged by the drawing of the line off Formosa. We have not lost our sense of values. There are things worse even than war—and one of them is the surrender of our liberty.

The American Legion, on occasion, has been termed a "nationalistic" group. The reference usually is made in a critical sense, as if there is something wrong or unfortunate about citizens of a country looking first to their own interests and safety.

That viewpoint overlooks a number of fundamental truths which events of this week have brought into sharp focus.

We are citizens of the United States—not of the world. We have national interests and national aspirations which it is our responsibility—and no one else's—to advance.

Our first concern must be for the security of America. We care about the freedom of individuals everywhere; but we are obligated by instinct and by duty to preserve Americans' freedom.

There is no other way to approach the goal of world security than through the security of our own country.

We of the Legion have consistently supported the United Nations. We have hoped and prayed that the U. N. might develop inton an effective instrument of world peace. We have supported American participation in security treaties and pacts for the same reason and with the same hope.

These attempts to build collective security are worthwhile and important. So long as they promise any additional strength for the free world, they merit our support. At the same time, the 10-year record of the U. N. and the cold war now being waged must convince objective men and women that when the chips are down the burden of decision and action rests almost solely with the United States.

Where we have assumed that burden, communism has been checked. Where we have tried to escape it, communism has advanced.

It was resolute American action that stemmed the Red tide in Greece and Turkey, during the blockade of Berlin, and initially in Korea. It was the lack of resolute action that cinched Communist victories in Czechoslovakia and China, and cost us victory in Korea and Indochina.

President Eisenhower, in his message to the Congress, last Monday, spelled out one of the hard and all-important facts of present international life when he stated:

"Meanwhile, the situation has become sufficiently critical to impel me, without awaiting action by the United Nations, to ask the Congress to participate now, by specific resolution, in measures designed to improve the prospects for peace. These measures would contemplate the use of the Armed Forces of the United States, if necessary, to assure the security of Formosa and the Pescadores." There is a time for debate and there is a time for action. It should be clear to all of us at this point that we can never rely upon an authority outside America for the protection of America's interests. Our lead responsibility as Americans is not to achieve united action by the free world but to support right and necessary action by the United States.

If, in the process our allies are offended, we regret it. But we can no longer afford to

let the feelings of people whom we believe are our friends determine our defense against aggressors whom we know to be our enemies.

By any sensible standard, our enlightened self-interest is in the best interest of world peace. A strong, free America is the best hope of mankind for a world where free men can live in peace.

The American Legion and the other great veterans' organizations so ably represented here tonight believe that the cornerstone of effective, long-range national security is a national security training program.

Together, we have presented to the Congress legislation to give America such a long-overdue program. I need not review the purpose and provisions of this legislation. You know that a strong, trained reserve force is the base, the foundation, if you will, upon which any expansion of our regular Armed Forces must be built. National security training will give us this essential foundation.

National security training will also allow us to field at all times a more effective regular military force. Highly trained and equipped with the most modern, efficient weapons, this force will be better able to protect our Nation and preserve peace because it will be backed up by a strong, trained reserve force ready for immediate mobilization and combat development.

National security training is also our only guaranty that those who fought in World War II, in Korea, and who may be called upon to fight tomorrow in Formosa, will not be the only Americans trained to defend our country in our lifetime.

If we must fight for the democratic ideals of justice and equity, then we must make certain that these principles are not voided by our failure to share the burden of defending America among all of our citizens.

Obviously, no effective program of national

Obviously, no exective program of national security training can be put into operation overnight. Therefore, the strength and combat readiness of our Armed Forces must be maintained at their present level for several years to come.

In fact, developments in Formosa and the Pescadores may necessitate a substantial increase in the size and fighting power of our regular Military Establishment. At the very least, the critical situation in Asia demands that there be no reduction in the next fiscal year in personnel strength and combat effectiveness of the Army, Navy, or Marine Corps.

Further, the planned buildup in the size and strength of our Air Force may well have to be increased and accelerated.

The American Legion is deeply conscious of the need for reducing the cost of government, including the cost of military security, to the absolute minimum. We recognize, as do all of the organizations which you women represent, that our economy must be as strong as our military defenses if we are to preserve our freedom and the peace of the world.

A bankrupt America would be more valuable to the Communists than all of the atomic bombs and all of the infantry divisions which they could muster.

The American Legion realizes this full well. At the same time, we are convinced that military weakness at the price of a balanced budget would be the most tragic and costly kind of economy.

There is room, plenty of room, for economy within the Military Establishment. We can get greater security without greater costs. But beyond this limit, if it is determined that we need more military security, even at the cost of budget deficits, then let's get that security.

As far as the American Legion is concerned, we would rather have red ink on the balance sheet than the lash of Red communism on our backs.

With the help of Almighty God and with citizens such as you to demonstrate that faith and courage and sacrifice are still the real source of strength of a free, invincible America, we can believe that our generation will survive the scourge of communism and leave to our children the heritage of freedom and opportunity and human dignity which is their birthright as American citizens and creatures of God.

Prayer Helped in the Early Days of the Republic and Prayer Can Help Now

EXTENSION OF REMARKS

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. MACK of Washington. Mr. Speaker, when the constitutional convention seemed bogged down and seemed likely to end in failure, Benjamin Franklin suggested that the convention delegates apply "to the Father of Light to illuminate human understanding."

Franklin told the convention how in the dark days of the Revolution, "We had daily prayers in this room for Divine protection." He added, "Our prayers were heard and answered."

A report of Franklin's recommendation for prayer is reported by a newspaperman friend and constituent of mine, Guy Allison, of Ocean Park, Wash., recently in his column which appears daily in many Pacific coast newspapers. Allison's column follows:

BYPATHS OF HISTORY (By Guy Allison)

In what way has the Congress recognized, as a wise procedure, a recommendation made by Benjamin Franklin during the Constitutional Convention of 1787?

The information that Members of Congress are to have available a room for prayer and silent meditation came over the wires recently. This action brings to mind a recommendation made by Benjamin Franklin on Thursday, June 28, 1787, during his attendance at the constitutional convention. At that time the convention almost split on the question of whether the small States should, or should not have, equal representation in the newly proposed national setup. When the time came for the final vote, the venerable Franklin, then in his 81st year, arose and addressed his fellow members as follows:

"Mr. President, the small progress we have made after 4 or 5 weeks of close attendance and continual reasonings with each other is, methinks, melancholy proof of the imperfection of the human understanding.

"In this situation of this assembly, groping as it were in the dark to find political truth, and scarce able to distinguish it, how has it happened, sir, that we have not hitherto once thought of humbly applying to the Father of Light to illumine our understanding?

"In the beginning of the contest with Great Britain, when we were sensible of danger, we had daily prayer in this room for divine protection. Our prayers were heard and answered. All of us who were engaged in the struggle must have observed frequent instances of a superintending providence in our favor. To that kind providence we owe this happy opportunity of consulting in peace on the means of establishing our national

felicity. And have we now forgotten that powerful friend? Or do we imagine that we no longer need His assistance?

"I have lived, sir, a long time, and the longer I live, the more convincing proofs I see of this truth—that God governs in the affairs of men. And if a sparrow cannot fall to the ground without His notice, is it probable that an empire can rise without His aid? We have been assured, sir, in the sacred writings, that 'except the Lord build the house they labor in vain that built it.' I firmly believe this, and I also believe that without His concurring ald we shall succeed in this political building no better than the builders of Babel.

"We shall be divided by our little local interests, our projects shall be confounded, and we, ourselves, shall become a reproach through the future ages. And what is worse, mankind may hereafter, from this unfortunate instance, despair of establishing governments by human wisdom and leave it to chance, war, and conquest.

"I therefore beg leave to move—that henceforth prayers imploring divine assistance, and its blessing on our deliberations be held in this assembly every morning before we proceed to business."

This motion was objected to by Alexander Hamilton on the grounds that the public might think that there was trouble brewing in the convention. It failed of passage, but on establishment of the Government under this Constitution, the very first law provided for opening congressional sessions with prayer.

Let's Be Counted

EXTENSION OF REMARKS

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. JONES of Missouri. Mr. Speaker, while individuals, organizations, and publications are following a line that seems to say "Do not expect much from Congress." I think what many of them seek to imply is that due to the fact that the majority in the two bodies of Congress is insufficient to bring about the passage of legislation over a Presidential veto, we can expect the passage and final approval of no highly controversial legislation.

This should not mean that Members of Congress, particularly those of the majority, should accept a defeatest attitude and reason that since it is not likely that the executive branch will change its position on certain matters that the legislative branch should not accept its responsibility in proposing even in the face of almost certain veto, changes that should be made.

I am referring, of course, to the status of agricultural legislation. The farmers of America suffered defeat during the 83d Congress, thanks to an administration that has proven itself hostile to the best interests of American agriculture.

From the Missouri Farmer, official publication of the Missouri Farmers Association, I am including herewith an editorial entitled "Don't Expect Much From Congress." I am taking this means

of assuring my farmer friends throughout Missouri that, while they may have little reason to expect any relief during the period of the 84th Congress, it is not because of the fact that Congress itself is unsympathetic to the plight of the American farmer. Ghairman Cooley, of the House Committee on Agriculture, has indicated that hearings will be held on numerous bills seeking to restore the supports that were wiped out last session. There is every indication that such bills will be reported favorably on a bipartisan basis from this committee. and I have every reason to believe that such legislation will receive favorable consideration when it reaches the floor of the House.

Despite the fact that, according to this editorial which I believe reflects the general public opinion, the President has made it clear enough that he will veto any price-support bill, I still believe Congress is not only justified but duty bound to see that such legislation is presented and approved by the legislative branch of the Government. In so doing we have met our responsibility.

Let us place the blame where it belongs, and let us not wait until next year to do it, when as this article states, many will say it was done for political reasons.

Let us show the farmers that they can place their confidence, trust, and hopes in the 84th Congress. Let us show the farmers that they can expect relief and constructive action from the 84th Congress.

Now is the time to meet the challenge in this editorial from the February 1955 issue of the Missouri Farmer:

DON'T EXPECT MUCH FROM CONGRESS

Farmers cannot hope that much in the way of constructive farm legislation will come out of the new Congress. About the most they can expect to be done in Washington is the passage of necessary appropriation bills, much talk, and considerable jockeying for position before the next presidential election.

The Democrats control Congress, that is true; but numerical superiority does not assure their control of legislation. On important legislation Republicans and Democrats cross party lines. They are motivated by economic considerations and not altogether by politics. And it must be remembered that the President is a Republican and that he has the last say on legislation. He can veto any measure passed by Congress.

It may be that this Congress will pass some kind of price-support law to take the place of the ineffectual flexible-supports law. But if that is done, it will likely be merely a political move.

The President has made it clear enough that he will veto any price-support bill. He is satisfied with the present flexible law. If the Congress does pass a price-support bill, it will be for the purpose of getting the President to veto it in order to put the administration in dutch with farmers. If this happens, you can bet that it will be as near to the next general election as possible so that farmers won't have time to forget about it when they go to the polls to vote.

Of course there is always the chance that Congress will pass a bill and that the President will sign it, or that Congress will override the veto. Hence, if any hearings are held, your association will testify in your behalf. The probabilities are, however, that we'll be merely "spinning our wheels."

Kings Point

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1955

Mr. DEROUNIAN. Mr. Speaker, under leave granted me, I include herewith an article by Mr. Jules Witcover which I think will gain everyone's interest who reads it.

It touches on the great United States Merchant Marine Academy at Kings Point, N. Y .- an institution that is dedicated to doing a dual job-preparing officers for our fourth line of defenseour United States merchant marineand at the same time creating a reserve of highly trained men who will be ready to serve our country in time of emergency.
Mr. Witcover's article, which is com-

pletely objective, appeared in the Marine

News of October 1954.

Inasmuch as we will be expected to consider annual appropriations for this great academy for the 1956 fiscal year, I felt that this objective study by Mr. Witcover, of Kings Point, and of the problems it has had to face in the past, would be helpful to the membership of the Congress

The article follows:

KINGS POINT: UNCLE SAM'S PERENNIAL STEPCHILD

(By Jules Witcover)

Another Congress has come and gone, the 83d, but Kings Point-the Nation's only Federal maritime academy-remains the stepchild of Uncle Sam's defense training system.

While West Point, Annapolis, Coast Guard and the new Air Force Academy operate with official legislative sanction, Kings Point continues to exist on a crisis-to-crisis formula concocted by the Maritime Administration, The school, implemented in only the most general terms by the Merchant Marine Act of 1936, could be closed down tomorrow if

the Maritime Administration so desired. What is being done about it? The answer to that question began to take form nearly a year ago and has carried through scores of private and governmental conferences that

are still going on.

Kings Point—at Great Neck, Long Island has depended on the annual Commerce Department budget since the school's inception in 1938. Under the 1936 act, a Federal maritime training program was established, but without specific component parts. Thus, the Commerce Department decided each year on what scale the school could Operate, and asked for appropriations proportionate to that decision.

During the war years, of course, the need for the academy was obvious, and appropriations always were granted swiftly and generously. Fortunately, too, the crises faced annually by the school—until last fall—concerned only the question: "How much?"

But then, suddenly, the Commerce Depart-

ment asked: "Why at all?"

The man behind the unexpected question turned out to be Louis S. Rothschild, the Maritime Administrator. Rothschild at that time was in the midst of a sharp economy and reorganization campaign. The Nation was at peace and the maritime industry for the time being was full-up in officer material. Why continue to spend upwards of \$2 million a year under such circumstances, Rothschild asked.

He initiated a poll of the four State maritime academies in Maine, Massachusetts, New York, and California in an endeavor to find out whether these schools could absorb the cadets at Kings Point in the event that school were shut down. All four State academies advised Rothschild they could take on the extra load. The State schools, granted a one-third subsidy by the Federal Government, theoretically would have received similar aid for the additional students.

With budgetary plans for fiscal 1955 well under way in the Commerce Department. the word got around that Rothschild would not ask for the Kings Point appropriation, thus effectively slamming the doors on 15 years of tradition at the Federal academy.

The report caused an uproar in maritime circles. Protestations flooded the Nation's Capital, and the office of Congressman STEVEN B. DEROUNIAN, Republican, of New York, in particular. Derounian's district includes Kings Point and many of the faculty and alumni make their homes in that area.

DEROUNIAN and his Nassau County, Long Island, Republican colleague, FRANK J. BECKER, formed the spearhead of a behindthe-scenes pressure movement against Rothschild's action. They were joined by alumni, civic and industry leaders, and within a matter of weeks the Maritime Administration had backed down and announced it would ask the Congress to grant another \$1,900,000—the same amount appropriated in fiscal 1954-to continue operations at Kings Point for at least another year.

The opening battle had been won by the Kings Point supporters. But it proved to be no more than just that-an opening battle. The lines were drawn: an economy-minded Maritime Administrator, with the backing of the maritime unions, on one side; DEROUNIAN, BECKER, other interested legislators and a large segment of the industry itself on the

In hopes of avoiding another budgetary crisis later in the year, the House Merchant Marine and Fisheries Committee appointed a special subcommittee to study the Kings Point situation and report its findings once and for all. The idea got complete support of the Derounian-Becker forces, who felt an official congressional report favorable to them would pave the way to speedy remedial legis-

The seven-man subcommittee headed by Representative WILLIAM K. VAN PELT (Republican, Wisconsin), began open hearings in February, and by early June they had heard from interested parties on both sides. Rothschild withheld his views on continuance of the school until he could complete a survey of the needs of the industry which, he said, probably would not be finished before the end of that session of Congress. quests for speedier action by members of the subcommittee, however, extracted from Rothschild a promise to try to submit the results before adjournment.

Testimony during the 5-month hearings was overwhelmingly in favor of retention of the Federal academy. The American Con-ference of Maritime Unions was the most outspoken opponent, arguing that "upgrading" schools were needed much more than officer-candidate schools, and that sufficient officers could be obtained as well via the "hawsepipe" method of upgrading.

Representatives of the State schools either opposed outright any special consideration for Kings Point or defended their own position regardless of what was done about the Federal school. But the atmosphere at the close of the hearings was extremely favorable to those who wanted to wipe out "administration-by-crisis" at the United States Merchant Marine Academy at Kings Point.

Thus, when Rothschild's report was submitted earlier than at first expected and was considered by the House subcommittee without much of a public ripple, it looked like smooth sailing.

VAN PELT, after conferring with members of his subcommittee, introduced a bill in the House on June 3 asking that Kings Point be given permanent status by writing it specifically into the Merchant Marine Act. The bill, applauded by the Derounian-Becker group, also would have given students midshipman status with equal pay and allowances as those granted Annapolis men.

Asked whether his bill would put Kings Point on a par with the other Federal academies, Van PELT said the measure would 'put it up very close, if not on a par." Nassau County colleague of DEROUNIAN and BECKER, Representative STUYVESANT WAIN-WRIGHT, during the hearings had proposed that Kings Point be given equal status with the others, but the idea had been taken lightly by many as too far reaching.

Nevertheless, the bill in its original form seemed to have overwhelming support in the House. It was referred to Van Pelt's own Merchant Marine and Fisheries Committee, and prospects were strong for a favorable

report to the floor in early July.

Then it happened. Rothschild, whose testimony and reports at the House hearings could not prevent introduction of the Van Pelt bill, turned his sights to the other side

of the Capitol.

At the request of VAN PELT, Senator ALEX-ANDER WILLY-his Wisconsin colleague with great prestige as chairman of the Senate Foreign Relations Committee—had introduced an identical bill in the upper House. The strategy was to get the Senate bill through committee and onto the floor for passage while the same steps were being taken on the House side for Van Pelt's bill

Time was running short by now, with adjournment an estimated 3 to 4 weeks away. In a congressional election year the Members were not expected to stay overtime, even on vital parts of the President's program itself. Rapid and uninterrupted action in both Houses was need to get the bills through before the inevitable last-minute logjam.

On July 8 the Senate Water Transportation Subcommittee, headed by Senator John Marshall Butler, Republican, of Maryland, held a 1-day hearing on the Wiley bill. volumes of testimony given to the Van Pelt subcommittee at their fingertips, it was expected the Senators would skim the surface and come up with a favorable report.

But before a single man could testify the thunderbolt struck. A letter to the subcommittee from Commerce Secretary Sinclair Weeks, Rothschild's boss, was introduced. Weeks said a preliminary study of the Federal maritime training program had been made, indicating that a more extensive survey of its relation to other Government-

would the Senators be good enough,
Weeks asked, to defer any action on the
bill this year until the results of this survey DEROUNIAN, BECKER, WAINWRIGHT, and others vehemently protested the delay. but the blow was devastating. Senator Bur LER, in spite of apparent personal support of the bill, remarked that Commerce Department opposition would surely hurt the chances materially.

He was right. The House bill several days later breezed through the Merchant Marine and Fisheries Committee and on July 30 was passed unanimously by the House, but the Senate companion measure never saw the light of day. The Weeks letter had presented just enough cause for deliberation to snuff out any chance for action in the last hectic Congress adjourned in August with weeks. Kings Point still a second-class citizen in the national-defense system.

Does this failure to push the measure through in 1954 mean the whole hassle will have to be repeated next year? That, Kings Point supporters believe, may depend on who wins control of the 84th Congress. Should the Republicans retain control, matters might well be picked up just where they left off, with prospects of early passage—in the House at least-in 1955.

But even if Congress goes Democratic, the bill should not have too much opposition from congressional sources of either party. The measure is generally conceded to be a nonpartisan one, and it is believed a change in party control might slow action mechanically, but not politically.

What, then, was the urgency to get the bill through this year. Advocates of permanent status for Kings Point fear the delay may strengthen the hand of those who have maneuvered the delays so far.

Weeks' explosive letter to the Senate subcommittee specifically mentioned the United States Coast Guard Academy in Norwich, Conn., among the other Government-supported programs to be considered in the rela-

tionship survey.

His comment that "this may point the way to consolidations or other changes which would simplify and reduce the Government expense of maintaining federally supported or assisted educational and training activities for merchant-marine officers and comparable personnel" raised quite a few eye-

In the same letter, when he mentioned the results of the survey would go to the "Secretaries of Commerce and Treasury," there was considerable conjecture about the Maritime Administration's plans. Inasmuch as the Treasury Secretary heads the Coast Guard, the rumor went, maybe Rothschild was now considering consolidation of Kings Point and the Coast Guard Academy.

Asked by this writer about such a possibility, Rothschild avoided direct comment on the report but added he thought "the present situation can certainly stand improvement."

Such a move, while undoubtedly effecting a real economy, would run into great con-gressional opposition as well as legislative snarls. Since Coast Guard has legislative authorization and Kings Point has not, a special bill would be required for the action, one which Kings Point supporters could be expected to fight with great vigor. The plan would require another round of hearings in both houses even more exhaustive than those held this year, and would be sure to meet with stern opposition from Coast Guard men and possible Navy men as well.

The initial Rothschild idea—transferral of the Kings Point cadets to the four State schools—would at least have consolidated maritime training under a single roof in each case. Merger of Kings Point and Coast Guard would invite double courses, overlapping activities and considerable adminis-

trative chaos.

So unless Rothschild comes up with a workable substitute acceptable to Kings Pointa highly unlikely possibility at this stagethe battle probably will pick up next year on Capitol Hill where it has just left off.

Meanwhile, Kings Point cadets and faculty members can resign themselves to another case of budgetary nerves this fallwhen Uncle Sam again ponders the question of whether his stepchild deserves another year of life.

Our Congressmen Deserve a Raise

EXTENSION OF REMARKS OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include

herewith the following editorial from the Oregon Journal, Portland, Oreg., the largest afternoon newspaper in the State:

OUR CONGRESSMEN DESERVE A RAISE

Under a bill proposed by Representative Francis E. Walter, Democrat, of Pennsylvania, the salaries of Congressmen would be boasted from \$15,000 to \$22,500. He also proposes that Supreme Court Justices be given a \$10,000 raise, and other Federal judges a \$7,500 boost.

Congressmen always have been supercautious about raising their own salaries. They are afraid, of course, that the voters will throw it up to them at the next election. and that it will cost them votes-perhaps even defeat. Political opponents of the Congressmen are almost certain to bring it up at the next election.

But the fact remains that a salary increase is justified. The Walter bill is a compromise, running \$5,000 a year less than the amount recommended by the special salary commis-

Now, \$22,500 sounds like a very nice salary for Congressmen. But when it is realized that most of them must keep 2 homes-1 in Washington, D. C., and 1 in their hometown, are subjected to the extremely high living costs of Washington, and have uncertenure, the take-home value shrinks considerably. Some Congressmen have maintained they could not stay on the job unless they had other income.

Well, they probably could with a few economies. It isn't quite that bad. One thing is sure, these are important jobs that should have salaries commensurate with the activities, abilities, and demands of the job.

Congress should vote a substantial increase, as suggested by Representative WAL-TER. We think that most people, looking at the problem fairly, will approve.

The Late Dr. Erland Harold Hedrick

SPEECH

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, may I add my voice to my colleagues' who have preceded me in praise of the late Dr. Erland Harold Hedrick. My experience with Dr. Hedrick in the 81st and 82d Congresses has always been a source of pleasure. I had known Dr. Hedrick for a great many years and had always admired him. When I came here as a freshman in 1948, his advice and counsel were invaluable to me. an excellent politician, a skillful legislator, and a sincere, kind man. He knew how to take first things first, but always seemed to have time for those things which seemed unimportant except to the individual who asked help.

Dr. Hedrick's experiences were varied. He was a physician, a soldier, a city and county executive, a banker, and a businessman. To this vast amount of experience he coupled a deep devotion to the people of his State and a sound philosophy of life to produce that which we all strive to be, a good representative. He represented excellently a dis-

trict of greatly diversified interests with skill and devotion. His methods were always straightforward and his motives always honorable.

The men assembled here in this Chamber who knew him have lost a friend. The men here who were not fortunate enough to know the man will never realize their loss.

Congressional Address by Chief Justice Urged

EXTENSION OF REMARKS

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1955

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an interesting discussion by the able journalist, Mr. Gould Lincoln, of the proposal to extend an invitation to the Chief Justice of the United States to make an annual address to Congress on the state of the judicial branch of government and related matters.

Also included is a news item from the Washington Evening Star indicating support for such a congressional resolution for the distinguished former Senator and noted lawyer, George Wharton Pepper, of Pennsylvania.

CONGRESSIONAL ADDRESS BY CHIEF JUSTICE URGED

(By Gould Lincoln)

What's good for the courts is good for the people, who are primarily interested in justice. So the joint resolution now introduced in the House and Senate, inviting the Chief Justice to address Congress on the state of the judicial branch of the Government, should be in the interests of

In some quarters, however, the question of politics has raised its head in connection with the proposal to have the Chief Justice take the limelight in this unprecedented manner—particularly Chief Justice Earl Warren. It is suggested that, in some way, the Chief Justice's appearance before the Congress will make him instanter a candidate, or at least a potential candidate for Republican presidental nomination in 1956—should President Eisenhower step aside. Nothing could be further from the fact. It is well understood by Chief Justice Warren's intimates he has no desire to become a presidential nominee; that he would resist even to the point of declining a nomination if it were offered him. In fact, he would not run.

NOT HIS IDEA

To skeptics, who appear to believe the GOP desires to nominate the Chief Justice and capitalize on his antisegregation opinion-which was the opinion of the Courtit may be pointed out the proposal for his appearance before a joint session of Con-gress did not come from him or from the Court. It was broached by Deputy Attorney General William P. Rogers, in a speech delivered away from Washington. well received. Further, if the fear of politics still persists, the legislation calling for an invitation to the Chief Justice to appear before Congress could fix his first appearance in 1957, after the presidential election of 1956. By 1960, the next presidential election year, the Chief Justice would be 69 years old, obviously too old for a presidential nomination and an election which would put him in the White House at 70, to begin a term.

In the 15 months he has presided over the Supreme Court the Chief Justice has had signal success. It is no secret he is happy in his work. He has become more and more conversant with the Federal judiciary and its problems. Those are the problems which Chief Justice would discuss in an appearance before Congress. Principal among them is the shocking state of calendars of many of the Federal courts. The backlog of unfinished cases is far greater in some districts than in others. In the southern district of New York, which includes New York City, a litigant can expect to wait almost 4 years from the day he files a suit in the Federal court until it is disposed of. Indeed, he must wait 3 years before his case is reached. During the year ended July 1, 1954, the Federal courts disposed of 93,161 cases, but left pending another 78,531. Obviously such delays, sometimes running 2, 3, or nearly 4 years, result in grave injustice to both plaintiffs and defendants.

MANY CAUSES

There are a number of causes for this situation in the courts. In some districts there are not enough judges. In some the judges do not work hard enough and take long vacations. Some of the Federal judges are too old or too ill to be effective. Also there is a lack of adequate funds to pay for needed assistants in the courts. In one district a judge, already ill when confirmed by the Senate, has spent 5 hours in court in 4 years. Judges close court all summer in some of the districts. There is no way to deal with those who fail to work except through impeachment proceedings. No authority is placed in the hands of anyone to deal with them. They are appointed for life.

A Chief Justice, invited to appear before Congress, will be in a position to disclose all of these ills and to make recommendations. And a Chief Justice, appearing at a joint session of the Senate and House, will have an effective sounding board. Obviously, if the proposal is adopted, the program should be permanent, with appearances of the Chief Justice either at the opening of each regular session of Congress or at the opening of each new Congress. He would make either an annual or a biennial report.

While the plan has received wide approval of lawyers, judges, Members of Congress, and plain, ordinary citizens, misgivings have been expressed by a few that it would lower the dignity of the Court and thrust the Court into politics.

A Chief Justice, however, would do neither. He would go on invitation and not as a supplicant with his hat in his hand. Nor would there be underlying political implications. Reports are made in writing to Congress, showing the situation of the Federal courts. But they are pigeonholed rather than read. A separate budget is prepared for the courts, but Congress cuts it.

[From the Washington Evening Star of January 28, 1955]

GEORGE WHARTON PEPPER ASKS CONGRESS TALK
BY CHIEF JUSTICE

A former Senator from Pennsylvania and noted constitutional lawyer said today an annual appearance of the Chief Justice of the United States before Congress would be of immense advantage in promoting a better understanding of the judiciary.

George Wharton Pepper, of Philadelphia, joined the growing list of lawyers, judges, and legislators who want to see Congress invite the Chief Justice to address both Houses.

In a statement to the Star, former Senator Pepper declared: "The well-being of the Republic is dependent upon coordinated action by the three great departments of Government. Coordinated action is impracticable unless each department is fully informed respecting the needs and activities of the others.

"Article II, section I, of the Constitution wisely provides for direct communication between the executive and the legislative branch. There is no similar provision to insure that the Congress as a whole will be kept informed respecting the Federal judiciary and its needs.

"The present procedure which enables the Director of the Administrative Office of the United States Courts to present requests for appropriations to subcommittes of the Congress is admirable as far as it goes, but it does not go far enough.

"The Congress as a whole should be given from time to time a comprehensive picture of all the operations of the judicial department and a statement of its requirements and needs.

"Nobody is so well qualified to act as spokesman for the judiciary as the Chief Justice of the United States. Just as Congress is informed by the Chief Executive of the state of the Union and the measures which the President deems appropriate, so the Congress should hear from the Chief Justice himself of the operations of the judicial department for which he is so well qualified to speak.

"If he were given an opportunity to appear annually before the Congress and to present a comprehensive statement of the operation and needs of the judiciary department, the result would be of immense advantage in promoting a better understanding of the judicial establishment and in generating the kind of atmosphere in which cooperation is most likely to flourish."

The Lace and Embroidery Industry

EXTENSION OF REMARKS

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. TUMULTY. Mr. Speaker, the schiffli lace and embroidery industry in the United States is heavily concentrated in my district. The industry is fearful of the adverse effect of the passage of H. R. 1. I would like to insert a resolution adopted at a parley of the mayors of Cliffside Park, Fairview, Guttenberg, Jersey City, North Bergen, Secaucus, Union City, Weehawken, and West New York. The resolution follows:

Whereas there are 550 firms engaged in the manufacture of schiffil lace and embroidery in Hudson and Bergen Counties in New Jersey, comprising 92 percent of the schiffil lace and embroidery industry in the United States, which firms with their allied processing trades also located here employ more than 10,000 citizens of New Jersey; and

Whereas schiffil lace and embroidery is extensively used in the clothing industry for gowns, dresses, underwear, shoes, hats, blouses, handkerchiefs, gloves, baby clothes, handbags, and coats and in the home-furnishing industry for bedspreads, sheets, currialins, drapes, tablecloths, and scarfs; and

Whereas the schiffil lace and embroidery industry is vulnerable to import competition from Japan and Europe; and

Whereas the menace of such imports lies principally in the foreign competitive advantages derived from low wages prevailing abroad: Therefore be it

Resolved, That the Congress of the United States is respectfully petitioned and memorialized to safeguard this industry so vital to the economy of northern New Jersey by maintaining the present tariff levels on lace and embroidery.

Mayor Francis J. Murphy, of Cliffside
Park; Mayor Louis Battaglia, of Fairview; Mayor Hermon G. Klein, of Guttenberg; Mayor Bernard J. Berry, of
Jersey City; Mayor John J. Roe, of
North Bergen; Mayor John J. Kane, of
Secaucus; Mayor Harry T. Thourot,
of Union City; Mayor Charles P.
Krause, of Weehawken; Mayor John E.
Otis, of West New York.

I would like to insert also a resolution introduced into the New Jersey Legislature by Hon. Maurice V. Brady, assemblyman from Hudson County. The resolution follows:

Whereas the increased importation of lace and embroidery products that come into competition with the output of factories of Hudson County, N. J., replacing the products of Hudson County's lace and embroidery industry, is a constant menace to the State's continuing economic stability; and

Whereas the lower wages paid abroad make it impossible for many of our smaller and medium-sized producers of lace and embroidery products to compete with imports without resorting to ruinous pricecutting, which in turn would result either in financial losses or heavy pressure for wage reductions and ouright unemployment; and

Whereas under proposed legislation, the President, on recommendation of the Tariff Commission, controlled by the President, would be able to reduce tariffs on imports from Japan down to 50 percent of what they were on January 1, 1945, or by one-third for any years of the 3-year period that this measuse would cover. Many tariffs would be cut by 5 percent for each of the 3 years; and

Whereas if the tariff on lace and embroidery products is lowered, then embroidery shops in Japan, Austria, Switzerland, and Germany could capture the American embroidery market by utilizing cheaper labor and underselling Hudson County; and Whereas our national obligations have

Whereas our national obligations have reached such extreme proportions that the national income must be maintained at its present unprecedented high level, or close thereto, lest we become insolvent; and

Whereas pressure that comes from imports of lace and embroidery products will render the upholding of the local economy at its high levels most uncertain and difficult unless all import trade is placed on a fair, competitive basis and the potential injury therefrom thus contained; and

Whereas a maximum of such trade results from a prosperous domestic economy freed from the threat of a breakdown resulting from unfair import competition: Therefore be it

Resolved, That the General Assembly of the State of New Jersey hereby memorialize the Congress of the United States that adequate safeguards be provided in tariff and trade legislation against the destruction or lowering of our American standard of living, the labor standard of our workmen, and the stability of our economy by unfair import competition of foreign lace and embroidery; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the Vice President of the United States, the Secretary of State, the Secretary of Commerce, the Secretary of Labor, the Secretary of Agriculture, the Chairman of the United States Tariff Commission, the Speaker of the House of Representatives, and each Senator and Representative from New Jersey in the Congress of the United States.

Plans for Huge Upper Colorado Dam Uncertain, Says Secretary McKay

EXTENSION OF REMARKS

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

- Monday, January 31, 1955

Mr. HOSMER. Mr. Speaker, proponents of the upper Colorado storage project are asking Congress to authorize an appropriation of \$421 million for a gigantic power dam at Glen Canyon, Ariz., without knowing whether the rock foundations at the site would support the immense structure as it would have to be built to integrate with other overall features of the project.

This amazing fact was disclosed in a letter written November 30, 1954, by Secretary of the Interior Douglas McKay to David R. Brower, executive secretary

of the Sierra Club.

Glen Canyon is on the Colorado River, and the proposed dam would be a key structure designed to raise power revenues to help pay for the multi-billion-dollar upper Colorado River project—H. R. 270—now before Congress.

In his letter, Secretary McKay stated that the materials on which the dam would stand are "poorly cemented and relatively weak in comparison with the foundations common to most high dams." The Secretary also revealed that "experiments to improve the strength of the foundation through a chemical grouting process were unsuccessful."

Further, although the Bureau has presented preliminary plans for a 700-foot dam, it does not intend to present final specifications for it until after Congress has approved the present vague project.

On this subject, Secretary McKay wrote Brower:

Following congressional authorization, more intensive studies will be made of the foundation conditions and of the Bureau's preliminary design to secure information for the preparation of plans and specifications for construction of the Glen Canyon Dam. If such intensive studies indicate the advisability of modifying the present selected height of dam, appropriate changes will be made in the designs prior to construction.

Despite this situation, great pressure is on Congress to approve the project. After that is done the Reclamation Bureau would conduct studies to determine what size and type of dam can be built. In other words, Congress is being asked to approve spending this great sum of Federal money when Reclamation Bureau engineers themselves do not know what the final plans and designs may be, how big the dam would be, how much it would cost, how much power revenues it would bring, and when there are grave doubts that such a structure would be secure.

Thus, Congress is being asked to buy a pig in a poke.

The Secretary's disclosures refute a 1950 report of the Reclamation Bureau which stated that the rock at the dam

site "is remarkably free of structural defects."

This 1950 report also said:

The Glen Canyon site is geologically favorable for a high concrete dam.

Secretary McKay told Brower:

Subsequent to writing the 1950 report on the Colorado River storage project, the Bu-reau conducted grouting tests in the drift tunnels driven 50 or more feet into each canyon wall of the Glen Canyon Dam site. Also, special bearing tests of 6-inch cores and large fragments of the foundation materials were made in the Bureau's Denver laboratory. The poorly cemented and relatively weak condition of the materials in comparison with the foundations common to most high dams has given the engineers who prepared the preliminary designs of the dam some concern as to the competency of the foundation to support any structure higher than 700 feet. Experiments to improve the strength of the foundation through a chemical grouting process were unsuccessful. These are the geological reasons why Commissioner W. A. Dexheimer made his statement in Denver about the limitation on the height of the proposed Glen Canyon

It has been the custom of the Reclamation Bureau to secure authorization of a project based on a cost estimate which they assure Congress will be ample. However, it is rarely found that these cost estimates prove sufficient, Actual costs of projects usually have been 50 to 100 percent greater than the estimates made at the time of authorization.

The obvious result has been that the Bureau's assurances of economic and financial feasibility have collapsed.

The financial plan for the whole upper Colorado River project sets up Glen Canyon Dam as the "cash register" for the development.

Yet the Reclamation Bureau apparently does not yet know how much Glen Canyon Dam would cost or how much revenue it can be expected to produce.

In the face of these uncertainties Congress should not approve this project.

The full text of Secretary McKay's letter follows:

My Dear Mr. Brower: On October 21, 1954, you were informed that further reply would be made to your inquiries of September 28, 1954, addressed to the Secretary of the Interior and the Commissioner of Reclamation, concerning the effect of the proposed Glen Canyon Reservoir upon the Rainbow Bridge National Monument. We now have the necessary information from the field to complete that reply.

It is our intention to take whatever steps are necessary to protect the Rainbow Bridge National Monument from waters of the proposed Glen Canyon Reservoir and to ask Congress to provide for such protection in the authorizing legislation. Cooperative studies are under way by the field offices of the Bureau of Reclamation and the National Park Service to determine the best means of providing this protection, and to date these studies have revealed no unsurmountable problems. The topography of the area surrounding the monument indicates that a barrier dam 1 mile below the natural arch and outside the monument would provide adequate protection. Details of such a plan will require extensive study and are not available at this time.

On the basis of data available at the time of writing the 1950 report on Colorado River storage project and participating projects, a 700-foot dam (580 feet above stream level) at Glen Canyon was the maximum height which met the criteria of economy, safety of the structure, and adequate protection of the Rainbow Natural Bridge. Subsequent to writing the 1950 report on the Colorado River storage project, the Bureau conducted grouting tests in the drift tunnels driven 50 or more feet into each canyon wall of the Glen Canyon Dam site. Also, special bearing tests of 6-inch cores and large fragments of the foundation materials were made in the Bureau's Denver laboratory. The poorly cemented and relatively weak condition of the materials in comparison with the foundations common to most high dams has given the engineers who prepared the preliminary designs of the dam some concern as to the competency of the foundation to support any structure higher than 700 feet. Experiments to improve the strength of the foundation through a chemical grouting process were unsuccessful. These are the geological reasons why Commissioner W. A. Dexheimer made his statement in Denver about the limitation on the height of the proposed Glen Canyon Dam.

Following congressional authorization, more intensive studies will be made of the foundation conditions and of the Bureau's preliminary design to secure information for the preparation of plans and specifications for construction of the Glen Canyon Dam. If such intensive studies indicate the advisability of modifying the present selected height of dam, appropriate changes will be made in the designs prior to construction.

Sincerely yours,

Douglas McKay, Secretary of the Interior.

Should Be National Shrine

EXTENSION OF REMARKS

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. SCOTT. Mr. Speaker, the history of Philadelphia which centers around the area of Independence Hall contains a number of hallowed spots. Among these landmarks which are associated with the early patriots of revolution is the Mikveh Israel Cemetery on Spruce Street between Eighth and Ninth Streets in Philadelphia in which is buried the remains of Haym Saloman, one of the selfless men who pledged his entire fortune to the support of our young Nation in her time of need, he died penniless as far as material goods are concerned, but lives richly in the memories of those who remember his great and patriotic services.

I have recently introduced a bill to provide that Mikveh Israel Cemetery shall be a national shrine and would like to include as part of my comments here an editorial from the Philadelphia Jewish Times, of January 21, 1955, as follows:

SHOULD BE NATIONAL SHRINE

Mikveh Israel Cemetery on Spruce Street, between Eighth and Ninth, is a proud and revered spot. But—

Its past is much more appealing than its present.

Those who are buried there occupy a more revered place in the pages of history than their mortal remains occupy in the scheme of things of today.

The ground within the walls of this burial place is hallowed in memory, but nearly unkempt in fact.

Independence Hall would probably be no better, if its upkeep depended on a comparatively small group of people, as is the case with Mikveh Israel Cemetery. The members of Mikveh Israel congregation have done as well as the limited means at their disposal would allow in preserving the final resting places of some of the Jewish community's most distinguished Revolutionary War and immediate postwar notables.

In Mikveh Israel are the remaining traces of Haym Salomon, who was one of the outstanding patriots of the Revolutionary War, and was largely responsible for its final victory, since he did much to finance it.

In August 1953, city council through an ordinance introduced by Councilman-at-large Victor H. Bianc, declared Mikveh Israel Cemetery a city shrine and appropriated \$5.000 to beautify and repair some of the more obvious blemishes.

Now, steps are being taken to have the revered plot of ground which contains so much of this city's and Nation's glorious past history officially declared a national shrine by the current 84th Congress. This is as it should be.

Our Nation, for example, could never repay the debt it owes Haym Salomon, who, after being an important factor in financing our break from the bonds of England died a pauper and with large sums still owed him by our Government.

But it could show its appreciation by making the final resting place of the man it owes so much a place of beauty and a point that will attract students and those with pride in our forbears, not make them shudder in shame.

Our Members of Congress, both Democratic and Republican, should present a solid front for such action before the current session takes off for a summer holiday.

Thoughts From the Grassroots

EXTENSION OF REMARKS

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial appearing in the Paris Daily Enterprise of Paris, Ky., on Wednesday, January 26, 1955. It is a very poignant presentation and, in my opinion, reflects the consensus of opinion of the home folks concerning those Americans still behind the Iron Curtain, and the need for greater effort to be exerted toward securing the prompt release. It merits the serious consideration of each of us.

ARE THEY FORGOTTEN MEN?

The public, generally speaking, over the Nation is backing President Elsenhower's Program and policy in regard to the Formosan situation.

Just where it will lead only time will tell. But the Nation is serving notice in the action that it is getting a bit tired of deals and negotiations.

Just as this new crisis arose the United States appeared to be entering into another deal with the Communists over the release of the 11 United States airmen and 6 other Americans being held by Red China.

In fact part of the crisis is in all probability the outcropping of a deal concerning some of the islands off the shore of the Red China coast.

There's no criticism of the negotiation itself.

But what of the hundreds of other Americans who are being enslaved in Communist lands?

Why just the 17 airmen? Why not force the issue a bit further and press for the release of the other Americans?

The word from Americans recently "sprung" from Soviet prison camps is that hundreds more are still enslaved in Russia and other Communist-dominated lands.

Are they the forgotten men?

While we're about it, why not go whole hog and get the kit and caboodle. They're Americans just like you and I—hoping that the Red scourge will soon be quelled and stamped out.

Let's not let them down.

Eddie Cantor's Birthday

EXTENSION OF REMARKS

HON, JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. ROOSEVELT. Mr. Speaker, I am sure that my colleagues will be pleased to hear that Eddie Cantor, the nationally known comedian and entertainer, is celebrating his 63d birthday today, Monday, January 31.

I know it is difficult for many of us to believe that the ever youthful and spry Eddie Cantor has reached the 63d milestone of his life. We like to think of him always as the man who dominates the stage with so much zest and life in him.

In recent years Eddie Cantor has also become known as a great supporter of various worthwhile humanitarian causes. I am sure that it is known to many of you that it was he who coined the name "March of Dimes" for the great annual campaign which we conduct at this time each year. In 1952 he made a tour from coast to coast and was successful in collecting 120,000 pints of blood which was badly needed for our veterans.

For many years Eddie Cantor has also been active in other charitable and philanthropic enterprises. Let me suggest a few of these, such as the Eddie Cantor Camp for Boys, the Youth Aliyah Movement sponsored by Hadassah in Israel, the United Jewish Appeal, the New York Federation of Jewish Charities, the Catholic Actors' Guild, the Episcopalian Actors' Guild, the Jewish Theatre Guild, and many other groups too numerous to mention.

Somewhere I recall a saying which is phrased something like this: "When you help a fellow up a steep hill, you get nearer to the top yourself." This is very true of Eddie Cantor. In his charitable activities he has helped many of his fellow men and in this way attained greater heights of humanitarianism

himself. Charitable work is today a great part of his life. While he gives of his time and effort and money, he is also doubly enriched by the fact that his name has become associated in the public mind with philanthropic interests. Of Eddie Cantor it can be truly said in the words of the poet:

Give to the needy shelter and bread. For giving is living, the angels said. But must I give again and again? My selfish, greedy question rang. No, said the angel, piercing me through; Give 'til God stops giving to you.

On this occasion of his 63d birthday there are thousands upon thousands of his fellow citizens who wish to extend to Eddie Cantor their sincerest felicitations and best wishes for many active years.

Tribute to Haiti

EXTENSION OF REMARKS

HON, EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. BOLAND. Mr. Speaker, the visit of President Magloire, of Haiti, to the United States points up the great bond of friendship that exists between these nations. President Magloire's splendid address to the joint session of Congress is further evidence of the spirit that prevails between these nations. The visit of the President of Haiti has been marked by editorial comment throughout the United States.

Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Springfield (Mass.) Daily News of January 27, 1955:

TRIBUTE TO HAITI

The first chief of state to visit the United States in 1955 is Gen. Paul Eugene Magloire, first popularly elected President of Haiti, second oldest republic in the Western Hemisphere.

President Magloire has already been given a Washington parade, a key to the city, and a state dinner. The visiting President and his wife were overnight guests at the White House, and today he addressed Congress as he continued his official visit schedule.

There will be many remarks that President Magloire's visit marks a century and a half of friendship between the two countries. Actually, this polite oversimplification detracts from the success of modern Haiti and its first people's President.

Haiti's history has been marked by rebellions, assassinations, massacres and other excesses. The slaughter of 167 political prisoners and the subsequent lynching of the President in 1915 made necessary American intervention. The United States Marines remained in authority for 20 years, and although American occupation was greatly different from Spanish and French rule, it was nonetheless resented by many citizens of Haiti

In this country, there was some popular sentiment in favor of withdrawing the marines and the American commissioner. Early in President Roosevelt's administration, the occupation was ended but a fiscal representative remained there to supervise customs until 1941.

Haiti has used its freedom well. Education is compulsory, and the more than 1,000 schools in the republic must teach English. French is the official language. Only 4 years ago, the people were given the right to choose their own President, a privilege previously held by the National Assembly.

So, President Magloire's visit is a tribute not so much to 150 years of history, as to the 20 years of progress during which this man became the elected leader of a free people.

Ten Good Reasons for Voting "Aye" on the Formosa Resolution

EXTENSION OF REMARKS

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. MASON. Mr. Speaker, I am answering the many letters that are coming in from worried mothers as follows:

I am in full sympathy and accord with your statement that you do not approve of our boys being slaughtered in another Korea so that the people who want war will be happy. However, I feel sure that a firm stand such as President Eisenhower has outlined will do more than anything else to head off another Korea.

President Eisenhower's request to Congress for the passage of a resolution approving his plan to use the American Fleet and Air Force, now in Asiastic waters, to protect and defend Formosa against Red aggression is a step toward preventing war, not toward provoking war. The President is convinced that a firm stand now—with Congress and the President joining hands in the proposal—will head off Red aggression. Believing the President to be right in his conviction, I voted "aye" on the resolution. The resolution was adopted 409 to 3.

I have 10 good reasons for wishing to avoid war; namely, 2 grandsons and 8 grand-nephews of draft age, to say nothing of the thousands of sons of draft age of former pupils of mine in whom I still have a personal interest.

Ever since President Roosevelt recognized Soviet Russia in 1934, the world has been in a continual turmoil, with one war following another as a result of our appeasement policy. Firmness and force constitute the

only program the Communists understand. If we had followed the advice of General MacArthur at the time he was fired by President Truman, we would have completed the job then, won a decisive victory over the Communist hordes in Asia, and have headed off the present situation in Formosa and Indochina. We are now paying the price of our former weak, vacillating, appeasing methods in dealing with the Communist menace.

President Eisenhower's firm stand now may have come too late. I hope and pray that it is not too late.

Now, Mr. Speaker, I want to call the attention of my colleagues to the editorial carried in the Washington Evening Star of Thursday, January 27, 1955, entitled "The Story of a Lost Victory." The editorial is based upon a recent report of the Jenner committee. It is both revealing and informative. It is both revealing and informative. It should be read by every American. For that reason I am including the editorial as a part of my remarks:

STORY OF A LOST VICTORY

By any standard of measurement, the report of the Senate's Internal Security Subcommittee—a report detailing how and why we failed to win the Korean war—is a significant document.

It is significant because it gathers together for the first time the stories of five ranking commanders in the Korean theater—Gen. Mark Clark, Lt. Gen. George E. Stratemeyer, Gen. James A. Van Fleet, Lt. Gen. Edmond M. Almond, and Adm. Charles Turner Joy. These men were outspoken in their criticism of the political direction of the war from Washington. This report is also significant because, despite its partisan political implications, it emerged with the unanimous endorsement of the subcommittee—Republican Senators Jenner, Watkins, Welker, and Butler, and Democratic Senators Eastland, Johnston, and McClellan.

In fairness, it should be pointed out that the views expressed by the officers who testified conflict in many respects with views held by General Bradley, then Chairman of the Joint Chiefs of Staff, and General Collins, then Army Chief of Staff. These officers did not testify before the subcommittee, and presumably were not asked to do so. To this extent, the report is one-sided. Even with this reservation, however, it is an important document.

Among the five field commanders, there was a remarkable unanimity in endorsing General MacArthur's views as to how the war should have been conducted. There was general agreement that the Korean war could have resulted in a decisive victory for us had it not been for politically inspired limitations laid upon the Armed Forces. With some qualifications, there was agreement that the Chinese Communist Army could have been routed if not destroyed, and that the failure to destroy it led directly to the debacle in Indochina and to the situation which now faces us with respect to Formosa. Admiral Joy was of the opinion that interference based on faulty political considerations prevented successful armistice negotiations, and he indicated that General Ridgway, now Army Chief of Staff, shared in part at least in this view.

There was a great deal of testimony with respect to incidents which may have been relatively minor, but which still shed a revealing light on the strange conduct of this war. They can be touched upon only briefly here, but recitation of a few may be illumi-nating. Thus, General Clark (and also General Van Fleet) was anxious to train more South Korean troops to relieve the pressure on American forces. General Clark, with the approval of the Secretary of the Army, made a study and then sought authorization from Washington to proceed with a training plan. He did not even get an answer to this request until after General Van Fleet's letter to General Eisenhower (a letter similar to the Clark request) was released in the midst of the 1952 Presidential campaign. General Clark testified: "Very shortly after that got action immediately authorizing me to start in on the buildup of the ROK forces." Much the same thing was true of hitherto little-known recommendations from the 2 generals for employment in Korea of 3 of Chiang Kai-shek's divisions-another story of a recommendation sent to Washington; no answer.

General Stratemeyer testified in similar vein. He was talking about November and December 1950. He stated that he "didn't care what anyone back home said"—that, at that time, he had the airpower to break the back of the Chinese Communists crossing the Yalu. But under the almost unbelievable restrictions imposed from Washington upon bombing of the Yalu bridges, according to his testimony, he had to pull his punches while the Chinese and their sup-

plies streamed across the bridges—a "lighted highway," as he described it. As a result, he testified, "a lot of American blood was spilled over there in Korea."

General Almond, who commanded the X Corps, was equally blunt. He testified: "Events now past have proved that General MacArthur was right and General Bradley was wrong. I need add nothing to this series of facts. Their noise is deafening to those who listen. The opportunity to deal a death blow to expanding communism presented itself in Korea. But I don't believe General Bradley ever could see it." And he ended on this note: "It is bad enough to have to fight the enemy; it is terrible to have to fight both the enemy and those that you are supposed to have support from."

These, to repeat, are the views of the field commanders, not balanced against the views of their superiors in Washington and not setting forth the considerations of those in Washington whose responsibility was much heavier than even that of the distinguished field commanders. But at this time the judgments of the field commanders seem to have a special significance.

If anything is clear, it is that the restraints laid upon the commanders in Korea were dictated by political considerations—an unwillingness to risk war with China or Russia, and a fear of alienating some of our allies under the United Nations direction of the Korean war. All of this, however, seems to be behind us. President Eisenhower's request for Formosan authority implies both a willingness, if necessary, to accept war with China and a willingness to risk war with Russia. And this is being done, at least at this stage, outside the U. N. framework.

It may be that this situation we face today can be traced directly to the lost victory in Korea. If so, if we are compelled now to accept risks which we were not willing to accept then, nothing can be lost, and much can be gained, by examining this testimony from the commanders who fought that war of frustration on the Korean peninsula, and whose views, at this late hour, have received a bipartisan endorsement.

Twosome in the China Tangle?

EXTENSION OF REMARKS

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. SIEMINSKI. Mr. Speaker, history might well record our times as those of twosome and the big split. We divide our world into east and west, north and south, old and new.

Will a twosome emerge in the China tangle?

Will it be east China and west China? Or will it be old China and new China with Formosa forming the new China of the west to pace the old China of the east?

To us, there is a familiar ring in old and new, north and south, east and west. We have the Eastern Hemisphere and the Western Hemisphere, the old world and the new, North America, South America; Mexico, New Mexico; North Dakota, South Dakota; North Carolina, South Caroline; Virginia West Virginia; England, New England; London, New London; York, New York; Jersey, New Jersey; North Pole, South Pole.

Like the winds, our names seem to blow away inherited hatreds.

One wonders whether the names east China and west China would do the same for the China tangle? Or would old China and new China do better, with the name Formosa gone with the wind? All Chinese dislike it anyway.

They call Formosa Taiwan-Tie-

Wan-gem of the Pacific.

The Good People of Alameda Are Extremely Proud of the Great Naval Air Station in Their City

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. MILLER of California. Mr. Speaker, for the second consecutive year the military and civilian personnel at the Naval Air Station, Alameda, have offered overwhelming proof that their loyalty, devotion, and pride in the service of their country is equaled only by their sense of community interest and responsibility.

This fact was clearly evidenced when the generous sum of \$107,400 was contributed by personnel of the Naval Air Station at the close of the 1954 United Crusade campaign in December. This figure represented a joint United Cru-\$ade-Navy relief effort, with \$93,000 going to the United Crusade fund and \$14,400

to the Navy Relief Society.

Mammoth facsimile checks for the colossal amounts were presented by Capt. Louis E. French, commanding officer of the air station, and head of the military department of the 1954 East Bay United Crusade, to representatives of the two charities in a colorful ceremony. Selmer H. Berg, Crusade campaign chairman, received the United Crusade donation, and Lt. Comdr. Earl D. Payne, NAS special services officer, and NAS chairman for Navy Relief, accepted the Navy Relief donation.

The grand total of \$107,400 exceeded last year's record of \$100,000. Civilian Dersonnel as a group, gave 8 percent more this year to reach a new high of \$9.29

per capital.

The \$93,000 raised for the United Crusade fund is considered especially meritorious because it was attained despite a loss of 2,500 personnel since the 1953

campaign.

As head of the military department of the 1954 East Bay United Crusade, Captain French directed and coordinated the Crusade efforts of more than a dozen Army, Navy, Marine, and Air Force activities in the Oakland area and adjacent communities. His representative in the extremely successful campaign aboard the Naval Air Station was Comdr. Robert F. Farrington, NAS executive officer, who served as chairman of the NAS Crusade drive.

Once again NAS Alameda has proved it is a real member of this community and a good neighbor indeed—

Said Captain French.

It's a pleasure to report that 97 percent of our personnel participated in the campaign. These people of good will, who reside in various cities and towns throughout the bay area believe in the crusade slogan, "Give where you work and benefit where you live"—

Added Captain French.

All hands at NAS, Alameda, deserve the Navy's traditional "well done" for a wonderful job—

Commander Farrington said.

And the reason the station personnel gave, more than ever before is that they realized the increased needs of the community and gave accordingly—

Commander Farrington added.

The inspired leadership of Captain French and Commander Farrington in the NAS Crusade drive was complemented by the capable and tireless efforts of a host of military personnel and civilian employees who comprised the various committees for the NAS United Crusade campaign. Notable among those who gave unstintingly of their time and effort were: Comdr. G. N. Eisenhart, assistant overhaul and repair officer; Comdr. H. D. Schultz, commander Fleet Air, Alameda staff; J. Griffith, overhaul and repair, industrial management office; C. Brunton, overhaul and repair, cost control office; W. MacDonald, industrial management office; H. V. La Juenesse, industrial relations officer; Lt. Comdr. M. E. Darchuck, NAS-Fleet Air, Alameda, public information officer; Lt. R. T. Janiec, overhaul and repair inspection group; Lt. E. J. Ryan, overhaul and repair administrative services officer; H. Stewart, NAS comptroller's office; S. Lacopoulos, chief boatswain's mate; V. Baum, chief aviation structural mechanic; F. Johnson, chief electrician's mate; and F. B. Grosso, journalist, first class.

Others active in the Crusade campaign on the unit, departmental, and divisional level included: Comdr. H. C. Rand, representing commander fleet logistics air wing, Pacific; R. Faulkner, overhaul and repair department, representing Naval Aircraft Lodge No. 739, I. A. of M.; Joseph Hanfre, overhaul and repair department, representing the Naval Air Station Association; Harry Burbach, overhaul and repair department, representing the American Federation of Government Employees, Local 1471.

S. C. Anderson, Supply Department, representing the National Federation of Federal Employees, local 712; D. Heddell, Public Works Department, representing the Masters and Foremen Association; C. D. Luders, Overhaul and Repair Department, representing the Association of Supervisors, local 17; H. H. Teilh, Overhaul and Repair Department, representing the Planners, Estimators, and Progressman Association; O. Zeisz, Overhaul and Repair Department, representing post 9919 of the Veterans of Foreign Wars.

J. Leonard, Overhaul and Repair Department, representing the Apprentice and Alumni Association; J. R. McDonald, Overhaul and Repair Department, representing the shop planners; W. Terry, Security Department, representing the Federal Naval Firefighters; Lt. Comdr. E. D. Payne, special services officer, representing the East Bay Chapter, Navy Relief Society; Lt. Comdr. H. T. Johnson, FasRon-116, representing Fleet Aircraft Service Squadron 116 and supported multiengine squadrons; Lt. I. Cushman, VR-2, representing Air Transport Squadron 2.

J. H. Cook, aviation structural mechanic, first class, VP-9, representing the Fleet Reserve Association, Branch 87; W. S. Meyers, aviation machinist's mate, third-class, NAS Special Services, representing Naval Air-Fleet Air Alameda Enlisted Recreation Council; Lt. Comdr. T. Pearce, FasRon-8, representing Fleet Aircraft Squadron 8 and supported Aircraft Squadron 8 and supported squadrons; and Ruth Barnes, Supply Department, representing the Naval Air Station, Alameda, women employees.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

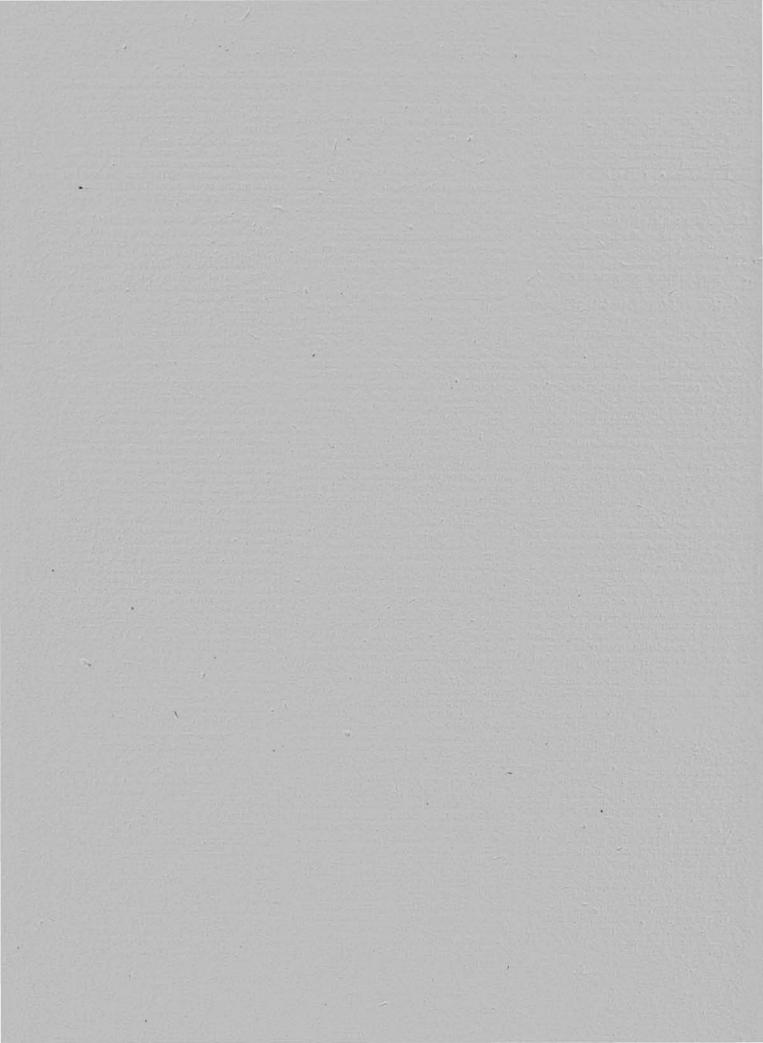

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Frank Brodle is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

The Fight for Freedom of the Press

EXTENSION OF REMARKS OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Tuesday, February 1, 1955

Mr. HILL. Mr. President, on January 9 last, Judge Walter B. Jones, presiding judge of the 15th Judicial Circuit of Alabama, and president of the Alabama Bar Association, addressed the Alabama Associated Press Association, meeting in Mobile. The subject of his address was The Freedom of the Press. The address is very able and timely and has received must favorable comment. Therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FIGHT FOR FREEDOM OF PRESS IN COURTS BEGAN EVEN BEFORE UNITED STATES BECAME NATION, AND CONTINUES STILL, AS IT MUST EACH GENERATION

(By Judge Walter B. Jones, presiding judge of the 15th Judicial Circuit of Alabama and president of the Alabama Bar Association, in an address January 9 before the Alabama Associated Press Association meeting in Mobile)

"Let truth and falsehood grapple; Who ever knew truth put to the worse . In a free and open encounter?"

-Milton's Areopagitica.

It is firm belief with me that two of the great institutions we have in our land today which mean so much to the happiness and welfare of our people are the press and the courts. So it does not at all seem strange to me to link them together, and to think of them as copilots in the difficult journey we go to maintain liberty and freedom.

The courts and the press, while performing distinct functions in separate ways, while serving the people in a different manner, yet have in common one sublime purpose: the preservation of the freedom of our people, and its transmission, not only unimpaired—that's not sufficient—but strengthened, and made more secure for coming generations.

Primarily, the courts seek to do justice between man and man on the one side, and between man and the state on the other.

The press, through its manifold agencies, seeks to let man know what his fellowmen are thinking and doing, so he may have knowledge of their actions as a basis for his interest in their welfare, and his appreciation of them.

So it is well that these two great servants of our people be linked together.

Study as you may the pages of history and you will find no greater, no more useful lesson than that a people who have not trial by Jury, no independent judiciary, no courts meeting in public, and a people who restrict and abridge the liberty of the press live not as free and happy people but exist only as alaves and bondmen to their rulers.

JOHN MILTON, 1644

A noteworthy contribution to the cause of freedom of the press was made by John Milton, the English poet, in 1644 when he wrote Areopagitica, a speech for the liberty of unlicensed printing.

The occasion of this great essay was an order of the Long Parliament for the regu-lating of printing in England. These orders, passed and put over by the Presbyterian majority in the Long Parliament, were framed to enable the sponsors to suppress publications voicing the religious and political views of their opponents.

This order roused Milton to protest, and he issued his famous plea for unlicensed printing in the following year.

It had but little effect at the time. But you cannot measure the importance of Milton's pamphlet by the effect it had on the then political condition.

In his love for liberty—the master passion of his life—he soared far above the politics

And today the Areopagitica "holds its supremacy among his prose writings by virtue of its appeal to fundamental principles, and its triumphant assertion of the faith that all truth needs to assure its victory over error is a fair field and no favor."

STAR OF LIBERTY, 1735

A towering landmark in the struggle for freedom of the press in America is the trial in New York City, 1735, of John Peter Zenger, a poor printer, whose name is today reverenced wherever a newspaper is published.

Undoubtedly it was a study of the Zenger case which caused Jefferson to write:

Were it left to me to decide whether we should have a government without newspapers, or newspapers without a government. I should not hesitate a moment to prefer

In 1732 Col. William Cosby arrived in New York with his royal commission as Governor of the British colony. Prior to that time one Van Dam had acted as Governor and drawn the salary of the office.

Cosby insisted that half the salary should

be paid to him.

Van Dam refused, the matter went to the courts, and soon became an issue in politics.

PRESSES SMASHED

The official classes and the aristocracy stood by Cosby. The people took sides with Van Dam.

One Bradford, the public printer, edited the Weekly Gazette, the first New York newspaper. He took up the controversy between Cosby and Van Dam and abused and reviled Van Dam and his supporters. Bradford would not allow space in his paper for the

opposition to reply.

So a few people who believed in liberty started a paper called the Weekly Journal, and John Peter Zenger was named editor.

The paper was vigorously conducted and attacked the Government officials with great virulence.

The colonial Governor had the editor thrown in jall and had his soldiers smash Zenger's printing presses.

The grand jury refused to indict, so the Governor sent the editor back to jail until another grand jury, carefully stacked, indicted him.

COLONY UP IN ARMS

The whole colony was up in arms against the Governor's action.

When the case came up for trial, a frail old lawyer from Philadelphia, Andrew Hamilton, volunteered to defend Zenger.

The question of the guilt or innocence a poor printer charged with libel was obscured by the greater question of the liberty of the press and the right to tell the truth about Government public officials and their acts.

When the trial came up, Hamilton admitted the charges against Zenger, but defended him on the ground that the charges

This was a novel doctrine at that time, and the judges, the pliant tools of the Governor, ruled the truth of the libels could not be given in evidence.

CAUSE OF LIBERTY

"Then," Hamilton replied, "I will appeal to the jury as witnesses of the fact. The jury has a right to determine both the law and the fact, and they ought to do so.'

Then this great lawyer turned to the royal judges and, continuing in his most impressive manner, said:

"The question before you is not the cause of a poor printer, nor of New York alone; it is the cause of liberty—the liberty of op-posing arbitrary power by speaking and

writing truth." Hamilton's argument—that newspapers should always be free to print the without fear of anyone—won the jury to his side. After being out barely long enough to organize, it brought in a verdict of "not guilty."

The jury took the view that Zenger had told the truth, and he was set free.

So today when we take up and read the news and editorials in our daily or weekly newspaper, let us gratefully remember that its freedom was won in a jury trial which one American orator called the "morning star of liberty."

VIRGINIA BILL OF RIGHTS

George Mascn, of Virginia, "the wisest man of his generation," enunciated in the Vir-ginia bill of rights, the 14 great foundationstones of free government, his finest political contribution to the Nation. It has been pronounced as "the most complete, most symmetrical summary of the rights of man and the principles of free government that has ever been furnished to the world." In the 11th article of this declaration of rights, Mason upholds the freedom of the press as one of the great supports of liberty. His

"That freedom of the press is one of the great bulwarks of liberty, and can never be restrained but by despotic governments."

BIG CONTRAST

Theodoric Bland in 1819 compared Mason's declaration of rights with Magna Carta, and

"The famous English bill of rights is a contract with nobility and royalty-a compromise with despotism, in which the voice of the people is heard in a tone of disturbed supplication and prayer.

'But in this declaration of Mason's, man seems to stand erect in all the majesty of his nature, to assert the inalienable rights and equality with which he had been endowed by his Creator, and to declare the fundamental principles by which all rulers should be controlled, and in which all governments should rest.

"The contrast is striking, the difference prodigious."

A549

HAMILTON IN FEDERALIST

Alexander Hamilton, one of our country's most intelligent statesmen, in an address to the people of the State of New York, urging the ratification of the Federal Constitution, noted the objection that the Constitution contained no bill of rights, no summary of the rights and privileges claimed by the peo-ple. He said that such was unnecessary and might even prove dangerous, and he asked:

"What is the liberty of the press?" "Who can give it any definition which would not leave the utmost latitude for eva-I hold it to be impracticable; and from this I infer that its security, whatever fine declarations may be inserted in any constitution respecting it, must altogether de-pend on public opinion, and on the general spirit of the people and of the Government."

MILL'S ESSAY ON LIBERTY

John Stuart Mill's essay on liberty is another great document for liberty of thought and expression. All of us should be familiar with his words on the liberty of thought and discussion. There he declared that there ought to be no defense necessary for the liberty of the press.

He regarded it as one of the securities against corrupt or tyrannical government. In his opening paragraph Mills said:

"No argument can now be needed against permitting a legislature or an executive not identified in interest with the people, to prescribe opinions to them, and determine what doctrines or arguments they shall be allowed to hear."

John Mill's essay on liberty should be studied and known by all men in lawmaking bodies, by all in the newspaper profession, and by all who believe in the freedom of the press.

KEEP COUETS OPEN

If we value our liberties in this country, and wish them to endure for the benefit and happiness of those who are to come after us, we must at all times do everything to keep the proceedings of our courts public.

Some three centuries ago there was in England a secret royal tribunal known as the Court of the Star Chamber, a sort of private or personal court of the monarch. became, under the arbitrary management of the Tudors, an instrument most hateful for overthrowing the political liberties England.

As the years went by the Court of the Star Chamber became more unsavory, and assumed the right to hear and determine every alleged misdemeanor, attempts to commit felonies and acts of disrespect to the state and persons in authority.

It was one of the most despised courts known to English history, and was a power-ful support of arbitrary government.

we do not wish courts of the star chamber, or courts like them, in this country-and there are voices from time to time urging secrecy in many aspects of judicial proceedings, and making the specious claim that secret proceedings best bring about justice—then let us see to it that the two great partners in the administrations of justice, the courts and the press, labor together, hand in hand.

NO SECRECY

Let us keep the doors of our courts open. their sessions free to be visited at all times by all persons.

Let us have no secrecy in our trials, no covert proceedings.

Let justice be done out in the open sunlight where all may see.

Let judges and jurors hold their trials in public where all are free to come and observe them at work.

Let court proceedings be without censorshin.

Let judges respect the very first section of our Federal Bill of Rights, that the freedom of the press be not abridged.

LET PRESS IN COURT

Let there be a press table in every courtroom. Let the news reporter have his rightful seat there.

Give the press photographer the opportunity to reproduce what the eye sees for the benefit of the absent.

Respect the right of the editor to freely comment on court proceedings and judicial decrees, condemning what his conscience tells him to be wrong and unjust in them, and commending what is right and just under the law of the land.

Encourage the publisher to issue from his presses, daily and weekly, what his report-ers report, what his photographers photograph, and the editorials his editors write.

Do these things and the people, whose justice the courts administer, will have a healthy interest in the work of their jurors and judges, and a desire to have part in the exalted work of their courts.

Do these things, and there will be fewer citizens trying to shirk jury duty and more people willing to serve in the jury box, and do their part as priests in the temple of justice.

MOST CAN'T ATTEND

There is no need, of course, to argue the advantages and the desirability of newspaper coverage-full and complete-of all public proceedings, especially those in the courts of justice.

But this thought does occur to me: There are two classes of people interested in public proceedings-those who can attend them in person and those who are absent.

The people in the courtroom, personally attending a trial, know just what goes on. They see with their own eyes and hear with their own ears.

But the larger group, those who cannot attend the trial, the thousands scattered over the State who are vitally interested in court proceedings, also have a right to know what goes on.

The only way the absent can enjoy this right is for the press to report in the dallies and weeklies the proceedings of the courts and other public bodies.

So this large group of people need the newspaper reporter, the photographer, and the editor to serve them so they may know what takes place.

GREAT TRUTH

Let us never forget this great truth: When the people meekly surrender one of their freedoms, or lose one because they are too lazy or cowardly to battle for it, this encourages and emboldens the enemies of freedom to strike down another freedom.

And when they have destroyed this second freedom, then the attack is renewed against yet other freedoms.

Finally all liberty and freedom have perished, and the people become slaves-subjects to arbitrary and despotic power.

So let us all, when an assault is made on one of our freedoms, stand up and meet the assault head-on, yield not one inch of ground-and throw into the struggle the best that's in us.

If we do not do this, then we lose in piecemeal fashion all of our liberties-one loss following quickly after another.

NO COMPROMISE

There can be no compromise.

There can be no appeasement.

There can be no traffic with the enemies of the great freedoms recognized in the Bill of Rights.

We must battle for all of them-and never show the white flag of fear.

For it is true that it is written by the finger of Almighty God-upon the everlasting tablets of the universe—that liberty once destroyed, freedom once struck down not, like the Phoenix, rise in youthful freshness from its own ashes.

Oftener liberty and freedom are gone forever, or at least sometimes lost for long cen-turies, until a strong and courageous generation worthy to hold and enjoy them comes again into the world.

EACH GENERATION'S FIGHT

The liberties we now have, the freedoms we now enjoy, do not live on simply because our forefathers in some great battle, or in some parliament or senate, won them and bequeathed them to us.

No! Freedom must be claimed and struggled for by every generation as it comes on

the stage of history.

Each generation must take up the torch of liberty and hold it high and steady if we would enjoy the blessings of free speech, a free press and courts which are influenced only by the principles of fairness and justice-administered under the known and established law of the land.

So let us here now highly resolve that we will continue with all the strength, with all the courage, and with all the fidelity that is in us, to do battle for our cherished free-

doms of speech and of the press.

Let us hand them down to our children. without one thread in their glorious fabric torn or weakened, without one stain.

Let every thread be made even stronger. Let their glorious colors brighten more

and more the lives of our people. Let this be so in order that our people, seeing, may liken the appearance of their precious rights, in the words of the Old Testament phrase, "to apples of gold in pictures of silver."

Panama Railroad Centenary: 1855-1955

EXTENSION OF REMARKS OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES Tuesday, February 1, 1955

Mr. MARTIN of Iowa. Mr. President, the Panama Canal Society of Washington, D. C., of which Mr. Andrew W. Dewling is president and Mr. Martin A. Seiler is secretary-treasurer, on January 29, 1955, in the Nation's Capital, celebrated with a luncheon meeting at the Burlington Hotel the 100th anniversary of the completion of the Panama Rail-

The occasion was notable for the large number present who were associated with the building of the Panama Canal and others who rendered distinct services for the Panama Railroad Company. Also present were a number of ladies who had lived in the isthmus during the construction years.

The attendants included Hon. Maurice H. Thatcher, sole surviving member of the Isthmian Canal Commission and Civil Governor of the Canal Zone during the construction era, who later served several terms in the Congress as a Representative from Kentucky and was the author of important legislation for the benefit of the canal and the isthmus. An out-of-town visitor was Mr. William R. McCann, consulting engineer of Hopewell, Va., who started his engineering career on the isthmus during the building of the canal and through the years since then has retained his interest in the problems of the Panama Canal, of which he is a keen student.

Also among those present was Capt. Miles P. DuVal, United States Navy, retired, former captain of the port, Pacific division, 1941-44, and author of 2 excellent volumes on the Panama Canal, with a third in progress.

Governor Thatcher served as toastmaster, and it was my privilege to be the guest speaker. The text of my address follows:

ADDRESS OF SENATOR THOMAS E. MARTIN BE-FORE THE PANAMA CANAL SOCIETY OF THE DISTRICT OF COLUMBIA AT ITS LUNCHEON MEETING IN WASHINGTON, D. C., JANUARY 29, 1955, IN COMMEMORATION OF THE 100TH ANNIVERSARY OF THE OPENING TO TRAFFIC OF THE PANAMA RAILROAD COMPANY

Mr. Toastmaster, ladies and gentlemen, 100 years ago, on January 27, 1855, raillaying gangs were eagerly working on the final lap in building the Panama Railroad. At midnight, in the tropical darkness and rain, the last rail was laid near Summit, at a point 37 miles from the Atlantic terminus and 101/2 miles from Panama.

The next day was Sunday. People on the isthmus, filled with festival spirit, gathered at points along the line of the railroad to the first trans-1sthmian train. Apprised of its approach by the shrill sound of the locomotive whistle, they awaited the train

with mingled feelings.

In the course of the trip, it passed through jungles and forests, across pleasant valleys and dreadful swamps, over wide chasms and around mountain tops. As it rattled along toward Panama, the onlookers, impressed by the appearance of the train and the facility with which it was handled, gave lusty cheers.

To them, it meant the end of pack mules and muddy trails, which for so long had been the principal means for travel over the continental divide. It represented the culmination of more than 6 years of heroic effort. It was the omen of good times to

What were the principal features of this celebrated railroad? It traversed the Isth-mus in one of the two places where the land is lowest; the other place was Nicaragua. It was a single track road 471/2 miles long and the final cost of completion was approxi-

mately \$8 million. The gauge was 5 feet.

The last, because it is wider than our standard gauge of 4 feet 8½ inches, has been a subject of endless discussion and numerous writings. Many, who visit the isthmus and do not have the opportunity to examine all the angles of the problem, go away to urge changing over to standard gauge. They do not know that this matter has been studied previously and rejected, based on economic considerations.

In the course of construction there developed a number of fables well-known to all who have lived on the isthmus. One of these was that the station Matachin, being a corruption of the verbe matar, meaning to kill and chino meaning Chinese, was so named because of the death of large numbers of Chinese who worked on the project. Another was to the effect that there was a "dead man for every tie."

Historical research has revealed some interesting facts. The name, Matachin, was on isthmian maps long before the start of the Panama Railroad and arrival of the Chi-

nese laborers.

The total force during the construction period was estimated at 6,000 men. Deaths during that time totaled 835 (whites, 295; blacks, 140; and Chinese, 400). This rate was not great under the health conditions that then obtained in the Tropics. About 140,000 ties were used.

These facts throw into irrefutable discard these widely quoted fables of the isthmus. In the perspective of history, the comple-tion of the Panama Railroad is tremendously

significant. It was the first major American construction project in the Tropics. It was the first transcontinental railroad of the three Americas. Its timely inauguration, following the discovery of gold in California, facilitated the settlement of the Far West. It was the first great step toward constructing an isthmian waterway. Thus, the builders of the Panama Railroad were the true pioneers of the Panama Canal.

Years later when French interests decided to undertake a canal project at Panama, as they had at Suez, one of the main factors that led Ferdinand de Lesseps to chose that route was the existence of an operating railroad. Recognizing that this road would be essential in construction of a canal, the

French gained control of it.

The tremendous French effort at Panama, 1879-89, is a dramatic story. Starting in brilliance and ending in tragedy, the collapse had repercussions that shook France to the roots. Nevertheless, the endeavor had its constructive aspects. Most significant was a legacy of engineering knowledge, that was to be of great value later. They also left the Panama Railroad.

Here it should be recorded that in 1879 when the French enterprise was being organized, there was a heated debate as to the type of canal. Unfortunately for them this issue was not resolved on the basis of its merits. Instead, the Congress of Paris called to decide that fundamental question was induced by its promoters, led by De Lesseps, to approve what was a predetermined objective of a sea-level undertaking. That decision, because of the magnitude of the undertaking, guaranteed its ultimate failure even before starting.

The French effort, nevertheless, demonstrated the vastness of the canal project and the inability of private enterprise to conduct so extensive an undertaking. It also emphasized the importance of the Monroe Doctrine. Moreover, it forced the United States to adopt a national policy of an American canal under American control.

This policy became active coincident with events preceding the Spanish-American War. In implementing it, the Congress on recom-mendation of President McKinley, directed a comprehensive investigation of the Nicaragua route by a Nicaragua Canal Commission, 1897-99, followed by an examination of all interoceanic canal routes by an Isthmian Canal Commission, 1899-1902. To head these two commissions, the President selected Rear Adm. John Grimes Walker, from my home State of Iowa, who was one of the leading naval officers of that time.

It was the work of these two commissions under Admiral Walker that supplied the technical basis for the choice of the Panama route. This fact alone establishes him as a leading architect in the evaluation of Isthmian Canal policy of the United States.

The American effort at Panama attracted world attention, with President Theodore Roosevelt as its great leader. Work had hardly started when construction was complicated by revival of the fundamental question of the type of canal, based largely on hypothetical questions of the comparative vulnerability of the types.

Fortunately, at the critical period, President Roosevelt had selected as chief engineer of the Isthmian Canal Commission one of the greatest engineers of the Nation-John Stevens, builder of the Great Northern Railroad and discoverer of Grand Marais Pass through which it was constructed.

After studying available literature and observing the terrain of the isthmus, which he crossed by foot, Mr. Stevens decided in favor of a high level lake and lock type. Coming to Washington in 1906, he led in a memorable legislative struggle known as the battle of the levels. In that, the advantages and disadvantages of each type, including the ques-

tion of vulnerability (now called security) was fully debated.

With the support of the Isthmian Canal Commission, Secretary of War W. H. Taft and President Theodore Roosevelt, the views of Mr. Stevens prevailed. Congress directed

Mr. Stevens prevaled. Congress directed construction of the high-level (lake and lock) type. That was the great decision in building the Panama Canal.

For that notable achievement President Roosevelt rewarded Mr. Stevens by appointing him to the combined positions of chairman and chief engineer of the Isthmian Canal Commission—the first man to be so honored.

Subsequently, Mr. Stevens left Canal service. The project was brought to completion by others under the chairmanship of Col. George W. Goethals, substantially in accord

with the Stevens plan.

In constructing the canal, two stupendous problems were excavation of Culebra Cut and the disposition of spoil. In the solution of both, the transportation afforded by the Panama Railroad was the key. The brilliant performance of that 47½-mile railroad during those action-packed years constitutes an enduring monument in transportation history.

When opened to traffic in 1914, the Panama Canal was recognized as the greatest engineering achievement of man. The transit since then of about 240,000 vessels of various types and the contributions of the canal during two World Wars prove both the success of the project and the wisdom of Congress and the President in adopting the high-level plan in preference to the tidal lock proposal.

Now more than 40 years have passed since inauguration of the canal. Possibly because it has been viewed as a completed work, the canal has not kept pace with progress expected of a great interoceanic utility.

As the first step toward improvement of its administration, Congress in 1950 enacted legislation changing the name of the Panama Railroad Company to the Panama Canal Company with jurisdiction over transit and commercial operations. This law also created the Canal Zone Government with jurisdiction over the purely governmental functions. The enterprise is still in the growing pains of adjusting to the new setup, which is required to be self-sustaining.

Other problems facing the Nation are how to increase the capacity of the Panama Canal and whether to construct a second canal at Nicaragua or elsewhere.

For the Panama Canal, many independent canal experts have urged the modification of the authorized third locks project to provide a summit anchorage on the Pacific side of the isthmus to correspond with that on the Atlantic. Other interests, in the name of security, have campaigned vigorously for construction of a practically new Panama Canal that would abandon the largest part

of the existing waterway.

Here I wish to pay a tribute to my former colleague, the late Representative Willis W. Bradley, of California, who in 1947 addressed this society after a trip to the Canal Zone. A careful student of the interoceanic canals question, he became the spokesman of the Congress on that subject. His addresses and writings, published in the Congressional RECORD, vigorously and fearlessly clarified the issues. They are classics of exposition that should be read by every serious student of the canal problem.

But the form of the Panama Canal and the question of a new Isthmian Canal are not the only problems facing the country. There are also those of diplomatic and economic character.

In the diplomatic field, there would be the question of a new treaty for constructing a new canal at Panama or elsewhere. In the economic, there are the questions of costs and their effect on transit tolls. Since tolls must be calculated to reflect the costs of construction, maintenance, operation, protection, sanitation and civil government, the economic factor is a matter of national and international concern. Yet we do not have expert independent opinions on any of these important elements that constitute the Isthmian Canal policy of the United States.

To supply the Congress with the best means of arriving at a wisely reasoned and stable policy, last Thursday I introduced a measure (S. 766) to create an independent and broadly based Interoceanic Canals Commission to conduct the necessary studies and to make its recommendations. In my judgment, this is the indispensable way to have this tremendously important subject properly examined under the everchanging conditions of this dynamic age, with all views presented, and a full, fair evaluation made. Congress would thus be able to determinenot only the best plan for the needed increased facilities of the Panama Canal, but, as well, the other long-range questions in-Undoubtedly, this solution merits volved. general consideration and support.

Just a few words in conclusion. On the isthmus, I understand, this hundredth anniversary is being appropriately observed, and the Canal Zone Government has issued a postage stamp in commemoration.

I am sure that, for many years to come, the Panama Railroad will continue its great historic role in relation to the Panama Canal and isthmian affairs.

It is most fitting that the Panama Canal Society of Washington should celebrate this centenary date, and I thank you very much indeed for the invitation to be present to-day, and to speak to you.

To those of you who worked in the Panama Railroad organization, or that of the Isthmian Canal Commission, in the construction era of the Panama Canal, I desire to extend my heartiest congratulations for the vastly important work you did; also to the good women who made your homes and shared whatever of good or ill fortune was yours during that period, I would tender sincerest commendation. The Nation and the world owe you much, and forever they will be your debtors.

Robert P. Tristram Coffin

EXTENSION OF REMARKS

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 1, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a brief statement prepared by me, and three editorials regarding the death, on January 20, 1955, of Prof. Robert Peter Tristram Coffin, nationally renowned Pulitzer prize-winning poet, and one of the outstanding citizens of the State of Maine.

There being no objection, the statement and editorials were ordered to be printed in the RECORD, as follows:

ROBERT P. TRISTRAM COFFIN (Statement by Senator Payne)

In the death of Robert Peter Tristram Coffin, whose untimely end occurred as he was preparing to do what he loved best, unite man with nature, Maine and the world have lost a great and beloved poetguide. For, even though the Maine bard was intrinsically and deeply rooted to the

natural virtues of his State, his message was universal. So fired was Tristram Coffin with the urge to acquaint man with those Godgiven things that count, that he was compelled to take his message beyond the borders of his country.

Born in Brunswick, Maine, the site of Bowdoin College, Coffin was raised on a saltwater farm tilled by his father on Great Island, in Casco Bay. Following the illustrious footsteps of two earlier Bowdoin literary figures, Nathaniel Hawthorne and Henry W. Longfellow, Coffin was graduated from that institution summa cum laude in 1915. From there he went to Princeton where he gained his A. M., and thence to Oxford as Rhodes scholar from Maine.

It was at Oxford that Coffin began writing his poetry and almost at once he exhibited an uncanny deftness and feeling for many of those subjects on which Hawthorne and Longfellow had so magnificently dwelt. As was the case with Longfellow, who as a child found his imagination capturing the beauty and adventure of the sea from the wharves of Portland, and about which he later wrote, Coffin also found himself returning to his childhood and putting into poetry those early scenes which had become imprinted on his mind.

A Pulitzer prize winner in 1936 for his Strange Holiness, a volume concerning his favorite topics, Coffin lectured and taught at many of the leading colleges and universities in this country and abroad. Among these were Columbia, Johns Hopkins, University of New Hampshire, University of Cincinnati, Harvard University University of Indiana, University of Florida, and the University of Athens in Greece.

He was book review and poetry editor of Yankee at one time, taught for 5 years at the Corpus Christi Fine Arts Colony, inaugurated the George Elliston professorship of poetry at the University of Cincinnati, and was largely responsible, while a professor at Wells, for founding and carrying on the Oxford idea of honor work in English Literature.

As a poet, lecturer, essayist, and biographer, Professor Coffin possessed not only a brilliant academic mind but he possessed a practical viewpoint as well that enabled him to blend such rarity into his works. With an ingenious facility he combined them both to make himself a master spokesman in "the art of making people feel well about life."

The tall and portly poet, with an imposingly sweeping moustache, once described himself as looking like a pirate. Although there were no pirates in his lineage, he did come from a family of early seafarers. He was a descendant of the Coffins of Nantucket, a famous early American whaling family. One of his early books, Lost Paradise, was built on his memories of island life. Later he compiled a collection of poems which he called Salt Water Farm. A biography of his father, Portrait of an American, won him honorary life membership in the National Arts Club.

As a teacher and lecturer he inspired his audiences and filled their minds with a wonderful awe and appreciation of the Pine Tree State and all its natural attributes. Salty sea spray, wind-swept fields, towering pines, rock-ribbed coasts, and, yes, even blueberry pie. These he instilled in the minds of his listeners.

And even though the atomic age, at the time of his death, was fully on him, its impact seemed only to spur his prolific pen in the ways of Nature. Although he never labored the point, you knew that Robert Peter Tristram Coffin, the apostle of Nature, was praising God for endowing Maine with such an abundance of magnificence, and for making him its leading spokesman.

[From the New York Times of January 21,

ROBERT P. TRISTRAM COFFIN

Robert P. Tristram Coffin had two great loves—one can really call them passions—poetry and Maine. And out of Maine he made the poetry: the bitter tang of the sea, the pungency of fir and bayberry, "the cranberries touched red by frost." "This is my country," he wrote, and nowhere in his writings is his native State long absent, either the place or the people. He loved and celebrated, often uncritically, their unwavering independence, their yea-saying, their Emersonian self-reliance.

It must not be thought that Mr. Coffin was a local rustic bard, tuning his song to a homemade lyre. He was a Rhodes scholar, member of Phi Beta Kappa, author of more than 30 books, a Pulitzer prize winner in poetry, a teacher of long standing, both in his own State and elsewhere. But he turned back to Maine because he felt that life there could be made most meaningful. Urban civilization repelled him; it was axiomatic to him that country living was superior to city life, that a man could get down to things that count only when he was close to earth and to nature.

His poetry reflects this. It is full not only of New England ways and people but of common things, carefully observed. His verse was sometimes roughhewn, unplaned, or homespun, but he never cared. They were virtues he prized in life. And there will always be those who, forced to live in a civilization that is mechanized, streamlined, and brassy, will turn to his work for a glimpse of a life that is simpler, unfettered, and, as he would have said, more beautiful.

[From the Portland (Maine) Press Herald of January 22, 1955]

Maine Loses Another Distinguished Man

The face of Robert P. Tristram Coffin bespoke ruggedness, kindness, and intelligence. These characteristics of a memorable face typified the personality and career of Bowdoin's poet who died before his time in Portland Thursday night.

He can in truth be called Bowdoin's poet, because as the college's president, Dr. James S. Coles, said, "Bowdoin was always one of his loves and all of Bowdoin loved him." Bowdoin revered him for the mark he made beyond the borders of the town where he went to college and later returned to teach. He succeeded in the fiercely competitive field of poetry and literature, succeeding not through talent alone but through sincerity and an authentic devotion to his family and his country.

his country.

Like his famous predecessor and fellow alumnus, Henry W. Longfellow, Robert Coffin was a consumer of literature as well as a producer, a scholar and teacher as well as a poet. Many worldly honors were his, a Rhodes scholarship, a Pulitzer prize, a Fulright fellowship, and certainly these rewards brought him a deserved happiness, but the measure of the man is also shown by his pleasure in the quiet academic life of the Bowdoin campus.

He found great reward in opening the doors of good literature to young men who would survive him to teach, to write poetry, to inspire.

[From the Lewiston (Maine) Journal of January 21, 1955] BELOYED BOB COPPLY

The passing of Prof. Robert P. T. Coffin, of Bowdoin College, removes from Maine the State's most noted modern poet. His death also deprives his college of an unusual teacher and a writer of English textbooks.

"Bobby," as he always was referred to by his students, loved Maine deeply. In both poetry and prose he extolled the Maine life. His poems were concerned with the commonplaces of life; the little things the average individual overlooks or dismisses with a shrug.

His ability to extract from these the common denominators of living enabled him to paint graphic, lyrical word pictures of the universals of life—nature in its glory and wonder, man in his daily tasks and the home with its attendant joy and pathos.

In a real sense he was able to translate for his readers the beauties of nature and the rewarding virtues of such hard work as chopping wood or milking the cows. His imagery was ever vivid. His style was pure and readily understood even when the simile involved such complexities of nature as a spider spinning her web in the noonday sun.

Through the poetry and prose of Professor Coffin, readers the Nation over came to be familiar with the sait spray, the smell of fir and bayberry, the joys of blueberry picking and blueberry pie, to name a few typical subjects of his pen. And Maine people came to appreciate more fully the wonders of their State because of his writing.

State because of his writing.

It was this selfsame ability that won for him the Pulltzer prize in 1935 for his book Strange Hollness.

A prolific writer, he continued to the day of his death to produce compelling poetry founded upon his microscopic attention to the Maine scene.

Why Are We Afraid?

EXTENSION OF REMARKS

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 1, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record an interesting editorial commentary, broadcast on January 28 by the Honorable Nathan Straus, over radio station WMCA, in New York City. The title of his remarks was "Why Are We Afraid?" and in them he discusses the dual problems of immigration and security.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WHY ARE WE AFRAID?

(Editorial broadcast over station WMCA by Nathan Straus, Friday, January 28, 1955)

Much has been said and printed about the injustices of the McCarran-Walter Immigration Act and the injustices of the security-loyalty program of the Federal Government. Our present-day immigration law and our present a turn in the direction America is taking—a turn so abrupt as to constitute a reversal of traditional Americanism. WMCA believes that these changes can be understood only as twin aspects of a new fear, something akin to unreasonable terror and panic

America was once a land, free and open to entry by all seeking a new hope and a new home, a place where independence of mind and security of person were both respected. The McCarran-Walter Immigration Act of 1952 with its rigid entry provisions, with its system of quotas designed to keep out immigrants from southern Europe and Asia, has slammed the gates in the faces of many seeking to find new opportunities and new freedom within our borders. Simultaneous-

ly, our present loyalty-security program constitutes a repudiation of the most sacred of rights guaranteed in the first amendment—respect for the dignity of the individual.

It seems to us at WMCA that it is no accident that these two reversals of policy both have taken place within the last few years. For it is only within the last few years that we have grown timid and afraid.

What is this fear costing us? What are the penalties imposed on ourselves by these

new un-American policies?

Our retreat from our ideals has earned us the contempt of other peoples, as Dr. J. Robert Oppenheimer, eminent physicist, recently pointed out in an interview. We are embarrassed that we cannot hold scientific congresses in this country since foreign scientists find it so difficult to obtain entry visas. This is, in Dr. Oppenheimer's words: "A wholly fantastic and grotesque way to meet the threat of espionage. Just an enormous apparatus, surely not well designed for that," and, he added, "terrible for those of us who live with it."

Indeed, although Dr. Oppenheimer did not mention it, while we keep out eminent scientists, we let in former Nazis and Fascists,

If we had had a McCarran-Walter Act on the books when Prof. Albert Einstein came to this country, the father of nuclear fission probably would not have been admitted at Ellis Island. The same could be said of the late Dr. Fermi who built the first atomic pile.

It is true, too, of other European scientists who, during the black years of Hitler, found a welcome here and helped to unlock the secret of the atom. Without them, we would not have been the first Nation to produce an atomic bomb. Instead, Nazi Germany might well have been first. Let us not forget that the development of the atom bomb marked a turning point in the history of the world and that we are indebted, for that achievement, to scholars and scientists who found refuge here from discrimination and oppression abroad. How can we hope to lead the world in any branch of science, of medicine, of education if we wall ourselves in a prison of our own making?

Moreover, the present quota system which discriminates against Asians and against Africans has introduced a shameful racism into the law of the land that once was known

as the land of freedom.

Although there was much publicity when Congress passed a special refugee relief act which, theoretically, was to take care of a quarter of a million new immigrants, the act was so written as to be a mere plous gesture. Actually, only 75 people have been admitted under this relief act, passed a year and a half ago. The refugee relief act has fooled no one, least of all the unfortunate people who are still trying to escape from tyranny to freedom.

But this will be changed if Congress has the wisdom to enact the new immigration bill introduced by Senator Lehman—a bill which he will undoubtedly reintroduce at this session of Congress.

Senator Lehman's bill does away with obstructive redtape, does away with a color line, does away with the national origins business. It simply sets an annual limit of 250,000 immigrants. Up to that number, all who are worthy, qualified, and healthy would be welcome.

The passage of such a bill by Congress would throw sand in the propaganda mills of Moscow and Peiping. Then, the Communists could no longer say that the United States is the only large nation in the world having an immigration law which draws a color line. The enactment of the Lehman bill would restore American prestige throughout the world.

Once again, the Statue of Liberty would be, as Emma Lazarus called her, "mother of exiles," who "cries with silent lips: 'Give me your tired, your poor, your huddled masses yearning to breathe free'." So much for the McCarran-Walter Act, which is one aspect of our new timidity. The same kind of unreasonable fear is shown in present security-loyalty procedures. How can we hope to keep our self-respect, and that of other nations, when we figuratively burn at the stake Government servants who have performed no disloyal act?

Everyone knows the cases of a few individuals who, either by reason of prominence or by reason of contacts with newspapers or radio, have been able to bring their cases to public attention. But for every man or woman whose fate is publicized, there are hundreds of little people whose reputations are blemished and whose livelihoods are destroyed by unproven innuendos and reckless charges.

The administration responsible for this mess should get us out of it. How? By appointing a nonpartisan commission—a commission that would examine present security procedures and work out fair methods for screening Government employees and those in defense industries.

The issue is bigger than Congress, bigger than the executive departments, bigger than the army of more than 2 million Government servants. When there is a climate of distrust in the Government, when every employee fears his fellow worker, when long and loyal service is repaid by persecution, this way of doing things spreads throughout the whole country and we lose our strength as a free people.

strength as a free people.

The tragedy of the cold war against the dictatorships is that the democracles, in a spirit of panic, may adopt the very methods of communism itself. The day of victory for totalitarianism will be here when its spirit as well as its practices become accepted in our own country. Dictatorship will have conquered democracy if ever suspicion of neighbors, spying on friends, condemnation without trial, are recognized practices here as they are in the dictatorships, whether on the left or on the right, whether in Soviet Russia or in Fascist Spain. That would be their ultimate and complete triumph.

Congressional Committee Procedures

EXTENSION OF REMARKS

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 1, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Congress Sets Bad Example," published in the Devils Lake Journal of Devils Lake, N. Dak., of January 11, 1955. The editorial deals with the congressional committee procedures.

I call attention particularly to the third paragraph of the editorial:

Although congressional secrecy was high in 1953, it rose to new levels last year. A national columnist figures that in 1954 41 percent of all congressional committee sessions were conducted behind closed doors, as compared with 0.4 percent in the previous year.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

CONGRESS SETS BAD EXAMPLE

Congress is setting a bad example as one of the worst offenders in the continual fight for the right to know.

Congress, over the years, has become more and more secretive, conducting more and

more of its business behind closed doors, Neither the public nor the press are welcome at these closed hearings, only the poliwho have a habit of engaging in shameful shenanigans which occasionally come under the merciless glare of publicity.

Although congressional secrecy was high in 1953, it rose to new levels last year. A na-tional columnist figures that in 1954, 41 percent of all congressional committee sessions were conducted behind closed doors, as compared with four-tenths of 1 percent in the previous year.

The Senate, probably more impressed with its importance, was the greater offender in this regard during the last 2-year sessions than the House of Representatives, the respective percentages being 39 to 35. However, more of the House business was conducted in secret last year, 43 percent, than in the Senate, 39.

Joint committees of Congress held 61 per-

cent of their hearings in secret during the

2-year period.

Part of the reason for the increasing number of closed sessions may lie in the fact that they deal with questions involving the national security. But that hardly explains the secretiveness of some of the committees, which deal in little, if any, information that could be detrimental to the national wel-

For example, the most secretive of all major committees in 1954 was the Education and Labor group in the House, which could hardly be considered in a class with such groups as the Armed Services and Atomic Energy Committees. We expect them to discuss matters which should be kept from

the enemy.

But the American people have a right to raise a suspicious eyebrow when a group concerned with education and labor leads all the rest in the number of its closed hearings.

Mouthings about representative govern ment and democracy sound a bit strange from Congressmen who at the same time would deny their constituents the right to

know what is going on in Washington.

Allowances should be made for security information, of course, but any other activities of the government are the people's business. In a government of the people, by the people, and for the people it cannot be other-

Arkansas Way of Life Sells Egyptian on America

EXTENSION OF REMARKS OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Tuesday, February 1, 1955

Mr. FULBRIGHT. Mr. President. I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Arkansas Way of Life Sells Egyptian on America," written by W. H. Halliburton, and published in the Arkansas Gazette of January 30, 1955. The article relates to a very interesting Egyptian who has been studying in my State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ARKANSAS WAY OF LIFE SELLS EGYPTIAN ON AMERICA

(By W. H. Halliburton)

The Arkansas way of life has sold America to Yousif Saleh El Ansary, of Maghagha, who has been in the United States since August

studying American education.
Yousif, who teaches sociology and geography in a senior high school at Maghagha, came to the United States on a grant under the Fulbright exchange student program.

Officials at the Arkadelphia educational institutions where Yousif is observing methods—the public schools and Henderson State Teachers and Ouachita Baptist Colleges—say that he is obtaining maximum benefit of his experience. Yousif—the benefit of his experience. Egyptian name equivalent of Joseph-is interested particularly in phases of American education that can be readily applied to Egyptian educational problems,

Yousif speaks excellent English and it takes an attentive ear to catch any hint of an accent. The handsome Egyptian, who has learned quickly to wisecrack in the best American fashion, is a much sought-after speaker on the luncheon club circuit at Arkadelphia and neighboring towns.

He learned his first English words in the lower elementary grades in his home town and, with many contacts with Englishmen during his later childhood, attained considerable knowledge of the language.
Since August he has learned "the Ameri-

can language." He also speaks French.

With a thorough, working knowledge of Egyptian history, Yousif can speak as confidently of the Sphinx and the Pharaohs and the pyramids as the well-educated Arkansan does of Lexington and Bull Run and Harpers Ferry-although Yousif's knowledge of hisof his native land must cover a period of about 12,000 years-about 11,600 years than the student of American history.

Yousif said that his country accepted Christianity with friendliness during the first century of the Christian era but the movement suffered a numerical setback during the great persecutions ordered by Roman Emperors. The doctrines of Islam found fertile ground in that time, he said, and gains made then grew and now there are about 19 million Moslems, and about 3 million Christians.

Yousif, an agile 30-year-old who looks as if he might have been an all-American halfback, would like to return to the United States for his doctorate.

Since he came to the United States, he has spent 18 days at Washington, where he attended orientation lectures under the Department of Health, Education, and Welfare. He was assigned to the University of Buffalo (N. Y.) and since has studied school systems at Chicago, St. Louis, New Orleans, Little Rock, and Arkadelphia.

After a month at Arkadelphia he will return to Washington for an Evaluation Week, where he will make his final reports on what he has seen and done in this country. He will return to Egypt March 1.

Assassination of President Remón

EXTENSION OF REMARKS OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES Tuesday, February 1, 1955

Mr. MARTIN of Iowa. Mr. President, the assassination of José Antonio Remón C., President of the Republic of Panama, constituted the most sorrowful and shocking beginning of the New Year possible.

While in a public place adjacent to the city of Panama on the evening of January 2, 1955, and conversing with friends, he was riddled with bullets from a machinegun fired from the darkness. and his death soon followed. Two others present with President Remon were killed by the same fire. The direct assassin has confessed his guilt and is in custody, pending his formal prosecution. All the facts involved have not been developed as yet. The motives involved have not as yet been fully explored, but numerous arrests have been made, and the case is being developed.

President Remón had served his country faithfully and well, and his tragic death has been the occasion for universal mourning in our sister Republic. and the Canal Zone. The people of the United States, as well as others throughout the civilized world, also join in deploring this most lamentable affair.

President Remón was one of the strongest Presidents who has thus far served Panama during the 50 years of its independent history.

On January 4, 1955, the Star and Herald, the historic daily newspaper of the isthmus, published a strong and able editorial on the subject of President Remón's death, and I ask leave to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD. as follows:

HISTORY WILL GIVE REMÓN HIS DUE

Panamanians, majority of whom are patriots, bowed their heads in grief and not a a little shame yesterday as they followed the bier of their late President to his final resting place. José Antonio Remón C., youngest, most daring, and farsighted of any recent national president, had been struck down in cold blood by an assassin's bullets on the very eve of his greatest achievement since assuming the presidency approximately 2 years ago.

Within weeks Remón was to have signed an accord with the United States which is destined to correct certain features of Panama's treaty with Washington deemed unfair to the interests of the smaller country. This achievement, attained by the Remon administration during nearly 2 years of negotiations with Washington, was to have been the crowning glory of his regime. It is just one of many negotiations sponsored by Remón, all geared to improving economic, health, or cultural conditions for his fellow Panamanians. The document will be signed by duly authorized representatives of this nation.

But the assassin, possibly the paid slave of a Remon enemy (all great men have them and the motive of these enemies is always envy, hate for a man who has made good and won the hearts of his countrymen) has deprived Remon of that moment of glory when his fellow Panamanians would have rendered homage to him en masse. Yesterday they rendered homage, thousands strong, but tearfully, as mourners following their President to his tomb.

That enemy of Remon-and hence enemy of the Panamanian people—has disgraced momentarily the name of his homeland. Never has assassination dimmed the honor of Panamanian patriotism. Wars have been fought through the centuries-always for the attainment of liberty and justice to all citizens, always in the name of democracy. This was no war. It was a base and cowardly

Chichi Remón did not live to see the full results of his labors, but great as were his efforts in behalf of his fellow countrymen, it may be that the tragedy of his death will

serve to place him still higher in the hearts of his countrymen.

Assuredly he will never be forgotten in Panamanian history; and history being what it is, perhaps his assassination and the horror of the crime will wreathe his memory in a more effulgent light than if he had died normally after his term of office ended.

This, of course, is small solace for those who mourn his loss. But in the years to come, when Chichi Remón is revered as the martyr of his own success in aiding his people, when his picture and undoubtedly his statue are glorified by generations of Panamanians yet to come, continuing generations will call him blessed.

The jolly, sincerely friendly, and democratic executive who seemed to have no enemies will have attained by the tragedy of his death a permanent glory in Panamanian history not shared by even the founding fathers of this young nation.

The War Decision: A Call for Wisdom

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES Tuesday, February 1, 1955

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Topeka State Journal under date of Tuesday, January 25.

This editorial urges that we proceed with extreme caution in dealing with this very explosive issue. With that view I am in thorough accord.

In my opinion, the time had come for this Nation to take a very definite stand in the Formosa situation, and when we did, we realized we were taking some very definite risks.

Now that Congress has acted, it is most important that we make every effort to avoid open hostilities, but at the same time keep firm in the position we have

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WAR DECISION: A CALL FOR WISDOM

Everyone can agree on at least one phase of the Presidential request for authority to use armed force to defend Formosa and the Pescadores, "if necessary."

That phase would be President Eisen-

hower's decision to seek the approval of Congress before committing the United States irreversibly to a policy that he apparently now believes is necessary—the drawing of a line which if crossed by Red China would automatically bring American intercession.

To this extent Eisenhower's calculated risk of a Formosan war differs from his predecessor Truman's uncalculated plunge into a Korean war. The President at least defers to the constitutional power of Congress to declare war, although indicating that his constitutional power as Commander in Chief of the Armed Forces would be employed in emergency meanwhile, if necessary.

But there will be many differences of opinion as to the wisdom of taking such a risk, calculated or not. The most careful and honest calculations sometimes wind up with the wrong answer. And where risk of war is involved, another party is calculating too, with his own set of ifs and whens. Despite the dramatic quality of the President's message to Congress, Monday, it is hoped that the congressional decision will be made coolly, and without haste. If time is pressing, so is the destiny of millions of people pressing upon the human conscience. Washington often grows excited and assumes the people are overwhelmingly of one mind or another. In this case it cannot at all be assumed that the American people, the men and women of the towns and farms, overwhelmingly want to risk an intercontinental war the end of which no one could foretell.

We all need guidance. We all need clear vision. We all need to hope that one phase of the President's message will emerge as uppermost-his request to the United Nations "for appropriate action under its charter, for the purpose of ending present hos-tilities" in the China coast area.

It is not for the United States to act alone, if indeed it is necessary for the United States to act warlike at all. Let Congress call upon the United Nations to take the It is never too late to negotiate. is as the British Ambassador, Sir Roger Makins, said early this month, "Negotiation, you know, is not the same thing as appeasement, or peace at any price."

A fate-tempting decision looms in which our officials will need all their wisdom. We have everything to gain or everything to lose.

The School-Lunch Program

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Tuesday, February 1, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated January 24, 1955, addressed to me by Mrs. Richard Wachter, of Hastings, Minn., on the subject of the school-lunch program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HASTINGS, MINN., January 24, 1955. DEAR SENATOR THYE: Since you are a busy man now I will get to the point. I'd like to put in my 5 cents worth on the schoollunch program which there is controversy over. This is a subject quite close to me because, as a student in high school, the superintendent asked me to be in charge

of lunchroom activities.

I know, Mr. THYE, that some of these kids, right here in Dakota County, never saw such good meals at home at best. May I add, the program wasn't nearly as well set up and complete 12 years ago as it is now, either. I hope the living conditions have changed for the better for some of those poor families in the last 12 years, too.

For 20 cents a meal the kiddles get:

1. A hot main dish, a protein included such as meat, egg, or cheese.

2. Bread.

3. Dessert, either fresh fruit, sauce, as a treat, ice cream, a good dairy product. 4. One-half pint carton of whole milk.

A well balanced and wholesome meal, don't you agree? And only 20 cents.

I know you realize that as a young farm mother, and others like me, this is an important discussion on the part of our Gov-ernment, as it is my job to fed my family

well and its important, too, to our men since it is helping to move the surplus everyone knows we have. What better way to use it than for our most prized possessions, the men and women of tomorrow.

My boys have told me that the one-half pint of milk is just a teaser. At a nominal fee it could be increased to 1 pint and use up more surplus and help out those who like milk.

I do hope you can help us keep a good program alive instead of letting it go out the window.
Sincerely,
ALVA RENELIUS WACHTER
Diehard Wachter.

The American Merchant Marine

EXTENSION OF REMARKS

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Tuesday, February 1, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the New York Times for January 31, 1955, which concerns a re-cent American Federation of Labor meeting at Miami Beach, Fla. It is especially encouraging to note that Mr. James A. Brownlow, president of the A. F. of L. metal trades department, has applauded President Eisenhower's program to strengthen the American merchant marine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENT HAILED ON AID TO SHIPPING-A. F. OF L. LEADER SAYS POLICY RECOGNIZES NA-TION'S NEEDS-URGES NEW SUBSIDIES

MIAMI BEACH, January 30.—An American Federation of Labor leader praised President Eisenhower today for his policy toward American shipping.

James A. Brownlow, president of the A. F. of L. metal trades department, told the department's executive council that the President had demonstrated a "comprehensive recognition of the Nation's need for an expanded shipbuilding program and a larger merchant marine."

He called on Congress to vote new subsidies for the shipping and shipbuilding in-dustries. He contended that the country's strength was being undermined by the lack of adequate financial support in these fields.

DECRIES USE OF FUNDS ABROAD

He asserted that labor unions were especially exercised over the building of ships in foreign yards with money supplied by the United States. He directed particular attention to the allocation of \$7,500,000 by the Foreign Operations Administration for construction of a destroyer escort in a shipyard in northern Italy.

A majority of the yard's workers are de-

clared communists.

In support of his plea for increased Government aid to United States shipbuilders, Mr. Brownlow said that the United States now stood tenth in ship construction, with only 2 percent of the world total. Great Britain has 38 percent, Sweden 13.4 percent and Germany 12.2 percent, he added.

He acknowledged that the United States' share would rise to 5 percent if the ship program authorized by the last Congress was carried out, but asserted that even this gain would leave this country fifth or sixth in the world listing.

FIGURES ON FOREIGN WORK

He declared that United States companies, most of them in the oil industry, were building 57 ships, aggregating 900,000 gross tons, in foreign yards. These companies, he added, are building only 4 ships, aggregating 90,000 tons, in this country.

By building ships abroad and operating them under foreign registry, he said, American employers are tearing down wage standards and fostering unemployment in the domestic shipping and shipbuilding industries. He ascribed as a factor low foreign wages. In British shipyards labor costs are roughly 28 percent below those prevailing here, he estimated.

He asserted that only 60,000 had jobs in domestic yards building ocean-going vessels and cited the wartime peak as 1,300,000.

Answer to the Atom

EXTENSION OF REMARKS

HON, JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, February 1, 1955

Mr. O'MAHONEY. Mr. President, in the Sunday, January 9, issue of the magazine This Week, a Sunday magazine published by numerous newspapers throughout the United States, including the Washington Star, there appeared a very brief article entitled "Answer to the Atom," written by Nelson Trusler Johnson. Mr. Johnson was formerly Minister to China. He was a career employee of the Department of State, a man of great ability, fine tact, and high spiritual concepts. I think in writing this article, which he must have done only a few weeks before his death, he left a heritage to his family, to his friends, and to his country which ought to be preserved in the RECORD. I therefore ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANSWER TO THE ATOM

(By Nelson Trusler Johnson)

"For thine is the kingdom, and the power, and the glory—"

These words seem to me to be fitting words to live by in this age of the atom. To me, they establish beyond question our relationship to God.

My lawyer father used to say to me that God placed us here as trustees of His kingdom. If we accept that concept, there is no need to live in terror of the energy which we, in the performance of our trust, have released from the atom.

Man has always had within him the power to destroy himself. Instead he continues to live in God's kingdom, by His power and to His glory.

Fear doubtless first selzed our primitive ancestors when one of them for the first time produced fire, handling familiarly and harmlessly the terribly destructive force which had always held man in deadly fear and awe. Man, master of fire, built thereon the great civilization which we see all about us. The energies released by atomic fission and fusion are but the latest of the many talents with which God has trusted us. Despite obvious dangers, we dare not wrap these talents in a napkin and bury them in the ground in fear of ourselves or God. If God has trusted us, can we not then trust ourselves?

With the power that God has given us we are even now taking the first steps forward in the building of a new world to replace the old. God has opened for us and for our children the bright prospect of a new and infinitely freer world. New horizons beckon us on all sides.

Let us go forward then, in God's kingdom, trusting Him as He has trusted us and unafraid.

Fiftieth Anniversary of the Forest Service

EXTENSION OF REMARKS

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 1, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Record an editorial from the Washington Post and Times Herald of February 1, 1955, congratulating the Forest Service on the occasion of its 50th anniversary.

I know that the whole Nation will join in wishing the United States Forest Service even greater success for its next 50 years. And I hope we shall heed the warnings expressed in the Post's editorial, that "while there is now general agreement on the purposes of the national forests, threats to their integrity remain in the form of efforts to lower the restrictions on one or another form of private exploitation," and that continued vigilance will be necessary to protect the high purposes of the Forest Service.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIFTY FOR THE FOREST SERVICE

Fifty years ago today the Forest Service was formally established as a division of the Department of Agriculture. The ensuing half century has brought rich dividends for the foresight of President Theodore Roosevelt and Gifford Pinchot, the first Chief Forester, who tied togethed the disparate governmental activities in this essential field of conservation. Americans have become increasingly conscious of their priceless stake in managed forests to provide timber, watershed and wildlife protection, grazing, and recreation.

The Forest Service has attracted a corps of unusually dedicated men in this task of maintaining a wise balance so as to preserve forest resources for future generations. Growth and cutting practices recommended by the Forest Service are now generally accepted in the lumbering industry (the worst violations of good practice are found on small woodlots). The public has been alerted increasingly to the importance of fire prevention. One measure of the Forest Service's success in developing these resources may be seen in the fact that receipts for use of the national forests in fiscal 1954 exceeded \$67 million, as contrasted with \$75,000 in 1905. The Forest Service also has followed a wise policy of setting aside certain prime-

val tracts as perpetual wilderness areas. One of the most unique of these is in the Superior National Forest of northern Minnesota, adjoining Canada's Quetico Provincial Park. The Quetico-Superior area provides some 5 million acres of magnificent canoe country, much of it actually roadless.

While there is now general agreement on the purposes of the national forests, threats to their integrity remain in the form of efforts to lower the restrictions on one or another form of private exploitation. The Department of Agriculture, for example, has been persuaded to give its endorsement to bills which would give holders of grazing permits what would amount virtually to property rights in the forests and would reduce the authority of the Secretary of Agriculture. Fears have not been assuaged by the appointment of former Representative Representative Wesley D'Ewart, of Montana, sponsor of one of the most extreme of the bills, as a special assistant to Secretary Benson, although there is reason to hope that Mr. D'Ewart, who has taken a constructive interest in other conservation matters, may moderate his views on this one. In any event, if the next 50 years of the Forest Service are to be as meaningful as the last, continued vigilance will be necessary to see that its high purposes are not undercut in practice.

The Military Budget

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1955

Mr. TEAGUE of Texas. Mr. Speaker, the House will soon be called upon to consider the budget for the military forces of this country. We have just debated and adopted a resolution with reference to the stand this country will take on Formosa. Certainly no issue should command the attention or warrant the prolonged thought of each and everyone of us as the appropriations for our Defense Establishment.

Mr. Hanson W. Baldwin, military analyst for the New York Times has expressed himself well in the following article which I desire to insert in the Record at this point:

THE MILITARY BUDGET—AN ASSESSMENT OF PRESIDENT'S PROPOSALS AND PROBLEMS POSED FOR SURFACE FORCES

(By Hanson W. Baldwin)

The President's military budget for the year starting next July 1 poses major and dangerous service problems for the future.

The budget estimates for the 1956 fiscal year reflect a projected slight drop in actual expenditures for the Department of Defense, but an approximate \$2,200,000,000 increase in obligational authority, or new appropriations, as compared with the current (1955) fiscal year.

This request for an increasse in new appropriations coincides with a planned decrease in military personnel from an approximate 3.2 million now to about 2.8 million by June 30, 1956.

Despite the maintenance of actual defense spending during the next fiscal year at approximately the current year's level, and despite the request for increased obligational authority, the Army will be reduced from approximately 24 to 20 divisions, including training divisions.

The number of Navy ships in commission will be reduced and most ships will be operated with reduced-strength crews. The Marines will withdraw 1½ divisions from the Far East, and the services' airbase and public works construction program will be stretched out or slowed down.

FUTURE PITFALLS NOTED

The 1956 defense budget, interpreted behind the lines of small type and columns of statistics, is full of pitfalls for tomorrow. Indeed, there are so many anomalies in it that the squeeze that already exists in the case of the Army, the Marine Corps and, to a lesser extent, the Navy, may become more and more stringent in future years.

This squeeze and these anomalies are reflected in the 1956 budget estimates in

many ways.

The Air Force is the only one of the three services that, it is estimated, will increase its budget both in authorizations and in actual expenditures during the 1956 fiscal year. The new authorization requested will amount by almost \$3 billion to a projected obligational authority of \$14,536,000,000.

During the same year the Army's requests for new funds will decrease by about \$335 million, and the Navy's (including the Marine Corps) by almost \$1 billion. Both the Army and the Navy actually will spend less in 1956 than in 1955.

Thus, despite a sharp reduction in the number of men in uniform, personnel costs—which amount to more than \$10 billion of the total \$32,898,960,000 Department of Defense funds in obligational authority—will actually go up, due to increased pay and other service benefits.

At the same time, despite administrative and management economies and some sharp cuts in planned bases and supporting facilities, operational and maintenance costs will also increase due to the expense of operating modern equipment.

The President's new Reserve program, which, if enacted, will cost more money for the Reserves, is another element of the developing squeeze on the Regulars of the Army, Navy, and Marine Corps.

ELEMENTS OF THE SQUEEZE

The major elements of the squeeze, in addition to those already cited, are:

The pressure for a balanced budget and for maintaining defense expenditures at about the current level,

the current level.

The constantly increasing costs of air power (and missile power).

The increased costs of funds devoted to the defense (as compared to the offense).

If these three pressures are maintained and the squeeze is further strengthened by increased personnel and operating costs and Reserve program costs, it will be easy to see that the currently projected cuts in the Army, Marine Corps, and Navy must be followed by other sharp additional cuts. For the Air Force slice of the defense budget is constantly increasing, and must increase, if the present program for an Air Force of 137 modern wings is to be carried out.

The wing, consisting of 30 to 75 aircraft and pilots, crews, and ground supporting elements, is a standard yardstick of airpower, just as the division is a standard yardstick

of land strength.

The Air Force had about 115 wings in June 1954, and has some 118 now. It will have an estimated 121 in June 1955; 130 in June 1956; and 137—its goal—in June 1957. Its request for new funds has increased about \$3 billion next year (as compared to this year, with a scheduled increase of 9 wings.)

Final operating, maintenance, and replacement costs of the 137-wing program have not been authoritatively estimated recently. However, some observers believe the Air Force will need some \$18 to \$20 billions

annually to maintain, operate, and provide bases and facilities for the 137-wing program. Its requests for the next fiscal year are \$3.5 to \$5.5 billions below these figures.

There is another element. The increase in total defense obligational authority requested next year may well mean an increase in actual defense expenditures in future years, unless something "gives."

What must clearly give, if the present emphasis in our defense policies continues and a balanced budget dominates, are the Army, the Marine Corps, and the Navy.

Army, the Marine Corps, and the Navy.
What tends to make this prospect even
more serious is the fact that present policies
create another "squeeze" by concentrating
a higher and higher percentage of diminished Army and Navy strength on purely
defensive tasks—radar picket ships, Nike
guided missile antiaircraft battalions, etc.

The implications of next year's budget requests to the future of our armed services should insure a searching review by Congress.

Underpaid Officials

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following editorial which appeared in the New York Times of February 1, 1955:

UNDERPAID OFFICIALS

The amazing disparity between the salaries of Federal and New York judges has been referred to on this page in recent weeks; and we are glad to see Attorney General Brownell advert to it once again in urging an increase in the compensation of both United States judges and Congressmen.

Judges of the United States district court now receive \$15,000, exactly half the salary in this area of judges of the somewhat comparable New York State Supreme Court. Associate Justices of the United States Supreme Court receive \$25,000, while judges of the highest New York tribunal, the court of tappeals, are paid a total of \$37,500 each. The point isn't that New York judges are overpaid, but that Federal judges are underpaid. The rise in the cost of living has of course had the effect of reducing their income even below the levels at which it had been set. It has been calculated that the purchasing power in 1939 dollars of a Federal district judge's salary after taxes amounts to less than \$6,500.

Members of Congress receive a total of \$15,000 a year. The commission that investigated these matters correctly observed a year ago that "Members of Congress and the judiciary have responsibilities as great as those of top executives in business or industry or greater." Yet the top officials of 100 America's largest corporations average over \$100,000 a year in salary. No one is recommending anything like that for Congressmen, but surely the proposed \$27,500 is reasonable compensation for so onerous a job. The difficulty in granting adequate pay to Congressmen comes from Congressmen, who fear the political effects of giving themselves even an entirely justified increase. Senator Dirksen, of Illinois, with whom we do not often find ourselves in agreement, has urged on his fellow Members an end to their 'timidity" on this matter; and we think he is right.

Increased salaries obviously will not guarantee better judges or better Congressmen,

but public freedom from economic pressures will prevent some good public servants from leaving their jobs for private life and will indicate to all of them that their Government is not really trying to get something out of them for nothing.

The Fabulous Future

EXTENSION OF REMARKS

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 1, 1955

Mr. CURTIS. Mr. President, one of our prominent industrial leaders has given us a fabulous look into a fabulous future. What will the United States be like in 1980? What should it be like? Brigadier General Sarnoff, chairman of the board of the Radio Corporation of America, has given us an exciting prediction in an article in Fortune magazine. And as Fortune says:

The name of Sarnoff has become, if not synonymous, at least indelibly linked with electronic progress.

I am informed by the Public Printer that the article is estimated to make 3 pages of the Record, at a cost of \$240.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FABULOUS FUTURE

(By David Sarnoff, chairman, Radio Corp. of America)

What is likely to be the special character of the quarter century ahead of us? Personally, I am convinced that it will be a period of drastic decision. It will be filled with events that, taken together, may well determine the direction and even the duration of man's destiny on this planet.

That an avalanche of advances will be forthcoming in the sphere of science and technology is not a matter of surmise. The new types of energy releasesd by the atom and controlled by the electron have already proved highly effective. The features of vital technical growths can be discerned in numberless embryos in the womb of science: our amazing network of research laboratories.

But these features will be matched by even more significant developments in the political, social, and moral spheres. Indeed, the pressures of technical changes will themselves intensify problems of adjustment, forcing us to seek solutions in line with our ideals of a good society.

Long-stagnant races and continents have awakened to an awareness of their rights, needs, and latent strengths. Long-accepted ways of life and codes of conduct are being menaced by a new barbarism that already dominates a third of the human race. A hunger for faith and salvation, for age-old values beyond the material and the temporal, gnaws at the mind and spirit of man.

This means that the coming quartercentury will be crowded with crises and climaxes. Forces that have been gathering impetus since the turn of the century will find vigorous and perhaps explosive expression. The tensions built up in our own generation are too great to be indefinitely contained. We will be confronted with great challenges that will call for dramatic commitments on our part.

If the destinies were already written in the stars and beyond mortal control, there would be little point in talking about them. But I am convinced, as are most people, that our destinies are, in large part, subject to our own volition. It is understandable that at times we have been frightened and bewildered. But we do have a choice; we can grovel in terror before the mighty forces of science and historic adjustment, even as savage man groveled before lightning and other natural phenomena. Or we can face those forces with courage, determination, and calm intelligence. We do have such a choice because we are not the passive objects but the active manipulators of those forces.

I. THE TECHNOLOGICAL AGE

For those of us who view history as a fascinating spectacle, the prospect of the coming quarter century is exhilarating. It is as if we were privileged not only to see but to participate in centuries of development telescoped into a brief span. Of one thing we can be sure: the segment of time between now and 1980 will not be dull. It will make heavy demands upon courage and character, upon wisdom and good will. And I have confidence that we can meet those demands, provided we approach our tasks not in fear but with faith in ourselves and in the strength of our freedoms.

The dominant physical fact in the next quarter century will be technological prog-ress unprecedented in kind and in volume. In relation to the total history of the human race, the last hundred years have been no more than a split second. Yet they have compassed more technological achievement than the millennia that preceded. The harnessing of electricity to the purposes of light, power, and communication; the demonstration of the germ theory of disease; discovery and application of the electron; invention of radio and television; development of anesthetics; the exploration of genes and mutations; invention of motor vehicles; evolution of the assembly line and other mass-production techniques; proliferation of organic chemistry; the splitting of the atom; development of antibiotics; the vast expansion of the known and measured universe of stars and galaxies-these are only the highlights of recent progress. On the day when the first issue of Fortune was published, televi-sion, nuclear energy, jet planes, penicillin, nylon and dacron fabrics were unknown or incubating in laboratories.

The quantity of the new powers and products and processes at man's disposal is important; but even more important is the increasing speed at which these things have come. It is not a case of continued increase but of continued acceleration of increase. We need only project the curve into the future to realize that we are merely on the threshold of the technological age.

A recent statement by the General Electric Co., referring especially to electronic and atomic energy, declared: "All these fields * * * are so promising that we expect to produce more in the next 10 years than in all the previous 75 years of our existence." The figures may vary, but the same pattern of rapid growth holds true for the Radio Corporation of America and for American enterprise as a whole.

Three anniversary presents

There is no longer margin for doubt that whatever the mind of man visualizes, the genius of modern science can turn into functioning fact. I have seen this demonstrated again and again. A current example will show what I mean.

In 1951, on the occasion of the 45th anniversary of my association with radio, I suggested to the scientists of the RCA research laboratory in Princeton, N. J., which bears my name, that they invent three presents for me by the time the 50th anniversary came around in 1956. I asked, first, for a magnetic tape recorder of television programs; second, an all-electronic air conditioner; and third, a true amplifier of light.

The scientists smiled. "He certainly can ask for the impossible," one of them later remarked. But the thrilling part of the story is that before half the 5-year period had passed, the scientists had actually produced one of the "presents," the magnetic tape recorder of black-and-white and color television programs; and they had made such substantial progress on the other two that their realization by 1956 now appears most promising.

We are now engaged in the development of a new form of light—electronic light, which is the keystone of the light amplifier under development in ROA laboratories. Already I have seen this light amplification, experimentally, in ratios of more than 20 times the original; and further progress is certain to be made. When that number 20 reaches 100, we shall have a practical amplifier of light—produced directly within a thin layer of electronically active material.

The potentials for practical use of this development will surely be greater than we can now foresee. This can safely be said of almost any new invention. When Faraday first produced an electric current, neither he nor his contemporaries could visualize the amazing future he had unlocked. Neither did Marconi dream of broadcasting and television when he succeeded in sending the first faint wireless telegraph signal through the air.

Electronic light will eventually provide startling substitutes for present types of illumination and thus will change the very appearance of our homes, stores, factories, streets, and cities. Electric light will have been freed from the prison of a vacuum bulb. It will obsolete the television tube of today, while bringing bigger and sharper pictures in color as well as in black and white. Light amplification is expected to lead to devices that will make not only photography but vision possible in the darkness, and to enlarge immensely our visual penetration of outer astronomic space. It may well reduce and in time cancel out one of the perils of night driving by taking the glare out of light.

I have enlarged on the implications of a single research project in a single laboratory in order to suggest the fabulous dimensions of the teeming novelties now gestating in hundreds of laboratories, large and small.

"Atoms for peace"

The released energies of the atom, though born in war and baptized in destruction, are already being funneled to man's constructive purposes. Because nuclear power is so recent and impressive, we have not yet digested it psychologically as we have earlier miracles. The real mission of science should be to create, not destroy. While the first atomic propulsion has been assigned to a submarine, it can be taken for granted that before 1980 ships, aircraft, locomotives, and even automobiles will be atomically fueled.

The era of nuclear power for peaceable civilian purposes is already at hand. It dawned in America a few months ago when President Eisenhower waved a neutron wand in Denver, Colo., that broke ground at Shippingport, Pa., for the first commercial plant powered by atomic energy. The first nuclear-power plant will surely rank with the first steam engine, the first electric motor, Morse's first telegraph message, Edison's first electric lamp, and Marconi's first wireless message as milestones of man's material progress.

Just a year ago the Radio Corporation of America publicly demonstrated an atomic battery that gives promise of many useful services. Only a minute amount of electric current was generated: barely enough to send the short telegraphic message I had the privilege of tapping out—"Atoms for peace." But the potentials of that event are enormous. This was no longer the use of atomic energy to make steam to make electric cur-

rent—it was the direct conversion of nuclear energy into electricity.

I do not hesitate to forecast that atomic batteries will be commonplace long before 1980. The waste products from the fast-multiplying commercial reactors will make available abundant captive radiation for direct conversion into electricity. Small atomic generators, installed in homes and industrial plants, will provide power for years and ultimately for a lifetime without recharging. Coal, oil, and gas will be increasingly displaced as fuel by nuclear energy, but will in turn be devoted to other uses by new developments of chemistry and engineering.

Things to come

Other sources of energy—the sun, the tides, and the winds—are certain to be developed beyond present expectations. New materials by the score—metals, fabrics, woods, glass—will be added to the hundreds of synthetics and plastics already available through our capacity to rearrange the structure of matter.

Fresh water, purified from the briny seas, will enable us to make deserts flourish and to open to human habitation immense surfaces of the globe now sterile or inaccessible. Tidelands and the ocean floors beyond, already being tapped for oil, will be increasingly mined for other materials and harvested for chemical and food resources.

Even guided missiles, transcontinental and transoceanic, will find vital civilian uses. They will transport mail and other types of freight over great distances, guided into terminal hangars within minutes after their takeoff. Pilotiess aircraft for passengers, too, are within the realm of the possible. Great fleets of personal helicopters and other planes will make the principal airways almost as busy as the highways on the ground; and electronic controls will insure safe travel in both dimensions.

Medicine can look to incalculable aid from science and technology. Already diagnosis, prognosis, therapy, and surgery have begun to make important uses of nuclear radiation and electronic devices: The electron microscope, for instance. Such uses will expand enormously by 1980. Similarly, techniques for learning faster and better will be opened up by color television, improved means of communication, electronic magnification, and other novel processes.

The era of automation is upon us. Electronic machines will not only compute, remember, and file information—tasks they have already taken on for business offices, banks, factories, and research laboratories—but they will perform more and more routine jobs now handled by people. Production especially will lean ever more heavily on electronics in the immediate years ahead. Automatic equipment will take much of the drudgery and spoilage out of manufacture. It will do the jobs of selecting, testing, checking, and handling raw materials and finished products. The goods thus produced will then be stored and inventoried electronically.

Some of the innovations will call for a change in products or methods of operation in some of today's business organizations. However, the whole history of our American economy proves that such changes spell progress; eventually many new jobs will be created for every job canceled out. The contrast between the millions employed by the automotive and related industries and the employment provided by the blacksmith shops they displaced is an overworked example, but it tells the basic story.

The temptation, at least for someone, who, like myself, has been in touch all his life with such spiraling wonders, is to continue the inventory of what is coming. The very fact that electronics and atomics are unfolding simultaneously is a portent of the amazing changes ahead. Never before have two such mighty forces been unleashed at the same

time. Together they are certain to dwarf the industrial revolutions brought about by steam and electricity. There is no element of material progress we know today—in the biological and chemical fields, in atomics and electronics, in engineering and physics that will not seem, from the vantage point of 1980, a fumbling prelude.

New grace to life

We have a right to make the same kind of projection for social progress, though with far less assurance. Let us, therefore, provide such assurance by setting our sights high. The material triumphs now at our disposal and the greater ones to come must be translated into a happier life for mankind everywhere. We must give a clear right-of-way to the things that are good, beautiful, and enriching.

High among our goals must be greater mutual tolerance among races and nationalities. We cannot wholly weed out the primeval prejudices and fears in the jungle undergrowth of the human mind. But we can remove some and neutralize the effects of the

The reduction of crime—by individuals and by nations—also deserves priority in our hopes and plans. The ever more plentiful supplies of food and goods, higher standards of living and education and health—these should make the containment of violence easier during the coming 25 years.

Automation and other aspects of scientific advance will, as a matter of course, put a premium on brains rather than brawn. Even now, in America, illiteracy has become more of a handicap in life than most physical handicaps. The demands for mental competence will be vastly enlarged. One hopes that by 1980 a decent education (though I recognize that no two of us will agree on definitions here) will have become as indispensable as a decent suit of clothes.

Leisure, of course, will be greatly extended. A much shorter workweek will no doubt prevail in 1980, and another 10 or 15 years will have been added to the average life span. Cancer, polio, tuberculosis, and an array of other scourges will have been consigned to the same limbo as cholera, typhus, and other great killers of the past.

Not labor but leisure will be the great problem in the decades ahead. That prospect should be accepted as a God-given opportunity to add dimensions of enjoyment and grace to life. We have reason to foresee a fantastic rise in demand for and appreciation of the better, and perhaps the best, in art, music, and letters.

In small things and large, in greater conveniences and a greater recognition of our common humanity, the quarter-century awaits us in a mood of welcome. We must resolve to fulfill its thrilling promises. Should we fail, the fault will not be with science and technology but with ourselves.

II. PROGRESS, A CHAIN REACTION

The most futile intellectual exercise is the discussion as to whether an industrialized society is "desirable." We might as reasonably argue whether the tides and the seasons are desirable. The genie of science could not be stuffed back into the bottle even if we so wished.

In theory, backward countries might still choose the simple life, but in practice they are clamoring for the devices and living standards of the West. The strongest appeal of Communist propaganda to retarded populations is in its promises of power dams, factories, mechanized farming, and the like. Much of the revolutionary leadership in Asia and Africa is provided by natives who have been educated in the West and have tasted its technological comforts and advantages.

Disparagement of the age of science and mass production, a nostalgia for the supposedly idyllic prescientific past, are familiar themes in 20th-century literature. Only a

few months ago a book titled Tomorrow Is Already Here, by Robert Jungk, warned that Americans are hell-bent for a soul-less, mechanized tomorrow, populated by dehumanized cogs in runaway machines.

I doubt whether those who denounce our world would, in the showdown, permanently exchange the material amenities of England, France, or America for those of darkest Africa. At the very least, I assume, they might spare the typewriters and printing presses with which they make themselves heard.

Nostalgia for what?

As a cure for hatred of science, I recommend a protracted visit to some really primitive region of open sewers and open sores, cruel rates of infant mortality and decrepit old age at 40. Nostalgia for the simple past romanticizes drudgery, disease, and ignorance. It glosses over the poverty, social injustice, and feudal despotism that usually go along with a primitive economy.

The claim that there is an inherent conflict between science and our immortal souls—that science is the natural enemy of the soul—does not stand up under examination. The man in an airplane is not necessarily less devoted to truth, justice, and charity than his forefathers in oxcarts. Virtue does not necessarily go with primitive plumbing, and human dignity can be nurtured in a skyscraper no less than in a log cabin.

True, the marvels of technology have come upon us so suddenly that they have created problems of adjustment. Age-old inertias have been disturbed. But on the whole the adjustment has been remarkably good; the the human problems caused by applied science are serious, but no more so than those it has solved. The crux of the matter is not in evils inseparable from technology but in the time lag in the assimilation of what technology has to offer.

Marx and Prometheus

The industrial revolution touched off by the steam engine brought trouble in its train; vile slums, child labor, brutal work hours and work conditions. But the time lag was bridged, slowly and surely. As capitalism matured, its fruits were spread to more and more people in goods, health, social security, and a new dignity of labor. Huge middle classes, not foreseen by Karl Marx, have arisen. The distance between rich and poor, as measured by living standards, has speadily shrunk. The scientists who sparked the industrial revolution can rest in peace, their consciences assuaged.

The same, I believe, holds true of inventiveness in our own time, including the splitting of the atom. Every achievement on the physical plane packs danger as well as opportunity. It is the ancient dilemma posed when Prometheus gave man the fire that both warms and consumes. The inventive surge that brought us motorcars also made possible Panzer divisions. Pyromaniacs, however, cannot be blamed upon Prometheus, nor saturation bombing upon the Wright brothers.

It is well to recall that the 20th century has also won victories, great and small, on the political, cultural, and moral levels. They are in evidence all around us, saturating our existence. They are spelled out in universal suffrage, civil freedoms, more widespread education, easier access to and greater appreciation of the products of genius in the arts; in society's growing acceptance of responsibility for the old, the widowed, the orphaned, and the helpless.

Technology and the spirit

In my own lifetime I have seen the liberation of multitudes from overwork, exploitation, and ravaging diseases to which they had seemed forever condemned when I was a boy. It is not a worse but an immeasurably better society that we live in.

The same decades that witnessed the control of the electron and the birth of nuclear energy also saw a substantial improvement in race and class relations and the enactment of vital social legislation. Along with the assembly line and automation has also come the rise of trade unions and a more equitable sharing of the products of labor and management.

America, the classic land of technology, enjoys the largest freedom from destitution, ignorance, and disease, along with political rights and social improvements unique in history. Its average citizen is not the common man but the uncommon man, for he has an amplitude of well-being and opportunity that prescientific societies reserved for a small and arrogant elite. Moreover—and this needs emphasis—the most magnificent flowering of science and technology has always occurred in countries where liberty prevailed. The close affinity between freedom and material abundance should give pause to those who derogate material progress.

"The figures show," Dr. Arthur H. Compton said recently, "that where technology has been used for the service of man, there is in broad total a healthy growth not only in man's biological life but also in his intellectual and spiritual life."

A society geared to technology is compelled, in order to remain viable, continually to lift the levels of human welfare. Greater purchasing power, more leisure, expanded relish for the end products of factories, communications, and entertainmenthese are the very conditions of its survival. It draws its vitality from freemen with an ever larger direct stake in the society, as totalitarians who would combine technology with slavery soon learn to their distress.

The final link

Science, far from nurturing pride, encourages humility. Its every victory reveals more clearly a divine design in nature, a remarkable conformity in all things, from the infinitesimal to the infinite, that surpasses mortal understanding.

mortal understanding.

In its early stages modern science seemed at odds with religion, but this was merely a token of its immaturity. The more familiar story, in our time, is that of scientists who become increasingly aware of the mystery of the universe and come to religion, in its fundamental sense, through knowledge of the limitations of science; and, indeed, how can those who play with the building blocks of the universe, its atoms and electrons and genes, fail to be touched by awe? More than ever, man's soul is involved in the equations of our lives.

Also, the physical closeness engendered by science is promoting ever closer social and intellectual relations between peoples. Generations ago essential isolation of countries was taken for granted; it was a function of distance and difference. Today a dictatorship that would isolate its subjects must erect iron curtains and walls of electronic jamming. With worldwide television, which I regard as a certainty before 1980, the sense of our common humanity will deepen. It is the strange, the unknown, that frightens, but the strangeness will be removed by visual contact to reveal the familiar physiognomy of our neighbors.

We know in our hearts that modern war can cause such overwhelming devastation to life and property as to become a species of suicide. The atom and the electron have made it almost as disastrous for the winner as for the loser. This decisive fact must, in the long run, cancel out war as an instrument of national policy. We cannot know when or what form the coming one world will take, but world law enforced by world police seems inherent in the age of science and technology.

and technology.

The forces I have discussed appear to me to cause a chain reaction. First, science and technology create material abundance. Second, this produces new conditions and

demands that compel adjustments with resulting social advances. Third, the interdependence of people in a world shrunk by science inevitably requires broader mental concepts, which lead to greater ethical and moral stature, which in turn stimulate man's spiritual growth.

It seems to me unqualifiedly good that more and more of the weight of arduous toil will be unloaded onto the backs of machines; that the sum total of pain and agony will be further reduced by the progress of healing; that modern communications will bring peoples and nations into closer contact, leading to better understanding of one another.

III. THE CHALLENGE OF COMMUNISM

The next 25 years, however, will be marked by great challenges to our courage, character, wisdom, and stamina. The greatest of these challenges, of course, will be the continuing Communist drive for world dominion.

The pendulum of Soviet diplomacy has swung between tough and tame, depending on the Kremlin's need for time, the domestic situation in Russia, etc. At this writing Soviet policy appears to be veering toward the tame end of the curve. But the essence of Kremlin policy, as defined by its leaders from Lenin through Stalin, has never changed. One must hope, therefore, that the free world has learned at last not to drop its guard under the spell of the Kremlin's tactical amiability. Even if the Soviets should agree to call off the cold war, it will not end the danger—the Communists have not been celebrated for keeping their pledges.

Needed: A crash program

Our overriding duty, in the years ahead, will be to make it crystal clear that the outcome of war, if the Soviets provoke a final showdown, will be far from assured. We must generate and maintain enough military vitality to convince the Kremlin that an attack on us would be a suicidal gamble for them. Whatever else we may do in the next quarter-century to reduce and in time remove the Soviet menace, it will be futile unless backed by adequate military force both offensive and defensive, conventional and atomic.

On the side of the offensive, the means of delivering destruction have become far more important than the means of destruction. In the H-bomb we have reached the ultimate in militarily useful explosive power; bigger bombs would be meaningless. Beyond this point the decisive elements in the equation will be range, speed, and accuracy in placing the explosives on the target.

This compels us to focus brains and energy on long-range bombers capable of fighting their way to the objective. It demands—and this seems to me the most important immediate need—clear superiority in the development of the longest-range guided projectiles, the so-called IBM or Intercontinental Ballistic Missile. A "crash program" to assure such superiority is called for. At the same time, especially while we are forging the new weapons of conflict in the third dimension, we must maintain our ground and sea forces at adequate levels.

But defensive vitality is no less important. The widespread idea that defense has become impossible is unwarranted and dangerous. Those who proclaim it usually mean that complete defense is not possible; but that is a truism, since there never has been a defense that could not be breached. True, a breakthrough today, in nuclear terms, can mean disastrous damage. But that is no excuse for failure to make all possible defensive preparations for the coming quarter-century.

The certainty that an attacker would suffer large-scale attrition—that he would sacrifice many planes and missiles for the one that gets through—would be powerful reinforcement for the deterrent value of our offensive strength.

Methods of electronic detection of planes and missiles are known. So are techniques for destroying them through automatic ground-to-air and air-to-air collision. In the defensive areas, what is involved is primarily an electronic contest. And in that, we have every reason to believe, the United States enjoys the substantial advantages that flow from its present technological superiority—in terms of resources, inventiveness, experience, and national skills.

Countermeasures are vital

The immediate danger is not a bombing contest but the debilitating, bankrupting, ruthless, and relentless Communist offensive in a cold war that may continue throughout the coming quarter-century. Until the advent of the Soviet regime, nations were either at peace or at war. Consequently they find it hard today to adjust their thinking and policies to a condition that is neither one nor the other in the traditional sense. We do not shrink from appropriating \$50 billion or even more for armaments, but we are still reluctant to spend a few billions to meet the more urgent needs of the prevailing cold war.

Because there is no sound of shooting, no thunder of exploding bombs, we do not as yet have the feeling of life-and-death urgency. But is it that urgent. Our defeat in the present nonmilitary struggle would doom what remains of freedom on this planet as completely as defeat in a shooting war.

The cold war is where the Communists are determined to defeat us. And that, by the same token, is where we could defeat them, once we recognized the new state of affairs and decided to meet it resolutely, with the same concentration of effort, the same readiness for sacrifice and risk, the same dedication to victory as if it were an old-style military challenge.

The West and its allies in Asia can cap-

The West and its allies in Asia can capture the initiative only by a definite decision: to win the cold war, or at the very least to prevent the Communists from winning it. In my view, this is the only real guaranty against a hot war.

The question, in truth, is not whether we should engage in political, economic, and psychological warfare, the principal weapons used in the cold war. The Soviets have driven us to take nonmilitary countermeasures of some sort. But these have been piecement, uncoordinated, and on a pitifully inadequate scale. The question, rather, is whether we should turn their own political and psychological weapons against the Communists with a clearheaded determination to make our counteroffensive truly effective in the quarter century ahead.

The job is global in size. Local problems by the score will have to be solved as they arise. But these can be solved if they are subordinated to an overall strategy geared to victory. The magnitude of the commitment and its colossal stakes call for focused planning and direction. We need a strategic high command in this vital area analogous to the Joint Chiefs of Staff in the military area. And our efforts must be continually coordinated with the agencies of cold warfare in other free countries.

The Soviet orbit is vulnerable to political and psychological weapons. The Kremlin knows this well and fears it most. Its internal "contradictions" are much sharper than those in the free world. The tensions between Soviet Russia and the satellite peoples are enormous—we saw some of them snap in Germany, Czechoslovakia, and Poland in June 1953.

Popular discontent inside Soviet Russia itself is widespread. After 37 years of absolute power, the Kremlin does not yet dare to taper off its use of raw force—political arrests by the million, large-scale executions, continuous purges and total suppression of elementary human rights. Fear of its own subjects, doubts about their alle-

giance in time of crisis, are chronic in Kremlin.

Progress or savagery?

The importance of winning the cold war cannot be glossed over in looking ahead to 1980. Unless we assure peace, unless we gain the initiative in the cold conflict—by means short of hot war—the triumphs of science and technology that I have sketched in broad strokes will be emptled of meaning.

If freedom is lost, if the dignity of man is destroyed, advances on the material plane will not be progress but a foundation for a new savagery. Mankind cannot indefinitely carry the mounting burdens of an armaments race, and the greater burdens of fear and uncertainty. Our supreme commitment, as we look ahead to a crucial quarter century, must be to win the peace—not a peace of totalitarian dominion but a genuine peace rooted in liberty. I believe it can be done.

Representative Willis W. Bradley: Naval Officer, Scholar, and Statesman

EXTENSION OF REMARKS

HON. THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 1, 1955

Mr. MARTIN of Iowa. Mr. President, during the 80th Congress, of which I was a Member of the House, I had the great privilege of knowing well one of its most distinguished Members—the late Representative Willis W. Bradley, of California.

Qualified by a lifetime of experience as a line officer of the United States Navy, Captain Bradley, after his election to the Congress, rapidly became a respected leader in matters affecting national defense, the merchant marine, and the Panama Canal. So far as the latter was concerned, he was a discriminating student and a vigorous exponent of congressional thinking about Isthmian Canal policy.

As the best means for resolving the many sided canal issue in the broadest interests of the United States, he introduced a measure for the creation of an Interoceanic Canal Commission—H. R. 4833, 80th Congress—which served as the model for like bills introduced in later congresses.

Representative Bradley's views on the vitally important canal question are preserved in two notable presentations, which I studied. The first was delivered on April 19, 1948, before the distinguished membership of the Cosmos Club of Washington, D. C., on the subject What of the Panama Canal?-Congressional RECORD, 80th Congress, 2d session, volume 94, part 10, April 21, 1948, page The second was on February 24, A2449. 1949, before the Engineers' Club of Washington, D. C., on the subject The Whys of the Panama Canal-Congressional RECORD, 81st Congress, 1st session, volume 95, part 12, March 4, 1949, page A1303.

These two statements by Representative Bradley are undoubtedly among the most comprehensive treatments of the canal problem in the annals of the

ongress, and are commended for careful study by all concerned with this subject, for he stresses operational requirements as the true basis for interoceanic

canal planning.

Other important contributions by Captain Bradley were his great achievements as Governor of Guam, 1929-31. There he exhibited the highest form of administrative initiative and statesmanship in the creation of a representative form of government for this insular possession of the United States. He lived to see its adoption by the Congress. His name is now a great tradition among the natives of Guam.

Captain Bradley died suddenly on August 27, 1954, at Santa Barbara, Calif. His death is mourned by a host of friends throughout this Nation, which he served with such distinction, and by the surviving Members of the 80th Congress. I am sure that all these join me in extending to his widow and daughters the assurances of the deepest and most tender sympathy.

I ask unanimous consent that an obituary published in the New York Times of August 29, 1954, be printed in the Appendix of the RECORD.

There being no objection, the obituary was ordered to be printed in the RECORD, as follows:

WILLIS BRADLEY, LEGISLATOR, DIES-CALIFORNIA ASSEMBLYMAN AND FORMER UNITED STATES REPRESENTATIVE WAS NAVAL HERO IN 1917

SANTA BARBARA, CALIF., August 28.-Willis W. Bradley, of Long Beach, Republican State assemblyman and former United States Representative, died yesterday after suffering a heart attack while attending a legislative hearing. He was 70 years old.

A native of Ransomville, N. Y., Mr. Bradley was graduated from the United States Naval Academy in 1907. He served as Governor of Guam from 1929 to 1931 and retired

in 1946 with the rank of captain.

Mr. Bradley was a Member of Congress from the 18th California District from 1947 to 1949. He was elected to the State assembly in 1952 and was a member of the Board Visitors at Annapolis.

His widow, Sue, and four daughters sur-

AWARDED MEDAL OF HONOR

Mr. Bradley won the Medal of Honor for heroism aboard the cruiser Pittsburgh when ammunition exploded on July 23, 1917. He was then a lieutenant. Badly dazed, he crawled through heavy smoke to rescue a man and then extinguished the fire in close proximity to other explosives.

In Congress, as a member of the House Committee on Merchant Marine and Fisheries and chairman of the Subcommit-tee on Ship Construction and Operation, Mr. Bradley campaigned for additional safety measures on American vessels. He also was on the Panama Canal subcommittee and in 1947 went to inspect the canal with 11 other Members of Congress. He supported the Navy's plan for improvement of the canal.

As a young officer in the Navy, Mr. Bradley also won the Silver Medal of the Italian Red Cross for his rescue work at the disastrous Messina earthquake of 1908. Subsequently, Pope Pius XI also awarded to him a medal. He held a master of science degree from George Washington University (1914) and was a graduate of the Naval War College and the Navy's postgraduate school of ord-nance and gunnery.

Is Manpower Cut Economy Move?

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1955

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial which appeared in a recent issue of the Bryan Daily Eagle, Bryan, Tex.

The article follows:

IS MANPOWER CUT ECONOMY MOVE?

What does it profit a man to have his money if he can't protect it from an enemy? In a nutshell that's what many Democrats say they want to know about the cuts which President Eisenhower proposes for the Armed Forces.

His administration, particularly Secretary of Defense Wilson, is in for stiff quizzing by the Democrats who took control of Congress yesterday. Judging from what they've said, they will ask:

Is the administration, for the sake of economy, reducing the Armed Forces to a point where they can't protect this Nation's in-

Senator Sparkman, Democrat, says he's afraid he's looking at bargaincounter defense. Senator Mansfield, Democrat, Montana, says he's afraid this country's vital military strength may be lost in the name of economy.

And Representative Vinson, Democrat.

Georgia, who will head the House Armed Services Committee, says he will call Wilson before him for a full explanation.

It was Wilson who started the ball rolling December 20 with the announcement of a big reduction in the Armed Forces, particularly in ground troops. Why the cut? Less fear of war in part, Wilson told newsmen.

This wasn't what Secretary of State Dulles told newsmen several days later when they asked if the military cuts were the result of less fear of war. That wasn't the reason, he said.

He said improvement in weapons meant the military forces needed fewer men. This apparent conflict raised this question.

If one said one thing, and one another, what was the real reason? Was it to save

Reduction in ground troops meant this country would be less able to throw in troops against the Communists if they attacked anywhere in the world.

The United States might retaliate with air power but unless native troops were available to stem the Red assault where it occurred, air strikes might not be enough.

The crisis in Indochina last year was re-The Communist-led Vietminh were trampling the French. There was danger they might take all of Indochina. The administration had to consider the question of intervening.

It was reported later Gen. Matthew B. Ridgway, Army Chief of Staff and member of the Joint Chiefs of Staff, opposed intervention on the grounds he didn't have ground troops to back it up.

In June 1952, in the midst of the Korean war, the Armed Forces totaled 3,636,000. When that war ended in 1953, it was possible to reduce to some extent the number of men under arms.

As of today, the Armed Forces number about 3,218,000, a reduction of 418,000 since June 1952. The administration now proposes a further cut to 2,850,000 by June 1956, a reduction of almost 800,000 men since 1952.

Eisenhower gave an explanation in a letter to Wilson, made public yesterday. This letter, backing up Wilson, may have been intended to take some of the heat off him.

The explanation goes like this:

(1) This country must be ready to meet any form of aggression, since no one can predict how it will come; (2) this country must depend as much as it can on new weapons and scientific development in order to cut down on manpower and save lives; (3) this country must be able to retaliate fast against any attack in order to discourage such an attack in the first place; (4) since no one can foretell how long the cold war will last, keeping up the minimum necessary defense force will be a drain on the economy so expense must be spared where possible; (5) the United States will have to have forces able to help out other peoples if they're at-

Ukrainian Independence

EXTENSION OF REMARKS OF

HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. MULTER. Mr. Speaker, the 37th anniversary of the proclamation of Ukrainian independence by the people of that country took place on January

The history of the Ukraine contains many chapters on their struggle for freedom and independence which they more recently realized during the years 1917 to 1920.

Today this Nation, composed of 40 million people, is behind the Iron Curtain under Communist domination, but in their hearts and minds these people continue their centuries-old struggle to regain their freedom.

The free people of the world are aware of the great courage which this country has displayed in its opposition to Communist oppression and we in the United States will give every possible assistance to restoring freedom in the Ukraine so that these people may realize a cherished dream-permanent peace.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

National Commander Speaks for Disabled Veterans

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. EVINS. Mr. Speaker, the House Committee on Veterans' Affairs, on which I have had the privilege of serving, this morning heard National Commander Alfred L. English, of the Disabled American Veterans, speak in behalf of the war-disabled veterans of the Nation and outline the proposed legislative program of that great veterans' organization.

Commander English is a distinguished Tennessean and a member of the bench of my State. His home is in Shelbyville, Tenn., where he is an outstanding civic and veterans' leader.

I feel that his testimony is worthy of the attention of the entire membership of the House and I am, therefore, asking unanimous consent that the full statement of Commander English, of the national DAV organization, be inserted in the Record.

His statement follows:

DAV LEGISLATIVE PROGRAM FOR 1955

(Statement of National Commander Alfred L. English to the House Committee on Veterans' Affairs, February 2, 1955)

Mr. Chairman, ladies and gentlemen of the committee, it is my privilege and honor to appear before the Veterans' Affairs Committee of the House of Representatives this morning as national commander of the Disabled American Veterans.

In accordance with the custom of many years standing this committee, at the beginning of each session of Congress, invites the national commanders of the congressionally chartered veteran organizations to appear before it and discuss their respective legislative programs. This opportunity to discuss legislative matters falling within the jurisdiction of your committee is one of the highest honors and most important duties will perform as national commander of the Disabled American Veterans this year. The DAV is proud of its record of service to America's wartime disabled veterans, and equally proud of the sincere, intelligent, and keen interest of this committee in its consideration of legislation pertaining to serviceconnected disabled veterans.

For the benefit of the newly assigned members of this committee, some of whom I have already had the pleasure of meeting, I would like to briefly state that the DAV was founded on the principle that this Nation's first duty to veterans is the full rehabilitation of its wartime disabled. This principle envisions: (1) proper medical care and treatment for disabilities incurred, increased, or aggravated by military service; (2) adequate compensation for the degree of disablement caused by such disabilities; (3) training and education to restore em-

ployability to the wartime disabled; and (4) adequate compensation to the widows, minor children, and dependent parents of veterans who died as a result of a service-incurred disability.

Before I present to you the principle objectives of our 1955 legislative program I would like to comment on the questions set forth in the letter of December 14, 1954, which I received from the chairman of this committee.

The first question is the effect that the amended form 10-P-10 and addendum (circular No. 11, 1953) designed to protect applicants for hospitalization and generally, from charges of "chiseling" may have had on the admission of veterans seek ing hospitalization for non-service-connected disabilities. The DAV, you may recall, presented no objection in 1953 to the general program of the admission of the nonservice-connected veteran unable to pay for his hospitalization elsewhere. We submitted no evidence of alleged abuses of the admission of non-service-connected veterans well able to pay for their hospitalization. I have been advised that we had conducted a careful survey through our national service offices but found no such abuses which would justify an amendment or change in the form 10-P-10. In a recent survey conducted throughout our offices we asked the specific question, "Has the revised form 10-P-10 and addendum 10-P-10a corrected alleged abuses of the admission of nonservice-connected cases who may be able to pay for the treatment elsewhere?" The general response was that there had been no abuses in the first place and the addendum was unnecessary. The answer received from our national service officer in Montana seems to express the opinion of many. He states, "To my knowledge there were no abuses of hospitalization of non-serviceconnected cases in the State of Montana, The publicity given, and the use of revised form 10-P-10 and addendum 10-P-10a has only served to drive away deserving veterans from making application for hospitalization with the Veterans' Administration when they are in need of and entitled to the same. As usual the honest man with a little pride and a conscience is the only one who is The fellow with an easy conscience or definite ideas as to his rights will pay no attention to the addendum.

The second question relates to the desirability of terminating the present emergency period for the Korean conflict as it relates to continuance of wartime benefits. I will discuss this question in full at a later point in my statement.

The third question is "The needs of the Veterans' Administration program with specific attention to any indicated need for major renovation or repair of existing VA hospitals and domiciliary homes. Particular reference is made to major repairs deemed necessary in certain of the older VA facilities which are not being taken care of in the current budget?"

As we have already indicated the Disabled American Veterans is vitally interested in the care and welfare of the wartime service-connected veteran and his rehabilitation. We believe that the hospitalization program of the Veterans' Administration and the treatment of the war veteran is one of the most important and necessary functions of the VA. We are extremely proud of the part the DAV has played in the past in the con-

struction and maintenance of your great VA hospitals. I know that members of this committee are deeply interested in the hospital program also.

I would like to stress at this time the present need for altering or renovating many of the older hospitals, enlarging them where necessary, and even rebuilding some of them that were originally constructed as temporary buildings during the war. The science of medicine and the treatment of the physically and mentally ill in hospitals have advanced rapidly and requires modern and up-to-date structures if the veteran patient to receive the first-class treatment he so justly deserves. Looking at it from a cold practical standpoint it is just plain good business for the Government to keep cur-rent with the maintenance of these hospitals, renovating and altering them from time to time when needed. The lack of necessary funds has been one of the reasons that the altering and maintenance of many of the older hospitals has not been put into effect. The DAV hopes that this year sufficient money will be provided in order that all of the older hospitals can become firstclass institutions.

The fourth question relates to "The operation of the VA loan-guaranty program, particularly as it relates to the differences in guaranty and entitlement under the guaranteed loan program and direct loan program that exists between veterans purchasing residential property and certain classes of farm real estate to be used by the veteran for a home?"

Public Law 475 of the 81st Congress increased the maximum guaranty and entitiement on residential property from \$4,000 to \$7,500, but failed to make any change in the guaranty on certain classes of farm property, so that today there exists a differential of \$3,500. The delegates to our two last national conventions have given consideration to this matter and approved resolutions to equalize the guaranty on farm property with that of residential property. H. R. 98, introduced by Mr. Edmondson, if enacted, would correct this inequity and we urge your favorable consideration of it.

In general the operation of the loan-guaranty program has been a tremendous asset to World War II and Korean veterans and to the Nation as a whole. It has enabled millions of veterans to become home owners who otherwise would have been unable to do so, while at the same time the cost to the Government has been negligible.

Question 5 relates to the desirability of a modest scholarship-assistance program for the dependent children of certain servicemen who lost their lives in the service of their country during a period of wartime, such a program to be patterned along the general lines of the veterans' education and training program under Public Law 550, 82d Congress.

The DAV is in full accord with the purposes of such a program, and we hope the committee will hold early hearings on H. R. 588, introduced by your chairman. The bill provides a modest scholarship-assistance program for the children of servicemen who lost their lives as a result of their wartime service. I know of no class of dependents more worthy of Government assistance.

Mr. Chairman, in answer to question No. 2 of your letter of December 14, 1954, it is my sincere belief that the weightlest problem confronting this committee and the veteran

organizations today is that of the desirability of terminating wartime benefits as al-ready accomplished by Executive Order 10585. I certainly don't know the answer to this very complex problem, nor do I think any of you ladies or gentlemen pretend to know the answer.

In this connection, I would like to read to you an editorial from the Albuquerque Tribune of January 17, 1955. I think it is both pertinent and timely. The editorial reads as follows:

"VETERANS' RIGHTS: TOUGH QUESTION

"What rights and privileges does America owe its veterans?

"This is a question so tightly wrapped in sentiment, tradition, national honor, and prejudice that few responsible persons have tried to examine it. It is not a question to be answered hastily.

"But it is one we soberly and logically must explore one of these days.

"Traditionally, American veterans and their widows have been honored as citizens to whom a grateful nation owed a debt.

"That tradition has been as correct as it has been noble.

"But times may outmode traditions.

"In the last 39 years, we have been in three major wars.

"There are more than 20 million living male veterans in this country, out of a total of about 50 million men.

'In other words, about 2 of every 5 men

have seen military duty.

"America's veterans, obviously, no longer

are a small, select band of heroes.

"Because of wars-and, in the last years, the advent of the peacetime draftwe have been edging closer and closer to the point where more than half our grown men will have served in uniform.

"When we reach that point, the veteran in

fact will be the average man.

"And the average man will be paying taxes to reward himself-with the Government

deducting a bookkeeping fee.

"In the past 8 years, we have been spending between \$4 billion and \$7 billion each year on veterans' services and benefits. We spend more on veterans than on any other budget item except national defense and interest. President Eisenhower has acted wisely in ordering veterans' benefits to be put back on a peacetime basis begin-

ning January 31.
"But the big question remains: What rights and privileges should we accord our

veterans?

"Is not military service becoming the rule,

rather than the exception?

What then, other than respect and protection of his rights to his old job back, should be given the dutiful man who fulfills his military obligations and is sent back to civilian life in good health? That's the problem for which we must find a realistic

answer before too long."

In order to answer the question "What rights and privileges does America owe its veterans?", it is necessary to give consideration to several important factors. The first of these is that the Congress will probably extend the Selective Service Act which ex pires June 30 of this year for another 2- or 4-year period. Even though active hostilities in Korea have terminated we are still maintaining large, combat-ready military forces in many parts of the world. On the 24th of January the President of the United States delivered a message to the Congress relative to our policy in the Far East. This policy as set forth in the President's meshad the nearly unanimous endorsement of the Congress. It is inconceivable to believe that as a result of this policy in the Far East, as well as our military commitments in other parts of the world, that American boys inducted into the service will not become casualties. Who among us can say that because of our stated foreign policy, and I do not imply it is wrong, that we are not at war or operating under conditions similar to war. If so, is this the time to terminate wartime veterans' benefits for these men and the dependents of those who will undoubtedly become casualties?

Military service is becoming the rule rather than the exception as stated in the above editorial. However, I cannot agree with the conclusion in the editorial that because military service is the rule that the Government's obligation to the veteran is to see that he gets his "old job back." Men being inducted into the service in great part do not have any "old job" to which to return. These are young men, men in their late teens, whi have never had a job, but who would have had jobs were it not for the interven-

tion of military service.

The Disabled American Veterans' primary concern is not with the veteran returned to civilian life in good health, but rather with the small minority who leave the service as a result of service-incurred injuries or di-The above editorial does not make any effort to develop or discuss what America owes to this class of veterans. We feel that first things should come first, and that the first thing for this Congress to decide is what does America owe to the veteran who was involuntarily inducted into the service, who fulfilled his military obligations and incurred a service disability as a result there-of. Because military service is rapidly becoming the rule, rather than the exception, does not in my opinion alter the Government's obligation to him in any respect.

Several weeks ago while visiting a large military hospital I overheard two marine enlisted men who were patients in the hospital, discussing the pros and cons of the termination date of wartime benefits January 31. One of these young soldiers made the statement that he would be discharged because of his service-incurred disability in a training camp and that he would receive wartime rates of compensation. If his unfortunate injury had occurred yesterday, and as a result of Executive Order No. 10585, he would be considered a peace-time veteran and eligible to receive only the peacetime rates of disability compensation would like to ask you this question, is there any fundamental difference insofar as eligibility for wartime benefits is concerned between a date early in January, when the young veteran became disabled, and February 1, 1955, or any date subsequent there-

The more we study this problem the clearer it becomes that the concept of wartime and peacetimed service has drastically changed since the end of World War II. Is it possible to arbitrarily fix a date for the termination of wartime benefits and at the same time adopt a foreign policy which potentially can erupt into a conflict of major proportions on short notice.

Because of the restrictive nature of the DAV legislative policy, our program is not as all-encompassing in the field of veteran benefits as that of other veteran organizations. The subjects we submit for your consideration from time to time relate solely to the veteran who has incurred a wartime, serviceconnected disability.

UNIFORMITY IN EXISTING BENEFITS

One of our chief concerns is the inequity created in the compensation rates by the en actment of Public Law 356, 82d Congress. This law provides a 15 percent increase in compensation for veterans rated 50 percent or more disabled, and a 5 percent increase for those rated less than 50 percent. Another section of the same law provided an increase of approximately 15 percent in death compensation to widows with children, while widows without children, did not receive any This obvious inequity was partially corrected during the second session of the 83d Congress, by the enactment of Pub-

lic Law 695 which, in part, provided an increase of 15 percent to widows without children.

However, Public Law 695, while providing a small increase in the rates of disability compensation, does not correct the inherent inequity existing in the rates of compensation created by Public Law 356 of the 82d Congress. H. R. 774 and 1819 pending before this committee, have for their purpose the reestablishment of parity in the rates of disability compensation between veterans rated less than 50 percent and those rated 50 percent or more.

The full significance of this inequity can be easily understood, when recognition is given to the fact that the differential between the less seriously disabled and the more seriously disabled is considered in adjudicating a veterans claim for service connection. Public Law 356, however, imposes an additional and entirely unwarranted differential by providing a 15 percent increase for one group of disabled veterans and a 5 percent increase to another group. The net result of this legislative legerdemain is that a veteran presently rated 10-49 percent does not draw this percentage of total disability compensation despite the fact that service-connected disabilities are rated percentagewise.

One other matter on our legislative program to which I would like to call specific attention is a proposed amendment to Public Law 182, 79th Congress. This law provides additional compensation in excess of total disability awards to veterans suffering from the loss or loss of use of one or more extremeties, or who have lost the sight of one or both eyes. Double amputations of arms or legs or combinations thereof are adequately provided for, but there is no provision in this law to grant an additional award for loss or loss of use of an eye in combination with the loss or loss of use of an arm or a leg. H. R. 1614, introduced by the chairman of this committee would make the present law more uniform and equitable if enacted

There are many other important subjects on our legislative program which fall within the jurisdiction of this committee, but in the interest of conserving time I will not read them. You will find attached hereto, a list of our major legislative aims and objectives other than those already referred to.

Again I wish to express my gratitude for the opportunity to present the DAV's legislative program to this committee and to thank you for the many courtesles you have extended to me. My Washington staff who are with me today will always be available to the committee and to your professional staff for any information regarding the VA program.

The Citadel, Charleston, S. C.

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose herewith the separate speeches by the distinguished military men who have graced the rostrum at The Citadel under the program instituted by that outstanding. retired general, Mark Wayne Clark, the now president of The Citadel.

Under General Clark's magnetic leadership America's foremost thinkers in the fields of religion, statesmanship, and the military are weekly addressing the Corps of Cadets at The Citadel in Charleston, S. C.

These discussions which are so well attended by the cadet body are thought provoking and are of immeasurable benefit to this fine institution. The first-hand experiences related by these distinguished speakers gives this student body an opportunity to gain information which few institutions of higher learning enjoy.

It is to the great credit of General Clark that these programs have been commenced and that those who are fortunate enough to attend this great military institution can gain the benefit of this rich experience.

Mr. Speaker, under permission to extend my remarks, I include first the address of His Eminence, Francis Cardinal Spellman, to the Corps of Cadets at the Citadel on December 4, 1954, the title of which is "America's Hour of Trial"; the second is the address by the distinguished Chief of Staff of the Army, Gen, Matthew B. Ridgway, delivered on Tuesday, December 7, 1954; and third, the address of the Chief of Naval Operations, Adm. Robert B. Carney, entitled "Education and Leadership," delivered to the student body on January 4, 1955.

Cardinal Spellman's address follows:

Address of His Eminence, Francis Cardinal
Spellman, to the Corps of Cadets at the
Citadel, Charleston, S. C., December 4,
1954

AMERICA'S HOUR OF TRIAL

It is with great gratitude and pride that I have come to South Carolina to be with you, cadets of the Citadel, whose lives are dedicated to perpetual protection of our beloved and blessed country. The fathers and brothers of some of you I have met in different and far corners of the earth. With some I have shared a day; with others a hasty meal behind lines of battle; with some a leisurely luncheon in my own home, or in their quarters. With all of them, as with you, I share a common love of our wondrous, free, and noble Nation, and close to my heart I hold this opportunity to be with you today.

Tried and trusted keepers of America's defense, yours is the responsibility valorously to match deeds and words; yours the sacred duty to live your lives, and if necessary, give your lives for your country. Fortified by my feeling that you believe in my own love of God and of my country, as I believe in yours, I ask that with friendly hearts and open minds, you ponder my reflections founded on the sacred principles of my priesthood and my patriotism, for I am devoted, as you are, not alone to the soil of America, but also to the preservation of America's soul.

It matters not where we live, or what position in life we hold, whether we be Protestant, Jew, or Catholic, by our prayers and our deeds we must prove our faith in God. our country, and our fellow man, publicly avowing not alone by words but by our works an eternal enmity to all evils spawned from godless, tyrannical communism, pledging our everlasting loyalty to justice and freedom rooted in God himself. And I beg of you, America's future guardian soldiers and my dear friends, as you observe military regulations in order that you may be prepared valiantly to defend your country, I ask that With equal fervor you follow faithfully the laws of God. As you respect every command of your military leaders, I pray with equal devotion revere the Commandments of your Divine Leader-Almighty God. For, in this, America's fateful hour, it is the bounden duty of every one of us to prove worthy of kinship with God and trustworthy of our American citizenship, not by lip alone, but by dally deeds of honorable living. The time has long since passed when anything less can save America.

Therefore, do I say to you young, stalwarthearted, strong-bodied sons of our free and precious country, stand firm in your faith, for only if faith dwells strong and stout and powerful in American hearts shall we be able to help America survive. If our hearts and our acts are weak and vacillating; if Americans are prope to appease Communists; if they continue to be apathetic toward Americans who take refuge behind the fifth amendment, Americans unworthy of the honor of being citizens of this mighty Nation; if some Americans continue to assail other Americans who are striving to protect their country by eliminating Communists from America's Government, defense plants, educational institutions, and the Armed Forces of the United States; if we continue to thus play into the hands of the Communists day after day until the days become months and the months stretch into years, then shall that day soon come when it will be too late to save America and all the God-given glories and wonders that are hers. Then shall America be destroyed, not alone by Communists outside her shores, but with the cooperation of traitorous-hearted, God-hating people pretending to be patriotic American citizens. Then, once again, the heroic sacrifices of America's sons, fathers and brothers, and all who so dearly loved them shall be violated as we again bring upon ourselves and the innocents of future generations agonizing, bloodletting years of war.

No man on earth wants war less than Ifor I am a priest of peace, my life consecrated to the service of God and man, dedicated to striving to bring peace to men on earth and everlasting peace in Heaven. No man wants war less than I, for a dozen times I have circled the world of war, visiting the men of our Armed Forces in every country of the globe where America's sons were fighting and dying on foreign soil, visiting and praying with them, trying to bring them some solace in their hours of heroic sufferings and sacrifices, and my heart cried out every minute of the countless hours I spent with the wounded as they lay on their cots of pain, in hospitals and hospital ships; no man wants war less than I, for I have seen the horrors and havoc of war and witnessed the untold miseries endured by men, women, and children in war-devastated lands. It is for peace I make my plea today, but peace that does not mean surrender to our enemies or leaves us unprepared or unaware of the dangers we face. For peace I work and pray and plead every day of my life—but peace with justice and freedom and honor for America and all the nations of the world.

But today realistic Americans must be aware that we are poised on the brink of a third world war, and, while no man knows the fate that awaits us, this we do know, that if communism conquers it will be slavery or death for Americans and the extinction of our country as a God-loving, democratic nation. Americans by this time should surely know Communists for what they are, America's enemy, deadly and merciless, subjugating nations by infiltration and aggression, enslaving freedom-loving peoples by promises of plenty while murdering their bodies, their souls, and their hopes until they die amid indescribable terrors, chaos, and famine.

America's hour of trial has come, and only if God guides the captains of our Ship of State shall we out-ride this terrible, tragic crisis of history. In the days that rush upon us now, only a nation one in heart and soul shall long survive. United only can we live, divided fall. America needs loyal sons like

you young men of The Citadel. She needs them strong of body and of soul. And it is my profound belief that no nation can long survive unless the loyalty of her peoples is founded in love of God.

founded in love of God.

I have been witness to this truth in a thousand ways upon the fields of battle and in embattled lands throughout the warwrecked world. It was but a few months after the conclusion of the last world war that I visited the historic city of Freiburg in southwest Germany close by the storied Black Forest. Freiburg was a tragic spectacle. Poverty, hunger, and suffering stared at us from every side. Rubble was heaped high in her ancient streets. Gaunt and empty ruins were all that were left of the quaint city which I had known as a young priest.

The 800-year-old Cathedral, glorious example of early Gothic, though badly burned and scarred, was still standing midst Freiburg's desolation. I crossed to the acres of ashes that once had been the university, which in its prime had attracted such scholars as Erasmus of Rotterdam and Zasius, the founder of modern political science, a university which possessed one of the oldest and best medical schools in Europe. All was a mass of smouldering debris. The huge lecture halls, the faculty houses, the magnificent library, the law and medical colleges, all had been reduced to charred and broken masonry silhouetted ghostlike against bleak, grey skies.

As I stood in the chill autumn air and gazed sadly about, my eyes were attracted to the inscription carved over an archway that by a freak of bombing had escaped destruction. It was chipped and charred but still legible and it read: "Unless the Lord build the house they labor in vain that build it." Here, I thought to myself, is a graphic and terrifying fulfillment of those words of the Psalmist inscribed among Freiburg's own mournful ruins. I thought of Hitler and his mad company and all those other dictators and godless tyrants, enemies of religion whose hate propaganda and terroristic methods had brought nations and peoples of the world to their present pitiable state of confusion and chaos, terrible testimony to this truth that they labor in vain who build without God.

Hitler derided and denied the God Who made him. Fanatically he attempted to stomp out religion. Hounding, imprisoning, murdering ministers of God during the crazed years of his ascendancy, he persecuted and put to death thousands of men and women only because they worshiped God instead of Hitler. He eradicated charity and mercy from human hearts and speech. He suppressed institutes of religion and, in their stead, he substituted Belsen and Dachau with their ovens, their torture chambers and their heaps of rotted corpses. He replaced the Commandments of God with antireligious slogans and laws, using sheer military power, science and the machine as tools of his despotism. Thus were God and religion blotted out of men's souls and the horrible and ineffaceable results were the ruins of Freiburg and hundreds of other devastated cities and towns in blood soaked lands pockmarking the whole-world-except, Thank God, 'till now, our own.

In our own America, ever since Colonial times, religion has taken its rightful, fundamental place in the writings of our Founding Fathers traditionally familiar even to every American schoolchild. Since the passage of the Bill of Rights in 1791 our Constitution has been amended 22 times. During those years many and important changes have occurred in our American life and customs, but the right of every American to worship God according to the dictates of his conscience has endured without change or threat of change. Never in the history of the United States has there been Government interfer-

ence or persecution of any religion. And, as Americans and as human beings we can be

proud of that record.

Religion has served our Nation well. Its benefits have been legion. Religion has encouraged recognition of the rights of conscience, has fostered the establishment of schools and colleges educating our youth to the advantages and the responsibilities of American citizenship. Religion has inspired and sanctified humanitarian motives and acts in the foundation and in the support of hospitals and charitable institutions. Religion has promoted the works of peace and encouraged and cemented harmonious relations among citizens and various racial groups of good-will. Religion has strengthened civic virtue and has been patriotism's strongest prop. Religion has acted as a proven and salutary check on human weaknesses and excesses and has ever stood as a solid and secure foundation for our democratic Nation.

Vividly do I recall another experience of the war years. It was in October 1944. The American forces had already breached the Siegfried Line and I was riding through a wooded section near Aachen with General Huebener then commanding the First Infantry Division. As our jeep bumped and road through a bounced over a corduroy dripping fog, past the hulking specters of blown up fortifications and overturned Nazi tanks, the general, in his forthright way, "Archbishop, I do not say that said to me: only a religious man can be a good soldier, but I do say emphatically and challenge anyone to contradict me when I say that the soldier who lives up to his religion is a better man and a better soldier."

Therefore do I pray you, cadets of this great military citadel, in your duty hours, in your social contacts, whenever and where ever opportunity permits, by word, deed and example, be faithful to the teachings of your religion. Seek out and encourage the sol-dier who is lax. Spur on the spiritual thinking that lad who is indifferent. Demonstrate to all, to your fellow-officers and your men, that religion does make a man a better man, a better soldier and a better American. By your own lives prove that religion is the fountainhead and foundation of democracy and that "Unless the Lord build the house they labor in vain that build it." Any other foundation is but a foundation of sand. Unless the Lord dwell in the structure of our Government, those who have labored to build it those millions who have fought and died to preserve and perpetuate our country, all will have labored, fought, suffered and died in vain.

Ofttimes many people of many lands and different religious beliefs have asked me what my faith means to me.

Faith was mine long before I studied its theological definition or even mastered the penny catechism during my Sunday school days. Faith to me has been, from longest remembrance, as real as my mother's love, my father's reverent responsibility to his church, his country, and his family, as real as the rosary in my grandmother's fingers, the blinking sanctuary light in our little country church. As a child of faith, I have ever dwelt in its warm, all-embracing atmosphere. Like the sky it drew my thoughts upwards; like the earth beneath, it steadled my feet. Like the air above me it served to satisfy the hidden needs of my soul. Like the goodness of my parents it sent me away satisfied, contented, at peace with God, myself, and my fellowman.

What does faith mean to me? I have seen the answer beneath the streaming glory of our Nation's flag, against the crimsoned glory of the tropical sunset, above the tranquil quietude of the white-crossed graves of our beloved dead, for faith alone can give logical answer to their sacrifices. This then what faith means—the ultimate and only satisfying explanation to life's most disturbing frustrations, the solution of all problems, the solvent of all pains, victory even in all defeats. Religion, my friends, is the daily chalice God offers for men's strengthening, the ground of hope, the source of love and the golden door by which, in God's good time. I devoutly pray, we shall pass into that fullness of possession where love rewards us for having held faith's strong and guiding hand amid the darkness, the terrors and the toil of this mortal world.

And now, dear friends, my heart is filled with desire to tell what America means to me, America, sacred sanctuary of liberty, democracy, and faith:

America means the broad wheat fields of the Middle West, symbolic of the broad spirit tolerance that has made it possible for peoples stemming from many diverse lands, races, and creeds to live here in our blessed Nation, united in fraternal charity.

America means the cotton fields and sunswept verdure of the South, symbolic of your gracious hospitality and the spirit of statehood undefeated.

America means the snow-capped Rockies, mighty in their majesty, symbolic of our country's ideals that man may live with man in mutual respect, following God's law, echoed in man's conscience.

America means the deep voice of crested waves rolling in from the Pacific along the frontiers of the Golden West which bespeak the sacrifice and labors of our vibrant, rugged forebears.

America means rocky hillsides, turbulent streams, little villages and towns in my native New England and my heart fills with emotion as I ponder the wholesome principles and homespun plety that dominated the small world of my boyhood.

America means New York, Chicago, Atlanta, New Orleans, Los Angeles, and the other cities of our great Nation, with their multiple beauties and wonders.

These are America's material glories, but more precious and wondrous still is our flag, which joyously and proudly I have seen flying aloft in all corners of the world, the flag freedom that symbolizes justice and love of man for God and his fellowman, stark contradiction to the red flag of tyranny, symbol of serfdom and pagan oppression. I have seen our American flag in wartime and in peacetime; and, as a loyal son of America, I give testimony to the truth that even in time of war, the message of that flag is peace. With rapt heart I recall the sight of our flag at the masthead of a ship, weaving bright colors above the turbulent waters, beneath a sullen gray sky, which seemed to reflect the world of today, dark with forebodings of disasters yet to come, gray with the accumulated clouds of evils and errors of the past.

Suddenly a gust of wind enfolds the listless standard at the masthead, and there, challenging the somber colorings of the sky streams Old Glory; Red with charity for all men and all nations of good will-red too with courage to achieve the liberties of man by personal sufferings and sacrifice; white for the basic righteousness of our national purpose; blue for our trust and confidence in God, our Heavenly Father. Red, white, and blue! The flag of our God-blessed America, the last unfailing hope of embattled humanity struggling for survival against the menace of atheistic communism that would desecrate and destroy both the flesh of man and man's spirit.

This, then, is what America means to me America, which you and I and millions of others stand ready to defend unto death. The Citadel, Charleston, S. C.

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following address by Gen. Matthew B. Ridgway, Chief of Staff, United States Army, at The Citadel, Charleston, S. C., Tuesday, December 7, 1954:

I am honored and grateful for the opportunity to be here today. For more than 40 years it has been my good fortune to have served in peace and war—at work and at your distinguished president, play-with General Clark. To be with him again and with you young gentlemen, preparing your-selves for the responsibilities and duties of the future of America, is an inspiring ex-

The Citadel has a long and honorable tradition. Its graduates have gone out to serve the Nation, both as soldiers and as civilians, for well over a hundred years. As one of the oldest military schools in the United States, The Citadel has an atmosphere, a curriculum, and a tradition with a sound and strong military orientation.

While I realize that it is not the primary purpose of the military college of South Carolina to train officers for the Armed Forces, it is of the military responsibilities of its prospective graduates that I want chiefly to speak, and it is to you young gentlemen that I primarily address my remarks.

The greatest opportunity to which you can

aspire is the opportunity for useful service.

That opportunity will soon be given to
you. Most of you expect, upon graduation,
to begin a tour of duty as a member of the active military forces. I hope that many of you will go on, as so many distinguished alumni of this school have done, to follow military careers. But even if you do not choose to continue as professional soldiersand I use the term "soldiers" to refer to all military men-the skills and the integrity which the Citadel has given you will prove invaluable to your communities, and to the Nation, whatever profession you may pursue. You do not need to ask yourselves why you

are receiving military as well as purely academic training. Presumably, you answered that question for yourselves when you chose to come here to school.

It may be, however, that you wonder why it is that you and so many of your contemporaries must give a number of years of your lives to full-time military service, and why, having completed your active service, you will continue to be available for military duty in case of national need.

The answer is simple: Our Nation, with all it stands for, lives under a continuing threat of attack by godless communism. Only by maintaining strength can we hope to deter such an attack. Only by readily available strength can we win victory—and win we must-if we are unable to prevent And only through the the outbreak of war. provision of trained, determined men can we attain the strength essential to achieve either of these objectives.

The rendering of service to the Nation is no imposition upon the individual. It sometimes seems to me that people are too prone to feel sorry for themselves. The soldier is frequently called upon to endure discomfort, it is true. He may have to accept real hardship and grave danger. Sometimes he is called upon to make the supreme sacrifice and lay down his life for the cause he defends.

None of this is new. Such sacrifices have been made throughout the history of man. Our own history is replete with them. Nothing is free. Nothing worthwhile is cheap. The service we perform, the sacrifice we may be called upon to make constitute the price we must be ready to pay to preserve for the future the blessings of liberty and justice, of human dignity and of individual freedom which have been handed on to us from the past.

It has been said that all true love includes a willingness to sacrifice. Certainly love of country and of God must include that spirit.

To all of you, let me say that seldom have young officers been afforded more challenging opportunities, more engrossing tasks than those which will confront you after your

entry upon active service.

To those of you who will enter the Army, let me say, never doubt the vital significance of the responsibilities which will be placed upon you as members of the Army of the United States. Among some circles today, there is sometimes a tendency to believe that modern wars may be quickly won by means of mass destruction weapons which will make unnecessary the operations of ground combat forces. No assumption could be more dangerous, if used as a basis for

Entirely apart from the employment or nonemployment of mass destruction weapons, a primary issue in combat is the destruction of the enemy's will to fight. Experience indicates that, when a people is devoted to its cause, its will to fight endures as long as its capability of fighting continues. In short, enemy resistance would continue so long as enemy armed forces could continue in combat. Ultimately, only ground forces can defeat enemy ground forces. And because enemy air and naval forces must operate from land bases, the seizure and occupation of such enemy bases by ground forces are important contributions to the achievement of victory at sea and in the air.

And, finally, since defeat of the enemy armed forces is not an end in itself, but only a means to an end, the victory must be consolidated. Domination over land and the enemy people occupying it must be gained and maintained, and only ground forces have the capability of so doing.

Obviously, none of the Army's tasks and missions can be carried out effectively with-out full support and assistance from the air and naval members of the team. Control of the air and the sea is essential to the projection of our military power overseas. However, the location of Army units on the ground is a true index of the progress of armed warfare. There is a direct analogy in football. If your ball advances, you win. If it is pushed back, you lose.

If it is pushed back, you lose.

As members of the Army, therefore, you will be part of a vitally important element of our military forces.

Whichever service you may enter, to develop and maintain the proficiency necessary to carry out your responsibilities, you will find that your talents, your skills, and your energy will be called upon to the utmost.

You must maintain an open mind. There is no mind so fine today that it sees solutions to all the tremendous problems which we all perceive in the military field alone.

We are passing through a period of transition. There is a greater requirement than ever for mental flexibility.

As new weapons become available you will have to master new techniques. In the Army, for example, already we have such weapons as the Honest John rocket, the Corporal guided missile for surface-to-surface

firing, and the Nike antiaircraft guided missile. We have the 280-mm. gun, capable of firing either conventional or atomic projectiles and capable, also, of operating effectively regardless of conditions of weather or visibility. We have recently announced the development of the "Bat," a 106-mm. recoilless cannon designed for antitank use. We have still other new weapons, including a number still under test and design, some of which you will doubtless have occasion to work with. In addition to weapons as such, there have been many innovations—and there will be more—in vehicles, in communications, in electronics.

All these advances in technology are having a marked influence upon tactics and tactical organization. One effect is that tactical deployments will entail much greater dispersion, both laterally and in depth. Necessarily, significant responsibility for tactical decisions will be delegated still farther down the chain of command. As a result, the responsibilities—and consequently the opportunities—which will be granted to you even as very junior officers will be substantially greater than has ever been true before.

before.

Partly for this reason the opportunities which you will have for leadership will also be increased. You will be granted the chance to direct the activities of the soldiers who, when properly led, have repeatedly proved themselves the finest fighting men in the world.

When I first came into the service the drill regulations provided that a second lieutenant marching with his company was a "file closer"—he brought up the rear, it was said, like the tail on a dog but not half so useful. If there was ever any truth in that desription, it long since disappeared. Today the responsibilities of all officers, however junior in rank, are very great indeed.

Never forget, however, that you are responsible for your men, 24 hours a day, 7 days a week, and that your success as an officer rests solidly upon them. Their intelligence, their enthusiasm, their ingenuity, and their initiative are among the strongest assets which our Army has, but the responsibility for bringing out these qualities will rest squarely upon you. It is the greatest challenge you can face, for you will be working with the finest material there is—American youths—and your success with them will bring commensurate success throughout your life.

Finally I want to mention the implications to you of the fact that units of our Armed Forces are standing guard at points throughout the free world.

In all likelihood, you will spend a good part of your active service overseas. As a member of such a unit, you will be charged with a share of the vital task of keeping up our guard against any sudden assault. In standing ready, you will not be merely going through a drill or an exercise for its own sake. The proficiency which you develop, the alertness which you maintain will constitute the index of our hope for success in building the collective strength through which war may be prevented and through which, if it cannot be prevented, it can be won.

Although the responsibilities you face are weighty ones, you are fortunate in the excellence of the preparation which you are being given, militarily and academically, to assume them.

Under the guidance of General Clark, the eminent soldier, whose courageous leadership is known world-wide, assisted by the distinguished members of the faculty and staff of this splendid school, you are acquiring skills through which you will go out to serve the Nation, whatever your profession, in the magnificent manner which your predecessors have taught us to expect of Citadel men.

And you are being granted something else of value equal to the academic training you are receiving. That is a sense of tradition, of continuity, of dedication to the preservation of those spiritual values which are the basis of all that we know and have of real and unchanging worth.

Finally, to you is being given a limitless opportunity, the opportunity for useful, meaningful service to your families, your communities, and your country. I know of no higher opportunity to which anyone could aspire.

The Citadel, Charleston, S. C.

EXTENSION OF REMARKS

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Adm. Robert B. Carney, United States Navy, Chief of Naval Operations, before The Citadel, Charleston, S. C., Monday, January 24, 1955:

EDUCATION AND LEADERSHIP

The contributions and accomplishments that have been made by the graduates and faculty of this distinguished military college form an important part of America's past. Famous deeds and famous names have become a part of this institution's heritage. One whose magnificent accomplishments in wars both hot and cold will be indelibly inscribed in our history is that of your president, Gen. Mark Clark.

Our Nation is indeed fortunate in having this great military leader here at Citadel where he can continue to lead and inspire such young men as I see in this audience.

The Citadel performs a unique function and service in the American scheme of things in that it gives a selected group of young citizens insight and training into the essential requirements of citizenship; it emphasizes the citizens' responsibility in rising to the defense of this country. What is more important, by the nature of its ideals, traditions and academic standards, Citadel stresses development in the field of leadership; and responsible leadership is urgently needed today.

needed today.

It becomes more apparent every day that our system of education is being posed with a greater challenge than we have ever known before. Both in government and industry, there is an ever-growing need for wider understanding of the interrelation between sound economics and national security. The time has passed when it is enough for a military man to be familiar with the tactics of his particular service arm or for the civilian to pleasantly limit himself to the civic affeirs of his own community.

fairs of his own community.

The nature of the world we live in is such that if general war should come again, not a man, woman, or child would be unaffected; more than that, virtually every citizen would be confronted with the responsibility of his own personal care in a desperate effort to survive. This stark reality is being brought home to people as never before by the growing awareness that we are no longer insulated by the oceans and the Arctic wastes. If this great test of national effort should ever come, every military man would be vitally concerned with the affairs of industry and civilian defense; and every nonuniformed contributor would, in some measure, need to have knowledge of military requirements in

order that they can be intelligently supplied and fulfilled. Toward the top of the ladder of national effort, where the great decisions must be made, there will be a corresponding requirement for a greater and broader understanding of human affairs. All of these things point to a need for broadening the scope of our national educational system with the difficult concomitant of increasing the amount of actual precise knowledge of an ever-expanding list of subjects. Actually, these are the only principles on which an effective educational structure can be built.

Education, today, must serve the dual purpose of supplying adequate personnel to the Armed Forces and continuing the uninterrupted flow of trained men to fill our other vital national needs, including our international commitments.

Always, there is the intense awareness of the fact that the incredibly complex organism which is the United States will need at every level a wise and informed leadership.

If one single attribute were to be singled out as the most important foundation-stone of leadership, there can be little doubt that it would be labeled "knowledge."

In the past, and perhaps under some circumstances still to be encountered, the rare personal quality that inspires others to follow may suffice to bring about the desired results. There are those men, who without apparent effort, have the gift to inspire subordinates to superlative effort. There have been occasions in military action when a dashing offensive spirit-was enough to turn the tide of victory. But for every such op-portunity and for every such man, there have been thousands and thousands of situations where saberwaving was not enough. Knowledge, and knowledge alone, will enable the men at the top, in positions of heavy responsibility, to evaluate the myriad factors and make the wise decisions. If this premise is accepted, and it would be hard to deny, it is all too apparent that a heavier burden is placed on leadership in these days of fantastically rapid and radical change

than at any time in our history.

The wisdom that is essential in handling our national and international affairs is not so much a wealth of specialized knowledge as it is skill in handling problems that involve many diverse and sensitive viewpoints which must be applied to new situations. Wisdom of this general sort will always require the help of experts, so there is a continuing need for some men to specialize in specialties and others to specialize in specialize in specialize.

The ability to think and to make sound decisions in areas where uncertainty is the dominant note is not something easily and quickly attained. It is wisdom that cannot be achieved by shallow methods or by shortcuts or by undisciplined mentalities. It can only be acquired after hard work and much practice. There is no shortcut in developing the ability to think constructively and make wise decisions in the field of human relationships. There is no quick and easy formula, no slogan and no label that will replace the trials, disappointments, and general experience factors that are involved in acquiring this sort of a general education. Man learns slowly, and if he keeps up to

Man learns slowly, and if he keeps up to date, he must learn constantly. He learns by composition of study, experiment, conversation with informed men, and association. He learns through books, travel, human contact, and personal experience. He learns, too, by his own mistakes; and he can also learn by the mistakes that are made by others. There is no substitute for repetitive experiences in the acquisition of knowledge and in the building of character.

Thus, you can understand why the military emphasizes the drill. It is the basis of indoctrination and discipline. It inculcates a skill to the point where it becomes automatic reaction.

If our young people are to have confidence in themselves and faith in themselves, they must be given assignments involving challenge. The more gifted children should be given more complicated problems, and greater opportunity to forge ahead. The exceptional mentality should never be sacrificed to mediocre conformity and particularly so in these perilous times which are testing and challenging all of us to our utmost capacity. The mentality that can see ahead and formulate new ideas needs encouragement today.

It is a sobering thought in light of today's brainpower needs and capabilities that fewer than half our people with mental capacity for higher learning actually go to college. Regardless of the individual's mental capacity, his brain must actually be put to work and challenged if it is to be improved.

In the field of leadership, the handmalden of knowledge is the ability to be articulate. Knowledge and ideas do little good if retained in a vacuum; they must be conveyed to others in a highly skilled manner.

It should be pointed out also that knowledge, in itself, is not enough. Nor is leadership alone a proper goal because evil men can acquire knowledge, achieve brilliance, and become leaders. The spiritual values were never more important than they are today, beset as we are by the plausible-sounding truth distorters in the Kremlin.

The question that quite naturally confronts each of us is to what extent international communism actually threatens our individual lives. Today, we are encouraged by the strengthening of our alliance and the strengthening of our retallatory capabilities which all, added together, would seem to any rational man to make aggression less probable.

But the Communists' pattern of aggression is sometimes hard to discern. The point to remember is this: The Communists are covertly attacking our liberties every hour of the day, every day of the year, and have been since the end of World War II; they are continuously on the offensive, if not on the battlefield, then in the free press, free speech, and free economy, to serve their own black and loathsome purposes.

What may cause optimism today is the apparent improvement in our own situation rather than from any dimunition of threat to our form of government. The threat, in terms of international communism's purpose and methods, is just as great today as it ever was.

One of the most insidious aspects of communistic methods is their perverted usage of our own Anglo-Saxon words. Today, fore our young people are old enough to fully comprehend and appreciate the true meaning of such words as "freedom" and "democracy," they are hearing these wonderful. meaningful words mouthed by the Communists in their effort to deceive and confuse. For instance, they label a satellite dictatorship, such as they are running in North Korea, as the People's Democratic Republic. They call us warmongering imperialists when they, themselves, state that it is their avowed purpose to gain control by force, if necessary, of our democratic processes. They call us reactionaries when, in fact, it is their government that is writing one of the most tyrannical chapters in world history.

The Soviets are constantly strengthening their armed forces quantitatively and qualitatively. They are developing new weapons and new uses of weapons. Their economy is expanding as is their interest in maritime matters. And the cells of their political structure are still being imbedded in every nook and cranny of the universe.

The truth is, then, that we need great national power as never before. We need technological achievement and a reservoir of trained personnel as never before. In comparing the two education systems—ours and theirs—we see that the Soviet Union implements its requirements from the top down. They start with the needs of the state and educate from the realization that they must have trained experts to support their aggressive aim. Any benefits that might accrue to the individuals are simply byproducts.

In contrast, the American education system is designed to serve the purposes of the individual by offering him the opportunity to pursue the things in which he is most interested. The national needs of the United States are served as a result of our educational achievements from the bottom up.

We must recognize that despite the inherent political and ideological restraints of the Soviet Union's communistic society, she is making both quantitative and qualitative improvement in planning and coordinating her educational requirements to go forward with her economic, military, and political plans. She is placing increasing emphasis on scientific advancement in her educational system, both in her universities and her secondary schools, and in the engineering field she is reported to be graduating nearly twice as many specialists as are we.

I have been speaking of precise knowledge in the precise sciences, but there are cultural and political sciences, the mastery of which is just as essential, not only for safety but for progress. Perhaps the greatest of these is the science of understanding people—not just the people of your own nation or your own community, not just the people with similar sociological and political experiences—but an understanding of the historical and political backgrounds which underlie the thinking of the peoples of other nations.

Many of the international frictions which plague us in our effort to band together under the banner of freedom can be charged to ignorance of our neighbors' backgrounds,

The thing that we call freedom stems from the flerce determination of our early settlers to escape the old way of life and to build something new of their own choosing. The Government which we evolved arose out of our pioneering and our revolt against Old World customs and systems. The same Old World geography is now populated with people who have known nothing but the system from which our forebears severed themselves.

Quite naturally we must expect a great divergence of viewpoint concerning such matters as government, sociology, community customs and educational viewpoints. But even when we are not prepared to agree with the modes of life or the philosophy of other people, we should seek to understand the reasons behind their hopes and their fears, for in no other way can we hope to achieve the real human accord which is absolutely essential for harmony and security.

Illustrative of this is the splendid NATO concept—a field in which I had the great privilege of serving at one time.

In southern Europe where I labored in this cause were nations, which in my lifetime, had been at each others throats. were fears and suspicions centuries old. Those ancient enmittes and apprehensions existed in some measure in the hearts of the individual people when, by the stroke of the NATO pen, they found themselves allied to-It took more than the stroke of the pen to overcome those feelings of doubt and warniess; and yet, in an incredibly short time, these feelings did change in great measure. Of course, at times, there were understandable reluctance and hesitation. This is why, earlier in my talk, while discussing the great problem of security which con-fronts the free world today, I stressed the fact that it cannot be solved by the politician alone, nor the diplomat alone, nor the soldier alone. If the urgently needed results are to be achieved, it requires, at every level, leadership built of an appropriate measure of all the components-political, spiritual, economic, military, and perhaps most important of all, an historical understanding which leads to a tolerant and useful understanding of the workings of other men's minds. There is a terrific challenge for this kind of leadership.

One of the lessons that stands out from my experience in dealing with the problems of others is that they must be approached with patience and an understanding of other points of view, and a firm resolve to find a mutually acceptable solution. When men of good will, wisdom, and tolerance approach problems in this manner, progress can be achieved. And, if there is one educational clarion call, it is the need for a breadth of education to the end that all of the free countries develop enlightened leadershipenlightened in the field of the problems of neighbors as well as their own.

If we are to cope with today's perpetrators of falsehood and deception, our most important long-range objective must be the achievement of an alliance possessing a more solid base in free nations, in armed might, in raw materials, in industry, and educa-tional productivity than the Communists

are able to command.

Our capacity to accomplish this longrange objective is transitory; and its success depends on the free peoples of the free nations, mutually understanding each other, the threat that exists to them in common, plus the will to maintain sufficient strength-moral and physical-to overcome this threat.

In short, the situation calls for a national and international educational effort to the end that we all have leaders who can keep pace with an environment that is constantly

changing.

Every literate citizen has a responsibility in this undertakin to know what freedom really is, and, as far as is humanly possible, to be conversant with the factors in order that he can explain them to others. dom must be related to every phase of personal and national life; we must understand the rights and the responsibilities of freedom the techniques of individual and mass persuasion in accordance with free world concents.

As far as our military needs are concerned, the machines of modern war are so complex that they can neither be conceived, built, nor operated by uneducated men. They require the best brains that we can develop. mentalities, as they grow and develop, must be dovetailed with those who toil in the realms of politics and economics. We must always remember that wars are not won by weapon alone. They are won by men who know and believe in the principles for which they fight. The more knowledge a man has, the more potentially capable he is of rendering a service to himself, his community, his country, and the world.

I would like to leave this thought in conclusion: The mere defense of our land and our own way of life, even when we are defending ethical and moral principles, constitutes R defensive attitude. In this day and age, there is no earthly reason to be defensive about the great ideal we believe in, which, in its simplest terms, is the achievement of the maximum measure of freedom and fair play for the people of all nations. Vidual efforts of the future must not be Predicated on the defense of our way of life but rather on the creative principle that we Will help it spread and flourish for all men.

Which brings me back to my topic-education and leadership. The type of leadership needed in this era can only evolve from a system of education which inculcates a vast knowledge, and trains men to assimilate and sort out the facts and factors for profitable use. The country should be thankful for institutions such as this where both sides of the medallian-civic and military-can be exhibited, explained, and accepted as the cornerstone of the leadership which alone can keep us on the path to a shining destiny.

Educational Benefits for Servicemen

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS -

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Russell I. Thackrey, executive secretary of the Association of Land-Grant Colleges and Universities, together with the resolution adopted by this fine organization at its 68th annual convention, which concerns full wartime benefits for persons serving in the Armed Forces on January 31, 1955. The resolution referred to supports the position represented in my bill, H. R. 292, which I introduced on January 6.

ASSOCIATION OF LAND-GRANT COLLEGES AND UNIVERSITIES, Washington, D. C., January 25, 1955. Hon. EDITH NOURSE ROGERS, Representative From Massachusetts,

House Office Building, Washington, D. C.

DEAR MRS. ROGERS: In connection with your recent introduction of legislation to extend eligibility for veterans' educational benefits under Public Law 550 during the period in which selective service is in operation, I am enclosing a resolution adopted by this association at its 68th annual convention. you will note, it supports the position represented in your proposal.

Sincerely.

RUSSELL I. THACKREY, Executive Secretary.

ASSOCIATION OF LAND-GRANT COLLEGES AND Universities. COMMITTEE ON VETERANS' AFFAIRS, NOVEMBER 1954

The committee had before it a letter from Representative OLIN E. TEAGUE, of Texas, presently ranking minority member of the House Committee on Veterans' Affairs, and scheduled to be chairman of that committee during the 84th Congress. Mr. TEAGUE's letter noted that in the past the Congress has adhered closely to the policy that rehabilitation programs were intended to benefit veterans with wartime service. It further states that the present program of education and training benefits under Public Law 550 may be discontinued at any time by concurrent resolution of the Congress or by proclama-tion by the President. It states that "now that hostilities have ceased in Korca, consideration probably will be given to terminating the period during which service personnel will accrue entitlement to education and training," and requests that the Association of Land-Grant Colleges and Universities consider this question at its annual meeting in order that its position may be developed prior to the next session of Con-

Your Committee on Veterans' Affairs has considered the question raised by Representative Tracus. It notes that at the time the association recommended a new program of educational and training benefits for veterans of the Korean fighting it felt that a

program of educational benefits was justified only on the basis that a mandatory 2-year interruption of education would cause many young men who might otherwise attend college not to do so, and that the Nation could ill afford the resulting loss of trained personnel. Your committee feels that this reasoning was sound at the time and is still sound, regardless of whether or not the armed services are engaged in active combat.

1. Your committee therefore recommends that for such period as the Nation continues to find it necessary in the national interest to maintain the Selective Service program requiring 2 or more years of active service in the Armed Forces for all able-bodied young men the program of educational benefits under Public Law 550 be continued. The committee in making this recommendation wishes also to make clear that it is not recommending a program of educational benefits for young men undergoing solely a comparatively short period of universal military training without subsequent active service, nor does it recommend continuance of educational benefits in a period in which selective service for extended active duty is no longer in operation. In the event of a sub-stantial change in the present Selective Service requirements, it feels the position of the association should be reviewed.

2. The committee further recommends that the association reaffirm its position in support of the financial provisions for educational benefits as provided in Public Law 550.

The Need for Standby Controls

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. RODINO. Mr. Speaker, I rise to remind this House that we have a great need for legislation authorizing standby controls. Today the newspapers and the news broadcasts are stressing the warlike developments in the Formosa area. I am hopeful that the measures we have taken in the last few weeks have lessened the danger of war.

Without in any way magnifying these Formosan developments, I want, today, to call your attention to the terrible situation we would find ourselves in if all our peaceful activities should suddenly prove to be inadequate. Our economy is operating at top speed. We are turning out all kinds of civilian goods and substantial quantities of military supplies. A sudden outbreak of war would not catch us entirely unprepared. In the military field we would be better prepared than in any earlier peacetime period. In the civilian field, however, we would be far from ready for such an emergency.

One has only to look back to the Korean situation to realize what might result from the lack of standby controls. After inflation set in and supply shortages developed, a system of controls was adopted. These controls were adopted too late, however, to prevent a general price rise of 20 percent and many dislocations in civilian supplies. It should be obvious to anyone that our civilian economy is becoming more intricate and more complex with each passing year. It also should be evident that dislocations in the civilian economy surely will be greater than ever before if we have another outbreak of war. We are supporting new measures in the United Nations in the interest of obtaining a peaceful settlement where gunfire is heard today. But at the same time we are reappraising our military requirements in the light of current developments in the world.

It is with these things in mind that I call your attention again to the fact that we do not have standby controls which would automatically go into effect if an emergency occurred. Are we going to continue to drift so far as our civilian economy is concerned? If an emergency occurs, will we be forced to enact legislation after much of the damage has been done to our civilian economy?

You are all aware, I am sure, that there are still many tensions in the world even though the Formosa situation is settled. The program to rearm Germany has its dangers. Unrest continues in the Middle East and in Africa. In view of all these tensions it seems to me it would be the course of wisdom to provide now for any emergency by enacting legislation which authorizes standby economic and supply controls for our civilian economy.

The Communists in the United Nations

EXTENSION OF REMARKS

HON, USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BURDICK. Mr. Speaker, in order to fortify what I have already said about the makeup of the United Nations, I quote here the words of Dr. George Dimitrov, chairman of the Bulgarian delegation to the assembly of captive European nations:

We think that it is high time for the democratic representatives in the United Nations to make their courageous decision and determinedly say:

"Out with the enemies of the United

"Out with the enemies of the United Nations from the United Nations.

"Out with the professional Red warmongers from this temple of freedom and peace.

peace.
"Out with the bloody dictators and criminal Red Fascists.

"Out with the agents of Communist conspiracy.

"Out with the greatest enemies of human rights, human dignity, human freedom, and human civilization."

In this Formosa situation the United Nations will attempt to obtain a cease-fire armistice and either maintain Nationalist China under the protectorate of this Communist-infiltrated United Nations or recommend some other move equally as disastrous to Nationalist China.

The President has full power to act now, no matter what the United Nations recommends, and he has already said that he will take charge of the matter. He now has the Congress squarely behind him and we hall his statement in his message that—

The situation has become sufficiently critical to impel me, without waiting action by the United Nations, to ask the Congress to participate now.

Public opinion overwhelmingly supports the President and this resolution of Congress.

For the exact language of Dr. Dimitrov, I am indebted to the research of Paul O. Peters in his Washington News Bulletin.

It is obvious that the President has no intention of attacking Red China, but it is equally obvious that he does not intend to abandon Nationalist China. The situation is in good hands and the general public now is united behind the President.

Conclusions on Travel and Exchange of Persons

EXTENSION OF REMARKS

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. DODD. Mr. Speaker, there has been brought to my attention a recently released European survey made for the Appropriations Committee of the other body by Brig. Gen. Julius Klein, of Chicago, a special consultant to that committee.

Of particular interest to me among General Klein's recommendations are his conclusions on travel and exchange of persons. General Klein, among other things, calls for—

First. Intensification of the interchange of persons program at all levels;

Second Encouragement of European tourist and business travel to the United States through cooperation with the established American travel industry; and

Third. Reexamination of existing law with a view toward facilitating and, with all safeguards of our interests, expanding the opportunities for foreign travel to the United States, and the assignment of adequate staffs to our consular services abroad to speed screening and other processing procedures required for the admittance of foreign visitors.

Since the end of World War II, the annual volume of dollars spent by American tourists abroad has more than doubled. Travel, in Europe, is now the biggest single source of earned dollars. The importance of Americans traveling abroad as a painless import and as an implementation of the "trade, not aid" program was well recognized by the report of the Randall Commission. Not measurable in dollars, however, is the value in strengthening the bonds of true friendship and understanding on a real personal level that international twoway travel brings. This understanding of America, its institutions, and its people, bought not by dollars but sold

through travel, can well be one of the strongest deterrents to Communist subversion of the minds and wills of men.

Uncomical Comic Books

EXTENSION OF REMARKS

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. POFF. Mr. Speaker, I have requested this time to call to the attention of the House a bill which I have introduced today. It deals with a problem of supreme importance to the parents of our Nation.

It has been well said that a nation's literature fashions a nation's culture. In recently modern times, our young people have been swamped by a great avalanche of library barbarism in the form of so-called comic books. The unhappy fact is that many of them are anything but comical. Legislation with respect to publications has always been a very delicate subject. One of our most cherished rights is the freedom of the press guaranteed by the Constitution. Any degree of Government censorship of the publication and dissemination of reading matter impinges upon that constitutional safeguard. The ultimate extreme of Government censorship is the book-burning technique of the Nazi regime. On the other hand, the Government is charged with the protection of the general welfare. There can be no doubt that some of this weird, sadistic, and immoral literature is inimical to the public interest. Thus it will be seen that in legislating in this field, the Congress is necessarily confronted with two vitally important principles, the sanctity of both of which must be preserved. Just as freedom of speech cannot be stretched to justify treasonous words, just so cannot freedom of the press be stretched to justify corrupt literature.

Because of the two principles involved, and because of the complexity of the legal questions entailed, I feel that a temporary Presidential commission should be established to study both the problem and the legal implications of possible new legislation. Under my bill, this commission would "make a thorough investigation and study of the publication and transportation for sale in interstate commerce, by mail, rail, or vehicular or personal conveyance, of books, magazines, leaflets, circulars, and other publications containing pictures, drawings, paintings, sketches, or other illustrations or language which may be characterized as lewd, lascivious, immoral, obscene, inhuman, or sadistic, or calculated to teach, encourage, or glorify a breach of moral or secular law."

As soon as the commission has completed its investigation, the bill requires it to report to the Congress its recommendation for such legislation as it may consider just and justified.

It may well be that legislation is not the answer at all. An atmosphere of Christian discipline in the home can do more to solve the problem than all the laws in the world. It is simple to teach righteousness; it is difficult to legislate morality.

The 100th Anniversary of the Panama Railroad

EXTENSION OF REMARKS

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include my remarks on the 100th anniversary of the completion of the Panama Railroad on January 28, 1855. A commemorative stamp was issued, which was designed by Leo C. Page, chief of the architectural branch, and printed at the Mount Hope Printing Plant, Canal Zone. It is of artistic design and shows a sketch of the first Panama Railroad engine.

This great historical event has been brought to my attention by James F. Campbell, a personal friend of mine, who has spent many years of loyal service in the Customs Service at Cristobal, C. Z.

On January 28, last Friday, the railroad which crosses the Isthmus of Panama marked its 100th anniversary. All of us are fully aware of the economic and the strategic significance of transportation between the Atlantic and Pacific Oceans across this 50-mile isthmus. I suspect, however, that not many of us are aware of the fact that for over half a century before the Panama Canal opened, in August 1914, passengers and freight had been transported along the general route of the canal by railroad.

When the first train linked the Atlantic and Pacific in Panama, on January 28, 1855, a year was to elapse before the first railroad in the United States crossed the Mississippi River and 14 years before the first rail link between the Atlantic and the Pacific was completed in the United States.

The completion of the Panama Railroad in 1855 was a tribute to United States private enterprise and engineering skill. The promoters were United States citizens. The corporation which operated the railroad from its beginning until 1948 was chartered in New York State and the contractors which handled the original construction were Ameri-

The railroad across the isthmus was built at an enormous cost in human lives and human suffering. The connection between the mosquito and malaria was not known at that time and the various curative and precautionary measures then used were of no value. Thousands died. The terrain was extremely difficult, involving both swamps and hills, It is difficult for us today to

understand how the project was ever completed.

The history of our own West is reflected in the history of the Panama Railroad. It began operation in time to benefit from the heavy movement of people and freight to California following the gold rush. Until 1870 the railroad was enormously profitable. After the completion of our own transcontinental railroads, the Panama Railroad went through a period of lean years.

French interests bought control of the railroad company in 1878 in connection with their efforts to build a canal across the isthmus. The railroad, after 1904, was of vital importance to the United States construction of the canal and is recognized today as essential to the maintenance and the security of the canal.

The Panama Railroad has been operated by the United States Government since 1904, but it is not financed from appropriated funds. I have visited Panama on several occasions and have had a nopportunity to observe the railroad in operation. I feel that we should all take pride in its record.

I would like to recommend to the Members of the House the special centennial edition of the Panama Canal Review of January 28, 1955, published in the Canal Zone, which contains a detailed history of the railroad with a number of very interesting illustrations.

Talk Is Cheap but Water Earns Money

EXTENSION OF REMARKS

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. ASPINALL. Mr. Speaker, every now and then it becomes necessary to say things which may sound sharp in some quarters, yet which are mild in comparison to what could be said. I do not think I need to add much to the editorial which will follow my remarks. This editorial appeared in the Denver Post, of Denver, Colo. It should be mentioned here, lest this be relegated as Democratic Party propaganda, that while the Denver Post is an independent organ of opinion it gave its support to the administration it here has under the microscope.

A big decision on reclamation and on the future of the West is to be made by this Congress. It may decide to do nothing, and if that decision is made the Nation will not soon regain the ground lost. Again, on the basis of information such as is highlighted in this editorial and as more completely spelled out in another insertion in this RECORD, made by me on January 27, 1955, the Congress may decide to get this great program back on the track so that the whole Nation may continue to benefit from this wise investment for underdeveloped areas. As it is pointed out, when you develop either a new area or increase the economic base, then you add net new wealth to the Nation generally. It is my hope that this editorial and the other insertion "Prairie Dogs Versus Prosperity?" will be carefully considered by the Members of Congress before they come to any final conclusion on what is to be done with reclamation.

The editorial follows:

TALK IS CHEAP BUT WATER EARNS MONEY

In his state of the Union message to Congress President Eisenhower said his 1956 budget "will recommend appropriations to start 6 new reclamation and more than 30 new Corps of Engineers projects of varying size * * ." Some of the corps projects, such as those in the Missouri Basin, may be related to reclamation. Most of them, we assume, will be for flood control or other purposes covered by the Rivers and Harbors Act.

Mr. Eisenhower made specific reference to the upper Colorado River project "to conserve and assure better use of precious water essential to the future of the West." And he said * * "to develop, wisely use, and conserve basic resources" is one of the "fundamental policies * * * at the foundation of our economic growth."

The reclamation record of the Elsenhower administration after 2 years is far from impressive. Its Budget Bureau was described last November by C. Petrus Peterson, president of the National Reclamation Association, as a "very potent obstacle to (reclamation's) progress." Last year the reclamation program had been murderously hacked down 65 percent from the fiscal year 1950 in funds for new project construction and rehabilitation.

For 4 years before 1954 the Bureau of Reclamation's budget had averaged more than \$263 million a year. The 83d Congress (the first Republican Congress since 1947-48) whacked reclamation down to \$160 million. It voted only \$4,184,000 for just 8 projects, 5 of which are very small. By failing to authorize additional work, and by refusing to put up money for some projects authorized a decade ago, Congresses in the last 4 years have forced a 44-percent reduction in the internationally famous bureau engineering staff in Denver.

On page 3 of this Roundup section appears an article entitled, "Prairie Dogs Versus Prosperity?" It digests a factual review of the benefits reclamation has brought to the semiarid States of the West in about a half century. Its source is the Bureau of Reclamation itself. Some will dismiss is as Bureau propaganda. But the skeptics will not include a single person who has observed or lived on the land or in the communities of the Colorado-Big Thompson, the Central Valley of California, the Columbia Basin or Yakima projects of Washington, the Boise project of Idaho, the Owyhee of Oregon, the Salt River of Arizona, the Provo River of Utah, the Rio Grande of New Mexico and Texas, or the Shoshone of Wyoming and Montana.

For on those projects and on dozens of others is living proof of the enormous values accruing from the cultivation of 6,192,416 acres of land, irrigated in whole or in part by Bureau-constructed works, and producing total crop values in 1953 alone of \$785,939,868. And all of this on land which Daniel Webster described more than 100 years ago as a "worthless area * * * a region of savages and wild beasts, of shifting sands and whirlwinds of dust, of cactus and prairie dogs."

Now, it is true that the Eisenhower administration itself demonstrated greater enthusiasm for reclamation than the GOP majority of the Congress. The opposition against western water and power development has been bipartisan: It has been led

by what appears to be a conspiracy among (a) those who believe interest-free Federal money for such works is wrong, philosophically and economically, (b) some who are fiercely playing regional politics from motives of self-interest, and (c) a group which confuses reclamation with make-work projects, to be deferred until needed as an antidote

for depression.

The opposition to reclamation is as old as Mr. Webster's indictment of plans to acquire much less develop the great West. has been overcome to the extent that the total irrigable land under completed works has increased from 39,300 acres in 1906 to 7,147,528 acres in 47 years. But it has been overcome only by the persistent and courageous efforts of men who believe in the West, in the soundness of reclamation as a Federal function: Men who have fought every step of the way.

Our complaint against the Eisenhower administration's Department of Interior has been its failure to dramatize the dynamics of its program, and to speak forthrightly and factually for the great West that the Department was created, primarily, to serve.

Engineers and Our National Well-Being

EXTENSION OF REMARKS

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. OSMERS. Mr. Speaker, on the opening day of the 84th Congress I introduced H. R. 286 which has as its purpose the establishment of scientific scholarships throughout the United States in order to meet the needs of the national defense and the general welfare as to scientific training.

My friend and former constituent, Donald A. Quarles, now Assistant Secretary of Defense for Research and Development, has made a most interesting address on the subject of Engineers and Our National Well-Being. Because of the wide interest in scientific development, I include this very fine address in the RECORD:

ENGINEERS AND OUR NATIONAL WELL-BEING (Address by Donald A. Quarles, Assistant Secretary of Defense, at First Annual Assembly of the Engineers Joint Council, New York, N. Y., January 21, 1955)

Ladies and gentlemen, it gives me a great deal of satisfaction to take part in this First Annual Asembly of the Engineers Joint Council. As an officer and director of the American Institute of Electrical Engineers, I have been much interested in EJC and the progress of its organizational growth. I have felt and still feel that unless or until another unity organization is created, EJC should be the senior policy body representing the engineering profession. In saying this, I am aware that there are still important segments of the profession not represented on the council. The present membership however, so broadly representative of The present membership is, profession that in professional matters I feel the council is entitled to assume and should assume this role of spokesman for the United States engineering fraternity.

I particularly appreciate the opportunity to address you on this occasion as a number of matters stand out in my mind as deserving the thoughtful attention of the profession. I realize that these are not new subjects and, in fact, that most of them are already receiving the active consideration of those assembled here. Since the subjects I would discuss all touch on national security policy in one form or another, I think it would be appropriate for me to say something about our security position vis-a-vis the Communist world. This, as you ap-preciate, has many facets, including our mutual security ties with the rest of the free world, our economic position, our military strength in being, and what might be called our cold war or psychological position. Because this is so big and complex a question, I think I should limit myself to the strictly technical aspect of it in which engineers would naturally have a primary interest. Viewed in this aspect, the cold war is a technological race with the Communist world. The question is how our team is doing in the race.

If there is any doubt in anybody's mind that weapon technology is a very important factor in our cold-war position, I remind you that even at the present state of development, 1 -airplane in 1 trip can deliver at great distances a bomb load to knock out 1 large city. This means that research and development efforts to increase the effectiveness of the payload, to improve the means and reliability of delivering it, and conversely, efforts to defend against it, tend to dominate our national-security program.

At the end of World War II it seemed evident that we had a fairly comfortable technological margin over the Communist world and, in fact, it is probably not an exaggeration to say that our air/atomic advantage was a principal factor in maintaining a balance of power and, consequently, a semblance of peace. In the decade that has followed, however, the Soviets have made very great strides in improving their technical position not only in the atomic field, as evidenced by their atomic test in 1949 and their thermonuclear test in 1953, but also in the fields of aeronautics and electronics, both of which are essential to the effective exploitation of their atomic developments. The quality of the jet fighters they threw into the Korean war, and the advanced types of jet bombers they flashed in their last May Day air show are adequate evidence in the aeronautics field.

In electronics, the evidence has been more obscure. Their technical publications have boasted of their radio communications and navigational aids. One of these also states that "on bombers airborne radar devices are used as sighting devices for bombing various targets," and it shows typical illustrations of airborne radar PPI presentations. The Soviet air defense system is apparently not unlike our own with GCI radars, IFF techniques, spotter networks, and so forth. They have, of course, a very great incentive to build up a defense against our atomic retaliatory forces. We got our first concrete evidence of their electronic progress when we saw what a gigantic and sophisticated system they had built up to jam our Voice of America broadcasts.

In the summer of 1953, we saw another very significant straw in the wind when the U. S. S. R. sent their modern cruiser Svcrdlow to the British coronation ceremonies, bristling not only with guns but with an assortment of search and fire-control radar antennas very comparable with one of our own cruisers of similar tonnage.

Perhaps the most important thing the Communists have done has been to modernize their educational system and to orient it strongly toward the physical sciences and industrial technology. As a result of very comprehensive work along these lines, they have increased their scientific and technological potential by an order of magnitude. and, as others have pointed out, they are today turning out engineers and scientists at more than twice the rate we are in this country. If current trends continue, it will only be a matter of a few years before their scientific and technical manpower exceeds our own.

This is not to imply that even with such numbers they would have a stronger technological base than we, since this depends on many things besides numbers. We would still have the stronger and more virile industrial system, and there is no question in my mind about our ability to stay out ahead in this technological race. In the military field, however, it is clear that we are competing with a single-mindedness of purpose and a ruthless concentration on the aims of militant communism that constitute a serious challenge to our way of life in the free world.

Fortunately, this situation is clearly recognized by our Government, and our national policy has been shaped to meet it. Presi-Eisenhower stated this clearly in his recently publicized letter to the Secretary of Defense. The President said in part that-

"Due to the destructiveness of modern weapons and the increasing efficiency of long-range bombing aircraft, the United States has reason, for the first time in its history, to be deeply concerned over the serious effects which a sudden attack could conceivably inflict upon our country * * Because scientific progress exerts a constantly increasing influence upon the character and conduct of war, and because America's most precious possession is the lives of her citizens, we should base our security upon military formations which make the maximum use of science and technology to minimize the numbers of men. * * * Security must be founded on a strong and expanding economy."

This all suggests that we should have a careful look at the course we are following the conservation of our scientific and technical manpower. Quite obviously in a long-range sense, our technical position vis a vis the Communist world will be strongly influenced by the way we handle this man-

power problem.

It is thus important for us to work toward national policies that enhance and conserve engineering manpower. The dilemna we are now in about drafting engineers is a case in point. There are good policy reasons for insisting that no young man escape the sacrifice that other young men must make in military service. On the other hand, engineers are scarce and, if we are to sustain a program that will keep us out ahead in this technological race, our need for engineers and scientists must be expected to increase rather than decrease.

This is a problem that we must deal with on a strictly national-interest basis. If we are to win this race, our manpower must be disposed to our greatest national advantage. The military services require some specialists in the performance of their missions. Beyond this, we cannot afford to put engineers and scientists into uniforms.

As you know, we have some important decisions to make along these lines in the months immediately ahead. The Selective Service Act expires on June 30, 1955, and legislation is required to replace it and also to bring our reserve program into line with present-day realities. In this connection, I recently arranged for discussions between members of the Engineering Manpower Commission, the Scientific Manpower Commission, and Mr. Burgess, the Assistant Secretary of Defense for Manpower and Personnel. I hope that further discussions can be held. not only with responsible officials in the Department of Defense, but also before other Government officials and the congressional committees that will work on the legislation.

There are also educational aspects of this problem that the Engineering and Scientific Manpower Commissions have addressed themselves to and that deserve the active support of the profession. Best utilization of available engineers requires, too, that industrial and other employers recognize an obligation to develop the full potential of each engineer and to avoid waste of his

talents on nontechnical duties.

One aspect of this matter that I should mention briefly is the heavy concentration of our technical manpower on defense and defense-related work. In the latter category I include the atomic weapon and military reactor work of the Atomic Energy Commission, and the research work of the National Advisory Committee for Aeronautics in the aerodynamics and aircraft propulsion fields. It is estimated that these defense lines use about one-half of the total research and development potential of the country. This is not to say that the results of these programs are useful exclusively for defense, as there are, of course, many byproducts of value to our civilian economy; nor does it imply that the nondefense half of the total national research and development effort is without benefit to defense since, in the long-range sense, defense technology is founded, in large measure, on the fundamental research in our universities and other similar institutions, and on the technology developed in our civilian indus-

In my judgment, this great concentration of our scientific and technological resources on the problems of defense is not only justified but necessitated by the world situation in which we find ourselves. To do less would jeopardize our position of technological superiority so essential to our long-term security. On the other hand, to attempt to use directly on defense projects a bigger proportion of our total potential might be unwise as a long-term program, particularly when one considers the interdependence of the military and civilian

Atomic energy has been a key topic of this assembly. There is no doubt in my mind that it deserves this kind of treatment. Some here have been associated with the program from its earliest beginning. One might say we are just entering the third era-the first was research and crash military development culminating in the Hiroshima and Nagasaki bombs; the second was also dominated by the military require-ments, culminating in our 1954 thermonuclear experiments; and the third or power reactor phase had its roots in the first two but might be said to have been ushered in by the launching of the Nautilus a year ago. Several significant things have happened since. Congress passed the Cole-Hickenlooper Atomic Energy Act last summer which opened up the field for private enterprise to come in and develop it for the greater good and welfare of the country. In line with the President's leadership, Congress also made provision for sharing our very valuable power-reactor know-how and even moderate amounts of nuclear materials with other countries to make it possible for them to share with us the great benefits of this new technology. On Labor Day, the President, by remote control, broke ground for the first large commercial powerplant, first in this country, and so far as we know, first of its size and kind in the world. This, in fact, is just one instance of the many ways in which our Atomic Energy Commission is cooperating with private industry in this

Looking to the future, the Commission is spending an estimated \$8.5 million a year on general reactor research and development work and is well into a 5-year civilian power reactor development program estimated to cost nearly \$200 million. The program calls for the building of five power reactors of as many different types, which were chosen to be the most promising for eventually leading to economic power.

While all of these are experimental and only one can be called large, they will serve for a period of testing and operation and as the prototypes of large plants where the experimental results are sufficiently prom-

Nuclear power is also of great potential military importance and, in addition to the Nautilus there are half a dozen military projects underway, notably to apply nuclear propulsion to aircraft, to large naval vessels as well as submarines, and to an Army project for the development of a semiportable powerplant for field use.

There is, of course, a close interplay between this military project and the general reactor development mentioned earlier. Taken as a whole they constitute a very broad and progressive national program that will, no doubt, have a very important impact on the development of the industry, both in this country and abroad, in this last half

of the 20th century.

One can hardly deal with the matter of nuclear power without raising a basic question of national policy as to the proper place of the Government in this field. The question is complicated by the fact that, for good and sufficient reasons, the Government arrives at the present crossroads with an absolute monopoly in the field, and with national security reasons for perpetuating some aspects of the monopoly. This poses a difficult question. On the one hand it is apparent that, if we really believe in free enterprise and in getting the Government out of all business activities except those that are necessary in the public interest and that cannot be properly performed by private enter-prise, then the time certainly has come to getting the Government out of the atomic power business. On the other hand, there are plausible arguments that the people's money has been spent to develop the art and to produce the fissionable or nuclear fuel materials and that the Government should therefore exploit and operate the power plants for the people. Of course, the hitch in this argument is the hidden premise that Government operation of such power systems would be in the best interest of the people. I, at least, believe that it would not and therefore I take great satisfaction in the enactment by Congress of the Cole-Hickenlooper Act which, while not proscribing Government operation, wisely provided for an orderly transition to private ownership and operation of nuclear-power facilities.

In closing I should like to return to a subject I touched on ir my opening remarks, namely the organization of the engineering profession. This subject has been worked over on so many different occasions by so many different groups and with such care and competence that I offer my views with some trepidation. Without further apology, however, I suggest:

- 1. That the guiding principle should be to serve the public welfare; and only to serve the interests of groups of engineers, no matter how large, to the extent that this is incidental to serving the public welfare. I believe this is in the enlightened self-interest of the profession.
- 2. The Unity organization should have professional standards of membership. Membership should be open to all who meet such standards, either directly or through membership in a constituent society. I feel that State registration should not be a necessary requirement, at least under present circumstances.
- 3. The Unity organization should be effective in developing the views of the profession; in developing policy for the profession; and in representing the profession in the formulation of national policy. If this kind of effectiveness can only be achieved by individual dues-paying membership then I am

for such membership but this has never seemed to me to be a paramount consideration. I am sure, however, that the federation concept will only work if there is a sense of urgency in the member bodies to make it work.

It is tremendously heartening to see this enthusiastic assembly of representatives, not only of the constituent societies of EJC but also of many other national and regional bodies with the common bond of professional interest in the engineering field. It is obvious that great progress is being made in drawing the profession together under Unity organization, and I pay tribute to the many leaders of the profession who have contributed to this end, including the first president of the expanded EJC, Mr. Pigott on my right, and our chairman, Dean Saville on my left, who is just embarking on his second very noteworthy term as president of our joint council.

I appreciate more than I can tell you, the opportunity you have given me to take part in this historic first assembly.

Eyes on Intelligence

EXTENSION OF REMARKS

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mrs. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the Record an editorial from the Pittsburgh Post-Gazette of January 31, 1955.

The editorial calls attention to a resolution introduced in the Senate for the creation of a Joint Committee on Intelligence Matters. A resolution for a similar purpose has been introduced in this House, and I am happy to be one of the cosponsors of it.

EYES ON INTELLIGENCE

A resolution that deserves the early attention of Congress has been introduced by Senator Mike Mansfield, of Montana, on behalf of a bipartisan group of 33 Sanators. The measure would create a joint 12-member congressional committee, similar to that on atomic energy, to supervise the Central Intelligence Agency.

Much of the activity of the Central Intelligence Agency, like that of the Atomic Energy Commission, is secret and not subject to routine scrutiny by Congress. Yet if the CIA is to be ultimately answerable to the American people for what it does all over the world, it should come under the regular observation of elected officials. It should be subject to the system of checks and balances designed to prevent any one department from becoming too autocratic.

A committee of Senators and Representatives could facilitate the handling of CIA legislative business. Like the Joint Congressional Committee on Atomic Energy, it could, when secrecy is essential, hear testimony in executive session without the necessity of repetition such as occurs when two committees of Congress must deal with the same question. The proposed joint committee would bring under systematic review an agency of Government which, to its detriment, now only attracts congressional eyes when some sensational suspicion about it is voiced.

Total Defense or Total War

EXTENSION OF REMARKS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES *Wednesday, February 2, 1955

Mr. BOLLING. Mr. Speaker, on next Monday, February 7, I expect to reintroduce my concurrent resolution providing for a study of the economics of atomic defense by a joint committee of the Congress. In the 83d Congress this was House Concurrent Resolution 229. In this connection there follows a speech I delivered at a luncheon of members of the National Planning Association last December:

TOTAL DEFENSE OR TOTAL WAR

Today, I will attempt to raise questions not to answer them. But before doing even that there must be some preliminaries.

In the first place, let us assume, and we are supported by the excellent NPA study of Gerhardt Colm, that the American economy can afford much larger expenditures for total defense than those currently being made or planned.

Secondly, let us assume that in 15 years or less the Communist bloc will possess large numbers of guided missiles with atomic and hydrogen warheads and speed of thousands of miles an hour and that there will be no effective way of preventing most of such missiles from arriving in the vicinity of their targets.

Today the United States still has a lead in the air-atomic armaments race. Socalled massive retaliation even now can force stalemate in terms of the big war. However, we and our allies apparently have neither the programs nor the forces to prevent the deterioration in our position in the Far East which is so evident in Indochina.

There are many ways to lose freedom. It need not disappear in a cataclysmic clap of atomic thunder. It may. But its strength may also be destroyed by the less dramatic destruction of peoples, seduced or conquered by more conventional totalitarian tactics.

From one point of view, the point of view of previous poorer performances, it may be said that the democracies have done well in their efforts since 1946. From another point of view, that of the future, it may be that we have only done well enough to prolong a process leading to an ultimate defeat. That we have not yet arrived at the point where defeat is inevitable is my conviction. I am equally convinced that unless we do better than we have in preparing our defenses our defeat may soon become inevitable.

Some of us believe that one of the primary reasons for that condition is the fact that we have never succeeded in arriving at a balanced and whole policy of advancing democracy, or, if you insist, of defense against Communist aggression. Today there must be not a foreign policy, a defense policy and a domestic policy, but one policy which includes all these and is the policy.

Most of us here will agree that our efforts

Most of us here will agree that our efforts beyond our shores depend on a growing domestic economy. Without an effective foreign policy to maintain and strengthen the coalition of democratic peoples, an airatomic striking force twice as large as necessary would not save us. Without adequate strength in the more familiar weapons of warfare there can be no effective policy to prevent the gradual destruction of the nations which seek to practice democracy but

are not yet in a position to defend their sovereignty. Without the best in early warning, continental air defense and civil defense, an enemy is actually encouraged to have hope of success in an all-out stab-to-the-heart attack.

There have been too many special pleaders, too many over-simplifications, too many exaggerations by the proponents of one element or another of the whole defense we need. No one method of defense will succeed without the others. And we need not choose from among necessaries because we think we cannot afford all.

It was with these points in mind that early last summer House Concurrent Resolution 229 which provides for a study by a special joint committee of Congress into the economics of atomic defense was introduced.

The details of the resolution are not too important. It will be reintroduced, perhaps with some modifications. But what it might lead to could be very important. It may even be that whether or not Congress acts on it will prove to be the difference between war and peace. You notice the use of the "may," not some more positive word, Frankly, no one knows whether effective dispersion of people and plants is practicable or wise. I strongly suspect that it is. I even suspect as I said before that effective dispersion can tip the balance to peace. But I do not know this for the simple reason that the facts do not exist upon which to base an intelligent decision.

Excellent studies have been made in this area—once excellent but now largely out of date because they were based on the existence of A-bombs only. One hears that various top-level members of the administration are studying the new problems raised by the H-bomb. What they will come up with I do not know. But I have the impression that at least some of their minds are frozen in the notion that a baianced budget is essential to our defense.

At any event, right now we do not have the facts on which to base a decision. Presumably if there were no limits to the amount of money and effort we could expend and if we did not care what happened to our free society, the decision to disperse effectively would have been made and implemented long ago. But since there are limits on our resources and our effort is directed to strengthening a free society, there are preliminary questions which must be answered before we can intelligently answer the larger question.

But, you say, we do have a governmental policy of dispersal, promulgated years ago. Many plants have been dispersed. Fine, but the indications are that the cholcest target areas have actually grown more attractive. Apparently, as one man moved out of an area more than one moved in. If one factory dispersed, larger ones did not. Our efforts have not been adequate to achieve our purpose. The problem of concentration still remains.

Here are a few of the questions which must be asked. If today much of our population and industrial strength is concentrated in 70 urban areas, each a prize target for enemy attack, how much safer can we make ourselves by reducing our concentration by 100 By 500 percent? How much more effort would it take for an enemy to effectively attack 350 urban areas rather than 70? Would the problems of our own military defense be increased five times also? What would such a program do toward making civil defense easier and more effective? Or would dispersion in fact make civil defense harder? Or does the dreadful area of radiation contamination, which an H-bomb explosion creates, make the whole problem of civil defense impossible?

Let us suppose the answers to all these questions demonstrated that selective dispersion would be very valuable as a defense measure—as a measure of defense so effective as to play a real part in deterring an enemy, willing to use surprise attack, from launching such an attack. Then we must answer the even more difficult questions of how to accomplish dispersion.

What would be the cost of this massive task? How long would it take? Who would pay for it? By what means? How could it be accomplished without using the methods of authoritarianism? In other words, how could the people in a society in which each individual homeowner and entrepreneur has and must have a large area of free choice, be persuaded that it is in their interests to participate in dispersal—even at some inconvenience or perhaps personal or corporate cost? And, of course, the people's participation would include paying for dispersion personally or through some level of government.

Unless I am in error, well-founded answers to most of these questions are not available. In part, no doubt, because of the swiftness of events. We read that the last hydrogen bomb greatly exceeded in yield even the expectations of its inventors. It is perhaps not much of an exaggeration to say that the age of fusion is as different from the age of fission as the latter is from that ancient day, 10 years ago, when all man had was blockbusters. Our minds, our imaginations lag behind. And this lag, of course, may be more fatal to mankind than radiation.

There is no reason why we should not have the answers to all the questions which must be answered before we can decide the blg question of the desirability and the feasibility of dispersion. We do not have them because too few of us have asked the questions and demanded answers. I believe that we have the ingenuity to devise means of encouraging the people in our mixed economy to disperse their homes and their places of business without spending more money than we can afford and without significantly decreasing the number or character of our free choices. I believe that dispersion can significantly decrease our vulnerability to surprise attack by making the chances of success in such an attack much less likely. But in this case, much more than the belief of a few is needed. We must have facts and conclusions. It is not that these facts are so difficult to obtain. Rather we have not bothered to get them. Certainly, it need not cost as much as even one atomic bomber to determine the answers to these questions and the others we need to answer. Should the answers add up to the conclusion that dispersion would not be practicable or effective, that, in itself. would be important and valuable. should the studies reveal that dispersion can be effective and that ways can be devised to achieve effective dispersion without undue strain either on our economy or our institutions, then the cause of peace might be advanced appreciably.

In our ignorance there is no bliss. Freedom cannot afford such ignorance.

I care not at all whether these studies are made by Congress, the Executive, or private groups. I care only that we use to the fullest that great advantage which democracy has over totalitarianism, its ability, at least in greater measure, to make decisions based on facts and to constantly seek for more facts and more knowledge. Our discipline is that of self. We have nothing to be proud of in the history of our attempt as a people to pretend that first the A-bomb and now the H-bomb do not exist. We must face the facts, but first we must know them.

EXTENSION OF REMARKS

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. RODINO. Mr. Speaker, I have introduced H. R. 3137, a bill to incorporate the Legion of Guardsmen. This is an organization made up of members and former members of the volunteer armies of the United States. These are men who have voluntarily served their country in peace and war and most times without remuneration. Their courage and devotion to their country, their giving of their time and their treasure, their self-sacrifice is an inspiration to the whole Nation. They are the successors to the Minutemen at Lexington and Concord, to the men who answered the call of Jackson at New Orleans in 1812, to men who served the Armies of the Republic in the Mexican War, to the men who rallied to the defense of the Union in the Civil War, and to the men who were the eagle's scream at San Juan Hill and Manila Bay in the Spanish-American War. Today these men have served in the National Guard, called first in World War I, and a whole year before Pearl Harbor in World War II: Their glorious history has been written on the battlefields of the world. These men have served in the Naval Reserve and Militia, the Coast Guard Temporary Reserve and Auxiliary, the Civil Air Patrol, and the State Guards. These men deserve recognition. The Legion Guardsmen deserves to take its place along with the other great patriotic organizations chartered by act of Congress.

The Legion of Guardsmen was organized in June of 1944 at Jersey City, N. J., for the purpose of perpetuating the friendships and associations of persons having served in the Armed Forces of the United States and its Territories; to obtain recognition for its members for military services rendered; to foster and promote governmental legislation for the betterment of its members and for the general welfare of the Nation; and to initiate and support ideas and to formulate plans to effect adequate national defense for the greater peace and security of our country. Its constitution and bylaws and those of its subdivisions, chapters, and posts prohibit it from engaging, directly or indirectly, in either political activity or business for a pecuniary profit.

This organization serves a special need. It is not just another organization of war veterans. It provides our volunteer guardians in both peace and war with their own organization. Its doors are open not only to those who are serving or have served honorably in the Armed Forces of the United States and their reserve components but also to those who have served or are serving in the Armed Forces of the States, the Territories, and the District of Columbia; the Coast Guard and its reserves and auxiliaries;

To Incorporate the Legion of Guardsmen and the Civil Air Patrol. It covers all those who have given or are voluntarily giving of their time and treasure, remunerated or not, to defend the State and Nation.

> Gentlemen, let me reiterate, this great organization deserves to take its place along with the other great patriotic organizations chartered by act of Congress. Let us honor the principles for which this organization stands. Let us recognize the great services which these men have rendered and are rendering to our country. Let us foster the spirit of the slogan: When America needs the minuteman-then America first, last, and always.

> Are We Going To Stand Firm for the Principles on Which This Government Was Founded?

> > EXTENSION OF REMARKS OF

HON, USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BURDICK. Mr. Speaker, action on the part of the United Nations may nullify the resolution passed by Congress to support President Eisenhower in his demand for authority to solve the Formosa problem, as he said, without waiting for the United Nations to act. The President left the door open for the United Nations to get behind a ceasefire in that explosive situation. Should the United Nations decide that Formosa should be turned over to the Reds of China, and it is quite probable that this is precisely what it will do, then where do we stand on the Eisenhower resolution? Should the United Nations agree that Red China should be let into the United Nations as our partner, then where do we stand concerning the Eisenhower resolution?

If this country backs up and agrees to these probable conclusions, it means for us a bigger defeat than we suffered in Korea. If this country ever consents to let the Reds into the United Nations. we automatically should withdraw from that organization if we have an iota of sense left. If we have not gone too far on the road to appeasement it may be that we will have courage enough to face the Communist menace.

We have been driven out of our reasoning faculties by trying to appease the Reds. They hold our soldiers as prisoners, condemned by a kangroo court, and we do nothing about it but run to the United Nations for help. This organization is not going to support a direct demand on our part for the surrender of our men. Red China knows that but hopes we will let her dictate the terms and the consideration for their release and the United Nations as now constituted, will yield and yield to the Reds no matter what they want. The reason is that the United Nations is infiltrated with Communists. Notice the vote in the United Nations on the Human Rights resolution. On the question of the individual's right to personally own property, the vote was 15 to 2 against it. Does that not clearly prove what I have always contended—that the United Nations is the agent of a Communist conspiracy?

When I voted to give the President authority to act in the Formosa situation I had confidence that he meant what he said, that he did not want to wait for any action of the United Nations. have confidence that he will not back up. However, with Great Britain haranguing for the recognition of Red China, and our own administrators wanting trade with Russia, it is a pretty tough assignment for the President. If we would rise up in our might and pull out of the United Nations as soon as Red China is admitted it would best serve this country to let them in. The Reds of China really belong in the United Nations, as the preponderance of ideas in that organization will be quite homelike for the Reds. That is what the one worlders are striving for, just as much as Russia-to build a world government of a Communist complexion. It surely is communistic in design, or that organization would not vote overwhelmingly to ban the private ownership of property. That ownership is the basis of capitalism and this vote clearly proves that communism and not capitalism is the present theme of the United Nations.

This struggle between capitalism and communism cannot be settled by any treaty or understanding. That struggle will go on until we are all one thing or the other. What Lincoln uttered nearly a hundred years ago is a good doctrine now-that a house divided against itself cannot stand. Anyone with just a smattering of commonsense ought to know that nations, differing in history, religion, and experience in government cannot be held together by agreements. We believe in Jesus Christ, but the Russians do not; we believe that a government exists for the people: Russia does not, but believes that people exist for the government. Can these views be harmonized? It is about time we stopped this woolgathering thinking and get down to first principles-we should hold fast to our religion, our history, our Government, which has proven to be the hope of mankind in his struggle for freedom and liberty, and let the atheists and the pledged destructionists of our way of life keep out of our company. Are we in the United States ready to sit down side by side with brigands, cutthroats, liars, and atheists? I think not.

The Communist slogan of peaceful coexistence is a new move to further delude the people of this country. never can be any peaceful coexistence with man or nations unless each party respects the right of the other, and that relations are honorable. Would the dictator of Russia keep any agreement? Would he desist from his propaganda? Would he consider honor in dealing with us? When we know from the writing of Karl Marx, the remarks of Lenin and Stalin that their purpose is to utterly destroy capitalism, by any means, we can see the futility of trying to live a peaceful coexistent life with Russia under its present government. "The lamb shall lie down with the lion" is the expression of a noble sentiment, but as the dictators would handle the situation, that statement would be paraphrased to read, "The lamb shall lie down with the lion, but on the inside of the lion."

Representative Daniel A. Reed

EXTENSION OF REMARKS

HON, RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. SIMPSON of Pennsylvania. Mr. Speaker, I take great pleasure in inserting in the Record a news column printed in some 200 newspapers from coast to coast, giving a well-deserved tribute to our distinguished colleague, Mr. Reed of New York. The column follows:

"Let George do it" has long appeared prevailing philosophy at 10 Downing Street, London.

Fight in current Congress over wrecking United States tariff protection for independent American business, labor, and agriculture got big push about 2 years ago when Downing Street coined slogan "Trade, not aid."

All kinds and titles of English officials

All kinds and titles of English officials deplore materialistic crassness of United States Congressmen refusing to open United States for flood of cheap products. To be sure, Representative Dan Reed, Republican, of New York, who almost single-handedly stopped drive last session, will never be considered as a Knight of the Garter, or even a Knight of the Suspender.

All anyone needs do to penetrate British "free trade" smokescreen is secure from Irish consul list of English import duties on Irish consul

England depends on food imports. Bulk of imports from across Irish Sea is farm produce. Yet despite need for Irish food, England slaps a duty on Irish imports.

About 2 years ago Washington tried to give England surplus butter for only paying shipping charges of 5 cents per pound. But despite being eager recipients of billon in United States aid, Britain turned offer down. That was due to fact England has rigged deal with Denmark to take Danish butter at British controlled prices, and Denmark takes British-made goods. A flood of free American butter would upset this applecart. So England saw American aid continuation leading to embarrassing situations. Thus slogan, "Trade, not aid," was coined in cartel-controlled nation without least idea of free trade.

In current tariff-wrecking drive administration is supported not only by England, but also by a few big steel, motor, and rubber firms in United States with plants all over the world who would like to flood United States with products of these plants made by near-slave labor.

It is impossible to predict battle's outcome. Administration seeks extension of Reciprocal Trade Act giving administration power to slash protective tariffs. This contradicts section 8, article 1, of United States Constitution specifically stipulating it is exclusive duty of Congress to establish tariffs.

About 20 years ago Congress threw away this constitutional power. Since then both food imports and United States farm surpluses have increased This is not a partisan fight. Many in both parties even question legality of Congress signing away its stipulated constitutional powers; some even feel Congressmen who have voted for Reciprocal Trade Act violated oath to uphold Constitution.

This is a moot technical point, but a three-administration experience with Reciprocal

Trade Acts proves following point.

The more than 500 Members of Congress, in close contact with their local economies, are better equipped to withstand British salesmanship than small administration group whose chief advisers are State Department "experts" far more familiar with economy of Bengazi, Libya, than that of Dubuque, Iowa.

A Good Beginning

EXTENSION OF REMARKS

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose the following editorial from the Indianapolis Star under date of February 1, 1955:

A GOOD BEGINNING

Agriculture Secretary Benson estimated over the weekend that when the Eisenhower administration took office 2 years ago the Federal Government either owned, or had a stake in \$130,000,000,000 worth of business properties which could be operated as private investments. He listed ships, railroads, coffee-roasting plants, sawmills, paint factories, bakeries, and refineries. In the last 2 years, says Benson, the Government has begun to reverse this growing competition with taxable enterprise, "and none too soon."

The record does show some progress. The Reconstruction Finance Corporation has been liquidated, although it was replaced by the Small Business Administration, with some of the same lending functions. The Inland Waterways Corporation no longer competes with private barge lines. And most of the Government-owned synthetic rubber plants have been disposed of. But in the absence of a complete inventory of these socialized businesses—and there never has been one—nobody is in a position to know whether or not the administration is merely nibbling at the edges in getting the Government out of competition with private business.

It is good news, therefore, that Budget Director Rowland R. Hughes has just directed all Government agencies and departments to submit a complete list of all activities they handle which could be operated by private industry and to give the reasons, if any, why they should not be privately operated. A first report must be made by April 15, and a final one by July 15.

When this has been done, Congress will then have before it specific operating data from all the departments. When appropriations for these competitive governmental operations are requested they can be accompanied by a checklist of private facilities, able and willing to perform the same job. The process of making tax-paying instead of tax-draining enterprises of many governmental operations will no longer be one of "by gosh and by guess." The battle for economy in government can then proceed on the basis of clearly outlined facts and objectives.

The President is to be congratulated on this move. Perhaps when he sees the itemized total of the needless ways in which the

Federal Government already overburdens private initiative, he will be less likely to commit his administration to further forays into the domain of the private citizen.

A Memorandum From the Czech Christian Democratic Movement

EXTENSION OF REMARKS

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the Record, I wish to insert the following memorandum sent me by the Czech Christian Democratic Movement:

CZECH CHRISTIAN DEMOCRATIC
MOVEMENT,

New York, N. Y., October 28, 1954.

To the Administration and the Congress of the United States of America:

The Czech Christian Democratic Movement in Exile expresses its profound conviction that communism, so long as it exists as a political power, will remain a menace to the liberty and security of the free world. We agree wholeheartedly with the Committee on Communist Aggression of the United States House of Representatives that any policy of containment, appeasement, or coexistence must be rejected. Such a policy denies the duty of the Christian toward all those who are victims of slavery, terror, or criminal aggression. As we have learned from the bitter experience of our own country, the attempt to coexist with communism leads inevitably to the destruction of human freedom.

We look to the United States for leadership in a crusade of freedom-loving peoples to restore freedom throughout the world. Since coexistence is morally and politically impossible, measures of mere defense, however urgent they may be, are the best temporary expedients. The fight for liberation is a matter of common interest; in helping other peoples to regain their freedom, the American people will secure their own.

Behind the smokescreen of coexistence, the

Behind the smokescreen of coexistence, the Communists are arming for a third world war, which they will unleash as soon as they are confident of victory. The only way to prevent this war is through a dynamic program of liberation, which will weaken the Communist's warmaking power. Based on our knowledge of political conditions and public psychology in Central Europe, in the Czech lands in particular, we take the liberty of suggesting the following policies which we consider essential:

1. American radio propaganda, such as the Voice of America and Radio Free Europe, should not limit itself to attacking the particular groups of conspirators now in power in Communist countries. Such propaganda, to have more than superficial effect, must develop a broad campaign against the entire system of Marxian socialism. It must show why communiam, as well as socialism, as an intermediate step to communism, destroy human freedom in the spheres of politics, economics, sociology, culture, and religion.

2. Such propaganda should not be entirely negative, but should support positively and actively the free-enterprise system. By presenting simple facts it can be shown that free-enterprise countries, such as the United States, Belgium, and West Germany have gone farthest toward a "classless society" and

in affording the workers a high standard of living. Conversely, it can be shown that socialism and communism increase class distinctions, and that the poverty and fear in Communist countries is caused directly by

the socialist order.

3. The total aim of American propaganda should be to intensify the dissatisfaction of the workers behind the Iron Curtain with the socialist order, and to make them want a free-enterprise system. Such propaganda cannot, of course, be carried on by those who are themselves Socialists and collaborators of the Communists.

4. Broadcasts for Czechoslovakia should be divided into three sections: Czech, Slovak, and Sudeten German. These broadcast programs should stress the right of the Slovak nation to self-determination, the right of the Sudeten Germans to return to the Sudetenland, as well as the need for the Cechs, Slovaks, and Sudeten Germans to work out a federal solution for living together.

5. As a first step toward actual liberation, military forces of the free world in Europe should be built up until they are at least capable of withstanding available Soviet forces. This includes German armed forces freed from arbitrary limitations as to quantity and quality of armament, as well as contingents from the nations behind the Iron Curtain. The latter should be organized in terms of nationality without regard to existing states.

6. As the balance of military power in Europe is restored, American and other Western propaganda can make its objective in-creasingly specific. The ultimate objective is to cause the enslaved peoples to revolt against the Communist puppets and their Soviet masters. The events of June 1953 in Eastern Germany and other satellites have shown that the victims of communism are quite ready to do so with even the least hope

of success.

7. As the first basic step in any program of liberation, it is necessary to decide how much and what kind of help will be given to the enslaved peoples when they make their bid for freedom. American broadcasts already encourage opposition to the Communist satellite governments, and such opposition is senseless unless it aims at ultimate overthrow of Bolshevist tyranny. Since Americans are now asking the Czechs and other captive nations to resist Soviet terror, we, as Czech exiles, ask the American Government and people: What will you do to help us against the puppet governments and against the Soviets should they inter-vene to quash a revolt which gives promise of success? American psychological warfare can never be more than superficially effective until this basic question has been answered.

8. At the appropriate time, general strikes should be called against the Bolshevist tyrants. As Lenin pointed out, the general strike is a revolutionary weapon and should be used only for revolutionary ends. Therefore, such a strike should not be called until all factors, including the amount and kind of help to be expected from the West, are such that the enslaved people has a reason-

able probability of regaining its freedom.

9. Propaganda to Iron Curtain countries is not made in a vacuum. It is part of total policy, and must be related to a long-term program with a definite objective. Since such programs involve commitments which only Congress can make, it is our belief that more active congressional participation in the shaping of United States propaganda policy would lend the authority needed for effective appeal to the peoples of Czechoslovakia and other enslaved European countries.

> JOSEF KALVODA Vice President of the Czech Chris-tian Democratic Movement.

Progress on Postal Front

EXTENSION OF REMARKS

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1955

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial from the Portland Oregon Journal:

PROGRESS ON POSTAL FRONT

In supporting President Eisenhower's recommendation for adjustments in the pay of postal workers (and the postage increases necessary to pay the bill) The Journal gave equal emphasis to the necessity for modernizing post-office equipment and streamlining postal methods. We suggested that some postal methods haven't been changed since President Cleveland's day.
Well, we've been "called"—albeit good-

naturedly—by Portland postmaster Albert Hodler. He called us by inviting us to take a look at what goes on these days at Port-land's main post office and particularly at the new regional postal organization which has been established here and in 10 other re-

gions of the country.

And it was an interesting experience, particularly at the regional accounting, and operations divisions, authorized last July and

now getting into business here.

The regional accounting division (covering Oregon, Washington, Idaho, Montana, and Alaska) headed by Charles Hill already is in business.

Its 35 people handled regional paychecks for the first time in December. It has mod-ern electronically controlled business ma-chines, the equal of anything used in big corporations. It is saving time and money for Uncle Sam. Its operation is in marked contrast with the old-fashioned, laborious accounting and payroll methods heretofore employed at various post offices.

The operations division headed by Sam Schwartz has followed the accounting division, and it, too, is getting into business. It has inaugurated a postal driver training program under the direction of John Nelson, regional vehicle manager, and has begun a motor-pool operation and garage project which is designed (like the new accounting

setup) to save time and money.

This division also is following carefully some operation experiments now underway in the East. One of them is the so-called cloverleaf delivery system which involves two-man truck crews who deliver all kinds of mail in one operation (including parcel post) four blocks at a time. They park their truck in the center of a 4-block area, then fan out with deliveries, 2 blocks to a man, then move on to the next 4-block area and repeat. Hence cloverleaf label.

If this operation proves as good as it looks, Portland will get it before long.

Most important of all, however, is the new regional decentralization program, already established in the Portland and 10 other regions, with 4 to go. Under this system, regional directors will transact all kinds of Washington and, incidentally, getting bogged down there. Only major problems and policy decisions will go to Washington. Service, purchasing, and personnel problems that heretofore took weeks or months can be handled promptly in the field at

regional offices. All this looks good. It is symptomatic of a new day in the postal service—a long deferred day. We've a long way to go, true. Our postal workers (1,700 of them in Portland) still have to do a great deal of hand work—facing and sorting mail particularly. In these fields we're still in the Cleveland era. We simply haven't yet developed compact and efficient machines automatically to sort, face and cancel mail.

But the postal service is working at it. Some automatic machines are being tested.

We may lick the problem in time.

And before we close, we have another ob-servation—this one about obsolete and inadequate buildings. Our main post office in Portland is handling 11 times as much business today as it was handling back in 1917 when the present structure was built—and handling it in the same space.

We need space and need it badly to match our more progressive methods. It's difficult to do an Eisenhower era job with Cleveland

era buildings. That's for sure.

Water Problems

EXTENSION OF REMARKS OF

HON. JOHN E. MOSS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. MOSS. Mr. Speaker, it is now clear that the official position of the State of California favors the earliest possible construction of the Trinity River project as planned by the Federal Bureau of Reclamation, including all of the important power features. This was reemphasized by the new Republican Governor of California, Goodwin J. Knight, in his inaugural address last week.

The new Governor also repeated his opposition to further negotiation for purchase of the Central Valley project by the State of California at this time.

I commend the Governor for his excellent statement on these subjects, and I wish to place an excerpt from his inaugural speech, covering water problems, in the Congressional Record to provide the fullest possible information on the attitude of the new Republican administration of the State of California.

The excerpt follows:

WATER PROBLEMS

The careful conservation and development of our water resources is of paramount importance to the people of our State.

We can anticipate the construction in the near future of two mammoth projects which will insure extensive additional supplies of water and power for our expanding population. These are the Feather River project and the Trinity River project. The Feather River project is a major unit of our long range California water plan and will be financed, constructed, and operated by the State of California. The State engineer will present a report to this session of the legislature which will contain a step-by-step construction program for the project, a schedule of deliveries from the project, an estimate of the funds which will be required for construction and suggested means of financing. When this report is presented to the legislature, we will have ended the era of planning on the Feather River project and we will have entered the era of financing and construction. There is immediate need for the project. I urgently recommend that the legislature take immediate steps to determine the proper and most effective means of raising the funds necessary for construction—for without affirmative action, the project will remain only a grandiose dream. I am hopeful that you will act expeditiously so that right-of-way acquisition can begin without delay and that initial phases of construction may be underway by this time a year hence.

NOW BEING PLANNED

The Trinity River project is now being planned by the Federal Government. California has informed the Secretary of the Interior that the project is feasible from an economic and an engineering standpoint and should be constructed at the earliest possible date. I recommend that this session of the legislature approve a joint resolution urging the Congress to begin consideration of this construction project, including all of its power facilities, at the earliest possible date.

Studies have been made by both State and Federal agencies on the San Luis project on the west side of the San Joaquin Valley. This project could utilize surplus waters obtained from either the Trinity River or Feather River projects. There are conflicting views on whether the San Luis project should be a part of one or the other. My view is that we should endeavor to include the San Luis development in whichever proj-

ect will be finished first.

I oppose the State purchase of the Central Valley project at this time. The United States Government has indicated that it has no interest in selling the project. We have greater and more immediate needs for the construction of the Feather River project, the Trinity River project, and other necessary State water and power developments on which we can use the several hundred million dollars which the Central Valley project would undoubtedly cost.

Socialist Politics

EXTENSION OF REMARKS

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the Congressional Record the following editorial from the Peru, Ind., Tribune under date of January 26, 1955:

SOCIALIST POLITICS

Fortune magazine has observed that the Dixon-Yates contract (under which taxpaying private enterprise is to build a \$100,000,-000-plus electric plant to serve an Atomic Energy Commission installation in the South) "probably never would have been an issue at all but for the fact that it was an election year."

Fortune is 100 percent right. Dixon-Yates has been made into a political football, to the confusion of the public. As President Eisenhower himself has said, "There has been a very great deal of talk and argument—much of it partisan—about issues that are really clear and simple."

It is charged that the contract is a give-away, and against the public interest. If that is true some men in public positions of the highest trust and responsibility are either grossly incompetent, or are trying to mislead us—an idea which is hardly tenable. Senators McClellan, and Fuleright said: "We believe the contract is in the national interest and should be executed by the Government." Representative Cole, formerly chairman, Joint Atomic Energy Committee, said: "I am confident that the

contract is in the national interest." Admiral Strauss, Chairman, Atomic Energy Commission, said "I believe that the proposed arrangement is in the interest of the people."

Why, then, all the sound and fury? The answer's simple: Dixon-Yates has been seized upon by those who want to saddle the country with a socialized, tax-free, tax-subsidized Federal power monopoly.

Los Angeles County Board of Supervisors
Passes Resolution Urging Continuance
of Military Hospitals in Southern California in Federal Budget

EXTENSION OF REMARKS

HON, CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to herewith present a copy of the official minutes of a meeting of the Board of Supervisors of the County of Los Angeles of my native State of California on January 25, 1955.

As the text of the communication to me from the said board of supervisors is crystal clear, I am sure that you and all my colleagues will be pleased to receive this expression of opinion by the members of this duly elected board of this great county of Los Angeles:

COUNTY OF LOS ANGELES,
BOARD OF SUPERVISORS,
Los Angeles, January 26, 1955.

Hon. CLYDE DOYLE,

Member of Congress, 23d District, California, Congress of the United States, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN DOYLE: Enclosed for your consideration is a certified copy of an order adopted by the Board of Supervisors of the County of Los Angeles on January 25, 1955, requesting the help of the Los Angeles County congressional delegation to retain certain appropriations in the Federal budget essential for the maintenance and operation of marine hospitals in this area.

Your assistance in having this vital service continued will be greatly appreciated by the members of the board of supervisors.

Respectfully yours,

RAY E. LEE, Chief Clerk.

IN RE MAINTENANCE AND OPERATION BY FED-ERAL GOVERNMENT OF MARINE HOSPITALS: ORDER DIRECTING CLERK TO ADVISE LOS AN-GELES COUNTY CONGRESSIONAL DELEGATION OF DESIRE OF BOARD OF SUPERVISORS THAT APPROPRIATIONS FOR SUCH SERVICE BE MAIN-TAINED IN THE FEDERAL BUDGET

Supervisor Ford submits the following statement on behalf of Chairman Legg:

"Efforts are being made in Washington to reduce certain appropriations for the maintenance and operation of marine hospitals, which have been and are very helpful health facilities in the seaports of the country. Southern California, with tremendous growth in population, has already overtaxed the number of hospital beds and medical personnel available to the thousands who would look to marine hospitals in this area, Should Federal appropriations for these institutions be reduced, it would work a serious handicap on those eligible for service therein."

And on motion of Supervisor Ford, unanimously carried, it is ordered that the clerk of this board be and he is hereby instructed to advise the Los Angeles County congressional delegation that the board of supervisors will appreciate very much their efforts to have appropriations for the maintenance and operation of marine hospitals maintained in the Federal budget.

Joint Congressional Committee on Central Intelligence

EXTENSION OF REMARKS

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BOLAND. Mr. Speaker, I call the attention of the House to the resolution of Senator Mansfield creating a joint committee on intelligence. For years Senator Mansfield has argued with increasing effectiveness for a closer look at our intelligence efforts. In effect this joint committee would be a watchdog of the extremely important and highly sensitive Central Intelligence Agency. Since Congress appropriates the funds for its operation and because there is little or no knowledge on the part of Congress as to the disposition of the appropriated moneys, it does seem to be good commonsense that both branches of the Congress have some Members who are aware of the mission and effect of the CIA. Congress should not be so completely in the dark as to its functions. The creation of a joint committee such as recommended by Senator Mansfield and several Members of the House, including myself, would go a long way in establishing better relations between the Agency and the Congress; fears would be dispelled and the magnificent work of the CIA would be appreciated.

In conjunction with the above, I include with these remarks two very fine editorials—one from the New York Times and the other from the Washington Post and Times Herald. Both articles approve the suggestion of a joint committee on central intelligence and both point up some very significant observations:

[From the New York Times] CIA "WATCHDOG"

The secret eyes and ears of the Federal Government, otherwise known as the Central Intelligence Agency, have been receiving an unusual amount of serious attention lately. A special Presidentially appointed group headed by Lieut. Gen. James H. Doolittle (retired) made a confidential survey of certain aspects of the CIA last fall, and reported that the organization was doing a "creditable job" but that some changes were needed. An entirely distinct and possibly more far-reaching inquiry has been proceeding for some time now under direction of Gen. Mark W. Clark on behalf of the Hoover Commission.

Meanwhile, Senator Mansfield, of Montana, a member of the Foreign Relations Committee, has renewed his long-standing demand for closer congressional liaison with the CIA through the establishment of a Joint

Committee on Intelligence, somewhat comparable to the existing Joint Committee on Atomic Energy. In introducing his resolution with the support of more than 30 Senators of both parties, Senator Mansfield fully recognizes the obvious need for secrecy regarding intelligence operations; but he makes the point that "once secrecy becomes sacrosanct it invites abuse," and under present conditions the CIA is "freed from practically every form of congressional check." A secret intelligence agency with so wide a field of operations as the CIA is inevitably an instrument of great power; and it seems to us that Congress has a broad responsibility for it that should not be avoided. Of course this is not to say that de-tailed direction of the CIA is within the province of Congress; but it is to say that there is a place for a small and highly discreet congressional body, aware of what is going on in this sensitive area, that can deeply affect the foreign relations of the United States.

Furthermore, the formation of a joint congressional committee on intelligence affairs should do much to improve the relations between CIA and Congress and to reduce the suspicion that the latter body inherently has for the former. As Mr. Mansfield says, it would safeguard as well as supervise the CIA, and it would give to CIA officials, now "defenseless against criticism because their lips are sealed," a Congressional channel to which they would have ready access. Some years ago a Hoover Commission task force recommended a congressional "watchdog" committee for CIA. Its establishment would in our opinion be of benefit to Congress and CIA alike.

[From the Washington Post and Times Herald]

INTELLIGENCE QUOTIENT

Senator Mansfield has again introduced his resolution for the establishment of a Joint Congressional Committee on Central Intelligence, this time with the support of 32 other Senators. Initially this newspaper was skeptical of such a step, not because there is not a need for more intensive congressional scrutiny of the Central Intelligence Agency, but because of the danger that the confidential nature of a sensitive executive agency might be compromised. Now we are persuaded, however, that some broader congressional review would on balance be desirable and could be accomplished safely.

Most persons in a position to have some appraisal of CIA's work agree that the intelligence estimates have improved markedly in recent years and that the undercover operations have been considerably less flamboyant-despite reports of somewhat clumsy and transparent undertakings in the Far But a secret intelligence operation insulated from normal checks and balances is, however necessary, at best a risky enterprise. No agency is so proficient, either, that it could not benefit from informed criticism. CIA is responsible to the National Security Council, it is true; but NSC in turn also is a vehicle of the executive department and has too heavy responsibilities to give CIA any very comprehensive scrutiny. A joint congressional committee on the pattern of the Joint Committee on Atomic Energy would not only provide a check against free-wheeling by this supersecret agency, it would also give CIA a spokesman on Capitol Hill-and fend off McCarthy-type fishing expeditions.

There are some disadvantages to such a plan, of course. One is the danger of leaks, though the concern of the committee ought to be with broad policy rather than with intimate details and care in the selection of members could avoid loading the committee with known blabbermouths. Another difficulty lies in the fact that CIA is responsible for only a part of the total intelligence oper-

ation; the major intelligence contributors are the military services, with CIA filling in the gaps and providing top evaluation. Still another lies in the possibility that a congressional committee would be bitten by the operating bug and be tempted to interfere with the day-to-day work of CIA.

But these are all difficulties which, it seems to us, could be overcome. The membership of the committee as provided in the resolution already includes men from the Appropriations Subcommittee which handle CIA's funds; perhaps it could be amended to provide some sort of liaison with the military intelligence agencies. A task force of the Hoover Commission under Gen. Mark Clark now is studying the CIA, and undoubtedly it will make some recommendations when it reports this spring. No action ought to be taken until these recommendations are weighed. But there is good reason to think that the concept of a more informed congressional review is practicable and that such a review would help the country improve its intelligence efficiency.

Snake River Dams

EXTENSION OF REMARKS

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. TOLLEFSON. Mr. Speaker, the House of Representatives of the State of Washington on January 27, 1955, adopted a resolution urging the Federal Power Commission to deny the application of the Idaho Power Co. for a permit to construct a dam on the Snake River. I have been requested to insert it in the Record. It involves a problem which Congress may or may not have to solve at some future date.

The resolution follows:

Whereas there is at the present time before the Federal Power Commission an application by the Idaho Power Co., a private utility, for permission to build three low-head dams on the Snake River; and

Whereas the Federal Government has heretofore proposed the building on the Snake River at Hells Canyon of a multiple-purpose dam; and

Whereas the granting of the application of the Idaho Power Co. will kill off for the future the possibility of a multiple-purpose dam at Hells Canyon; and

Whereas the full potential of the Snake and Columbia River Basin for irrigation, reclamation, flood control, and the production of electricity can be realized only by the building of a multiple-purpose dam at Hells Canyon; and

Whereas the economic conditions of the Pacific Northwest are dependent upon adequate power as well as adequate irrigation, reclamation and flood control; and

Whereas the proposed Hells Canyon Dam would provide for a better development of our natural resources and its construction would be in the best interests of the people of the State of Washington; and

Whereas with the exception of a few public officials, the majority of the people of the Northwest and this house of representatives are in favor of the building of Hells Canyon Dam: Now, therefore, it is hereby

Resolved by the House of Representatives of the State of Washington, in regular session assembled, That we oppose the granting of permission to the Idaho Power Co. to

build the proposed low-head dams; and be it further

Resolved, That we respectfully petition the Federal Power Commission to deny the application of the Idaho Power Co.; and be it further

Resolved, That copies of this resolution be immediately forwarded to the Federal Power Commission to be filed in the present proceedings of the application of the Idaho Power Co., and that copies be sent to all the members of the congressional delegation and the Governor of the State of Washington.

Machinery for Peace

EXTENSION OF REMARKS

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. HOLTZMAN. Mr. Speaker, in these hectic and trying times there is an ever increasing need for a calm and deliberate approach to the peace we all hope for. This does not mean that we must lessen our defense effort or in any wise weaken our national security. It does mean, however, that we must never consider the attainment of our goal as impossible, or war as inevitable. We must never close the doors to the conference room because peace is worth trying for at all costs short of appeasement or dishonor. We must support the United Nations wholeheartedly as the only machinery for peace. Under leave to extend my remarks, I insert the following editorial from the New York Times which I urge the critics of the United Nations to read carefully:

MACHINERY FOR PEACE

What happens when an issue as exasperating and confusing as that of the Formosa Strait comes up at the United Nations may be discouraging. It is discouraging because it reveals the deep cleavage among the nations of the world, the suspicions, the hypocrisies, the dangers of conflict. Yesterday's proceedings in the Security Council were no exception.

Yet these were, in fact, proceedings in a body organized to maintain "peace and security." No nation had to be represented there. Some that were not represented would like to be. Hard words were exchanged but no shots were fired.

Nor was this all. Even in the course of old-fashioned diplomacy the firing of shots was a last resort. What the Security Council had to offer was quick action—or a quick inability or refusal to act. Behind the Council, if it could not or did not act, stood the United Nations Assembly, which could be called into session on short notice. Communication among the nations could not be shut off as long as the United Nations existed.

We must wait for a settlement of the question immediately at issue. If and when that question is settled there will be others. Not in the time of any of us now alive will there be a complete end of all discussion and all dissension among the nations. But the peoples of the world, or their representatives, can talk among themselves, quickly and in the blaze of publicity.

Few of us in this country could find sense in what the Russian representative had to say yesterday. Few will find sense in what he will say today or tomorrow or next week. But he can say it, we will listen to it, and if It does not make sense the free world will so understand.

We have as yet no guaranty of peace. But the machinery for peace we do have. Let us cling to it. Some day it can be made to work for the salvation of civilization and of mankind itself.

Distrust Rather Than Faith Result Abroad of United States Propaganda and Spending

EXTENSION OF REMARKS

HON. GORDON H. SCHERER

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. SCHERER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to insert an article entitled "Distrust Rather Than Faith Result Abroad of United States Propaganda, Spending," by Eugene W. Castle, which appeared in the Cincinnati Enquirer on January 16, 1955.

The Congress in the next few months will be required to vote funds for the continuation of foreign aid. I feel that the Members should have the benefit of Mr. Castle's thinking on the matter of foreign aid. His new book entitled "Billions, Blunders, and Boloney" was released Monday of this week by the Devin-Adair Co.

Mr. Castle founded Castle Films, Inc., which specialized primarily in educational motion pictures. At his own expense he traveled the world to personally check on our foreign aid and propaganda programs.

His article to say the least is most enlightening.

The article follows:

DISTRUST RATHER THAN FAITH RESULT ABROAD OF UNITED STATES PROPAGANDA, SPENDING

(By Eugene W. Castle)

During a 6-year period-since 1948-the taxpayers of the United States have spent more than \$40 billion for economic and military aid abroad, plus more than half a billion dollars for overseas propaganda.

No nation, since the beginning of history, has spent more money trying to win the friendship and confidence of foreigners than the United States.

Joseph P. Kennedy, former United States Ambassador to Great Britain, returned recently from an extensive tour of Europe. He reported that our expensive propaganda abroad appears to have failed completely because the average man in England, France, Italy and other countries, seems to hold the impression that we, and not the Soviet, are warmongers.

This writer traveled 75,000 miles over a period of 3 years. He interviewed hundreds of people in all walks of life throughout Europe, the Near East and Central and South America. Also, he corresponded extensively with Americans who live in, travel and trade throughout the Far East.

Here are some conclusions:

In many instances our great extravagances overseas have helped the Communists and hurt Americans.

Today, our country has fewer friends abroad than ever before in our history.

Our propaganda failures have, all too often, cost us the confidence and respect of millions of Europeans who were once our friends, but who are now openly suspicious of both our give-aways and our continued propaganda excesses.

Europeans hate propaganda from any

country—ours, or their own.

We had more friends abroad when we spent less than \$20 million a year for overseas propaganda. Today, we are spending more than five times that amount. And those who advise and directly influence President Eisenhower are urging that our activities overseas to "mold and influence the minds of foreigners" should be further expanded.

Here are a few examples of how the pockets of the American taxpayers are being emptied by the Washington Government for useless publicity projects abroad:

We are today wasting \$5 million annually for provocative documentary movie films. These are shown by means of mobile trucks, mostly to undernourished people in out-ofthe-way places. Our movies mirror American advantages and luxuries that these desperately poor foreign viewers can never hope to attain nor enjoy. Uncle Sam's propa-ganda films create envy and hatred for Americans!

Harrison Salisbury, who for 6 years was chief correspondent for the New York Times in Moscow, recently returned from Russia. He reported that America's best salesmen were our Hollywood-made entertainment films and that the Russian people marveled at the detail and lack of propaganda in American movies, regardless of how old or how bad they were!
And what is the Soviet competition? The

Russians export about 12 feature films annually. In some countries the Moscow-made pictures are not permitted to be shown. United States of America sends more than 350 American-made feature films overseas annually. All of our films are intensively shown. Thus the score: Moscow 12, vs. United States of America, 350!

But despite the fact that our American entertainment movies dominate the theater screens of the world, the United States Information Agency continues to plan and produce amateurish and offensive propaganda films to compete with our Hollywood studios, whose products are applauded and accepted the world over.

The USIA spends more than \$6 million annually on totally uselsss 6,000-word, 6-daysa-week news cables to 77 foreign USIA offices. These compete with the authoritative Associated Press, United Press, and International News Service, who serve the leading newspapers of the world with daily cabled news reports from the United States. These are the only kinds of news reports that should emanate from a nation of freemen.

Additionally Uncle Sam is today subsidizing newspapers and newsreels, and issuing millions of booklets and leaflets in foreign

And what is the Russian competition to these most extensive publishing activities carried on by professional American pub-The answer is zero, because the "aflishers? fluent" Red citizen is not allowed to travel, and not one European nor Asian in a million speaks Russian.

In Greece and Turkey, where the people are preponderantly anti-Communist, they cannot understand why Uncle Sam must spend more than a million dollars a year in each of these countries, to tell Greeks and Turks what bad men the Soviets are, and what good fellows we are.

In Spain, where there is no communism at all, we are spending vast sums for propa-ganda, to tell the people of Franco-land why we are giving that country hundreds of millions of dollars of military and economic aid. Here, too, the Spaniards are amazed that we must spend millions of dollars to advertise our generosity and to tell them about the dangers of Moscow communism.

In the Orient, we have lost face. Anyone familiar with Asia understands that the oriental mind regards an occidental who has lost face in Asia as having lost all.

First, we lost face throughout the Orient when General MacArthur was not allowed

to win the war in Korea.

Again, we lost face in Japan and throughout Asia when General MacArthur was summarily dismissed from his authoritative duties in that country.

More recently we again lost face when the French surrendered in Indochina, and 12 million Asiatics were driven behind the Iron Curtain in that unfortunate war-rayaged country.

Even today, the return to the Orient of Generals MacArthur and Wedemeyer as diplomatic representatives of the United States, would do more to regain the support of Asians than all of the millions already spent and to be spent.

Chinese Communists would not be in control of the Orient today if our policymakers in Washington had not tled the hands of Generals MacArthur, Van Fleet, and Clark in Korea. Millions of orientals know the story. It largely explains why communism is gaining in Asia and the Western World, and our ideas are being driven from oriental

The Marshall plan in Europe now is to be curtailed because most European countries are in better financial shape than we However, desperate efforts are being made to influence our legislators in the 84th Congress to transfer and perpetuate the Marshall plan and with it the legion of Government payrollers who administer it to the Orient.

In France, we have spent nearly \$8 billion since 1948 for economic and military giveaways and propaganda failures.

For the billions spent for military aid, the French have never, to this day, obliged us with even an accounting of how they have spent our money intended for their purchase of military material for the defense of that

In France today, despite the more than \$5 million spent annually for stupid and harmful United States propaganda, 1 Frenchman in every 4 is a Communist, and supports the spokesmen for the men in the Kremlin.

In Italy, the situation is even worse. In that country we have spent nearly \$5 billion to try to "sell" Democracy to the Italians. Last year, despite our lavish give-aways, augmented by hundreds of our propaganda amateurs and busybodies, roaming all over Italy, the Italian Communists gained 250,000 converts in the Italian elections. And, more important, we have incurred the open enmity of the former King's party and the Mussolini followers who, despite the fact that both the King and Il Duce are no more, prefer the false promises of the Communists to American generosity. These two groups number more than 4 million voters, and their These two groups votes against us could topple the present "razor-thin" majority of the current Italian Government and put the Reds in power in Italy.

Every American who reads this will feel more encouraged and hopeful when he learns of the successful experience of Anthony Cucolo, contractor and philanthropist, of Suffern, N. Y. Mr. Vucolo licked communism in the town in Italy where he was born. Mr. Cocolo stopped the Italian Reds dead in their tracks.

Mr. Cucolo won a 92 percent vote for Democracy in the Italian village of Summonte. How did he do it? How did Mr. Cucolo, who has two sons, both graduates of the West Point Military Academy, accomplish a that our billions in give-aways and millions for propaganda in Italy have almost completely failed to do? Here is the story, and in his own words:

"I sent \$2,000 annually to a committee in my native town of Summonte. The commit-

tee consists of a physician, the mayor, and another prominent citizen. The committee purchases locally at cheap prices, spaghetti, rice, potatoes, and sometimes meat. foods are carefully distributed to those in dire need."

The economic security of all Americans, and the solvency of our country, remain in deadly danger so long as these spending agencies continue to grow and to create the deficits that unbalance our budget year after This year the Federal deficit will be \$5 billion, and already, according to Secretary of the Treasury Humphrey, our Nation is faced with a deficit of \$3 billion, 6 months before the next fiscal year begins. We cannot continue red ink in Washington and hope to combat the Reds in Moscow and Peiping. It cannot be done.

Newspaper Editor Writes That Alcohol and Gasoline Do Mix, but That the Mixture Is Explosive, Destructive, and Disastrous

> EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1955

Mr. DOYLE. Mr. Speaker, by reason of the unanimous consent heretofore granted me so to do, I present the text of an editorial in the San Francisco (Calif.) Examiner on Friday, August 20, 1954:

ACCIDENTS AND ALCOHOL

(By W. W. Bauer, M. D., director of bureau of health education, American Medical Association)

We are told that alcohol and gasoline do not mix. I disagree. They do mix. And the mixture is explosive, destructive, dis-

Yesterday I concluded that most of the crazy things drivers do are due to just plain selfishness. That is not inconsistent with the statement that alcohol is responsible for many traffic fatalities and injuries, to say nothing of minor episodes and near misses. Drinking at inappropriate times and in immoderate amounts is a form of selfishness.

Persons who have had even one drink should not drive within the next 2 hours. If they have had more, the interval should be longer. It is not necessary to be drunk to be an unsafe driver. The really drunken person is probably unable to drive. It is when he has reached what Dr. Herman Heise calls the delighted and devilish stage that he

is the real menace.

That's when he has had just enough not to know how much he has had, and not to know that he has had too much. This is When he thinks he is the best driver in the world, and is just that much more deadly and dangerous.

The effect of alcohol, often falsely described as a stimulant, is not stimulating at all. It is narcotic. The feeling of stimulation is false—a delusion. Alcohol de-Presses the higher centers of the brain first, and its effect spreads progressively to the lower brain areas. Intellectual perception and judgment are the first to go.

The person under the influence of alcohol has lost part of his finer discriminations. He may do things he would not have done if sober. His manners are worse; his sense of humor may be coarsened; he laughs too loudly and in the wrong places. At the same time he thinks himself exceptionally clever or inspired, and he tends to show off. There could hardly be a worse state in which to place him in charge of a powerful motor

Physiologically, alcoholic intoxication blurs the judgment, and slows the automatic reactions which play so important a part in competent driving. When an emergency demands split-second reactions to avert tragedy, the intoxicated person finds himself slow and inaccurate.

Intoxication in relation to accidents has been emphasized mainly as to motorcar deaths and injuries. But the abuse of alcohol tends to increase accidents under any

conditions, anywhere.

In industry, where there is heavy machin-ery, or where dangerous substances are handled, intoxication adds to the accident haz-It does likewise in the home, where incoordination, overconfidence and carelessness can get the person into trouble with heaters. electrical or mechanical appliances, carbon

monoxide gas, or tripping and falling.
In an analysis of alcohol and its relationship to violent death, Drs. Spain, Bradess, and Eggston reported a series of 500 cases handled through the office of the medical examiner of Westchester County, N. Y. In that State there are no coroners; the medical examiner performs the functions which devolve upon the coroner in other States. Among these occurred 82 cases of nonindustrial accidents, and 24 percent of these were under the influence of alcohol to some extent.

Included were examples of varying accident causes, all influenced by the alcoholic condition of the victims; pots boiling over on the stove, putting the fire out and thus causing gas asphyxiation; fires in bed; drownings, and choking on food,

Many fatalities with an alcoholic tinge do not occur among the so-called drunkards. They occur in all segments of the community, all classes and economic levels and varied occupations, according to the authors previously quoted. They go on to report that automobile fatalities represent the most serious group. Many persons involved had been drinking at a cocktail party, a tavern, a holiday celebration or a wedding. How quickly their joy turned to sorrow.

It's Already Being Done

EXTENSION OF REMARKS

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose the following editorial from the Indianapolis Star under date of February 1, 1955:

IT'S ALREADY BEING DONE

President Eisenhower has often stated as his philosophy of government that the Fed-Government should only do for the people what the people cannot do for themselves. Yet he now has proposed a health reinsurance program that completely con-tradicts this praiseworthy view. For his plan seeks to do in the field of health insurance what is already being done by private industry. He claims that the insurance industry has to have help in the form of a Federal reinsurance fund to provide for catastrophic medical payment coverage. Yet the insurance industry is already doing the job without even making use of its own reinsurance facilities.

Thus the only arguments for the President's program are based on false assump-tions. There is no need either for Federal money or for Federal planning in this field.

For instance, here in Indianapolis American United Life Insurance Co. has just announced its catastrophic health insurance plan. Under this plan a man and wife can be protected against 75 percent of all medical expenses up to \$7,500 for as little as \$65 a year. The first \$500 of medical expense is deductible. Other insurance companies offer similar plans in the same price range. They are not getting and do not need any Federal aid to make this insurance available.

We see no reason, therefore, according to the President's own oft-stated philosophy. why a single cent of Federal money should be spent on an unnecessary reinsurance program—much less \$100 million.

The Day Lincoln Was Shot

EXTENSION OF REMARKS

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. OSMERS. Mr. Speaker, because of the universal interest in Abraham Lincoln among Members of Congress and the public at large, it seems appropriate to place in the RECORD a report on the book, The Day Lincoln Was Shot. This report is by John P. Marquand, a member of the editorial board of the Book of the Month Club, and appeared in the January issue of the Book of the Month Club News. The Day Lincoln Was Shot was written by my distinguished constituent, Jim Bishop, and in the same issue of the Book of the Month Club News there appears an author's note, which sheds light on the circumstances that led to the writing of this book.

Under leave to extend my remarks, I include both articles in the RECORD, as follows:

THE DAY LINCOLN WAS SHOT

(By Jim Bishop, an hour-by-hour narration with the gripping suspense of a mystery story plus the balance of classic tragedy)

A REPORT BY JOHN P. MARQUAND

So many excellent books have been written on every phase of the life of Abraham Lincoln that it hardly seems possible that anyone can make a further significant contribution. Yet here is The Day Lincoln Was Shot, which can take its place in the very first rank of vivid and exciting Lincolniana, This book is exactly what its title says it isa 24-chapter, hour-by-hour narration and evaluation of the events in Washington that preceded and immediately followed the shooting of Lincoln in Ford's Theater by John Wilkes Booth. Though some of the episodes Mr. Bishop retails are so familiar as to be part of America's folklore, their combination with a myriad of lesser-known facts lends the whole an amazing freshness. The Day Lincoln Was Shot has the gripping suspense of a mystery story plus the balance

of classic tragedy.

The idea and form are so excellent that it seems surprising that no one has ever written such a book before. Then one realizes what a truly enormous amount of material Mr. Bishop has had to digest; his publishers tell us that his researches have been going on for the past 25 years. Nothing appears to have escaped him that could add polgnance and verisimilitude to the narrative, Like all good writers, Mr. Bishop understands the image-and-character-building value of seemingly trivial detail, and with very few lapses he has succeeded in reconstructing a time and a place down to the very sounds on the streets of Lincoln's Washington.

It is 7 o'clock in the morning in the White House and the polished rosewood door of the President's bedroom swings open just

as Mr. Bishop begins his story.

"The big man started down the hall slowly, like a person older in years, the legs perpetually bent at the knees, the black suit flapping about the frame. He looked like a man who did not feel well. The circles under his tired eyes were pouched; the skin of his face was almost saffron; the scraggly black beard thinned and died as it approached the hairline; the hair itself was almost combed; the feet moved with conscious effort, barely lifting off the red pile rug before being set down again; the thick lips, more brown than red, were pulled back in a semi-smile."

It would be hard to find a better description of Lincoln, and other characters in the day's drama assume a similar vitality—among them the flighty, unpredictable Mrs. Lincoln; young Tad Lincoln; the stately members of the Cabinet; and Gen. U. S. Grant, embarrassed by popular acclaim. There are literally scores of minor figures—soldiers, barbers, hotel clerks, grooms, policemen. Then of course there are John Wilkes Booth and his fellow conspirators and the unfortunate boardinghouse keeper, Mrs Surratt. Mr. Bishop moves from one to the other of these people to explain their motives, but never forgets the consuming purpose of his story.

Did you know that Mrs. Lincoln made Mrs. Grant so nervous that the Grants refused the Lincolns' invitation to Ford's Theater that fatal night? Did you know that Booth as a small boy had said he would like to go down in history as someone who overthrew the Colossus of Rhodes? Did you know of Lincoln's vivid dream of his own death? Did you know that when Booth entered the unguarded Presidential box, no one was disturbed by his intrusion? All were listening to the tinny, second-rate lines of a play called Our American Cousin-which, as quoted by Mr. Bishop, add to the macabre quality of the scene. Did you know that when Booth's shot was fired no one was greatly disturbed because the sound of his derringer was more like the pop of an air-blown paper bag than a shot? Did you know that the President ceased rocking in the chair provided for him by the management but did not immediately slump forward? Did you know that when Booth said "Sic semper tyrannis," he spoke in such a low voice that very few of the audience heard him?

These are only a sample of the discoveries that one can make in a book filled with hundreds of little-known facts. Even the most analytical reader will find it hard not to be carried away by the sweep of Mr. Bishop's In fact, as one draws close to the drama. inevitable climax at Ford's Theater, although one is completely aware of the ending, one begins to hope against hope, and almost to believe, that this ending cannot be possible. The creation of such an illusion is surely a high form of art. Perhaps it will be frowned upon by academic historians who are suspicious of any effort to make history readable. But for other thousands who love the American scene and who revere one of the greatest of all Americans, The Day Lincoln Was Shot will have deep significance. It will give new insight into the character of the man who stood immeasurably far above the others of his time and yet whose greatness was not wholly recognized until his life was ended. It will serve as a bridge between the past and the present. Washington, goodness

knows, has changed since the Civil War, and yet much of its character is changeless. The people who dwelt there on that fateful April day, the troops who marched through the streets, the civilians, the profiteers, the freed slaves, the ordinary men and women and, above all, the lonely man who still sits there solitary in his memorial—these have left an imprint on the city and on history which time will never dim. Mr. Bishop has given all this new life and new immediacy.

AN AUTHOR'S NOTE (By Jim Bishop)

There is no time, within conscious memory, when I was not interested in President Lincoln. My interest dates back to the first time I heard him described as a great, sad man with a beard, a man who tried to keep brothers from killing each other and was, himself, killed. This was a story told to the students of the third grade at St. Patrick's Parochial School in Jersey City, N. J., by Sister Marie Allicoe in 1917. I was 9. It moved me to feel ashamed that "we" had slain a dark Santa.

In 1920 I began to read books from the Clinton Avenue branch of the Jersey City Library. Many of these were stories of Lincoln. My father, a second-generation Irish police lieutenant, saw me reading a Lincoln biography and nodded with approval. "I often wonder," he said, "who was he?" The inference was supernatural—that Lincoln had been sent here to accomplish a mission and, having accomplished it, was ordered home.

In 1930, when I was a reporter on the New York Daily Mirror, I became convinced that no two stories of the assassination agreed in all particulars. I began to keep notes with the notion of some day writing the real story. A big part of a small salary went to buy Carl Sandburg's four volumes, Abraham Lincoln: The War Years. Years later, Sandburg introduced me to Andre Kostelanetz at the Metropolitan Opera House as the only person he knew who had read through the four volumes twice.

My notebooks were 28 in number. Each was marked with an hour of the day, from 7 a. m. to 7 p. m. The three extra ones were labeled "The Conspirators," "The Lincoln Family," and "Washington City—Era." Anything pertinent to any of those notebooks was jotted or typed and placed in the proper book. Quite often a little-known work would add a tiny piece of information to the pile, but without noting the time of day. All such went into a large envelope.

It was not full-time work. By day or by night I worked as a rewrite man, a feature writer, did magazine articles, wrote such books as The Glass Crutch, The Mark Hellinger Story, Parish Priest, had time for a wife and two children, wrote a small-town newspaper column, ran for local office and was trounced, raised dogs, drank beer, bought a house, worked with hammer and nails, played pinochle with my father, and mowed a lawn.

Scores of thousands of individual notes went into the little black books, and, in time, they became fat. Often, a new fact automatically reconciled some of the loose-end facts in the big envelope, and, in time, the little pieces began to fall into place. The detailed scheme of what happened in Washington on April 14, 1865, could now be seen in perspective. The weather, the people, the movements of John Wilkes Booth, the unusual happiness of the President, the hourby-hour work of the members of the Cabinet—all began to seem logical.

It was then, 2 years ago, that I intensified the research and went to Washington to run down the final facts needed for a book. I traveled the escape route of Booth in an Oldsmobile and checked it to the tenth of a mile. In the Library of Congress and in the Army Adjutant General's files were 7 million words to be read—a large part of them contained in old affidavits of witnesses to the events of that day.

After that, it was simple task—merely checking all that happened in any one hour of the day, writing the word "Void" on pages of notes which had no relationship to the real facts, and writing. The last was easy.

Security Flimslam Demoralizes Scientists

EXTENSION OF REMARKS

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks, I wish to include the following article entitled "Security Flimflam Demoralizes Scientists," from the February 1955 issue of the Democratic Digest:

SECURITY FLIMFLAM DEMORALIZES SCIENTISTS

"Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die.
Into the valley of death
Rode the six hundred."
—Tennyson: The Charge of
the Light Brigade.

"Who had ever heard that minds created free by God should submit slavishly to the arbitrary will of others? That they should submit in matters of truth to the decisions of a committee of men not qualified to judge? * * * These are the novelties that carry with them the ruin of commonwealths and the subversion of the state."—Galileo.

America today is searching out the meeting ground between Galileo, the scientist, and Tennyson's Light Brigade, so that a close working relationship can be nurtured between the men who invent our devastating new weapons and the men who must handle them to protect our Nation.

In an ideal society, these two professions would never be required to work together. There can be no natural affinity between the professional soldiers who are trained "to do and die" without questioning and the scientists whose very genius lies in questioning every accepted fact. But we are too far from an ideal society to afford these niceties. For the sake of our national survival, the scientists and generals must develop a respectful understanding so that their combined powers of destruction can be held in readiness against our enemies.

This problem in cooperation has always been inherent in our technological age, but the public did not become aware of it until recent months when the scientists began protesting that their usefulness is threat ened.

"The morale of the scientists today as I meet them is low," said Dr. Vannevar Bush, dean of American scientists, "so low that while they will not refuse to serve, they will serve without enthusiasm and without fruitful inspiration."

This unhealthy state of affairs, Dr. Bush told a congressional committee, is the direct result of the Eisenhower security program. For it threatens the "exceedinly important and valuable partnership" which grew up slowly between scientists and military men during the war. This precarious understanding "has now been gravely damaged and is being gradually destroyed."

Dr. James Killian, president of Massachusetts Institute of Technology, one of the important centers for defense research, is also

A583

alarmed by the "deterioration in recent months" of the relationship between military and civilian research personnel. Dr. Killian, who gave his views to the Riehlman congressional subcommittee which investigated military research last summer, blamed the decline primarily on current "security procedures and policies" which he regards as "hazardous."

The former cooperation between the scientists and the generals did not spring up spontaneously. It was the carefully nur-tured product of a great united wartime Now that it has been breached, it is not likely to regain its former vigor without cultivation.

It is not probable that scientists will ever welcome restrictions on their freedom, but they are not prima donnas about it. Indeed, they imposed secrecy on themselves in 1939when they first saw the likelihood of developing an atom bomb before the Government was brought into the picture.

What concerns Dr. Killian, Dr. Bush, and their scientific colleagues today is the Government's changed attitude toward scientists. During World War II, these men accepted the security regulations imposed by the military as one of the necessary evils of war. Though most of them were privately convinced that no scientific fact could be kept secret indefinitely, they recognized that a thin edge of time could mean the difference between victory and defeat. Moreover, it was easier for them to accept restrictions during the war because they at least knew that the security system, whether it was misguided or not, sprang entirely from patriotic motives.

What has aroused scientific antagonism is the realization that the present administra-tion has frequently exploited security as a political racket. This has led the powerful Federation of American Scientists to attack "the dangers and the bitter fruits of a security system which is motivated more by the risks of politics than the risks of disclosure of information."

Scientific associations, individual scientists, newsmen, and public officials who had worked with scientists seemed to conas last summer's headlines show:

"Scienists Call for Revision of United States Security Standards." (New York Her-

ald Tribune.)
"Scientists' Treatment Is Criticized."

(Washington Post.)

"House Group Warns: Row With Scien-sts Threatens Security." (Washington Daily News.)

"Experts Worried at Curbs on United States Weapons Research." (Baltimore Sun.)

Administration policies provoked new bitterness last fall at the height of the congressional election campaign when Vice President Nixon sought to strengthen his Communist smear charges by making an example of Dr. Edward Condon.

Dr. Condon was director of research for Corning Glass last October before the administration singled him out for attention.

The distinguished scientist had taken this position after prolonged security attacks prompted him to leave the directorship of the Bureau of Standards despite repeated

clearances.

Since Corning Glass sometimes handles defense work, Dr. Corning as research director was again checked for security. He was cleared again last July for the fourth time since World War II.

But last October his clearance was suddenly revoked; several weeks later he re-The Atomic Scientists of Chicago, signed. chapter of the Federation of American Scientists, publicly blamed "political abuse of the Nation's security system." Vice President Nixon, they charged, had "intervened With Secretary of the Navy Thomas" to overrule Dr. Condon's clearance. The accusa-tion was borne out by a New York Times report of the Vice President's campaign boasts.

"The fact that Dr. Condon's talent will no longer be available to our Military Establishment is serious," said this outstanding group of scientists. "We are more concerned, however, with this new example of political interference with the personnel security sys-It has been degraded to such a point that its judgments are almost meaningless, except for the damage they do to the individuals affected."

This political manipulation has its roots 1952 presidential campaign when General Eisenhower himself said on two occasions that Russia has the atom bomb only because spies inside our Government had handed over the secret formula. The accusation was dismissed as no more than campaign talk at the time; but when this and all the other campaign spy stories led up to Eisenhower Security Order No. 10450 in the spring of 1953, the scientists sat up and took

As removals of so-called security risks mounted past the 6,900 mark, scientific pressure mounted with it. Scientific misgivings were only increased by reports in the press that there was not one known Communist among the people removed. Instead, the 6.926 figure included blabbermouths, drunks, misfits, victims of political firings, and malicious gossips, plus a few people who died in office, and a considerable leavening of civil servants who resigned without knowing there were charges against them.

One great wave of scientific protest was touched off when "Mr. Atom," J. Robert Oppenheimer, was called a security risk and denied access to the atomic secrets he helped

create.

At the time Dr. Bush wrote: "Witnessing all this sorry affair, scientists rather generally have come to the conclusion that a man's reputation has been placed in jeopardy because he held and expressed strong opinions which are not now consistent with the established program of his Government."

"If you want to try a man for strong opinions," Dr. Bush told the board which found against Oppenheimer, "you can try me. I have expressed strong opinions many times, and I intend to do so. They have been unpopular opinions at times," he added.

The Bulletin of the Atomic Scientists

called the Oppenheimer case a breach of faith on the part of the Government. Dr. Oppenheimer, they protested, was called to they protested, was called to heavy responsibilities in full knowledge of his life history, and then after he had given the most valuable services to the Nation, previously known facts were used to cast aspersions on his integrity.
Scientific resentment against this type of

treatment has been voiced so strongly that it has even raised the possibility of a scientists' strike. This notion that this body of loyal men would deliberately jeopardize our national security by withholding their talents need not be considered too seriously, but the concern expressed by Dr. Bush that scientific effectiveness can be undermined by low morale is too real to be ignored.

The administration itself has at last become alarmed by the scientists' united stand against the politicalized system. This became evident when the President appointed mathematician Dr. John Von Neumann to the Atomic Energy Commission last fall.

Von Neumann was an important contributor to atomic development and had been an outspoken critic of the security system before his appointment. He has said outright that under the present system a man may branded a security risk when his honor and good citizenship are not questioned, and he has urged revised proceedings which would conform with judicial practice.

When Von Neumann was appointed, one Washington columnist who is a recognized authority on atomic matters said privately

that the appointment had been made out of abject terror. The administration, he said, knows it is near the edge with the scientists, and is afraid to push them any further.

This evaluation is borne out by another leading scientist's reaction to the appoint-

"It's a step in the right direction, and a big one," he said, "if the administration listens to Von Neumann and changes its ways. But if this is just done for appearances, just to propitiate opposition, then we are in for serious trouble."

Gambling Capital of the United States Unmasked-I

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1955

Mr. ANFUSO. Mr. Speaker, I am grateful to Mr. Bob Considine, the noted reporter of national fame, for his highly interesting series of articles which have appeared in recent days in many newspapers throughout the land concerning Las Vegas, sometimes described as "the gambling capital of America." This ace reporter spent several months checking the real facts on Las Vegas and has come up with a very revealing story.

Shortly after the 84th Congress was convened, I introduced a resolution, House Resolution 97, to set up a fact-finding committee of five Members of the House of Representatives to undertake an investigation of the causes of crime in this country and a study of the methods of crime prevention. I also introduced a bill, H. R. 2543, calling for the creation of a Bureau of Crime Prevention in the Justice Department as a permanent agency to conduct a continuous study of ways for preventing crime and curbing juvenile delinquency.

Bob Considine's series of articles would be most revealing and helpful to a congressional committee set up for this purpose, as suggested in my bills, since it would make possible to study this problem at its roots. I, therefore, want to bring these informative articles to the attention of all my colleagues. The first of the series, taken from the Chicago American, was published on January 23, 1955, reads as follows:

GAMBLING MECCA UNMASKED (By Bob Considine)

Las Vegas, January 22.—This place must be seen to be believed. Even then you wonder.

The area embraces one of man's greatest and one of his least important engineering achievements: Hoover Dam and the penny slot machine.

Human nature being what it is, the slot machine and its ilk attract more tourists than the world's highest dam, which has created the world's largest manmade lake and zips power to 8 million people in 3 huge

NO ROAD MAP NEEDED

The blazing city of Las Vegas and its adjacent strip along route 91 combine to be an excellent customer for the power brewed in the dam's 18 huge generators.

A tourist approaching Las Vegas at night needs no road map. From 50 miles away it glows like the nose of the late Charles (Cherry Nose) Gioe, Chicago Capone gangster who helped transmute this little desert town and its road approaches into a gambling mecca that makes Monte Carlo look like a bingo game in a mortuary.

Barring certain threats to its shaky and almost rootless existence amid the forlorn sagebrush and cactus, Las Vegas may attract 10 million visitors in 1955.

They'll spend better than \$50 million on food, rooms, shopping, and services.

FEW WILL BE BORED

No man will be able to compute accurately what they'll drop gambling, spend at Las Vegas' 24-hour bars, or get clipped for at its breezy bordellos.

Whatever the activity of the swarms of transients, vacationers, ever-growing list of residents, and the matrimonially disenchanted who are sweating out 6-week residence, few will be bored.

The only counterpart to Las Vegas in the average person's knowledge is a western movie in technicolor.

But not even Hollywood would produce a western along the story lines of Las Vegas' day-to-day exterior glamor. Nobody would believe it:

Ample housefraus, bulging in Jeans, feeding coins to one-armed bandits while buying dinner for the old man and the kids at the

corner grocery.

Tired-eyed, rumpled dice shooters not even looking up when the whole town is eerily lighted and subtly shaken by the fiery belch of an A-bomb on the AEC testing ground 75

miles away.

Cocktail waitresses, some of whom can be talked into working after hours at their apartments, driving about in Cadillac convertibles (Bell Capt. Vane Weidenkopf, of the sumptuous Sands Hotel, prefers his Jaguar).

CHARACTERS, TOO

And characters? Forgetting the re-treaded mobsters for a moment, what about Rex Bell, the old horse opera star who married Clara Bow? He wound up lieutenant governor of the State.

And Nicholas Andrea Dandolos, the world's dullest gambler through whose hands have passed an estimated \$500 million? (Nick the Greek is a graduate from the Greek Evangelical College with a bachelor of arts in philosophy.)

And Joe W. Brown, who owns the huge Horshoe Club downtown? Brown, whose oil and gas holdings in Texas bring him \$40,000 a month, looks and talks like Army Secretary Stevens in the confident early rounds of his fight with Senator McCarthy.

He has \$1 million framed in 2 layers of plate glass at the entrance of his air-condititioned gambling hall—one hundred \$10,000 bills.

WANTS LOAN

Abe Schiller, of the Flamingo Hotel, an unofficial Grover Whalen for the "strip" since his life was spared by Bugsy Siegel, asked Brown to lend the million to him to place on a Las Vegas Chamber of Commerce fioat in the Rose Bowl parade. Brown said:

"I kind of hate to let it out of the place for a few days. It's a nice attraction."

(The display costs him a small fortune in lost interest and protective insurance.)

Then he had a thought:

"Tell you what I'll do, though. I'll get you another million."

But as it turned out, the United States Government couldn't raise that many \$10,000 bills on such short notice. Brown snapped impatiently: "Well, then, how about 10 \$100,000 bills

* * the ones with Woodrow Wilson's picture?"

But these are gold backs and not permitted to be owned by individuals.

Brown is said to have considered leaving the United States and going back to Texas.

SUN WORSHIP

It sometimes seems hard to believe but there are occasionally other activities in Las Vegas, aside from gambling. Sun worshippers pour in, fleeing the smog and fog to the west and the Arctic blasts to the east.

Couples come to be married. (Hotel Last Frontier has a wedding bureau where a couple can buy a \$25 service at the neon-lighted "Little Church of the West" on the hotel grounds—includes minister, organist, society-page notes for the hometown papers and a ride around the block in a stagecoach. Photograph, \$5 extra.)

There are about three times as many

There are about three times as many marriages in Las Vegas as divorces.

DEATH TAXES

Some people come to Las Vegas to die or break a few of their tax chains. Nevada has no income, inheritance, death transfer, sales or gift taxes.

Others come to fish for frisky bass in Lake Mead or trout in Lake Mohave, below the great dam.

Some come to build department stores, like Sears, or futuristic bomb-shelters out at Yucca Flat, where new atomic tests are about to take place.

But most come to gamble, and even those who come for announced other reasons eventually belly up to a dice, roulette or "21" table, play the pitfless machines, bingo, or the horses.

Horse-betting, gambling's highest moment in most big United States cities, gets comparatively little play in Las Vegas.

"Who wants to wait a half an hour between rolls?" is the general attitude about horses. The pink stucco Las Vegas track needs only the sun-bleached skull of a buffalo to complete the traditional picture of desert waste.

Greater gambles go on constantly beneath the tinseled surface of Las Vegas.

This year will see the opening of eight new lush hotels and casinos, representing an investment of somewhere between \$15 and

\$20 million.

They are Tony Cornero's Stardust Hotel, Frank Fishman's Royal Nevada, Alfred Gottesman's Dunes, Louis Rubin's and Alexander Bisno's Moulin Rouge, Ed Levinson's Fremont Hotel downtown (Las Vegas' first skyscraper), the Riviera, the "Strip's" first tall one, being built by Dave and Lou Gensburg and Murray Saul, Fred J. Trevillian's Desert Spa, and the big Alabaster Continental, with widespread ownership.

None of these places could exist without gambling.

SCAN OWNERSHIP

They could not hope to afford to pay the stunning night-club act fees that have made Las Vegas the capital of the entertainment world. They could not afford to follow the common practice of barely breaking even or losing on food and rooms—a "come-on" that has hammered such prices down below the level of second-rate hotels in the big cities.

And, for them, it will not be a question

And, for them, it will not be a question of simply completing their structures, priming the casino pumps and opening the doors.

The State says in effect that such places must be three-fourths finished (or with that much capital showing) before a gambling license can be applied for. Then the records of all shareholders must be searched.

The people are fingerprinted and the whorls and dips rushed off to the FBI in Washington for a checkup. Theoretically, at least, it is possible for a \$5 million pleasure dome to be denied a license, or deprived of one after beginning operations, though it hasn't happened yet.

SHOW-CAUSE ORDER

The Thunderbird Hotel, for example, is now operating full steam under the sufferance of a show-cause order, pending its efforts to clear up charges that it is partly owned by Meyer and Jake Lansky, two fabled mob characters whose deeds, citations and charges actually cover 211 pages in the Kefauver reports.

Cornero, one-time operator of the gambling ship Lux and Rex which cruised off California, will not be the only potential new operator thoroughly scrutinized.

Hidden ownership is the bane of the life of the Nevada State Tax Commission, in charge of issuing licenses. There are differences of opinion as to the seriousness or thoroughness with which the commission polices such matters.

There is no question, though, that the commissioners—who serve without pay and have generally distinguished records as public servants—are a strong deterrent to further inroads by toughs and extoughs on the Las Vegas scene.

The retired or deodorized bootleggers, bookies, murder suspects, goons, and thugs who have found security and a measure of respectability in Las Vegas do not want anything to upset the applecart. They want to be left alone.

They, in truth, are the police of the gambling business in Nevada. They keep it as clean as they know how, knowing that once the public confidence is shaken in it, or it is invaded by notoriously apparent muggs from the outside world, their whole costly investment would rot away under the baleful sun and stinging sand.

TAX THREAT

The man who gives Las Vegas more ulcers than any other person is Virgil W. Peterson, operating director of the Chicago Crime Commission. Peterson's direct and guilt-by-association charges relate usually to hidden ownership of the gambling palaces.

ownership of the gambling palaces.

Big and little operators in Las Vegas fear that Peterson, and others who floodlight the hoodlum quicksands on which much of the edifice of Las Vegas was built, will hurt the State's tourism business, or prompt other States to legalize gambling in an effort to pull that business away, or worst, inspire a tax-hungry Congress to clamp a 10-percent Federal tax on Nevada gambling.

In the mind of most of those I talked to,

In the mind of most of those I talked to, such a tax would turn Las Vegas into the plushiest ghost town in history.

Peterson told the Public Prosecutors' Institute in Berkeley, Calif., last month that the old Capone mob has taken over control of many places in Vegas and Reno.

Though he did not support his statement, the National Association of County and Prosecuting Attorneys immediately canceled its scheduled convention here for next month.

PRIM PUZZLE

It would have poured many thousands more dollars into the pockets of Las Vegas merchants of all sorts—except Roxie's, the leading house of prostitution, closed recently in what some considered an odd outburst of primness on the part of the widest open town of them all.

Many dire warnings have appeared in national magazines and newspapers of late, predicting that the guns will soon be roaring in Las Vegas, as this or that group attempts to take it all.

When I asked questions about that of such people as Moe Dalitz, former Cleveland bootlegger baron who is one of the owners of the swank Desert Inn and a gifted user of its oasis of a golf course, or of Jake Kozloff, whose interest is switching from gambling to skyrocketing real-estate holdings, I got bigger laughs than Joe E. Lewis, the town's favorite comedian.

WHAT'S AHEAD?

There is obvious concern, however, over what the future holds.

The black market money ran out several years ago. The day (and night) of the titanic plunger is gone. The appeal is increasingly toward the masses type bettor.

The Desert Inn group's erection of the Showboat, out of town, beckons sobersided people in from Boulder, site of the dam and without gambling.

without gambling.

The downtown Las Vegas Club, the house

of jackpots, advertises:

The Jackpot Emporium.

The Jackpot Hippodrome.

The Jackpot Palladium.

The Jackpot Arena.

The Las Vegas Club is the jackpot round-house.

"With 350 slots where you can sit in comfort and enjoy the Las Vegas club's liberal policy * * * and we do mean liberal!

"Free parking for our patrons."

Now, as the individual play decreases in money wagered but expands in numbers of players, in will march a host of new arenas of wagering. The established operators wonder what will be the saturation point.

FRIEND GONE

They worry over such additional thoughts as what effect two proposed Negro hotels and casinos will have on predominantly white Las Vegas.

And they worry over what Washington will do, now that Nevada gambling's good friend and spokesman on Capitol Hill, Senator Pat McCarran, has gone to his reward.

They know their own legislature is safe. In fact, they contributed a lot of money toward the election campaigns of candidates calculated to support continued gambling and to balk at taxing the gambling grosses more than the 2 percent now in the tax law.

To be additionally sure, the gambling interests maintain the influential John V. Mueller of Reno as their lobbyist at Carson City. He sits in the aisle of the State Senate.

But Washington-that's different.

The casual visitor to Las Vegas cares little about these deep worries.

He walks through garish downtown Las Vegas wanting to adopt a rolling gait and pack a pistol.

pack a pistol.

He forgets home, family and the city's many bell-pealing churches as he sweats over a cold pair of dice.

And as he leaves, poorer but wiser, he makes a note that one day he'll return—and get even.

One thing certain: He never forgets the place, any more than an ancient traveler would have forgotten Babylon or, more appropriately, Pompeli.

Gambling Capital of the United States Unmasked—II

EXTENSION OF REMARKS

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1955

Mr. ANFUSO. Mr. Speaker, following is the second article in the series by Bob Considine on Las Vegas, America's gambling mecca, published in the Chicago American, January 24, 1955:

LAS VEGAS UNMASKED—BUGSY CALLED TUNE ON "STRIP"

(By Bob Considine)

LAS VEGAS, January 24,...The late and (in Las Vegas) lamented Bugsy Siegel set

the ethical tone of the resort's gaudy "strip" one night not long before his execution was ordered by the country's leading racket figures—meeting with Lucky Luciano in Havana.

Siegel, builder and original boss of the Flamingo Hotel and casino, sprang lithely from his office when notified that one Bud Bodel, a private eye he had hired, had just flattened a Flamingo dealer who pulled a gun on a patron.

SIEGEL'S TECHNICOLOR DREAM

On a summit of rage which only he could scale, Siegel blazed:

"I won't have any rough stuff in here if I have to kill a couple of you — myself right in the casino."

There wasn't any more trouble, except for Bugsy.

If the old and some of the newer characters along the "Strip" dared, they'd erect a statue to Benjamin (Bugsy) Siegel, member of the board of directors of Murder, Inc., self-styled killer of 12 men (he preferred to shoot them in the face), spectacular shakedown artist, playmate of playgirl Virginia Hill, pet of the late Countess Dorothy Di Frasso, and other society personalities.

THEN CAME THE "STRIP"

He remains the patron devil of the hardest playing stretch of land on earth.

He made a technicolor dream come true, using bloodstained and racket-gained bank-rolls.

Ownership of his handsome and lively olive green monument—the Fiamingo—has long since passed on to persons who can meet the moral requirements of the Nevada State Tax Commission, the licensing body.

But to those with memories longer than a finger the now much-enlarged Flamingo will always be Bugsy's brainchild.

From Siegel's dreaming and daring grew the "Strip" as it is today. Those dreams and that daring were incidental causes of his slaying, but they gave inspiration to lesser figures in gangland, and to banking interests as respected as those of the Moody family in Galveston.

Up from the scabrous wastes along route 91, just south of Las Vegas on the road to Los Angeles, mushroomed the splendor of the Desert Inn, Thunderbird, Sands, Sahara, restaurants, bars, motels, gas stations—the works.

Tens of millions of dollars have sprung directly from Bugsy Siegel's exploitation of the "Strip."

That limited section of the State of Nevada which is actually under State control (Federal lands comprise most of the area) has come to depend heavily on the "Strip" and neighboring Las Vegas for tax money with which to build roads, schools, and maintain them.

NO HOPE FOR BUGSY

But Bugsy couldn't stay around to see the burgeoning of the "Strip," and its impressive role in the State's economic picture. He broke a rule, and the supreme court of the underworld handed down the verdict of guilty. There was no recommendation of mercy. Or hope of appeal.

Some who preceded Bugsy to this general area would have had difficulty comprehending him and his power.

The earliest ancestors of the Paiute, Shoshone, and other Indian tribes knew and perhaps worshipped the springs of Las Vegas centuries before the white man came to America.

The Spaniards, who gave Las Vegas its name (The Meadows), wrote home about it before the Revolutionary War. The American explorer, soldier, and politician, John C. Fremont, penned 111 years ago, that he found Las Vegas water "good but rather too warm to be agreeable."

The Mormon Church established a mission here in 1855, "to protect immigrants and the United States mail from the Indians, and to

teach the latter how to raise corn, wheat, potatoes, squash, and melons."

CITY BORN IN 1905

Brigham Young, informed that the area was rich in lead deposits, encouraged the mission to enter mining. But the project falled and, with Federal troops breathing heavily on the oppressed Mormons everywhere, Young called the Las Vegas mission home to the Great Salt Lake area of Utah.

The San Pedro, Los Angeles, and Salt Lake Railroad, now the Union Pacific, anchored Las Vegas permanently to the map of the United States on May 15, 1905.

On that day it sold 1,200 lots to miners, railroad workers, and shopkeepers with the promise of laying out streets, putting water pipes into each lot, and tarring the road in and out.

Two days later, Las Vegas was a tent city, including a 140-foot-long tent hotel. It never lacked in lustiness from the very start.

Its next boom came in the depression years with the building of Hoover (Boulder) Dam 30 miles away.

30 miles away.

But the State was so close to bankruptcy before that, and its mining and cattle industries so defunct, that its legislature had by that time reached a decision of great significance, not immediately apparent.

GAMBLING LEGALIZED

Desperate for new income in 1931, the legislature legalized gambling.

It caused no immediate gold rush. The freewheeling mobs to the East and West were concerned with bigger things, mainly bootlegging, bookmaking and numbers, narcotics, and white slavery. The dusty dice tables of a forlornly isolated State held no lure save for an occasional passing motorist.

An event in Los Angeles was chiefly responsible for the creation of the city of Las Vegas as it is known to millions today.

In 1938, at which time Las Vegas had a population of 3,000, a recall election put Fletcher Bowron in city hall in Los Angeles and its underworld sensed he was too tough to handle.

The gambling fraternity in Los Angeles packed up, lock, stock, and barreling dice,

and descended upon Las Vegas.

Guy McAfee, former Los Angeles policeman turned gambler, opened the Golden Nugget, whose partners now include Clifford Jones. Democratic national committeeman for the State and former lieutenant governor. At the same time the Pioneer Club was set up, owned by Chuck Addison, Milton "Farmer" Page, Bill "Porky" Curland, and L. B. "Tutor" Scherer.

MOB'S PHILOSOPHY

It was a live-and-let-live group whose philosophy was perhaps expressed recently by McAfee when he said, "Gamblers have too much invested to gamble with trouble. We'd be knocked right out of the box."

Gamblers and motel operators moved timidly out along the highway leading to Los Angeles. Land, now fabulously costly,

was cheaper than dirt.

By 1940 the population of "Greater Las Vegas" had jumped to 6,000, most of them bent mainly on flipping a few dollars out of the pockets of motorists hurrying through to the coast, or streaking eastward.

Pearl Harbor struck terror in Las Vegas. With gas rationing in effect, it was feared that no suckers would be swarming through town.

But the Las Vegas story was only beginning. Workers began pouring through, en route to the shipyards and plane plants of southern California.

BUGSY ARRIVES

The Defense Plant Corporation built the \$140 million Basic Magnesium, Inc., plant at Henderson, 12 miles to the southeast, and shipped in thousands more customers.

Enter Bugsy Siegel.

He had been sent to California in 1937 on the recommendation of Louis "Lepke" Buchalter, then chairman of the board of an underworld syndicate, which included Meyer and Jake Lansky, Frank Costello, Longy Zwillman, Phil Kastel, and, by remote control, Luciano—in prison.

The trip had a twofold aim. California was ripe for big-league exploitation by the mob—which was enjoying good relations with the Chicago, Detroit, and Cleveland gangs—and it seemed a shame to the syndicate to see all those boobs holding on to their money.

The second reason why Siegel took the joint advice of Lepke and Horace Greeley was that he was hot. What he had thought was his perfect murder had begun to unravel.

HIS MURDER ALIBI

Five years earlier he had checked into a New York hospital, permitted himself to be tucked in bed for the night, got up when the nurse left, stuffed pillows under his blanket to simulate a sleeping figure, slipped out, drove to Brooklyn, and murdered Tony Fabrizzo—a mob figure who foolishly dreamed of selling his revealing memoirs.

Siegel was back in bed and sleeping peacefully when his nurse came in with breakfast the next morning. He checked out several days later with a perfect alibi. But, 5 years later, police were closing in, and so he was shipped west.

There, by seizing control over movie extras, via a phony union, he was able to shake down stars and studios by threatening to pull his people off production lots. It was said that in a single year he grossed \$400,000 at this racket.

FEARED IN HOLLYWOOD

Bugsy isolated his uncomplaining wife and their two daughters in a handsome home and proceeded to outdazzie the tinseled culture of the movie world. He dressed better than the stars, talked faster, and was infinitely feared.

Countess Dorothy Di Frasso, known for her flashy parties and sharp wit, sponsored Siegel socially and all but succeeded in making him a leader in a community he was boldly stealing money from.

boldiy stealing money from.

Bugsy, who had known almost hideous poverty as a tenement kid, put indirectly lighted dressers in his dressing room, to illuminate his neat mounds of \$25 shirts.

It was at this time he was joined on the coast by Virginia Hill. The spectacular moll, 1 of the 10 children of an Alabama tombstone polisher, first reached the public eye as a showgirl in Chicago's "A Century of Progress" in 1933-34.

She was 16, appeared in a show called Elephants and Fleas and was just about to change her mouse-colored hair to auburn.

PAIR LIVED IT UP

After the fair she ran through 2 or 3 quick husbands, became a sort of all-American girl of the syndicate and was in the chips well enough to rent Rudolph Valentino's old hilltop house when she arrived in Hollywood.

She and Bugsy lived it up. He moved her and himself into a home in Beverly Hills, which was leased in her name—and gave her, among other things, a wedding ring.

But this was Siegel's light side. His work, aside from shaking gold dust from the stars, was to gain for the syndicate undisputed control of the race-wire service on the coast.

Before Senator Estes Kepauver's racketbusting committee destroyed it, the importance of the raco-wire was spoken of by the California Crime Study Commission in these terms:

"Control of the so-called 'wire service,' through which up-to-the-minute racing results from tracks all over the Nation and even Cuba and Mexico are brought directly to individual bookmakers through distribution points for a price, has long been the cause of murderous underworld struggles.

"CONTINENTAL CAPTURED

"The largest of the wire services is known as the Continental Press Service, formerly controlled by the late James M. Ragen, Sr. Strenuous efforts were made by those who inherited the Al Capone empire in Chicago and by Prank Costello to gain control of or destroy Continental Press Service.

"West of Chicago the Capone group first attacked the Continental monopoly by setting up a competing service known as Trans-America Wire Service. Subsequently in Arizona-Nevada-California territory, the Capone syndicate 'captured' Continental.

"With the appearance in Las Vegas of Moe Sedway, unrestricted access to the wire service for anyone willing to pay for it was suddenly cut off early in 1942 except for 2 or 3 establishments whose proprietors discovered that by giving Sedway an interest in their business, they could continue to receive racing results without disturbance.

"Originally from New York and a friend of Siegel's since boyhood, Sedway's mysterious control over the wire service paved the way for Siegel himself.

"The terms were hard, but the reasons for accepting were compelling. As one of the partners in a Las Vegas gambling house testified, 'a book is an asset to a gambling house. It brings the people in in the daytime, and if your competitors have it, you almost have to have a book to compete."

"By these means, Stegel secured a regular income from Las Vegas alone of at least \$25,000 a month."

An Editorial From the Chicago American

EXTENSION OF REMARKS

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an editorial from the Chicago American of January 31, 1955. The editorial follows:

TIMIDITY OF CONGRESS

We've contended that Members of Congress, and Federal judges as well, deserve an increase in pay.

Men of good caliber should not have to serve their country at financial sacrifice. Or, to put it more significantly, these important jobs should pay enough to attract men of great ability and not just the independently wealthy or broken-down hacks who want to get in out of the rain.

But the timidity of Congress. Its fear of the voters. These factors have prevented action in past Congresses. Now, as it seems probable a raise will be voted, they emerge in a ludicrous way.

It is reported that proposals will be made for a \$10,000 pay hike (from the present \$15,000 to \$25,000) so that, on the floor, Members may humbly vote to reduce the increase and wind up with \$22,500.

For goodness' sake, men, the people aren't that dumb. They know Congressmen have to maintain two homes and contribute to everything from the smallest raffle to the party campaign chests.

They know Federal judges, at \$15,000, make only a fraction of what they could command in private practices.

Please, gentlemen, just fix a fair figure. The people will understand and respect.

Annual Report of ICC Reveals Politics Gets Nod Over Safety

EXTENSION OF REMARKS

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. SHELLEY, Mr. Speaker, for the information of the Members of the House, I wish to insert in the Congression. SIONAL RECORD an article which appeared in the Trainman News of January 24, 1955. The Trainman News is the official weekly publication of the Brotherhood of Railroad Trainmen. The article, written by Mr. Harry See, the organization's national legislative representative, comments on a proposal contained in the annual report of the Interstate Commerce Commission under which the Commission's Bureaus of Locomotive Inspection and Safety and Service would be consolidated into a new Bureau of Safety and Service. The article also discusses a recommendation in the report with regard to appointment of the director and assistant directors of locomotive inspection and the qualifications of permanent inspectors.

The article follows:

ANNUAL REPORT OF ICC REVEALS POLITICS
GETS NOD OVER SAFETY

(By Harry See, national legislative representative)

The Interstate Commerce Commission wants to play politics at the expense of railroad safety. That is the only conclusion that can be drawn from the Commission's latest annual report.

One of its several recommendations under the reorganization and management improvement section of the report is to consolidate the Bureaus of Locomotive Inspection, Safety, and Service into a new Bureau of Safety and Service.

To do this would be to no longer distinguish between qualifications and duties of Bureau of Safety inspectors and locomotive inspectors. While both types of inspectors ac concerned with maintaining safety conditions on railroads, their jurisdictions are different.

SAFE OPERATION

The safety appliance inspector is concerned with proper operation of any device on railroad cars which will affect the safe operation of cars, such as hand brakes, brake steps, running boards, sill steps ladders, handholds, coupling levers, handralls, etc. On the other hand, locomotive inspectors are concerned with inspection and maintenance of locomotive boliers, and all parts and appurtenances of the locomotive and tender. In addition to steam locomotives, this service also includes the highly complicated mechanisms of diesel and electric locomotives.

There is no practical reason why these two valuable safety agencies should not be kept separate and distinct as in the past, insuring to the traveling public and railroad employees that railroads are safe and will be maintained in a safe operating condition.

As we continue to read the recommendation, we find the ICC supplies its own motive for advocating the merger of these two bureaus. The report alleges that having two kinds of inspectors, safety and locomotive, results in a duplication of service, which "is wasteful and has brought objection from the rallroads."

RATLEOADS OBJECT

Therein lies the key to the recommendation—the railroads object to it! The railroads have always objected to any measure which would police their operation. They objected to enactment of the Locomotive Inspection Act, the Safety Appliance Act, and the Signal Inspection Act. They objected to requirements for power brakes, for ash pans under locomotives and for automatic stokers; in short, they objected to and opposed any regulations that would cost them any money, whether or not it would result in improved and safer operation and save human lives.

Allowing inspectors from either bureau to interchange inspection assignments would necessarily result in inspectors from one bureau attempting to pass upon the items of safety about which they know nothing, since their qualifications and experience have been otherwise. This interchange in railroad inspection can easily reflect itself in less thorough and inefficient inspections, and result in an increase in accidents attributable to unrecognized defects. But this possibility aparently gladens the heart of railroad management which has consistently opposed such regulation. Recalling this attitude of the carriers in the past makes it more easily understood why the management-conscious ICC would recommend the discontinuance of the present practice because it has "brought objection from the railroads."

HARMFUL RECOMMENDATION

A more destructive recommendation of ICC in its annual report is the one to amend the Locomotive Inspection Act to eliminate provisions relating to appointment of the director and assistant directors of locomotive inspection and the detailed requirements relating to employment of inspectors.

Elimination of provisions relating to ap-pointment of the director and assistant directors of locomotive inspection is something which has been long sought by ICC. In 1911 when the Boiler Inspection Act was passed, Congress felt the large accident toll caused by defective locomotive boilers was so serious that an independent bureau within the commission should be set up, with the director and two assistant directors nominated by the President of the United States, by and with the advice and consent of the Senate. The intention was to give bureau heads a certain amount of independence, so they would feel free to use all powers vested in them in making rules and setting up standards to prevent accidents due to defective locomotives.

The ICC apparently wants to select its own director and assistant directors. By having absolute control over the heads of this bureau, the administration of it can be placed in the hands of officials and inspectors swept up from the political arena, whose lack of qualifications and experience will result in the breaking down of safety standards of long standing.

WITHDRAWS NOMINATION

For instance, at the last session of Congress, the Senate Committee on Interstate and Foreign Commerce requested Charles H. Grossman to appear and acquaint committee members with his views on legislation designed to accomplish the same emasculating process as the above provision in the ICC report. Grossman had been nominated to become Director of Locomotive Inspection. When Grossman expressed himself against the proposed change, the ICC members were angered, and the President was persuaded to withdraw his nomination.

If the detailed requirements relating to employment of locomotive inspectors are eliminated, as proposed in the ICC recommendation, this would permit appointment of a man who knows absolutely nothing about locomotives or their appurtenances. Employment of such inspectors has been

closely guarded by law. Since 1911 all locomotive inspectors have been required to have an intimate knowledge of all working parts and safety devices of locomotives. To insure this, they are required to pass examinations relative to their training, experience, and knowledge of intricate mechanisms related to work in the field of locomotive inspection.

After successfully passing such examinations, the applicants are entered on civil-service rolls, and are entitled to privileges and protection of civil service. The excellent safety record on railroads insofar as locomotive failures are concerned attest to the wisdom displayed by Congress when it instituted this detailed process for the selection of suitable men for these positions.

LOOK AT 1954 RECORD

To illustrate the importance of the work done by locomotive inspectors, you need look only at the record of the Bureau of Locomotive Inspection for 1954. In that year a total of 19,999 steam locomotives were inspected; of these, 2,599 defects were discovered that should have been corrected by the railroads before the locomotives were put into service. In the same period 83,338 diesel locomotives were inspected and 7,395 defects were detected.

For the ICC to remove these men from protection of the civil-service system and to eliminate requirements for their examinations is simply to open the door of another Government agency to invasion by political patronage. Under the American system of political spoils, it is expected that certain inconsequential jobs will be filled with only a passing wink to qualifications and with a large dose of favoritism. But in the field of employment where the caliber of a man and his technical knowledge are directly related to the kind of job he can do in the field of safety maintenance, it is unthinkable to imagine any relaxation in such job requirements.

SOUNDS THE ALARM

The BRT's national legislative representative has already sounded the alarm on Capitol Hill by acquainting Members of both Houses of Congress with these and other deleterious provisions in ICC's annual report. Relative to the provision to let down the bars requiring examinations, he said that, if ICC has its way, wardheelers soon will be seen fumbling about freight cars and locomotives looking for a leak or a rattle. To expect any degree of safety on the rall-roads, he said, we must insist on men with practical railroad experience.

Ukrainian Independence

EXTENSION OF REMARKS

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. HILLINGS. Mr. Speaker, January 22 marked the 37th anniversary of the proclamation of Ukrainian independence. As a member of the Select Committee on Communist Aggression during the 83d Congress, I was impressed by the evidence received concerning the desire for freedom shown by the Ukrainians. During the Second World War millions of Ukrainian patriots attempted to rise up against the Communist dictatorship in the Soviet Union but were unsuccessful. The Ukrainians would be one of our most important allies in the event of a

future uprising and resistance against the masters of the Kremlin. I extend my greetings to these freedom loving peoples on the anniversary of their proclamation of independence.

The Strategic Importance of Southeast Asia

EXTENSION OF REMARKS

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. ROGERS of Texas. Mr. Speaker, I am honored to commend to the Members of the Congress the article that I today insert in the RECORD. In order to predicate properly the splendid treatment of a serious problem in world affairs. I insert a brief biographical sketch of the able author, Dr. Diosdado M. Yap, a noted Far East authority and the publisher and editor of Bataan Magazine. The article that has been written by Dr. Yap concerning the Far East situation should be carefully studied, as it contains the answers to many of the problems faced by mankind, not only in the Far East, but in other parts of the world. The matter follows:

THE AUTHOR, DR. DIOSDADO M. YAP

Dr. Yap was born in Baybay, Leyte, Philippines. He attended primary and secondary schools there and then came to the United States for his college training. He graduated with honors from Crane College where he took an active part in student affairs, and then attended the Northwestern University Law School and the Lewis Institute in Chicago.

In 1930 he attended George Washington University, from which he received his M. A. in Education the following year. His doctorate was awarded in 1935. In addition, he has the degrees of B. S., M. S., IL. B., Ed. D., Ph. D., and IL. D.

Dr. Yap was among the first authorities on the Far East to tour the Army camps for the War Department. Soon after the Pearl Harbor incident he was commissioned as expert consultant to the United States Secretary of War to visit the encampments and lecture to the officers and enlisted personnel on all phases of the far eastern countries and of the war in the Orient, with special reference to American-Philippine relations. In less than 3 months he spoke to approximately a million men.

Dr. Yap was formerly publicity officer and researcher for the Resident Commissioner of the Philippines to the United States. He was also director of the Philippine Information Bureau, managing editor of the Philippine Journal, and technical staff member of the Joint Preparatory Committee on Philippine Affairs. At present he is publisher and editor of the Bataan magazine and chief of the Washington bureau of the Manila Chronicle.

He is author of History of Higher Education in the Philippines, and of numerous articles on the Far East for different American publications. For some years he has been American correspondent for leading Philippine papers and a radio commentator on far eastern affairs in Washington, D. C.

He has made repeated trips to the Orient, traveling through China, Japan, India, Pakistan, Hongkong, and his native islands. His long study of the problems of the Far East and his association with its leaders qualify him to speak with authority. Dr. Yap is a speaker of the highest ability. His command of English is flawless.

THE STRATEGIC IMPORTANCE OF SOUTHEAST ASIA (By Dr. Diosdado M. Yap¹)

The titanic struggle between the free world and communism is being fought in Asia, and whether or not America remains free depends upon whether or not we can win in Asia. Up to now we are losing, because we have failed to win the people of Asia to our side. I have just returned from an extensive trip to the Far East in which I talked with the political leaders, religious leaders, businessmen, workers, and the man in the street in Burma, Ceylon, India, Indonesia, Japan, Korea, Pakistan, Philippines, Thalland, Formosa, Malaya, Hongkong, Viet-Nam. Cambodia, and Laos.

One thing that was impressed upon me during this trip was the fact that the people of southeast Asia are entirely ignorant of America, American aid, or America's desire

to assist free people to stay free.

The result of all the billions of dollars we have sent to Asian countries is that we have won some friends among the leaders, but we are losing the people. Unless we can get the people of Asia on the side of the free world, they will accept the Communist world and thus put two-thirds of the world's population under the control of the Kremlin.

IMPORTANCE OF ASIA

When that happens the Communists can take over Europe without firing a shot because Europe cannot exist without the trade and raw material of the Far East. With Asia and Europe gone and with our sources of raw material cut off completely, how long can America hope to stand off the final plans of conquest by the Soviet? The answer is obvious; we must win the friendship and support of the people of Asia, not merely because we want to help the Asians, but because by helping them to remain free is the only way we can bring lasting security to ourselves.

I believe the situation was aptly summed up last year in a report by a special Study Mission to the Far East of the Committee on Foreign Affairs of the House of Representa-The committee, headed by the Honorable Walter H. Jupp, of Minnesota, said in the conclusion of its report: "The study mission believes that the United States must recognize frankly that it is the security, even the survival, of the free world that is threatened in Asia. We do not believe, in the light of our information and analysis, that a third world war is the most immediate danger in that part of the world. The first stage in the Communist program always to try to subvert the weak and divide the strong. Therefore, it is the unending the strong. Therefore, it is the unending series of local actions in Asia, including violence and subversion, and the constant attempts to sow dissension among our allies in Europe and elsewhere, to which American policies must be directed with intelligence, vigor, and determination if we are to pre-vent the gradual chipping away of the free

How are we to meet the Communist conquest in Asia? What should the course of American policy be if it is to be intelligent, vigorous, and determined? To find an answer to these questions we must explore the effect of aid aiready given, determine why it has not been successful and seek more effective means of reaching the people.

Again quoting from the report of the Foreign Affairs Committee Study Mission we find that grants of money are not the answer. The study mission said: "There is a popular assumption that appropriations of money are the solution for our problems. Money is a measure of our interest, not a yardstick of our success. If money alone could do the job, our problems in Asia would long since have disappeared. Its conversion into constructive programs and action is the real test.

"Since 1945 the United States has given more than \$6 billion in economic and technical assistance to countries in this area. About \$5 billion has been for various kinds of emergency relief, most of it immediately after the war. Since 1950 more than \$1 billion has been, or is being, spent for programs of economic and technical assistance."

In talking with hundreds of people on my recent trip I find that among the masses in the Far East, with the exception of the Philippines, the people know nothing of these vast sums which have been contributed by this country to help them. The benefits have been used to attempt to build political power, to stabilize existing governments, or carry on " a propaganda war among people who can neither read nor write and who do not have enough to eat, let alone radios to hear American broadcasts against the evils of communism. The people of these countries know of America's participation in the last war, but since the war there has been a complete blackout of publicity concerning America, American aid, and American ideals. In all my travels in about 27 countries, the only story I saw in any newspaper about America was a short paragraph in a paper in Pakistan concerning the divorce of Marilyn Monroe and Joe DiMaggio. By such standards are Americans judged in the Far East.

DEMOCRACY IN ASIA

If free southeast Asia is to be saved from communism, the West must bring its democracy closer to the hearts and minds of the uncommitted millions. This cannot be done at the high level of diplomatic missions and State Department conferences. We can reach the people only through massive invasions by democratic missions and ambassadors of culture, through technological assistance, labor-saving devices, and by teaching the people the secret of our success, the secret of our production, so that they may be able to secure for themselves the basic necessities of life.

The attitude of the great majority of the people of southeast Asia is best illustrated by a conversation I had with a laborer in Singapore. "The people just want peace," he declared. "We are tired, we do not want to fight anyone anymore. We just want a chance to make a better living."

Freedom to the common man in Asia means a small piece of land to call his own upon which he can raise enough to feed him and his family and which will afford them shelter and give them the opportunity to clothe themselves.

Until we have met this basic need of the eople of Asia all efforts to inspire them with the ideals of political freedom are futile. The minds of the people of Asia are yearning, not so much for knowledge of how bad communism is, as for assurance of how good democracy can be to their daily lives. has been denied freedom for so long a time it has forgotten what freedom can mean in terms of a prosperous economy, progressive community life, and a richer meaning of human existence. These things cannot be brought home to the people of Asia merely through the propagation of the manual of arms or the usual vituperation against the Kremlin or Peiping governments.

From my observations, based upon my countless interviews and conversations, the dollar handout is not Asia's idea of friendly assistance from the West. They believe that

experience has taught them that grants-inaid can corrupt the beneficiaries and encourage a false sense of security on the part of those who give.

In Salgon a taxi driver told me: "Yes; we have heard of America. They have given much money, but what is their purpose? They are in cahoots with the British and the French and will help these countries in their colonial policies, which means slavery for us."

In many countries I found the people who know of American aid are suspicious of our aims. Those who were not outright unfriendly were cautious in their attitude toward America. They wanted to believe in our goodness of purpose, but our close alliance with the colonial powers was uncomprehensible to them. They need a graphic illustration that we do not support the colonial policies of our allies in Europe and that we genuinely mean to stand by all people who want to be free.

Billions of dollars given to China, Korea, and France to straighten the security of the free people of Asia did not improve the position of democracy and of the West in the Pacific. One can but speculate whether these billions of dollars, if utilized to build up the economies of those nations and to expand the trade potential and to introduce democratic institutions like public schools, government sanitation services, puericulture centers and health clinics in rural areas, might not have been more effective in containing communism in Asia.

THE POINT 4 PROGRAM

The most effective use of money spent in Asia has been through the point 4 program where our technical advisors went among the people and where we were able to demonstrate our willingness to give them an opportunity to build better lives for themselves.

It is time we apply to our diplomatic relations the lessons taught by the religious missionaries. The priests, ministers, the Christion teachers and doctors who, for years, have gone among the people, humble, often barefoot, and lived with them, spoke to them in their own language, became a part of their lives, these are the Westerners who made the great impact on the peoples of Asia. Our losses can be traced to high level diplomacy where we dealt only with the leaders at the political strata and forgot the

The Christian missionaries overcame another great barrier which keeps the West from victory in Asia—the barrier of inequality. We can never successfully reach the hearts and minds of the Asians until we give honest recognition to the status of equality of the Asians.

One becomes conscious of this imperative for equal status when talking to Nehru of India. Americans who ponder as to why Nehru takes the attitude he does after this country has been so generous with India must remember that the greater part of Nehru's life was spent in white men's jails and he has tasted the bitterest dregs of being made to feel inferior. His first words to me were to remind me that he and I have a common background and then he reminded me of the years he spent in British jails and how his first important writings were prepared in jail.

Now he feels that destiny has brought him to a position for which his early suffering and persecution has fitted him, the leader of the people of Asia.

In my interview Nehru told me: "There are only four great powers in the world today. India, China, Russia, and the United States. India must be given proper recognition."

Nehru's plan for a neutral bloc of Asian nations is a practical one. He knows that the people of Asia hold the balance of power in the world struggle. If he can consolidate the Asian nations into a neutral bloc looking to India for leadership, then he is in a

i Dr. Diosdado M. Yap, editor and publisher of Bataan magazine, covered the SEATO conference in Manila last September, after which he toured all over southeast Asia. He also toured several European countries for over 2 months before returning to the United States.

better bargaining position with the other 3 great powers, 2 of which, China and Russia, threaten his borders, and the United States who must keep Asia out of the hands of the Communists.

The arguments of Nehru make sense to many people in other Asian countries. A businessman in Rangoon said his country is close to India economically, culturally, and spiritually, and will follow the leadership of India. This merchant said he was not unfriendly to the United States, but he did not trust us as he was convinced we would follow the lead of the British in any final showdown in Asia.

OBSTACLES OF DEMOCRACY

These deep-rooted feelings, born of years of hatred and distrust of the white man, are the chief obstacles democracy must overcome in Asia and are, at the same time, the chief weapons being skillfully exploited by the Communists. The West can successfully meet this challenge, if we face the issue of equality with courage and honesty.

I believe that from the geopolitical point of view, it is in the vast Pacific basin where West and East can actually learn to live together in equality, in freedom, and in abundance. On the rim of this vast ocean are the most populous continents, bountifully blessed by nature with limitless natural resources and unlimited human needs await-

ing to be met and satisfied.

The real challenge of communism to the West is—which of the two, communism or democracy, can sooner remove the stigma of penury and hunger and of inferior status from the inumerable poor in the western reaches of the Pacific Ocean. Communism falsely claims it can do it sooner, and, unfortunately, the many millions of illiterate poor of Asia have responded to that false claim. They have responded because the Communists have sent their agents, natives, among the people with glowing promises of abundance while we have been content to send them copies of the Declaration of Independence, pamphlets, bulletins, booklets describing the American way of life, and pictures of American workingmen riding in automobiles. So far removed are the simple possessions of Americans to their own poverty that they simply do not believe us.

The principal task of democracy today is not to shout against the falsity of the Communist claim, but to prove by actual performance that the system of the free world can accomplish the goal of peace and abundance for the people of Asia sooner and more completely than the Communists can.

To pursue this vast task of democracy successfully, there is one imperative that must be heeded, regardless of consequences to the existing mental attitudes prevailing in many Western countries—that imperative I have already mentioned, the imperative of equality. All Asians must be accorded equal status in concrete practical terms. It is the only principle that can bring about an economic revolution toward democracy in all the so-called underdeveloped countries.

Chinese Communist leaders won, through force, a status of equality with western leaders, first at Panmunjom and later at Geneva. The West cannot afford to wait until all the other Asian leaders win the same status through force. Yet we invite the use of force by our failure to recognize equal status for Asians while at the same time the Chinese Communists demonstrate that it can

be won.

Now let us turn our attention to the core of the problem in Asia and the solution for it. There is scarcely a country which I visited in southeast Asia that is not threatened by internal Communist subversion, in many cases by direct Soviet or Chinese pressures, operating partly through the large Chinese population living in the country and partly through the close geographical impact of Communist China itself. We can never af-

ford to forget that China is like a glant hand dominating the fingers, all the countries adjacent to it and comprising all the countries of southeast Asia.

COMMUNISM IN ASIA

Keeping in mind the strategic geographical position of China, let us analyze the causes that have helped the spread of communism in Asia. Briefly summed up, they are:

 Susceptibility of the Asian masses to new, revolutionary doctrines because of the age-old state of poverty and misery of the

people.

2. The devastation caused by the last war which wrecked the economies of many Asian countries and caused more difficulties to the peoples and their governments.

Resurgence of the spirit of nationalism.
 Lawlessness and moral decadence as a direct result of the war.

 Geographical position of Asia relative to Soviet Russia.

The one prevalent condition of which the Communists have taken the greatest advantage is the rampant poverty and misery among the millions of people of Asia. The Reds find the poor, illiterate masses ready to give a willing ear to Communist teachings as a possible remedy for their ills. And, as I have stated, the Communist agents carry their story directly to the people.

In the words of the Prime Minister of Pakistan—"The peoples of Asia have suffered for many long decades from hunger and disease and here millions of people lead subhuman existence, verging on a perennial state of almost famine. Their lives have been one long tale of misery, unrelieved even by hope. Stricken by famine and epidemic, bowed down with care, they must often wonder why destiny had made it so hard for them to live when in other countries life was so different—full of zest, full of joy. Their ignorance and illiteracy prevent an objective analysis of new way of life offered to them. Their desperation makes them accept any hazardous path of life, if it only promises relief from their sufferings."

Another prevalent situation in Asia which communism has thoroughly exploited is the economic prostration that many Asian countries have suffered as a result of the last war. Economic dislocation with all its attendant problems and difficulties has given the Communists the opportunity to use their familiar systems of sabotage, to sow confusion and chaos, to create discontent, and to interfere with the execution of national programs of rehabilitation and recovery. They know that the longer the economic sufferings and difficulties of the people remain, the easier it is for them to achieve their ends.

Prior to the war the nationalistic feeling in many Asian countries had remained suppressed. After the war, these countries, still under alien domination, found a resurgence of nationalistic feeling which they proved with intensity as they saw the opportunity to throw off the shackles of colonialism. The Communists were quick to seize the initiative and to stir up hatred against the colonial powers and present them to the masses as "imperialists" and "exploiters" and to picture the United States as the champion of "imperialism" and "exploitation."

Our failure to take a strong stand against French colonialism in Indochina only helped strengthen the Communist propaganda and lead to greater distrust of real American motives.

THE LEADERSHIP OF MAGSAYSAY

In spite of these great difficulties facing the West and the tremendous gains made by the Communists, there are some encouraging signs in Asia which, if we recognize, we can turn to the advantage of the free world.

First, there is the great showcase of democracy, the Philippines. Under the inspired leadership of President Magsaysay, the Philippines have met and conquered the Communist threat, and they have come a long way on the road to rehabilitation and economic recovery. The great success in the Philippines is due to the recognition by Magsaysay of the needs of the people to be given an opportunity to improve their condition. He has used American aid to benefit the people and he has let the people know of American assistance and contributions.

The Filipino people have close affinity with practically all Asians. In addition, the Filipinos were the only people in Asia that stood loyally with a Western Power during the war, proving beyond any question of a doubt their faith in the democratic ideal.

Because of their close and long association with the American people, and inasmuch as their educational training for almost half a century has been patterned after that of the United States, I feel that the Filipinos can serve as a human democratic bridge between the West and the Asian peoples.

In addition, the Filipinos are the only preponderantly Christian people in Asia and they were the first oriental people to establish republican institutions. From their historical background, the Filipinos have close ties with all the Asians. It includes a long record of ancient history which testifies that the Indonesians and Malays in the Federated States are their blood relatives, that the Filipino people linguistically and culturally are related with India, that the people of Ceylon (Singhalese) are their racial cousins, and so are the Vietnamese, Cambondians, that the Thailanders and Burmese are descended from the same racial stock which combined with Malay and Polynesian stock to produce the Filipino race and that the ancient Chinese people were trading regularly with the ancient Filipinos since the early centuries of the Christian era.

the early centuries of the Christian era.

Consequently, by racial ties, by identity of culture and antecedents, by bonds of friendship antedating the formation of many nations in the West, the Philippines and the Filipino people enjoyed and are enjoying an important position in the world of Asia.

THE ROLE OF THE PHILIPPINES

These are assets that the Filipino people have been able to discover and they inspire the West in that the Philippines can play the role of a Democratic bridge from the West to the vast hinterland of Asia, and vice versa.

However, in order to make this bridge strong and enduring so as to sustain the heavy traffic of conflicting ideologies and political drives of economic rivalries and social revolutions, it must have a solid foundation—strong pier and support, indestructible

beam and well-adjusted parts.

In building that bridge strong and permanent Senator Jose P. Laurel of the Philippines pointed out that "the Filipino people need American sympathy and help. We need not so much funds as concession in trade, not so much American manpower as American technology and skill. More than anything else, the Filipinos, as well as other Asians, need the assurance that they are regarded as brothers of all our democratic friends and allies in Europe, in North and South America, brothers with equal rights and privileges, equal freedom of decision as any other sovereign nation, and an equal voice in the high councils where the vital decisions are made, to claim our share of all hazards, the labors and the sacrifices, the free world may incur in the defense of freedom in southeast Asia, and we feel that we are also entitled to full equality in the rights and privileges of the union of the free."

Another great force reacting on the side of the free world is the new foothold being gained by Christanity in many countries of Asia. The modern missionaries are devoting themselves to the teaching and practicing among the people, their religion regardless of social, racial, or class distinction. They are getting across to the people of Asia that they recognize the dignity of the human spirit. There is a tremendous spiritual revival throughout the Far East which can inspire men to seek freedom and to remain free from the domination of a power that recognizes no God and regards man as only the most intelligent of the animals.

I do not believe we should seek to nationalize the missionaries, but I believe the Government should encourage their great efforts and assist them in their great task of bringing knowledge and help to the people of the Far East.

American business is contributing to better understanding among the people of Asia. There is no longer the tendency to exploit the native which was so much a part of the early history of that area. American business today is giving the natives of Asia better job opportunities at decent wages to enable them to make for themselves better lives. One had only to hear the enthusiastic praise of American enterprise by an air-field mechanic at the airport in Karachi, Pakistan—"the American company has given me much hope to live better with good wages and a chance for even a better job"—to know the important part American business is playing in spreading democracy's story. They are getting across the idea that the people are partners in business instead of mere chattels to be used and exploited.

PROGRAM TO STOP COMMUNISM

Using these factors as a base we can successfully meet communism in Asia by instituting a specific program summed up as follows:

 Amelioration of the lot of the landless population in countries, where now lands are still available for settlement.

- Acceptance of the reality of a new force in the life and history of Asian nations, according to them their rights to national freedom, human dignity, and mutual respect in their relations with the other nations of the world.
- 3. A system of economic and financial assistance with a much broader scope than the Marshall plan in order to meet the urgent requirements of both their reconstruction and development.
- 4. A system of mutual cooperation (SEATO) that will assure to the free countries of Asia the same benefits of joint action for the defense of democracy in the East that the Atlantic Pact gives to the nations of Western Europe.
- 5. A vigorous educational and information drive in Asia to save the poor and illiterate masses from falling an easy prey to Communist propaganda, to unmask the myth of communism and to demonstrate the true blessings of democracy and freedom,

Southeast Asia needs development. The dormant resources must be developed and utilized to afford the necessary income to the hundreds of millions of peoples in Asia in order to enable them to raise their standard of living. American business should be encouraged to open subsidiaries and plants such as they have done in Europe and in the South American countries. More efficient and scientific methods of agriculture must be introduced to replace the antiquated and inefficient farming methods that are still in use. Industrialization, technical know-how, modern technology must be used to raise their standard of economic development, intensify their production, and provide more sources of income and development, especially in those countries or places where agriculture can no longer adequately support the size of the population.

The most fearful thing about my whole trip was the evidence of the resurgence of

communism in Japan. Japan, more than any other Asiatic country, is feeling the lack of dollars. It is the great industrial center of Asia and must find markets for its manufactured products.

"China offers Japan the best place to sell its goods," the vice president of a large import-export house in Japan told me. "Our whole economy is based on our export—can you expect us to ignore our best potential customer while you in America offer us no alternative?"

The West must let down the trade barriers and give the Asians full opportunitity to trade freely in the markets of the world. If we do not offer them the chance to trade with us, they must trade with the Communists and, because the Communists use trade as a political weapon, it can only be a matter of time before Asia is committed, through its trade policies, to the side of communism and against the side of democracy.

To do all these things successfully, we must reach the people. This means greater stress on technical assistants who will go among the people. American business should be encouraged to expand its present policies of enlightened capitalism. We should encourage and assist the people to gain new self-respect and treat them as equal human beings.

THE PHILIPPINE EXAMPLE

Greater use should be made of the success of democratic procedures in the Phillippines. While not detracting from the good that has come from the exchange of persons program and the benefits of having Asians study in the United States under the Smith-Mundt or Fulbright grants, we could do much more to convince the people of Asia that the free world offers them greater opportunity by showing them firsthand what has been done in the Phillippines.

The Philippines is the answer to the Communist charge of American imperialism. The United States kept its word, granted Philippine independence, and unselfishly gave every assistance to the new nation so that it could be successful. President Magsaysay is, to my opinion, the natural and undisputed leader of the free world in Asia today. We ought to send study missions and exchange students from all Asian countries to the Philippines where they can observe the workings of democracy as it applies in a country which has a common culture, social and economic similarity, racial strain, and history with their own.

How well we meet the challenge of working with the people of Asia may well determine if we ourselves are to remain free. We must recognize that today the Communists control roughly one-third of the people on earth. One-third are alined with the free world. The remaining third thus become the balance of power and the free world can remain free only if the neutral one-third join the free world.

These so-called neutral nations do not fear the Communists as much as they fear us because they do not trust us. We have not shown them that we mean what we say, that we will stand by those nations of the world who want to become free or to remain free; that we will not make deals at the expense of our allies in order to achieve fancied security for ourselves.

Once we have convinced the people of Asia, as we have convinced the people of the Philippines, that we can be trusted, that we do believe in the American ideals we express, then they will welcome our friendship and aid and cooperation and we can build a safe and secure world for all the people.

H. R. 1

EXTENSION OF REMARKS

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement made by me before the Ways and Means Committee of the House of Representatives during hearings on H. R. 1:

Mr. Chairman, and other distinguished members of the House Committee on Ways and Means, thank you very much for your courtesy in granting me this opportunity to submit a brief statement with reference to the important proposal presently pending for your consideration.

The economic conditions now existing throughout the coal-producing areas of the United States are just about as serious and dark as it is possible for them to be. The continuing and growing unemployment is, to say the least, heartbreaking. The residents of these areas are anxiously looking forward to the Congress of the United States as a last hope for positive and definite action in order to alleviate this unnecessary human suffering and misery—the insecure and dark future they are now facing.

On a recent trip to Europe I had an op-

On a recent trip to Europe I had an opportunity to see at firsthand a number of communities where industrial recovery has been slow and real prosperity is still not in sight. Let me point out, however, that nowhere did I find the economic stagnation that has enveloped the coal-producing communities of West Virginia since foreign residual oil began its relentless surge into the fuel markets of the east coast.

In recent years the State of West Virginia has been producing nearly one-third of our Nation's supply of coal. The Fifth Congressional District of West Virginia is an important part of one of America's basic and most important industries. Over the years we have been proud of the coal—an indispensable commodity—produced by the citizens of West Virginia. As a matter of fact, this district is the second largest coal-producing district in the United States.

In 1950 the population of my congressional district, which comprises 16.5 percent of the State's population and includes the seven southernmost counties, was 330,450 men, women, and children. It is now my sad duty to report that in the intervening period West Virginia has suffered a greater population decrease—amounting to 2.9 percent of our residents—than has any other State in the Union. You can be sure my district has suffered more than a proportional loss. Most of these citizens were forced to move away due to the shortage of job opportunities. In addition, there is more widespread distress among our remaining residents than probably has been experienced by the citizens of any other State.

On December 31, 1954, in 6 of these 7 counties—Mingo, Wyoming, Mercer, Mc-Dowell, Summers, and Greenbrier—a total of 75,856 individual American citizens, living within this area, were dependent upon surplus commodities for survival.

From this, it is indisputable that more than 22.9 percent of the population of the Fifth West Virginia Congressional District or nearly 1 out of every 4 persons—that is, men, women, and children, are absolutely dependent upon Federal aid because of the lack of job opportunities.

In five of these counties-Greenbrier, Mc-Dowell, Mingo, Mercer, and Wyoming-there were 310 coal mines operating and employing a total of 31,324 men as of December 31, 1952. On October 1, 1954-just 22 months later-in these same counties there were only 213 coal mines operating—a loss of more than 31 percent—employing only 21,800—a loss of nearly 31 percent. In other words, 9,544 men—most of them responsible heads of families-and through no fault of their own-found themselves out of jobs in a basic and major American industry.

In these five important coal-producing counties in southern West Virginia, during the year 1952, 39,806,802 tons of bituminous coal were produced. During 1953 these same counties produced only 38,590,683 tons. From January through November 1954—the production figures for the month of December are as yet unavailable—these counties produced only 31,308,821 tons of coal. This represents a loss of 8,497,981 tons, or, from a percentage standpoint, a loss of 21.4 percent of our 1952 production. In any area of the United States, when we see such a rapid rise in loss of production, we are in serious difficulties. In some communities, the situation is worse. For example, in some individual areas, production has fallen from 1,771,842 tons in 1952 to a mere 502,902 tons in 1954—a loss of 1,268,940 tons.

The great railroads-the Norfolk & Western, the Virginian, and the C. & O .- serving this coal region have also found it necessary to furlough a large percentage of their employees-numbering into the thousandsbecause of the loss of coal transport.

This is a most serious problem. Every day the conditions of misery, unrest and despair are brought to my attention. Some of our men have spent more than a year diligently searching for work and are still looking. Many residents, former coal miners, railroad workers, small-business men and others, have gone away from southern West Virginia never to return. After more than a year of bitter disappointments and poverty, it is a wonder to me that a man can still retain his desire to work. These men are not asking for Government handouts. They are demanding that this grossly unfair competition to the coal industry—this unre-stricted import of foreign oil—be restricted now. Today there is very little incentive to our younger generation to remain at home. For 2 years many of them have been forced to go elsewhere to search for employment.

In the entire history of our country, the coal industry has never failed to stand by the United States Government. It is now time for the United States Government to stand by the men and women of the coal industry.

From the national security standpoint, in 1952 there were 466,840,782 tons of bituminous coal produced in the United States. In 1954, our entire production amounted to only 391 million tons of this most valuable product.

It is an unquestioned fact that the production of coal is essential to a rapid industrial expansion. Unless coal is readily available, we cannot expand our industrial production capacity as quickly as would be necessary in the event of a national emergency.

Outstanding fuel experts estimated that, in the event of a national emergency—that is, if we are attacked by a hostile foreign power—we would need a minimum of 650 to 700 million tons of bituminous coal during the first year of such emergency. These same fucl experts also insist that, in order to meet this requirement, we must maintain an absolute minimum production of 500 million tons of bituminous coal each year. Last year, as has been previously Pointed out, we produced less than 400 mil-

lion tons of bituminous coal, which is over 100 million tons of coal less than the minimum required for the protection of our own

national security.

This is a grave situation—one that demands immediate congressional corrective measures. We must now, at this time, limit the importation of foreign residual oil and crude. This foreign oil competition is grossly unfair. The Members of the Congress of the United States have an inescapable obligation to our own people here at We must now face that responsibility squarely and stand up to be counted.

In conclusion, Mr. Chairman, I feel quite strongly and most respectfully urge this com-mittee to extend its hearings in order to permit members of your committee an oppor-tunity to go into the coal areas for firsthand observations of the widespread destitution now current. In my considered opinion, a full understanding of the prevailing situation in the coal industry is a prerequisite to judicial determination of matters pertaining to international commerce.

As this committee is aware, the Randall Commission, which is admittedly responsible for the recommendations contained in the bill now under consideration, made no effort to obtain firsthand information on coal status. For that matter, it seems to me that Congress has a responsibility to obtain authoritative information of this type regardless of the course taken by the executive branch of the Government.

In recent years, it has been customary to send delegations from both the House and the Senate on missions into the four corners of the globe so that the Congress might be properly advised. In this light, what excuse can be offered for refusal to treat particular areas of our own country in the same manner?

My congressional district is little more than an hour away from Washington by air, or you may make the trip overnight on the train. I can assure you that our mine operators and mineworkers will be glad to assist any delegation in making a thorough study of conditions in our communities.

Mr. Chairman, inasmuch as the Reciprocal Trade Agreements Act will continue in force for the next 5 months whether or not a report comes out of this committee in the interim, am I asking too much in the interests of my people's welfare and my country's security?

Aid for Crippled Slated

EXTENSION OF REMARKS

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. WAINWRIGHT. Mr. Speaker, I would like to call to the attention of my colleagues in the Congress the wonderful work being done for the physically handicapped in Suffolk County, N. Y. undertaking is being handled by Richard Gilmartin, of Montauk Point, a leader in all forms of civic activity. The following report from the New York Times of Sunday, January 30, 1955, called this matter to my attention:

AID FOR CRIPPLED SLATED-SUFFOLK PROJECT AIMS TO TRAIN ADULTS FOR INDUSTRIAL JOBS

RIVERHEAD, LONG ISLAND, January 29.—A paraplegic is leading a Suffolk County survey that aims at creating a workshop where disabled adults can be trained for jobs in pri-

The survey organization calls itself Skills Unlimited. Its chairman is Richard Gil-martin, of East Hampton, a former Suffolk welfare commissioner. He became paralyzed years ago in an automobile accident. The workshop would be for people with

disabilities of all kinds, with adequate medical supervision.

The Suffolk County Tuberculosis and Public Health Association is taking the initiative in getting the workshop started. Other Suffolk agencies participating include the Cerebral Palsy Association, Heart Committee, Multiple Sclerosis Society, Association for the Help of Retarded Children, and Welfare Department. The State Department of Education is also aiding.

Electoral Reform

EXTENSION OF REMARKS OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the remarks of J. Harvie Williams, executive vice president of the American Good Government Society. It is to be noted that his analysis of the proposed reforms of the presidential electoral system points to the advantage of the congressional district method of selecting electors, introduced in the House by myself—House Joint Resolution 4-and in the Senate by Senators MUNDT, DIRKSEN, and GOLDWATER-Senate Joint Resolution 3:

THE ELECTORAL COLLEGE SYSTEM

(Remarks of J. Harvie Williams, executive vice president, American Good Government Society, substituting for Edward R. Burke, president, initiating round-table discussion on the stated question)

CONSTITUTIONAL REFORM OF THE PROCEDURE FOR ELECTING PRESIDENT AND VICE PRESIDENT

The President and Vice President of the United States are elected by the electoral college which has 531 members-1 for each United States Senator and 1 for each Member of the House of Representatives-who, in turn, are elected by the voters in the several States. In each State all of its electors are elected statewide en bloc, as though all corresponded to Senators. In most States party candidates for elector run as a group in the name of the party's candidate for President. This permits election of the group whose candidate carries the State by a onevote plurality, and permits no division of a State's electoral weight between the parties, although its weight in the Congress is so di-Members of the electoral college in each State meet at its capital and, being all of the same party, cast a solid block of votes for its candidates for President and Vice President.

This uniform method of electing the electoral college came into general use during the first quarter of the nineteenth century when the stronger party in each State, con-trolling the State legislature, arrogated to itself the State's full electoral weight. In each State the weaker party opposed the ac-tion. So it was that both "national" parties supported and opposed the development according to its strength or weakness in particular States.

The central provision of the Constitution

for the electoral college reads;

"Each State shall appoint, in such manner as the legislature thereof may direct, a num-

ber of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative * * * shall be no Senator or Representative * * appointed an elector" (art. II, sec. 1).

Upon thoughtful reflection it is readily seen that the Founding Fathers established a plan of election of the President which (1) combined the Federal basis of the Senate with the national basis of the House; (2) gave full effect to the principle of separation of powers; (3) gave each State the same representation in electing the President that it has in the Congress; (4) established the electoral majority system which permits the existence of only two significant parties; and (5) left to each State, as a means of selfprotection, the determination of voter qualifications. No valid complaint has been made against the operation of these elements of the constitutional plan for electing the President.

The sole valid complaint against the electoral college system is against the consolidated electoral weight of the States. question now is how best to make divisible the electoral weights of the States, so as to eliminate the present high premium on onevote pluralities in the large pivotal States

that are vital to victory for each party.

Now a word about New York's 45 electoral votes. New York City dominates the State's electoral vote, which turns on a onevote, statewide plurality and, therefore, dominates the political thinking of the White House and the executive branch of the Federal Government. National leaders of both parties believe New York's electoral vote to be absolutely necessary for victory. It is included in the minimum planned majority of 266 votes by the managers and candidates of each party. The reason for this is that in 100 years only 1 Republican has become President without winning New York's vote— Hayes in 1876. That victory was by a single vote in the electoral college, and after a special electoral commission had examined disputed votes from some Southern States and, I believe, Oregon. All of the disputed votes were awarded to Republican Hayes.

During that same period, only three Democrats have become President without New York's support—Buchanan in 1856, Wilson in

1916, and Truman in 1948.

It is the inordinately high premium on a one-vote plurality in the State of New York which is largely responsible for the proposed constitutional amendments to make its weight in electing the President divisible between the parties.

Proposals to amend the Constitution in this particular are based on one or the other of three principles: (1) Abolition of the electoral college and election of the President by direct popular vote without regard for State boundaries; (2) abolition of the electoral college but retention of the electoral vote with this divisible between the parties in each State according to the popular vote of the candidates; and (3) election of members of the electoral college in each State in the same manner in which its Senators and Representatives are elected.

Abolition of the electoral college, the indispensable condition of any plan of voting directly for the President, would create in the Constitution interstate candidacies for President to replace present intrastate candidacies for the electoral college. This would open the door for ultimate Federal control of elections, including the qualifications of voters, now a State matter.

Direct popular election of the President would reduce the relative weights of the smaller States in the election. Since States have 6 or fewer electoral votes they could prevent ratification by rejection or inaction. Senator Lodge abandoned this proposal in favor of retaining the electoral vote on the present basis and dividing it propor-

tionally among candidates within each State.

The Lodge-Gossett plan would introduce into the Constitution the new and novel principle of proportional representation which is the basis of the multiparty systems on the European Continent and which soon will be validly urged as the proper manner of election for Members of Congress. future danger would be in addition to those of interstate candidacies.

Election of members of the electoral college in the same manner as Senators and Representatives would merely compel the State legislatures to abide by the structure of the Constitution as a whole, as was intended by the Founding Fathers. This plan introduces no new principles of representation and would require no adjustment in any other part of the Constitution. Moreover, it would give the President the same broad footing in the electorate now enjoyed by the Congress as a whole, would bring the elective bases of the executive and legislative branches into the closest possible balance, and at the same time would bring the election of the President as close to the people as our Federal political system permits.

While all three plans of election would divide the electoral weights of the States between the parties, only the State-district plan conforms to the Constitution well enough to leave its other parts untouched and in balance.

Certainly we do not wish to undo what the Founding Fathers did well. Rather, we should adjust to the general plan of their handlwork those things they did not foresee.

The Greatest Good

EXTENSION OF REMARKS

OF HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include an interesting and informative editorial from the New-Examiner, of Montpelier, Idaho.

This editorial is an excellent comment on the 50th anniversary of the establishment of the United States Forest Service and the related growth of the intermountain region. The editorial follows:

THE GREATEST GOOD

The year 1955 will make the 50th anniversary of the establishment of the Forest Service in the United States Department of Agriculture. Quotes from a letter of Secretary of Agriculture James Wilson to Gifford Pinchot, Chief Forester, on February 1, 1905, outlined the policies for the administration of the forest reserves (now national forests) as follows:

"In the administration of the forest reserves it must be clearly borne in mind that all land is to be devoted to the most productive use for the permanent good of the whole people and not for the temporary benefit of individuals or companies. * * *

You will see to it that water, wood, and forage of the reserves are conserved and wisely used. * *

"Where conflicting interests must be reconciled, the question will always be decided from the standpoint of the greatest good of the greatest number in the long run.'

At first the creation of these public forests were opposed by many who thought that the reserves were to be locked up, thus thwarting

the development of local industry and sacrificing the present to the future. President Theodore Roosevelt insisted that forestry is the preservation of forests by wise use; that forestry means making the forests useful not only to the settler, the rancher, the miner, the men who live in the neighbor-hood, but indirectly to the men who may live hundreds of miles off down the course of some great river which has had its rise among the forest-bearing mountains.

The intermountain region of the Forest Service is one of 10 such regions-9 in the United States and 1 in Alaska. National forests in the intermountain region (Utah, Nevada, southern Idaho, and parts of Wyoming, Colorado, and eastern California) were created from 1897 through 1908. In 1905, when the Forest Service came into being, the population of the area within the intermountain region was around 650,000 and in 1950 it was 1,340,000. Between 1950 and now, populations have increased from 10 to 26 percent in the different States. Roads into the national forests were few and difficult to travel. Forest boundaries were not surveyed and most of them unmarked. Timber was being cut in small amounts, due to its inaccessibility. Recreation use limited and there were few facilities for picnicking, camping, and winter sports.

Today, after 50 years of progress in the

Forest Service intermountain region-

There are over 14,000 miles of forestdevelopment roads and highways, and 27,600 miles of trails.

There are 624 improved campgrounds and

picnic areas with a capacity to serve about 67,000 people. Even with this number, the capacity of the recreation facilities are outstripped on summer weekends and holidays.

The sawtimber cut in 1954 was around 185 million board-feet—or enough lumber to build 18,000 five-room homes.

Over 300,000 head of cattle and a million sheep are grazed. They are owned by about 6,500 ranchers who depend on the national forests for summer grazing. There are 4,400 miles of range fence, 1,350 miles of stock driveway, and 4,300 range water develop-ments constructed by the Forest Service to aid in grazing management.

An estimated 200,000 hunters and 360,000 fishermen visit the national forests each year to harvest the game animals and fish under State laws. Blg game animals spend 75 percent of their time on national forests. There are 11,000 miles of fishing streams, and 145,000 lakes or ponds in the national forests

of the intermountain region.

Perhaps of greatest importance to the people of this portion of the United States is the part the national forests of the intermountain region play in furnishing usable These national forest watersheds produce nearly 25 million acre-feet of water per year. Water is the common denomina-tor of all resource use and industrial development in the intermountain region.

With increasing demands for water, timber, forage, recreation, and other products and services of the forests, it may be expected that in the 50 years ahead, development of national forests will continue in response to growing needs. Fifty years from now, as today, the strength of the Nation will lie in its people and its resources. In the public interest, the policy of using our national forests to provide the greatest good to the greatest number in the long should continue to guide the Forest Service in its management of these public forests.

Located as we are here in the midst of national forests, all of us, regardless of occupation, have daily reasons to know of their existence, and often have direct dealings with the Service. Many persons in the Bear Lake Basin have lived through and identified themselves with 50 years of progressive management of our resources. and large the Forest Service personnel, aside

from their training, technical knowledge, and record of getting the job done, have been and are high type civil servants who meet, treat and deal with the private citizen in a way that engenders mutual respect and has contributed greatly to an acknowledged successful operation.

Problems of the Dairy Industry

EXTENSION OF REMARKS

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BOW. Mr. Speaker, despite the best efforts of hundreds of sincere and earnest men, in Government as well as in private life, the dairy industry of the United States is in difficulty today, faced with problems of low producer prices, inadequate marketing systems, and an excess of production that cannot be used even though our Nation includes thousands of people who have an inadequate supply of dairy products.

As the representative of an extremely important dairy region, I am one of those who is seeking a solution to the problems of this vital industry. Today I have reintroduced for the consideration of the Congress and all those connected with the dairy industry the self-help bill that I sponsored originally in the 83d Congress. I offer it as a possible solution to the problems of American dairymen. I am happy to state that it already enjoys the support of a great many of them

This bill proposes to permit the dairymen to do for themselves those things that the Government is now trying to do for them. In short, it is a program by which the dairy industry itself may control production, promote distribution, and establish a system of prices fair to both the producer and the consumer of dairy products.

Our objective is to provide the American people with a continuous and ample supply of milk and dairy products at a fair price—a price that will encourage greater consumption of these vital, health-building foods.

The first prerequisite is a fair return to the original producer, plus assurance of a steady and growing demand. The Department of Agriculture is working toward these same objectives, but it is slow work, indeed. I feel very strongly that the industry itself can do the job, do it more quickly, without expense to the Government, and without the Government controls that are so onerous to our independent and self-reliant dairy farmers.

The self-help bill proposes establishment of a Federal Dairy Stabilization Board appointed by the President from nominees selected by the industry. The Board would be empowered to collect a fee from all producers to finance its operations. The amount of the fee is to be related directly to the production of each farm so that each will pay his fair share of the cost of the marketing program. In years of surplus production a high fee will be charged. When

production is low and the marketing problems are thereby simplified, the fee may be very small.

The present Government system of flexible price supports tends to aggravate the problem it seeks to correct. By lowering price supports to 75 percent of parity, the Government encourages many dairy farmers to increase production in order to maintain their usual level of cash income. Milk production did increase last year in the face of reduced supports and outlook for this year is that it will remain high. The self-help program would have the opposite effect.

Our colleague, the gentleman from Washington [Mr. WESTLAND], estimates that this program would have permitted farmers to improve their income by 37 cents per hundredweight in 1954, if the proposed Board had set price supports at 90 percent of parity. The gross income to farmers would have been 60 cents per hundredweight greater than under the Government's 75-percent support program. The self-help fee would have averaged about 23 cents per hundredweight even if all of the surplus production acquired by the Board were a total loss, and the difference-37 cents per hundredweight-would have been added to the income of every participating producer.

The normal functions of supply and demand, the relationship with the prices of other foods, and the marketing program of the Board should insure that the self-help plan establishes prices that are fair to the consumer and to the producer. Government has never been able to control prices successfully. There is reason to hope that a cooperative effort of the kind here proposed could do a better job.

In the event the program does not operate as anticipated, the bill contains provisions that will permit the Secretary of Agriculture to intervene.

The bill also creates a 12-man dairy advisory committee, representing all interested parties. The advisory committee should serve as a useful agent in counseling and guiding the administration of the program and enlarging the demand for dairy products.

One objective of this bill, Mr. Speaker, is to relieve the taxpayers of this Nation of the costly burden of the price-support program for dairy products. Another is getting the Government out of the dairy business and permitting the dairy farmers to operate their own program of price stabilization, surplus proposal, and production stabilization.

Mr. Speaker, the dairy industry accounts for 20 percent of our total farm income. Thousands of independent farmers throughout the country make this the largest single branch of agriculture. I hope that these men and women will consider and study the self-help proposal, and will give us their advice and counsel. I know of their dissatisfaction with Government controls. I am confident of their desire to operate the dairy industry in the traditional pattern of American free enterprise.

I trust that the measure will have the earnest consideration of the Congress this year.

Annual Ukrainian Day

EXTENSION OF REMARKS

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the resolutions adopted at the mass meeting of Americans of Ukrainian descent living in the area of Minneapolis-St. Paul, Minn., in celebration of annual Ukrainian Day.

The resolutions are as follows:

RESOLUTIONS ADOPTED AT THE 17TH ANNUAL URRAINIAN DAY OF THE TWIN CITIES, NOVEMBER 14, 1954

On the occasion of the mass meeting of the Americans of Ukrainian descent and those Ukrainians who were so fortunate as to come to the United States in recent years, and who are now resident in the Twin Cities and vicinity, assembled in the auditorium of Edison High School, Minneapolis, Minn., for the purpose of the celebration of the annual Ukrainian Day on October 14, 1954, have passed the following resolutions:

"1. As blood kinsmen of the Ukrainlans who are living in their native Ukraine, we solemnly attest by our knowledge that they are deprived of personal, national, and political freedom under the ruthless and cruel Communist regime of Soviet Russia and Moscow imperialism. The Kremlin strives to denationalize Ukrainians and other conquered peoples, exploiting and preparing them for the purpose of world conquest in due and opportune time.

"2. Ukraine was the first independent nation to be conquered by the Russian Communist military aggression, and it is important for the freedom-loving American people and of the world to understand the pattern of the Communist subjugation of Ukraine, since the Kremlin has been continuously using this pattern from October 1917 for the Communist penetration and for the conquest of freedom-loving nations of Europe, Asia, and of the world.

and of the world.

"3. In spite of the Muscovite Communist aggression, and in spite of the political, military, and ideological occupation of Ukraine by the Russian forces, and in spite of unheard of persecution of Ukrainian people, and of the exploitation of Ukrainian natural, economic, and human resources, the Ukrainian masses have not ceased their struggle against the Russian and Communist imperialisms. Until recently the Ukrainian nation was almost alone, who valiantly has carried her mortal struggle against the Russian imperialism and the Communist conquest of the world. This struggle continues and the Ukrainians are seeking and awaiting real help from the western freedom loving world, before the West loses its own freedom and the ability to resist the Russian and Communist imperialisms, due to Communist penetration and our own efforts of only containment, peaceful coexistence, and appeasement of Moscow aggressors.

"4. It is of historic record that at present the peoples of the world are under the sign of insurgent nationalism, whether we acknowledge it or not, and nothing will stop the conquered and disfranchised peoples, short of annihilation, in their heroic struggie for their political freedom and national independence of their countries.

"5. Recognizing this nationalist struggle of the various peoples in the colonial world of today, the Kremlin regime of Communist Russia utilizes these movements for the purpose of Russian imperialist aggrandizement

against the American and free world inter-

ests.

"6. In order to gain a breathing spell in her preparation for further conquest by military aggression, Soviet Russia endeavors to deceive the Ukrainian people by offering them some national concessions such as a Ukrainian national hymn, distinct Ukrainian flag, and other national privileges so as to appease the Ukrainian nationalist aspirations and to build up the Russian Communist strength for aggression against the United States of America and other nations.

"7. The question of the national independence of Ukraine and of other non-Russian peoples, oppressed in the U. S. S. R., should receive greater appreciation in the United States, and America should extend her adequate and benevolent help to Ukraine as to the foremost and consistent leader in the superhuman struggle against Russian imperialism and world communism. America should become the faithful friend and leader of the oppressed and disfranchised non-Russian peoples in the U. S. S. R. not only for humane and cultural reasons, but also for the reasons of American interests and national security by the promotion of national freedom of these disfranchised nations."

A. A. GRANOVSKY, Chairman of Resolution Committee.

Political Revolution in Southern Asia

EXTENSION OF REMARKS

HON, HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. ADDONIZIO. Mr. Speaker, from August 15 to 28, 1954, the Second General Assembly of the World Assembly of Youth met in Singapore. Fifty nations of the free world sent delegates to this important international youth meeting which had as its theme Youth in Action.

Following are the interesting addresses made to the delegates by the Right Honorable Malcolm MacDonald, British High Commissioner for southeast Asia, and Madame Vijayalakshmi Pandit, of India, President of the General Assembly of the U. N.:

POLITICAL REVOLUTION IN SOUTHERN ASIA
(By the Right Honorable Malcolm MacDonald, United Kingdom Commissioner General for southeast Asia)

In southern Asia in these days one of the great events of history is taking place. During the last few years nearly half a score of countries and nations have emancipated themselves from foreign rule, from what is called colonialism.

Their peoples have assumed control of their own destinies—that is, insofar as any individual nation can determine its own destiny in this age of inextricable international interdependence.

So thas is a period of political revolution in southern Asia—of vast transfers of political power. At the same time, in addition, several of the new governments are attempting something in the nature of an economic and social revolution—freeing their populations from feudal systems of land tenure and overloading.

These economic parts of the transformation will take longer to accomplish; the political side of the change has been swiftly done, and is almost complete. Nearly every people throughout the continent have now gained their national sovereignty and independence.

So these are very important, enthralling, but in some ways destructive and in other ways wonderfully creative years in southern Asia. And—as often happens in human affairs—the testing times have produced men worthy of them.

There are great leaders alive in the East today—men like Nehru in India and Sukarno in Indonesia and U Nu in Burma and others who are making deep personal impressions upon contemporary history.

We westerners must understand that these statesmen have a lofty significance for their peoples similar to that of George Washington for Americans, and Oliver Cromwell for us Britons, and of other national liberators in Europe and South America for their grateful posterities.

Like all their fellow Asians, Malayans wish for national freedom. And they must, of course, have it, and so far as we British are concerned we welcome the prospect of selfgovernment in Malaya- as readily as we greeted its advent in India and Pakistan, in Ceylon and in Burma.

There is one difference in the case of Malaya, which explains why the development here is slower than it was in these other countries. If the population of this land were homogeneous, belonging mainly to one race, they would be self-governing today.

But the citizens here are very mixed. They belong to several different races of markedly divergent characters. There are about 3 million Malays and about 3 million finese, about three-quarters of a million Indians and Pakistanis, and there are communities of Sinhalese, Eurasians, and others.

And these peoples are now engaged in the exciting task of combining themselves into a new nation—the Malayan nation—in which men and women of different races and creeds shall be absolute equals together as citizens, sharing the same patriotic love and loyalty to their common homeland.

Well now, this creation of a united and yet multiracial nation is a difficult experiment, but it is making very promising progress. I do not agree at all with those gloomy prophets who declare that if the British left Malaya tomorrow the Malays and Chinese would fly at each other's throats and spill each other's

Both the Malays and the Chinese have a great deal too much sense for that; there is already a sufficiently strong and instinctive resolve for national unity in both communities to prevent it; and the common dangers which would face both communities if they indulged in the luxury of fratricidal, interracial strife are so obvious that they would certainly find ways and means of combining in order to avert them.

Nevertheless, the extraordinary mixture of races here does create many delicate problems of cooperation, many of which at least it is wiser to solve before, rather than after, the acquisition of complete self-government.

These problems are being progressively resolved; and next year both in Singapore and in the Federation radical constitutional advances will be made which will carry the Malayans a long way toward democratic selfrule.

Yet we must realize, both in the West and in the East, that in the mid-20th century, nationalism is at least partly out of date. The historically inevitable and right upsurge of nationalism in Asia and in some other regions of the world is occurring at a time when the, in some ways opposite, sentiment of internationalism is more urgently necessary than at any time in the story of mankind.

And the apparent conflict between nationalism and internationalism will, I am sure, be the most important question which keeps intruding upon your deliberations in this

Assembly, and which you leaders of the young generation will have to deal with in practice afterwards as you assume more and more responsibilities in the governments of your countries.

Sometimes it is given to children to see things with fresh clarity and to speak startling truths. I have a young Asian friend, a child in her early teens, whose intellect is like a small bright flame. Her parents want her to become a naturalized British subject, and the other day they asked her what she thought of the proposal. She answered it at once, "I don't believe in nations."

She happens to be intensely proud of her racial origin and also to feel a certain admiration for the British; but what she was trying to express was that somehow national loyalties were inadequate, they were not enough in the modern world; in addition to this we must all feel a higher allegiance to the human race as a whole. Her remark was a forthright statement of a profound truth.

The fact is that, in the present circumstances, excessive nationalism in any part of the world can be dangerous; it might become a deplorable force leading to a devasting result. There are many very perilous weapons lying around in these days. There is, for example, the notorious hydrogen bomb.

If nationalism is expressed in ways which provoke international rivalries, then nationalism might become the spark to set alight a fire to consume the whole of humanity.

I spoke a few minutes ago about an apparent conflict between nationalism and internationalism—but no such conflict need exist. The two forces should be complementary to each other. It is very proper that we should all feel a pride in our national heritages.

Whether we be Africans or Englishmen, Americans or Chinese, Indians or Australians, Japanese or something else, we each have many things to cherish lovingly in the history and the traditions and the achievements of the tribes and the clans and the nations to which we belong.

Human civilization is like a huge treasury

Human civilization is like a huge treasury into which peoples of every race pour their own contributions, and part of civilization's fabulous richness depends on their variety and diversity. So certainly let us maintain our pride in our distinctive national and racial qualities.

But at the same time, we in the mid-20th century must rise above our national prides and acknowledge a higher allegiance to the whole international community. We must forget our racial prejudices—and stupid old superiority and inferiority complexes—and recognize that without distinction of color or creed we are all brothers and sisters, equals in the sight of God.

We must understand that there is only one race that matters—and it is the human

We must all become citizens not only of our separate countries but also citizens of the world.

YOU MUST LEAD THE WAY

(By Mme, Vijayalakshmi Pandit)

During the course of my tour, in Kuala Lumpur, I was asked a question, a very personal question. The person who asked me stated: You are being feted by all the rich and the great of this land, you who have the opportunities to address these great mass meetings, where police come and keep order and where great arrangements take many days to make. Are you aware of the fact that there are people who are uneducated, people who want help, people who want encouragement, people who in every sense of the word are down and out and will be the stumbling block to the progress of any nation as such, as such people must be the stumbling block to the progress of any nation?

And of course it is not always possible to meet people, to give replies to them, but I gave a reply at the meeting and I will repeat to you what I said then, because it might be of some use to you: I was aware of conditions not only here, also in other parts of Asia, but because, being an Asian, I myself come from a nation which is still-in many senses of the word-an underprivileged area; because I know the difficulties that my government has had in trying to build up a nation which can march ahead with all the more progressive nations of the world; because I know that unless we can build up our international strength we cannot hope to contribute to the international pattern which we must create if we are to succeed in establishing a permanent peace.

So I would like you, delegates to this Assembly, to just keep somewhere in the back of your minds the idea that there are all sorts of problems right here in the very city that is entertaining you and that some of them will have to be solved before the quest

for peace can end.

Mr. MacDonald has so very vividly spoken about the revolution in Asia. There is nothing I can add to the picture which he has painted already for you, but I would like to say just this—that it is not only some of the leaders of Asia that we admire today or that demand our respect and admiration, but also the common peoples of Asia who today are expressing their faith in God by their service to humanity; who instead of building those temples of stones, those monuments which have come to us in the East and in the West-great poems in marble and in stone-today the people are expressing their faith in Asia in building the little mud schoolhouses that will give their children knowledge, and in building those little maternity centers where a mother can go and have her baby in safety and know that she and it will live.

In all these various community projects where we are teaching the people a harmonious pattern, living together, recognizing each other's weaknesses, conscious of our strength, conscious also of the fact that only by both the unity and strength of the community can a real pattern of life be evolved, which will strengthen that community through the community-the nation.

That is what the people of Asia are doing today and for this I believe that they are entitled to admiration, because it is only a short while ago that Asia was still dependent.

I speak to you today on a day which is significant for two Asian nations—Pakistan and India—for it was on this day 7 years ago that the transfer of power took place from British to Indian and Pakistani hands. But the real significance of this day is not because of the transfer of power, but the method in which that transfer was made, in the manner in which the recognition was made, that the time had come for certain things to be changed and they were-with a minimum of hatred and a minimum of distrust-and the result was that we have today a cooperation with the people of the United Kingdom, which is firm and which is one which will be lasting because it is based on true understanding and faith in the purpose of each other.

Now how did this happen? How did this come about? I would like to speak of this as a miracle of the modern age, because even in this age, we do sometimes see a miracle, and one of the miracles that has happened in the modern world was Gandhi. Because he came to us and he told us certain things which have made it possible for us in the 7 short years since our freedom to raise our heads and to walk with people on the international plane, and have their respect and confidence. And the way he taught us was the way which all of us must adopt, both in our national lives and on the international plane, for it was the way of nonviolence and tolerance and love.

What he said to us was that if you are moving toward a noble end you cannot fol-low ignoble means, because they defeat the end in itself. Therefore, means and ends must both be equally good-that is something which we should do well to remember in this age, when expediency often takes the place of principle.

He taught us that we must in no circumstances mix up systems with individualsthat a system might be bad, and that it must be destroyed, but that individuals should not be destroyed; nor does one fight against the individual, and so we fought a system which we considered to be wrong and we made friends with the individuals; and I think that it is well for the world to remember this great event of modern history.

It is right that youth with its great idealism, its vision, its courage, its faith, should be in the forefront of the quest for peace, but you must remember that even in this quest there are certain things which must be observed.

The first thing is not to lose yourself in a mass of resolutions, in a mass of discussions which have no meaning today, because there is no single subject in the world that has not been discussed a great deal. And if you, the representatives assembled here, have not already been able to grasp all the various complications of the problems that face us, there will never be any time in the future when you will ever know them, and if you are to live up to your slogan of "Youth action," there must be the minimum of discussion.

Do not fall into the trap into which we, your elders, have fallen-do not fall into a mass of words, wonderful slogans and isms which keep on popping up in different parts of the world and above all let me plead with you to have a positive approach to your problems and not a negative one.

That is what I really want to say to you tonight. I am tired of the manner in which people run down things they do not un-derstand or do not like. If, instead of running down the systems that we do not care we would try and talk about the ones we have faith in, the things which we believe in, then indeed we could build up a great body of opinion which will grow strong and which will help in offering solutions for the problems with which we are faced today.

But instead of this we are diverted by the negative approach to various aspects. of the greatest nations spend their time in criticizing or condemning certain ways of life which they do not appreciate or do not like. Now, I would like to say to you today, as one who believes in democracy, as one whose nation is pledged to the democratic pattern, why don't you and I try to sell democracy instead of denouncing communism?

Because I would like you to remember that in the final analysis that ideology will win which gives the greatest good to number of people, and if we believe in democracy and we feel that that is the answer to the needs of the world, then we must take democracy into the homes of the people, into the lives of the people and raise them to the standard by which they will understand not only the value of democracy, but also all the other values that flow from a recognition of that political principle.,

The United Nations is attempting to do just that, but the United Nations can only be as strong as the weakest member nation in the United Nations General Assembly in New York and if there are nations which are still adhering to the principles and development of the charter, yet denying them when it comes to actual action, then the United Nations cannot be strong.

I have heard a great deal of criticism of the United Nations. I resent that criticism,

because I believe that there is nothing at the moment that anyone has devised that can replace what the United Nations stands for, and I think that if instead of merely pledging ourselves on paper, we could do all what Mr. MacDonald said just now—pledging our hearts to certain principles and purposes-then we could indeed make United Nations, as it is, with all the difficulties that confront it, a successful organization.

People often say, people who should know better, "What has the United Nations donethere is no peace in the world?" would like you to remember that there is no war in the world and that the United Nations has localized the various conflicts that do exist and have existed, and that twice in recent years the United Nations has done something which has never before been

tried in history.

The first was in the case of Korea, the second in the case of Indochina. results will be: we will have to wait and see. But an experiment of great magnitude has been made, and if we want such experiments to succeed and if we believe that we can only progress through the pacific settlement of disputes, rather than by flying at each other's throats, then the only way is to support the United Nations and to see to it that in our communities, in our nations, wherever our voice and strength can be heard, it shall be used for peace and not for creating greater fear and greater hysteria about war among the people.

We all know that there is a great threat to the world today because of the invention of great weapons of destruction, we are all aware that, if such weapons have to be used, all of civilization that has been built up through thousands of years would be de-stroyed. But it is no use keeping these things to ourselves--we have to make each

other aware of the facts.

Just as you throw a stone into a pond and the ripples go in increasing circles round and round until they reach the edge, so if we throw a stone into this great pond of the world, the ripples will increase and ultimately have some effect on the thinking of mankind. So the ripples of peace will grow larger and larger until the entire race reaches a point where it will understand that war is no use because it solves no problems.

I, for one, have not discovered who won the last war-I am constantly asking people, but I have received no adequate response. do not think that anybody knows who could win the next war, because war itself leaves problems which are gradually becoming more and more unsurmountable, more and more beyond the economic grasp of the nations concerned.

We have had our share of problems not due to the war, but as a product of partition. Many of the nations assembled here have seen the aftermath of war. I do not understand how any person who thinks can believe that war will solve any problem or that anyone will be the victor in another war.

Therefore, if we want peace, let us stop talking: we have talked so much that the world is drowning in the floods of its own words. Let us now get together and try to put into practice some of the resolutions that we have made—some of these principles that have been put before us-let us try them out.

They can be no worse than war. Today with the threat of war over us, let us practice tolerance, let us not doubt it if our neighbor says he means to preserve the peace, let us give him peace, and if he doesn't live up to it, then the world community can take the matter in their hands, but let us not follow that negative line of not doing anything ourselves, but shouting to one another on any point we do not fully understand.

The letters that form your name— W. A. Y. and the word that it spells—

WAY-has a special significance for Indians, because in our philosophy the word for the ultimate destination is WAY=MARG=the path. We all travel on this path.

We are comrades of the world traveling to an unknown destination; whether that road will lead us to the promised land, or whether we shall end up by destroying ourselves, it lies in our grasp.

Never before has mankind been so powerful, never so much in a position of being able to save itself and give to humanity all the benefits of the great scientific achieve-

ments that lie to its credit.

With all this frankness, because we do not have enough tolerance, because we do not have enough patience, because we will not walk the straight and narrow path, but prefer the easier ones of compromise and expediency-we talk in terms of war until war actually comes.

But I would beg of you who are young— Why don't you lead the way? Do something spectacular—forget about us, the older gen-

We have tried to do our part, good or bad, but why don't you try and take the initiative and try to work for positive ends-unceasingly and with the thought that you have it in your power today to lead us out of this slough of despondency into the land of

The Atomic Energy Commission Should Take Advantage of the Opportunity Presented To Salvage Its Position of National Respect and Nonpartisanship and Abandon the Dixon-Yates Contract

> EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. EVINS. Mr. Speaker, it is clear beyond contradition that the Atomic Energy Commission has lost face-indeed perhaps even the admiration and respect of the Nation-by its blind insistence in putting over the Dixon-Yates deal. It is equally clear now that the Atomic Energy Commission is further jeopardizing its nonpolitical, nonpartisan position in our Government by its continued one-man rule bordering on dictatorship. Such a position as the Atomic Energy Commission finds itself, because of its participation in the Dixon-Yates deal, can be rescinded and the prestige of this vital agency restored if the AEC is willing to admit its past errors and mistakes.

It is unthinkable that this vital agency of our Government should continue in the errors which it has committed-that is, the Dixon-Yates error.

Along this line, Mr. Speaker, I desire to have included with my remarks in the Appendix of the RECORD two editorials from two widely separated and widely read newspapers. Both editorials, the one entitled "Stop Sign for Dixon-Yates" from the January 30, 1955, edition of the Nashville Tennessean, and the editorial entitled "Cancel It" from the Washington Daily News of February 1, 1955, are in full agreement on the point that Dixon-Yates is bad for the Nation and that the AEC should withdraw itself from any such deal.

The editorials follow:

[From the Nashville Tennessean of January 30, 1955]

STOP SIGN FOR DIXON-YATES

Acting on the reasonable belief that the joint congressional committee on atomic energy can undo anything that it has done, that body has voted to rescind its previous approval of the Dixon-Yates contract and to recommend that the Atomic Energy Commission cancel it.

Commenting on the action, Mr. Ken Whitaker, of the Tennessee Valley Public Power-Association, says, "it is unthinkable that Admiral Strauss and the Atomic Energy Commission now will proceed with the con-

Unfortunately this was an overstatement, because it is not unthinkable that the AEC and its chairman will do everything in their power to make the White House-inspired contract effective, provided they can find a legal Their determination to rush way to do so. this rigged deal through has been apparent,

from the first.
"Illegal," cry Republican members of the toint committee, but in making such a claim they are only accenting the point that the issue will now become a matter for litigation—the last thing desired by its supporters.

For our part, we hold it to be unthinkable that Senator ALBERT GORE'S resolution defining the committee's present attitude should not prevail. But if there is an administration intent to ignore it, the courts will be faced with an interesting legal question which, incidentally, may not be decided before several years have elapsed.

Because of what happened last November, an "in" with the White House is no longer the sole requisite for success in the strange

Dixon-Yates venture.

[From the Washington Daily News of February 1, 1955]

CANCEL IT

Now the clear and unmistakable duty of the United States Atomic Energy Commission is to cancel the Dixon-Yates contract,

If Adm. Lewis Strauss, Chairman of AEC, continues to be stubborn and fights for the contract, the responsibility will be entirely his. The responsibility is twofold: For putting his agency into the awkward role of power broker for TVA, and for making the Government, at a later date, pay possible penalties it can now escape.

He now has the chance to get his agency and the Eisenhower administration he supports so completely, off a hook on which they should never have been hung. a damaging political issue which will embroil the administration, to its great disadvantage,

for a long time.

Admiral Strauss' opportunity came by reason of the majority vote of the joint con-gressional Atomic Energy Committee recommending cancellation of the contract

The committee, by a 10 to 8 strict party vote, pointed out that the contract is not yet effective. And since it is not, a Government decision to cancel it will not now entail any penalties. Later, these might be great.

The Atomic Committee's majority vote was not a reckless, publicity-seeking move. It was the result of a studied and solemn decision by responsible, stable, and patriotic

Cancellation now of the Dixon-Yates contract will not, as some proponents claim, deprive the growing city of Memphis, Tenn., of power it will need badly in a few years, which is no business of the AEC anyway; its primary job is to make and keep us strong militarily.

If, after cancellation, the Congress-as it probably will-again refuses to appropriate money to TVA to construct a new power generating plant, then Memphis can go ahead with its own plans to build such a plant. And Memphis' plans are well along.

Another alternative would be for Congress to set TVA up on its own bottom, provide it with authority to issue revenue bonds to be liquidated by power revenues, and permit it to decide on this basis whether to build more generating facilities to serve west Tennessee. Or, Congress can direct TVA to supplement its present power supply by buying more electricity directly from private companies around the periphery of the watershed it

Finally, cancellation of Dixon-Yates will in no wise affect the power supply to AEC's great plants in Tennessee, in Ohio, or in Kentucky. It has an undoubted first priority under law for TVA power for defense purposes. And it has available growing sources of power from private companies with which it has immense contracts in Ohio and Ken-

The Dixon-Yates contract is bad.

AEC has just been given the opportunity to cancel it.

This it should do-and now.

More Say for Congress in Tariff Changes

EXTENSION OF REMARKS

HON, WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. DAWSON of Utah. Mr. Speaker, while realizing the need for a healthy export market, many of the Members of Congress from raw-material-producing States have been concerned over the apparent determination of the State Department to oppose any increase in any selective tariffs even when those increases have been recommended by the United States Tariff Commission as the only means to prevent serious injury to a domestic industry.

Recently I introduced a measure that would make a fundamental change in our Reciprocal Trade Act without depriving the President of the power he requests to negotiate further reductions in tariffs. The measure is numbered H. R. 3246 and I would appreciate hearing the views of other Members of Congress on its provisions.

I wish to insert at this point an editorial from the Salt Lake Tribune, Salt Lake City, on this proposed legislation:

More SAY FOR CONGRESS IN TARIFF CHANGES

Representative WILLIAM A. DAWSON proposes a fundamental change in the Reciprocal Trade Agreement Act, which Congress should seriously consider.

President Eisenhower has asked for a 3year extension of the act. Mr. Dawson con-He would give the President the requested power to negotiate reciprocal trade agreements, but he would transfer to Congress the final say in granting tariff changes for the relief of domestic industries.

Under the present law, the need for higher tariff is first determined by the United States Tariff Commission. If changes are found advisable, action is recommended to the President, who either accepts or rejects revision.

Under Mr. Dawson's proposal, Tariff Commission recommendations would be sent to Congress and would become effective unless vetoed within 60 days by either Senate or House. This is similar to the provision of the Reorganization Act of 1946, under which the President may make changes in executive agencies subject to congressional veto.

Mr. Dawson's move is prompted by recent experiences of the lead-zinc mining industry. Heavy imports depressed the domestic market, with serious effect on the economy of several Western States, and the industry appealed to the Tariff Commission for relief. After extensive hearings, the Commission recommended upward revision of lead-zinc duties, but the President rejected the recommendations.

If Mr. Dawson's proposal is accepted, it will mean the return to Congress of some powers which it previously held, but it will not mean a return to the days when Congress ruled supreme in the tariff field. The President, through the State Department, will still have the power to alter tariffs through negotiation of reciprocal trade agreements, but the need for tariff relief will be subject to congressional authority.

will be subject to congressional authority. We would not want to go back to the days when the tariff was a matter of horse trading on Capitol Hill, but we do not think, on the basis of what has happened to lead-zinc production, that the present system is wholly desirable. As Mr. Dawson says, "There is something wrong with a setup which puts the decision to change a trade agreement in the hands of the same person who made it, when it later turns out the agreement * * * is failing to work."

In considering tariff relief, the executive branch might be governed more by international aspects and Congress by domestic. However, the Dawson proposal does not give Congress power to revise trade agreements, but only the power to accept or reject revisions recommended by the Tariff Commission. The President would still be able to make his opinions known to Congress and thus affect the outcome. A little domestic as well as international thinking could be wholesome.

We think that Mr. Dawson has hit upon an excellent approach to a difficult problem and that his proposal, if accepted by the administration, would be very helpful in getting extension of the Reciprocal Trade Agreements Act through Congress.

Regulation of Water Levels of Lake Ontario

EXTENSION OF REMARKS

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. OSTERTAG. Mr. Speaker, for more than 2 years now, property owners on the shores of Lake Ontario have been faced with the threat of severe flood damage as a result of the joint development of the United States and Canada of the great power potential of the St. Lawrence River.

Under an order of approval issued by the International Joint Commission on October 29, 1952, the two Governments were authorized to proceed with the Power development under a so-called method of regulation No. 5 which would permit the raising of the water levels of Lake Ontario to disastrous heights.

While the order of approval set forth as one of its findings that the shorefront property owners have adequate Drotection against such damage under the Constitution and laws of the United

States, experience has given the affected property owners no reason for any such sanguine view of the matter. In an analagous situation, where a dam was built by Canada across a portion of the St. Lawrence River, the property owners who sustained resultant damage were unable to get any satisfaction in the courts.

The fact of the matter is, Mr. Speaker, that the International Joint Commission has itself recognized in the past that the Constitution and laws of the United States do not by themselves provide necessary protection to property owners whose lands are damaged by waterpower developments on the United States-Canadian border. In at least 2 instances—one involving the Lake of the Woods in Minnesota, and 1 involving development of the Kootenay River in Idaho-the Commission has itself arranged for the protection and indemnification of property owners. I have urged this course on the Commission, in connection with the St. Lawrence power development, and shall continue to do

Meanwhile, however, I am happy to report that the Commission itself, acting under a reference submitted to it by the Governments of Canada and the United States in June 1952, is seeking to establish a range of fluctuation of the Lake Ontario water level which, if maintained with due regard to natural factors, would go far to protect the shorefront property owners.

Moreover, I am in receipt this week of a letter from the chairman of the United States section of the International Joint Commission, the Honorable Len Jordan, stating explicitly that the objectionable and hazardous method of regulation No. 5 has been abandoned, and that the method of regulation which will be substituted for it will be calculated to reduce, rather than aggravate, flood damage along the Lake Ontario

Mr. Speaker, I wish to applaud and commend this forthright statement on the part of former Governor Jordan. I am certain it will be welcomed by the lakefront property owners, and will give them reason to hope that the added steps necessary to insure their protection will be taken.

The problem is not one affecting Lake Ontario properties alone, of course. It is a potential problem wherever power developments affect the water levels along the entire length of the United States-Canadian border. Its proper adjudication now will therefore prevent limitless confusion in the future as the development of these international water resources proceeds.

Under leave to extend my remarks, Mr. Speaker, I include in the Record at this point Governor Jordan's letter, together with the correspondence from Representative Kenneth B. Keating and myself which preceded it:

INTERNATIONAL JOINT COMMISSION,
Washington, D. C., January 31, 1955.
Hon. Harold C. Ostertag,
House of Representatives,

Washington, D. C.

Dear Mr. Osterrac: This will acknowledge
the joint letter dated January 21, 1955, signed
by Representative Kearing and yourself, rela-

tive to possible injury to property owners along the shores of Lake Ontario in your State after the power project in the International Section of the St. Lawrence River is completed and commences operation.

Pursuant to the reference submitted to this Commission by the Governments of the United States and Canada on June 25, 1952, the Commission is now causing a study to be made with a view to reducing the range of fluctuation of the level of Lake Ontario heretofore experienced, which means that the extreme high levels such as have heretofore damaged shore properties, would be readuced, with consequent benefits to the property owners.

These matters of concern to you were discussed quite fully at a special meeting of the Commission in New York on January 26-27, 1955, and I am pleased to inform you that the Commission contemplates being able to submit to the two governments a recommendation of the fluctuation range through which Lake Ontario shall be operated, together with upper and lower limits of the range expressed in feet above mean sea level. Tentative figures may be available by May of this year. You know of course that the Commission does not contemplate regulating the lake level in accordance with method of regulation No. 5 which is now known to be unsuitable for use.

No basis exists for thinking that the method of regulation to be substituted for the objectionable method No. 5 will cause injury to the owners of shore properties in excess of that which they would suffer if the lake and river were in a state of nature.

the lake and river were in a state of nature. It should be reassuring to you however, that the Department of State has concluded, with the Department of Justice concurring informally, that such property owners, if injured would have a remedy in the courts of the United States and Canada; and that while this Commission apparently considered the internal laws of the United States and Canada to be sufficient to take care of the claims for compensation to property owners, the Commission nevertheless retained jurisdiction over the subject matter of the applications and kept itself free to make such further order concerning such subject matter, which of course would include indemnification, as it might consider desirable.

You may be very confident that the Commission will spare no effort in evolving and putting into effect a method of regulation calculated to reduce in some measure rather than aggravate flood damage to properties along the shores of Lake Ontario.

I trust the information contained herein will reassure you. A similar letter is being sent to Representative Keating.

Sincerely yours,

LEN JORDAN, Chairman, United States Section.

JANUARY 21, 1955.

Hon. LEN JORDAN,

Chairman, United States Section, International Joint Commission, Federal Trade Commission Building, Washington, D. C.

DEAR GOVERNOR JORDAN: We are in receipt of a letter from the Department of State, under date of January 20, with respect to adjudication of claims of owners of property bordering on Lake Ontario, which may arise out of construction and operation of the St. Lawrence power project.

The letter points out that, in issuing its order of approval of this project, the International Joint Commission indicated its continuing responsibility for the protection and indemnity of all interests which might be injured by it, but that no provisions were made in the order for submission of claims to the Commission. The letter further points out that the Commission alone can decide whether to take further action in this matter.

We respectfully submit that, as a result of certain international undertakings in the past affecting the water levels of Lake Ontario, of which the Commission is cognizant, the legitimate interests of shorefront property owners have been injured, but they have thus far been denied indemnity and are deprived of the protection guaranteed to them under the Constitution and laws of the United States. The serious threat of further injury under the pending international power developments on the St. Lawrence River therefore creates the greatest apprehension as to the protection to be afforded these citizens.

In the light of these facts, we urgently request that the United States section of the International Joint Commission act now to allay these apprehensions, by reaffirming, in concrete terms, its mandatory responsibility to protect the interests of citizens of the United States against injury.

Specifically we request that the Commission place on its agenda for the forthcoming meeting on January 26 the matter of amending the order of approval to provide for the establishment of concrete and orderly procedures under which property owners on the Lake Ontario shores may know (1) the conditions under which shore property damages are to be compensable under the provisions of the Boundary Waters Treaty; (2) who is to be responsible for the payment of damages; (3) the means of making claims for damages; and (4) that whoever is responsible for payment of damages shall provide reasonable assurances of ability to pay.

Trusting that we may have an early and favorable response to this request, we remain

Sincerely yours,

HABOLD C. OSTERTAG,

Member of Congress.

KENNETH B. KEATING,

Member of Congress.

DEPARTMENT OF STATE,
Washington, January 20, 1955.
The Honorable Harold C. Osterag,

House of Representatives.

Dear Mr. Osteriac: Reference is made to your letter of June 17, 1954, also signed by Representative Kenneth B. Keating, in which you raised questions concerning the adjudication of claims of owners of property bordering on Lake Ontario which may arise out of the construction and operation of the St. Lawrence power project undertaken

by the United States and Canada.
Your letter states that the level of the lake will always be controlled by one or more of the structures to be built by the Power Commission of the State of New York and the Ontario Hydroelectric Power Commission, and that in every instance involving injury to the shore properties, the injury will result from the joint action of the two power authorities. You add that a United States citizen cannot sue a Canadian entity in the United States courts, and that a Canadian citizen cannot sue a United States entity in the Canadian courts. You, therefore, apparently feel that the International Joint Commission, created under the Boundary Waters Treaty of 1909, should establish procedures for the indemnification of property owners who may be damaged by the power project. However, in this connection, you call attention to a reported difference of view between the American and Canadian sections of the Commission as to its authority to determine and approve indemnification that might be due on account of injury to owners of shore property, and you request that the Secretary of State take steps through diplomatic channels to establish appropriate international machinery for the solution of the problem.

If the Department understands your letter correctly, it raises two fundamental questions. First, whether, under existing law, property owners who may be injured through the construction or operation of the power

project have adequate remedies without resort to the International Joint Commission, and, second, whether the Commission should provide the machinery to deal with such damage.

After careful consideration, the Department has reached certain conclusions concerning these matters which have been informally concurred in by the Department of The first is that owners of lakefront property have a legal remedy in New York against the Power Authority of the State of New York for flood damage, either under section 10 (c) of the Federal Power Act or under general principles of law relat-ing to the joint and several liabilities of This remedy is probably joint tort-feasors. open in the courts of New York to both United States and Canadian property owners. Similar remedies appear to be open to both United States and Canadian property owners against the Ontario Hydroelectric Power Commission under arbitration procedures of Ontario.

The second conclusion which the Department has reached is that, while the International Joint Commission was concerned with the possibility of injury to property owners, it apparently considered that internal laws of Canada and of the United States are sufficient to take care of claims for compensation to property owners. In its order of approval, the Commission made a finding, set out in the preamble, "that suitable and adequate provision is made by the laws in Canada and by the Constitution and laws in the United States for the protection and indemnity of all interests on either side of the international boundary which may be injured by reason of the construction, maintenance, and operation of the works." arder made no provision for submission of claims to the Commission. Nevertheless, the Commission "retains jurisdiction over the subject matter of these applications, and may, after giving such notice and opportunity to all interested parties to make representations as the Commission deems appropriate, make such further order or orders relating thereto as may be necessary in the judgment of the Commission." So, the Commission has kept itself free to make such further orders concerning the subject matter of the applications, which, of course, would include indemnification, as it may consider desirable.

Whether the Commission, having decided that suitable and adequate provision is made by the laws in Canada and by the Constitution and laws of the United States for the indemnification of injured interests, should take further action is a matter which it alone can decide.

In the circumstances, the Department sees no reason for approaching the Canadian Government with a proposal for the establishment of further procedures for the settlement of such claims.

Sincerely yours,
THAUSTON B. MORTON,
Assistant Secretary
(For the Secretary of State).

Cyprus and Macedonia

EXTENSION OF REMARKS

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include a copy of the petition presented to the United Nations by the Macedonian Political Organization of the United States and Canada, submitted to me by Mr. M. D. Chaneff of my district. Mr. Chaneff is president of this organization of Americans of Macedonian birth or extraction, and I am glad to comply with his request that this statement be made available to the Members of Congress. The long and troubled history of the Balkan peoples contains many tragic conflicts between ethnic groups, one of which is related in this petition. Certainly all of us hope that these conflicts, including both the Cyprus and Macedonian difficulties, may be resolved in our time.

The petition follows:

CYPRUS AND MACEDONIA—A PETITION PRE-SENTED TO THE SECRETARY GENERAL OF THE UNITED NATIONS ON NOVEMBER 18, 1954

His Excellency Dag Hammerskjold, Secretary General of the United Nations,

New York, N. Y.

Your Excellency: Recently the Greek press has raised the issue for the annexation of the Island of Cyprus to Greece. The local demonstrations at Cyprus itself, as well as those in Athens, appear to be the result of a well planned campaign by the Greek Government. Not only the official political factors of the Athens regime but also the ecclesiastical dignitaries—priests and bishops—have joined in arousing these Anti-British demonstrations. Greece's demand for the annexation of Cyprus is not necessarily a new manifestation. Similar demands have taken place before.

In her dispute with Great Britain over the Island of Cyprus, Greece has appealed now to the United Nations asking for the right of self-determination of the Cypriotes. The official announcements made by the Athens Government state that since 80 percent of the population of the Island of Cyprus is Greek, Great Britain should renounce her domination of the Island and turn it over to Greece. The fact that 20 percent of the population of Cyprus is Turkish does not seem to concern the Athens Government. The Greek representative at the United Nations said that the right of self-determination was written into the charter and could not be ignored by the United Nations.

No one would deny the self-determination right of the people. Indeed, it is a sacred fundamental right. Since Greece has made such an issue in regard to Cyprus Island, it is important for the free and democratic world to know by what humanitarian principles does the Athens regime determine its policy toward the ethnical minorities in Greece.

North of Mount Olympus and Bistritsa River, there is a territory known for centuries with the name of Macedonia. This country has an area of 25,000 square miles with a total population of nearly 3,000,000 people. It occupies the heart of the Balkan Peninsula and its important Vardar Valley with the seaport of Salonika.

The population of Macedonia consists of the following ethnical groups: Bulgarians, Turks, Greeks, Albanians, Arumanians and others. Until 1912 Macedonia was dominated by the Turks for nearly five centuries.

But the Balkan wars of 1912-13 changed the whole political structure of the Balkans. Macedonia, which was supposed to be liberated from Turkish rule and organized as an independent state unit, was divided mainly between Serbia (now Yugoslavia) and Greece, and a small part left to Bulgaria. This was done against the wishes of the great part of the population who fought for its freedom and independence.

When Greece finally annexed her share of Macedonia (Bucharest Treaty, 1913), she found there 378 Bulgarian churches with 300 priests and 340 elementary and secondary schools with 720 teachers. While this part of Macedonia was under Turkish domination, all of the above mentioned Bulgarian institutions were enjoying free development. In Salonika the newspaper Pravo was published in the Bulgarian language. With the advent of Greek rule in Macedonia, all Bulgarian schools and churches were closed. The teachers and the priests were forcibly driven out of their country or put into prison. No Bulgarian newspapers and books were allowed to be published or permitted to be read. Even the Bible in the Bulgarian language was forbidden. All Macedono-Bulgarians are now forced to go to Greek schools and churches and coerced to use the Greek language.

While the country was under Turkish rule, the Arumanians of Macedonia had a total of 120 schools of their own. In Salonika and Grevena they even had vocational schools. By a special decree issued by the Turkish Sultan in May 9, 1905, the Turkish Government recognized the national character of the Arumanians as a district nationally. They were no longer to be considered as Greeks. In their schools and churches the Arumanians, of Macedonia, taught their children and worshiped God in their new native language.

With the annexation of southwestern part of Macedonia, the Greek authorities had also denied the cultural, religious, and language privileges of the Arumanians. The Greek language was forcibly imposed in the Arumanian schools and churches, and many of the priests and teachers were persecuted, maltreated, and imprisoned.

Turkey, which was considered at the beginning of the 20th century as the "sick man of Europe," and against whose administration of the country was raised so much complaints, had been far more humane to the Christian population in Macedonia than Greece has ever been. The language, schools, and religion of the Bulgarians and Arumanians in Macedonia were respected by the Turks. Many old inhabitants in Macedonia now lament and say, and rightly so, that the Turkish regime over Macedonia was far better than the present Greek rule.

Greece has signed the Universal Declaration of Human Rights, a document adopted by the General Assembly of the United Nations on December 10, 1948. On March 28, 1953, Greece signed and ratified also the European Convention on Human Rights. Both these historical documents contain clauses for the freedom of thought, conscience, and religion; freedom of expression, etc. Greece has never granted these fundamental rights to the Bulgarian and Arumanian people in Macedonia.

On July 31, 1954, the 400 delegates of the World Presbyterian Alliance assembled in Princeton, N. J., and representing 66 self-governing church bodies from 45 countries, unanimously approved a resolution which took sharply to task the Greek Orthodox Church for imposing restrictions on the Evangelical Church of Greece. Knowing that the Greek Government does not allow religious freedom to its own Greek-speaking subjects, one can imagine what the attitude of the same Government would be toward those who will dare to read even the Bible in a language different than the Greek one.

It is significant to note that Greece does not complain about England's treatment of the national and religious rights of the Greek inhabitants of Cyprus. For the Greek population there enjoys the privilege of having their own schools churches, newspapers, and the use of Greek language. Freedom is not suppressed. One-third of the population of Cyprus is even free to proclaim its communistic feeling. Unfortunately, the same cannot be maintained as to Macedonia under Greek rule, where people are arrested and exiled in remote islands if they have an in-

clination to manifest their ethnical, Bulgarian, or Arumanian conscientiousness.

The Bulgarians and Arumanians under Greek rule will be very happy, indeed, if they were granted those fundamental rights which the peoples in the island of Cyprus are enjoying under British rule.

We know that the Greek representative at the United Nations will deny the existence of Bulgarian and Arumanian speaking peoples in Maccdonia. He will dramatically emphasize that the whole population of Macedonia since the time of Alexander the Great belongs to the Greek race. Alexander faded into eternity 23 centuries ago. During those times many a change took place all over the world. The ethnical physiognomy of Macedonia changed also.

We do not insist to take the Macedonian territory away from Greece and have it handed over to a neighboring country. The best solution of the Macedonian problem is to create an independent state of Macedonia out of the three divided parts among Yugoslavia, Greece, and Bulgaria. At this moment we do not ask even that. But we do challenge the Greek Government to allow a special United Nations commission to go on the spot, in Macedonia, in order to find out:

A. Are there any Bulgarian and Arumanian speaking people in Macedonia under Greek rule?

B. If there are such ethnical groups, why the Greek Government has not yet recognized and given those peoples their sacred fundamental rights? Why the churches and the schools of these peoples are not free, not open?

If the United Nations Charter is to be invoked in order to transfer a territory from one sovereignty to another sovereignty, why should not the same charter be invoked in order to efface an ugly injustice inflicted upon the unfortunate peoples of Macedonia?

Your Excellency, in presenting to your enlightened attention the above-stated facts, we sincerely believe that they will come under your serious consideration and will be made known to all members of the United Nations.

Respectfully yours,
Central Committee of the MaceDONIAN POLITICAL ORGANIZATION OF
THE UNITED STATES, CANADA, BRAZIL,
AND NEW ZEALAND,
M. D. CHANEFF, President.
LUBEN DIMITROFF, Secretary.
MACEDONO-BULGARIAN EASTERN ORTHODOX CHURCHES OF THE UNITED
STATES AND CANADA,
Very Rev. George Nicoloff.
Rev. Vasil Minailoff.

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. SHELLEY, Mr. Speaker, the fact that our social security system is here to stay is accepted by 99 percent of the people of this country. There are, however, a few carping critics who persist in taking potshots at the system for reasons best known to themselves. The public statements they make are based on fallacious reasoning and proven misconceptions. A fair percentage of these shortsighted critics are to be found in the insurance industry, despite the fact

that the advent of social security brought with it a tremendous expansion in almost every form of insurance business. The industry as a whole recognizes that social security has not only been a boon to the people of the United States, but that it has also brought a stabilizing influence into their own field.

The December 1954 issue of Life Insurance Courant, a trade publication, carried some telling editorial comment aimed at members of the industry and other critics of social insurance who refuse to accept the facts of life on the permanence of social security. Lane Kirkland, writing in the AFL News-Reporter, has emphasized the importance of this editorial as a useful antidote to the propaganda against social security emanating from professional doomsters and lobbying groups. I include the editorial and Mr. Kirkland's comments in the Congressional Rec-ORD so that this antidote will become more widely available.

[From the Life Insurance Courant of December 1954]

SEEING THINGS IN PERSPECTIVE

With your indulgence we should like to trace some of the history of social security with the intention of leading up to recent developments in this field and commenting on them.

Social security rests on the idea that if the individual does not prepare for his old age—or for his dependents—someone else

must do it.

A second premise is that even in relatively prosperous times a very large number of people have no money for retirement purposes when they reach age 65, and that others can make only a minimum provision for their dependents in case of their early death.

COOPERATIVE PLAN

Since these ideas are accepted and since there are said to be good philosophical and practical reasons for putting part of the social insurance cost on industry, the social security system in America was devised as a cooperative plan, under the sponsorship of Government, to require people to make minimum provision for their old age and their family's dependency. The alternatives to social security seem to be as follows:

1. No help from Government in any way, in other words, complete independence of the individual except for what private charity may give him. The record of the 1920's and 1930's shows that a majority of people, on their own, cannot or will not prepare for their later years. Is private charity up to

filling the gap?

2. Assistance by local government. When this broke down in the 1930's the Federal Government had to step in with relief and work projects. Besides the historical failure of relying on local government alone, there is the objection that this kind of assistance is particularly susceptible to political mismanagement when conducted on a large scale.

3. Reliance on the Federal Government for support of the aged on a charity basis. The difficulties in attempting to administer a means test for the country from a centralized authority are so obvious as to require no elaboration.

NOT YET PRODUCED

While it is possible that a better system of cooperation between industry and workers to provide for people's old age and for their dependents can be devised, one has not yet been produced which is satisfactory to the people at large. Perhaps this system is going to cost the Government (and of course through it the taxpayers) a great deal of money in the future. This point seems far

distant at this time. A large reserve could be accumulated in anticipation of this distant date, but that proposal was defeated and is not seriously promoted by any number of people today. The public, however, seems willing to pay the cost—at least, their elected representatives think so.

STRONG INSURANCE SUPPORT

The reason for going into some of this history is to describe the system that the life insurance industry has generally been supporting since it first accepted the principle of social security and the plan adopted.

Outstanding individuals in the business have given a great deal of time in assist-ance to the development of the program in an orderly way. These people have differed in details with some legislation, but this has not prevented them from continuing to give their good will and best intelligence the development of social insurance in America. The public should be grateful for the efforts of life insurance people in the development of a sound program. It should be grateful too, to the companies that these men represent who have lent them for this purpose.

BENEFIT FOR INSURANCE

Conversely, by the development of a reasonable program, the life insurance industry has benefited enormously. Billions of dollars of insurance has been sold partly because people have had a base upon which to build their retirement income and security plans for dependents. Agency departments in company after company base their selling plans on a social security approach.

There are opponents of social security. They have every right-and, naturally, a responsibility—to speak out and state their views. Some of these opponents are in the life-insurance business. There is some danger, however, that the public, or part of it, may think that these objectors are speaking for the life-insurance industry. Of course, this is not the case.

Let us examine some of the more common objections recently raised. One of these is the mistaken one that social security hurts the sale of life insurance. There is no worse ground on which to stand if one wishes to convince the public than the basis of sheer self-interest. It is bad even to seem to have this as a basis for opposition.

The life-insurance industry should dissociate itself from some of the petty criticisms that a few people have made of social security. For example, there was general agreement among financial experts that the building of a gigantic reserve was undesirable. Those who say we should built a large reserve do not have much company.

PAYING TWICE

From time to time some people-fortunately, not many of them insurance people-suggest that social security has to be paid for twice. It is true that there is a constitutional requirement that social-security taxes be considered general revenue. This clouds the actual financial process involved. Any person with some amount of financial training, however, knows that the suggestion that we have to tax ourselves twice for social security is as absurd as the idea that when a person buys utility bonds he must pay for them twice. We should dissociate ourselves from this kind of hokypoke charge.

Some people are trying to get the word "insurance" removed from the phrase "oldage and survivors insurance." This is apparently an activity chiefly of members the insurance business. It is based on the idea that social security does not meet the requirements of commercial insurance and therefore should not be entitled to the term. It seems to us that this quibbling about terminology is weak on two scores.

THE DEFINITION BUSINESS

First, social insurance, which began in Bismarck's time in Germany, has been dignified by definition in Webster's Unabridged Dictionary for decades. Secondly, the general public does not use the phrase "old-age and survivors insurance" but say "social security.' Why make such a fuss about this that people are likely to go to their dic-tionaries to check up on us? We certainly don't want that.

While the public does not really believe that the Government plans are guaranteed, it knows that no political administration is going to commit suicide by reneging on the promises made, and paid for.

NONPAYING RECIPIENTS

Another quibble that does us little credit is the objection that some people soon to retire will pay little compared to what they will receive. This problem, to hear some will receive. This problem, to hear some people talk, is confined to social security. Every employer who has been operating long enough to have employees in late middle age is faced with the same problem. Insurance people meet it time after time in setting up pension plans.

It seems that there is a simple choice between having these older people receive social security and not having them receive social security. Apparently there is almost univer-sal approval of the idea that they should receive social security income. But suppose that the alternative were to be acceptedthat they were to receive no social security income unless they had paid commensurate taxes. If they do not receive social security income they are in the same position that most other people of 65 would find themselves-and which was referred to earlierthat is, without enough money to retire.

PUBLIC ASSISTANCE

For some years we have had a large number of elderly people on the public assistance roles, with the Federal Government contributing a considerable part of the income that they receive. A number of spokesmen for the insurance industry have ably shown that the wide variations in payments among the States (and other difficulties) have made public assistance a less acceptable means of providing for most elderly people than social security. We might even suggest that the recipient would be content with a slightly smaller social security payment which he could receive without shame than he would be with a public assistance check to which a means-test tag is attached.

Finally, those individuals who object to social security on philosophical grounds have a right to speak out—as individuals. It often happens that where they are opposed to social security they have no fears of their own personal security, but it is also true that very likely they would feel the same way if they were not financially independent. Their intelligent criticisms can provide needed balance.

The life insurance business, however, is so overwhelmingly in favor of social security that the public should know that those who oppose the principles or who make carping criticisms such as we recounted talk only for themselves. We hope the public realizes this. And we hope the leaders in our industry who have helped to develop a sound social security program will continue to cooperate to produce a better one.

[From the AFL News-Reporter, Washington, D. C., of January 14, 1955]

INSURANCE INDUSTRY IS TOLD RELAX, ENJOY SOCIAL SECURITY

(By Lane Kirkland)

One source of encouragement to those who believe in a strong social security system is the fact that calm reason sometimes pene-

trates even the darkest corners-including, believe it or not, the inner recesses of the commercial insurance industry. does, it often provides a useful antidote to the propaganda that emanates, like a poisonous smog, from the chamber of commerce, such lobbies as the National Association of Life Underwriters, and professional doom-sters such as Clarence Manion.

RELAX AND ENJOY IT

A case in point can be found in the December issue of the Life Insurance Courant, a trade journal published in New York. In this issue, the editor was moved to bring a few basic home truths about social security to the attention of his colleagues in the insurance industry, and to suggest that they calm down, relax, and enjoy it.

Opponents of social security within the insurance industry, he infers, are guilty of biting the hand that feeds them, for the system has stimulated, rather than injured, the commercial insurance business:

* * by the development of a reasonable program, the life insurance industry has benefited enormously. Billions of dollars of insurance has been sold partly because people have had a base upon which to build their retirement income and security plans for dependents. Agency departments in company after company base their selling plans on a social security approach.

"There are opponents of social security * * * Some of these opponents are in the life insurance business. There is some dan-ger, however, that the public or part of it may think that these objectors are speaking for the life insurance industry. Of course, this is not the case."

LEVELS AT PROPAGANDA

The Life Insurance Courant then proceeds to tick off some of the propaganda arguments leveled against the old-age and survivors insurance system by these opponents. As to the spurious complaint that social security "hurts the sale of life insurance," the edi-"There is no worse ground on torial says: which to stand if one wishes to convince the public than the basis of sheer selfinterest. It is bad even to seem to have this basis for opposition."

Taking up another threadbare argument,

the journal notes that:

"From time to time some people • • • suggest that social security has to be paid for twice. * * Any person with some amount of financial training, however, knows that the suggestion that we have to tax ourselves twice for social security is as absurd as the idea that when a person buys utility bonds he must pay for them twice. We should dissociate ourselves from this kind of hokypoke charge."

Another line, propounded by the chamber of commerce and ridden very hard by the late unlamented Curtis subcommittee during the 83d Congress, is the allegation that old-age and survivors' insurance isn't really "insurance." The Life Insurance Courant disposes of that bit of word-play in short order:

"It seems to us that this quibbling about

terminology is weak on two scores.

"First, social insurance * * * has been dignified by definition in Webster's unabridged dictionary for decades. the general public does not use the phrase age and survivors insurance' but says 'social security.' Why make such a fuss about this that people are likely to go to their dictionaries to check up on us? certainly don't want that. We

While the public does not really believe that the Government plans are guaranteed, it knows that no political administration is going to commit suicide by reneging on the promises made, and paid for."

The journal closes this "dutch uncle" lecture to its colleagues by soliciting the charitable indulgence of the public toward the wayward members of the trade:

"The life-insurance business, however, is so overwhelmingly in favor of social secu-rity that the public should know that those who oppose the principle or who make carping criticisms such as we recounted talk only for themselves. We hope the public realizes this."

All in all, it would be hard to improve upon this insurance journal's rebuttal of the insurance lobby's propaganda. It is good to know that the industry is not entirely without a conscience.

Ukrainian Independence Day

EXTENSION OF REMARKS OF

HON, ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution adopted at the Ukrainian Independence Day celebration on January 22, 1955, in Minneapolis, Minn.

The resolution is as follows:

RESOLUTION PROCLAIMED AND ADOPTED AT THE CELEBRATION OF THE UKRAINIAN INDEPEND-ENCE DAY HELD ON JANUARY 22, 1955, IN MINNEAPOLIS, MINN.

Thirty-seven years ago the Ukrainian people renewed their sovereign rights on Ukrainian territory. The Ukrainian Parliament, the Central Council (Rada) proclaimed the renewal of the independent Ukrainian State on the 22d of January 1918 in capital Kiev.

The free and independent Ukrainian National Democratic Republic was recognized by England, France, Germany, Austria, Hun-gary, Bulgaria, Turkey, Latvia, Estonia, Fin-land, Rumania, Czechoslovakia, Poland, Italy, the Vatican, Argentina, Georgia, the Don Cossack Republic, and Russia.

But continuing along the old path of Russian imperialism, Communist Moscow attacked the independent Ukrainian Republic and overran it despite the desperate resistance of the Ukrainian people. Thus the new republic became the first victim of Communist Russian aggression. It also became the first nation to resist the aggression of Communist Moscow which today threatens the entire still-free world.

The Ukrainian Government of the independent Ukrainian Democratic Republic went into exile. Communist Moscow set up by force and violence the Communist regime and government in Ukraine. But the people, faithful to their democratic traditions continue to fight against this regime

and the Soviet Government.

We Americans of Ukrainian descent, gathered at the celebration of the 37th anniversary of the proclamation of the independent and free Ukrainian Republic, in Minneapolis, Minn., on January 22, 1955, appeal to the Government, representatives, and people of the United States of America to help the Ukrainian people to restore their own demo-

cratic government.

We declare that the proposal to exclude Ukraine from the United Nations is against the interests of our country, against our American policy of liberation. The present regime in Ukraine and its right to represent the Ukrainian people can and should be questioned. But no one can question the right of Ukraine to be a member of the United Nations.

Dr. ALEXANDER LUTY-LUTENKO, Chairman of the Ukrainian Congress Committee of America, Branch Minneapolis, Minn. MINNEAPOLIS, MINN., January 22, 1955.

Stampede?

EXTENSION OF REMARKS

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to direct the attention of my colleagues to an article in a recent issue of the Los Angeles Examiner under the caption 'Stampede?"

This article raises the question of why the haste in rushing through the extension and enlargement of our Trade Agreements Act.

The article follows:

STAMPEDE?

For no obvious reason, a great effort is being made to induce Congress to extend immediately the Reciprocal Trade Agreements Act.

This act, which many persons do not understand, empowers the State Department to reduce or abolish American protective tariffs by making deals with foreign countries. Once again, the act is about to expire, and the proposal before Congress is

to keep it going.

This is not emergency legislation, like the Formosan defense project. In fact, its history is getting stale. For the Reciprocal Trade Agreements Act is now 20 years old. It was first enacted in 1934, and it has been extended several times, and also amended, since them. Nonetheless, the leadership in Congress has made the routine renewal House Resolution No. 1, and the Ways and Means Committee has been holding hurried and hectic hearings on the bill.

But, what is the urgency?

Last year, when for the sixth time the same act was about to expire, President Eisenhower asked for another 3-year continuance.

Congress rather reluctantly voted a 1-year extension, relying on a promise that the State Department would not exercise its tariff-slashing powers during the year.

Congress also authorized the Tariff Commission to study the operations of the act, to determine any damage that had been inflicted upon our native industries or labor by low-wage foreign competition, recommend any necessary or desirable changes.

The Tariff Commission was instructed to report to Congress in March of this year.

Yet, here is a high-pressure campaign to get the Trade Agreements Act again prolonged without awaiting the Tariff Commission's authoritative findings.

Now, why?

Perhaps the American Tariff League has the answer.

The League notes that, under the Reciprocal Trade Agreements Act, our protective tariff level has fallen 70 percent since 1934, and a great deal of injury has already been done to many industries in many States.

The League suggests that doctrinaire freetraders, and some commercial interests who want our protective tariff system obliterated entirely are striving to get the Trade Agreements Act renewed, perhaps permanently, before the full extent of the harm caused by tariff wrecking can be adequately disclosed.

In sum, they want the Reciprocal Trade Agreements Act extended before the Tariff Commission can tell Congress what the act is doing and has done to employment and industry in our country.

In the circumstances, Congress should certainly await and consider the Tariff Commission's report, which Congress itself requested, before taking any action whatsoever on House Resolution 1.

Persons Entering Armed Services for the First Time On or After February 1. 1955, Will Be Regarded as Peacetime Veterans When They Leave Military Service and as Such Will Be Entitled Only to Peacetime Benefits

> EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. VAN ZANDT. Mr. Speaker, according to a statement released recently by the Veterans' Administration, the following benefits will be available to persons entering the Armed Forces on or after February 1, 1955, when they leave the service under honorable conditions.

These veterans will be regarded as peacetime veterans and, under present laws, will not be eligible for any of the benefits provided by the Korean GI bill, nor for any wartime service benefits payable to veterans of the Korean conflict

Peacetime veterans may be entitled. under certain conditions, to medical and domiciliary care, disability compensa-tion, aid for the blinded, "wheel chair" homes, servicemen's indemnity, guaranty of commercial life-insurance pre-miums, burial expenses, burial flag, guardianship service, and appeals. Their dependents may be entitled to death compensation where the veterans die of service-connected causes.

The benefits and conditions are:

Medical and dental care: A peacetime veteran may be entitled to hospitalization, outpatient medical and dental treatment and prosthetic service, provided he was discharged under other than dishonorable conditions for a disability incurred in line of duty or is receiving compensation for a serviceconnected disability.

Domiciliary care: A peacetime veteran may be entitled to domiciliary care if he meets the above eligibility requirements and is incapacitated from earning a living and has no adequate means of support.

Disability compensation: A veteran disabled by injury or disease incurred in, or aggravated by, peacetime service may qualify for disability compensation. Discharge must have been under other than dishonorable conditions.

Monthly rates range from \$14 to \$145, depending on the degree of disability, plus statutory awards for amputations, blindness, and so forth, up to a maximum of \$336.

Where the disability resulted from extrahazardous service, such as simulated warfare, the veteran may be entitled to wartime rates. These are \$17

maximum of \$420.

Veterans rated 50 percent or more disabled may be entitled to additional compensation for a wife, children, or dependent parents.

Aid for the blinded: VA may provide special aid to veterans who are blinded and are entitled to compensation for service - connected disabilities. blindness itself need not be serviceconnected.

Aids include approved electronic and mechanical equipment, as well as seeingeye or guide dogs. VA also pays the expense of training the veteran to use the dog and for the dog's medical attention.

Wheelchair homes: Seriously disabled veterans who cannot get about without the aid of wheelchairs, braces, crutches, canes, or the like, may be entitled to a grant from VA for a wheelchair home, especially adapted to their needs.

These veterans must be entitled to compensation for permanent and total service-connected disability for the loss, or loss of use, of both legs due to certain specified conditions.

Eligible veterans will receive a Federal grant of not more than 50 percent of the cost of their homes up to a maximum of \$10,000. This grant may be used to pay part of the cost of building or buying such homes, or to remodel existing dwellings for their requirements.

The grant also may be used to pay off the indebtedness on such homes already acquired by eligible veterans.

Servicemen's indemnity: Persons entering active service on or after today are automatically covered against death in active service for \$10,000—less any other Government life insurance in force at time of death.

For those called to active duty 31 days or more, this free indemnity protection continues for 120 days after separation or release from active service.

After their separation from service. these veterans may obtain two types of postservice Government life insurance under certain conditions.

The first type is a 5-year level-premium term policy that is renewable every 5 years at the premium rate for the thenattained age without medical examination. This type of term policy is not convertible to any other form of Government life insurance; nor does it pay dividends.

Veterans who may apply for this insurance are those who were ordered into active duty for 31 days or more and who were entitled to indemnity protection while they were in service. They must have been released from such active service.

These veterans may apply to VA for the insurance within exactly 120 daysnot always 4 months-of their separation or release. While they do not need a physical examination, they must pay the required premiums. They may take out up to \$10,000 of this term insurance, less any other Government life insurance in force at the time of application.

The second type of insurance is available to eligible disabled veterans. This coverage is a special form of national

to \$181, plus statutory awards, up to a service life insurance—NSLI—on either term or permanent plan policies.

Veterans eligible for this special insurance are those released or separated from active service on or after April 25, 1951, under other than dishonorable conditions and who are found by VA to be suffering from a service-connected disability or disabilities for which VA compensation would be payable if the disability is 10 percent or more in degree. They must not be suffering from nonservice-connected disabilities that make them uninsurable.

These veterans must apply to VA for the special NSLI within 1 year from the date that VA finds their disability or disabilities to be service-connected. Each application must be accompanied by the required physical examination and the necessary premium.

This special NSLI is issuable to eligible disabled veterans on either term or permanent plans in amounts ranging up to \$10,000, less any other Government life insurance in force at the time of appli-

If such veterans are totally disabled, they may apply for any of the special plans except those issued under endowment contracts. They also may apply for waiver of premiums at the time they file applications for the insurance, but they should tender the full premiums with their applications and continue to pay such premiums on time until they are notified by VA that their waiver has been granted. Premiums paid during waiver will be refunded.

Guaranty of premiums on commercial life insurance policies: Persons entering or in the Armed Forces, who have commercial life insurance, may apply to VA for the guaranty of premiums, indebtedness, or interest up to \$10,000 of insurance per person. The VA guaranty covers the period of service and for 2 years thereafter.

Any amount paid by VA to an insurance company for a protected policy becomes a debt due the United States by the policyholder and must be repaid.

Burial expenses: Funeral and burial expenses up to \$150 may be paid by VA in the death of certain peacetime veterans. The veterans must have been receiving compensation at the time of death or must have been discharged or retired from service for disability incurred in line of duty.

Payment is made only to the undertaker or to the person who paid the expense involved. Claims must be filed with VA within 2 years from the date of permanent burial or cremation.

Burial flag: An American flag to drape the casket, which may be retained as a memorial by the next of kin, may be supplied in the death of peacetime veterans who have been discharged under conditions other than dishonorable after serving a full enlistment, or for disability incurred in line of duty. Such flags may be issued, upon application, by VA field offices, most first-, second-, and third-class post offices, and those fourthclass post offices located in county seats.

Death compensation: The widow, children, and dependent parents of deceased peacetime veterans may qualify for compensation where the veterans' death was due to service.

A widow loses her entitlement upon remarriage. Unmarried children normally lose their entitlement upon reaching age 18, but if they are attending a school approved by VA they may continue to receive death compensation while attending this school, but not after 21 or married.

Monthly amounts vary according to the number and relationship of the dependents. Examples are: Widow, no children, \$69.60; one child alone, no widow, \$53.60; one parent, \$60. Corresponding rates where death was due to extra-hazardous service are \$87, \$67, and \$75.

Guardianship service: Incompetent peacetime veterans, their minor dependents, and incompetent beneficiaries are entitled to protection of their estates derived from benefits paid by VA under acts of Congress.

Such protection is provided by the chief attorneys of VA regional offices in accordance with State and Federal laws and VA regulations.

The chief attorneys maintain supervision over guardians appointed by State-probate and county-courts, as well as legal custodians recognized by VA in their respective jurisdictions.

Appeals: The Board of Veterans' Appeals is available for rendering final decisions in all cases appealed to the Administrator of Veterans' Affairs, wherein a claimant has been denied benefits to which he claims entitlement. The board has no original jurisdiction: its work is similar to that of a court of appeals.

Higher Minimum Wage

EXTENSION OF REMARKS OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. BLATNIK. Mr. Speaker, the following letter to the editor, which appeared in the Washington Post and Times Herald for January 31, 1955, written by John W. Edelman, Washington representative, Textile Workers Union of America, CIO, and Solomon Barkin, director of research, CIO, is as penetrating and concise a statement as I have seen on the necessity of raising the minimum wage to \$1.25:

HIGHER MINIMUM WAGE

We welcome your support for a higher minimum wage in your editorial of January 17.

We support your view that "the administration figure should be raised," but we cannot agree that the increase over the administration's proposed 90 cents should be only 5 to 10 cents. A minimum wage of 95 cents or \$1 is not in keeping with economic trends, nor would this figure provide anything like a decent American standard of

The \$1.25 minimum, which the CIO and AFL recommend, is justified by several factors, all of which are touched on in your editorial.

The cost of living for the low-income group has risen by some 18 or more percent. Manhour productivity, according to the Joint Congressional Committee on the Economic Report, rose some 15 percent from 1949 to 1953. Extending this trend to 1954, and allowing for both the rise in the cost of living and the growth in national productivity, would jutify a minimum of at least \$1.06.

Actually, wages during this period in the better organized industries have risen by 45 to 59 cents per hour. Prevailing minima in most industries exceed \$1.25 per hour, as indicated by the minimum of \$1.75 in autos, \$1.61 in the ship building, \$1.57 in the steel industry, etc.

Actually, the 1950 increase from 40 to 75 cents-as demonstrated by the current Department of Labor study to which you referwas more substantial than the rise now recommended by the President. In 1950 we had a 99 percent increase on the then 40cent-an-hour rate which directly affected just over 6 percent of covered employes. A 90-cent minimum would be a 20 percent boost on the 75-cent rate and would directly affect less than 5 percent of eligible workers.

The President misses the point when he states that "minimum wages do not deal with the fundamental causes of low incomes and poverty." The fact is that the weak bargaining power of unorganized workers in certain industries and areas is a fundamental cause of their not receiving decent wages.

The minimum-wage law partly corrects this imbalance in bargaining power, which is the principal cause of substandard wages. The purpose and actual result of minimumwage legislation is to enable workers who have little or no bargaining power to achieve a progression in wages not too far behind the

level enjoyed by other American workers.

The major impact of the 1955 increase in the statutory wage will be felt in industries where workers have weak, if any, bargaining power and where chiseling employers have prevented the fair-minded employers from following national wage trends. There is no ground for your fears that some few manufacturers in outlying areas might go out of business if a higher minimum was required. The experience of 1950 demonstrates that clearly.

The adoption of a realistic minimum wage in 1955 will have no greater consequences than those experienced in 1950. A statutory wage of \$1.25 is justified by the rise in living costs and the sharp increases in man-hour productivity during the past 4 years. A minimum rate of \$1.25 per hour is required to enable large numbers of underprivileged employees to achieve living standards not too much below what could properly be described as a decent American standard.

SOLOMON BARKIN, Director of Research. JOHN W. EDELMAN,
Washington Representative, Textile
Workers Union of America-CIO. WASHINGTON.

Little Red Federal Schoolhouse or No Controls, Except as Provided Herein

EXTENSION OF REMARKS OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an edi-

torial which appeared on January 28, 1955, in the Richmond News Leader.

LITTLE RED FEDERAL SCHOOLHOUSE OR NO CONTROLS, EXCEPT AS PROVIDED HEREIN

One of the most bitter fights of the 84th Congress will be waged in coming months on the issue of Federal aid to school construction. Already more than half a dozen bills are in the hopper, and more will be coming along before formal hearings begin. movement will gain impetus on February 15, when the President transmits to Congress his affirmative program for dealing with the classroom shortage.

If this invasion of State and local responsibility is to be thrown back, those who believe in a tightly limited Federal Government should be mobilizing now. The pending legislation carries with it—be dead certain of the fact-the ultimate surrender of local control over our schools.

That assertion, of course, will be denied. Proponents of this legislation will point to specific clauses in their bills that appear to forestall Federal control. The measure sponsored by 30 Democratic Senators (S. 5). for example, contains a section declaring that "except as specifically provided by this act, no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over, or prescribe any requirement with respect to, any State agency, school agency, or school to which any funds have been or may be paid under this act."

But let us look at what would be specifi-

cally provided by this act.

Section 1 of the bill provides a title-the "Emergency Public School Construction Act of 1955." Section 2 would appropriate \$500 million a year for the next 2 years. Section 3 would direct that the sum be expended "only for the construction of public elementary and secondary school facilities."

Section 4 gets down to the meat of the coconut. Here a formula for distribution of the fund would be set up, in which the key factor would be determined by the Commissioner of Education. He would promulgate the allotment percentages, "and the percentages so promulgated shall be conclu-These grants would be paid out only for school projects that met standards ap-

proved by the Commissioner.

Some of these standards are defined in section 5. In order to participate, a State government would have to submit satisfactory evidence to the Federal commissioner that its State Department of Education had authority to carry out a school plan. Then the State would have to describe the steps, if any, which have been taken toward making full use of State and local financial resources in the construction of school facili-The State would be required to show that it had formulated sound long-range school-construction programs in the local areas, and that it had attained a more efficient organization of school districts in the State.

The sovereign States of the Union then would have to submit satisfactory evidence to the Federal commissioner that they would use any Federal grants in addition to and not as a substitute for State and local funds available for school construction. They would be required to establish accounting procedures acceptable to the commissioner. They would be required to provide acceptable standards for locating, planning, and constructing school facilities.

But the end is not yet. Section 5 (a) (10) would require the States to see that every laborer and mechanic on a Federal-aid school construction job is paid at not less than prevailing wages in the area, with time-anda-half for overtime after 40 hours in any workweek. If the States fail to comply with all of these requirements, extending over four printed pages of the bill, the commissioner

is directed to withhold Federal grants in whatever fashion he determines to be appropriate under the circumstances.

Other sections of the bill deal with the filing of reports and audits, the procedures for judicial review, and with definitions of terms. What all of this adds up to is a beginning, a foot in the door, a first mild draught of a habit-forming drug. To localities, hard pressed for school facilities, the prospect of a \$500 million pot of gold is as

pretty as a rainbow.

And it is just as deceptive. For it is only one soft little creeping step from a control over where a school may be built to a control over what may be taught there. a basic statute is spread upon the books, the process of subtle amendment may begin, to the end that Federal grants will grow ever larger and local responsibilities ever smaller. And just as the Virginia State government, by reason of its financial assistance, now exerts great control over local school grams and textbooks, so the United States Government, for precisely the same reason, ultimately would exert tighter and tighter controls over the operation of our local schools.

What is involved here is not a few thousand dollars for brick and mortar; what is involved is domination over the minds of the next generation. For once, let us not be fooled by the sweet-talk of those who argue lyrically that this time Federal control would not follow Federal grants. Federal control always follows Federal grants, and ultimate control of the public schools is the richest prize the Fabian Socialists could hope to win.

A Wise Precaution

EXTENSION OF REMARKS

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, February 2, 1955

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Steuben Republican of Angola, Ind.:

A WISE PRECAUTION

President Eisenhower's message to the Congress asking for support for such use of force as he may deem necessary to halt threats of invasion of the island of Formosa by the forces of Red China was a wise precaution. No doubt he has taken advantage of the unhappy experience of former President Truman, who, without consulting Congress, hastily ordered American forces to halt the invasion of Korea, exercised under the authority extended him by the Charter of the United Nations.

The people of the country were grievously offended by this exercise of power by the Chief Executive, although doubtless from a literal legal interpretation President Truman had the authority for such action. course of history reveals that it is a better policy on issues which are not closely defined to gain the consent of Congress before undertaking a position which would give rise to argument and to support from only part

of the people.

President Eisenhower has already demonstrated his unwillingness to plunge our country into a war regardless of how grievously we have been offended and of the trying attitude which has been exhibited by Red China toward the safety of our nationals. Indeed, it has been difficult for the people to withhold an expression of their impatience in this regard.

The President's message should develop more unanimity of opinion that the President is right in his conduct of these ticklish affairs no matter how irksome these policies may be to the people whose lives and safety are not seriously jeopardized. The use of force should only be the last extremity for the safety of our Nation. In war the victorious nation is likely to suffer as grievously or more so than the conquered who became the wards of the victors.

The Dark Tunnel

EXTENSION OF REMARKS

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the Record, I include an article by the noted commentator and author, Walter Lippmann, in the New York Herald-Tribune on February 1. In view of the dangerous situation in the Formosa area, I commend Mr. Lippmann's calm, objective appraisal to the attention of Members of Congress and other readers of the Record.

TODAY AND TOMORROW (By Walter Lippmann) THE DARK TUNNEL

It would be a mistake for the country not to take very seriously the difficulties and the dangers which have been raised up in the Formosa area. We are living in anxious days. There is a danger of hostilities of which no one could see the end, once they had begun. And there is danger that we may find ourselves in a very difficult position among our allies and among the uncommitted nations of Asia and elsewhere. Our case has not been well worked out and stated and we are not invulnerable. Let no one suppose that another blistering statement by Senator Knowland or by an admiral can do anything but magnify the danger and compound the difficulties of our position.

On the face of it the position taken publicly by the parties to the great dispute are irreconcilable. Is there, then, the responsible statesmen are asking themselves, any light at the end of the tunnel? There may be some light. It is a dim light and distant. But perhaps with the fate of man at stake, there may be enough reason left in the high places to keep that light burning.

The light is this. The conflict of positions, irreconcilable as it is, is just one stage short of being as bad as it could be. Nobody has delivered an ultimatum and nobody is committed to taking any military action beyond what he is now doing. Neither side is compelled to take military actions now, next week, next month beyond the status quo. The only exception to this is the decision to evacuate the Tachens, and that is an action not to engage forces but to disengage them.

It must obviously be the business of every friend of peace to bring pressure to bear against any action to disturb the status quo. This is not a cease-fire, and certainly not even a beginning of any kind of settlement. It is, however, the necessary condition—as yet not precluded by the official statements of either side—for exchanges and for negotiation. This country will assume that the President has taken every precaution that can be taken to see to it that neither the

Nationalist Chinese nor any of our units in the Far East disturb the status quo.

If eventually there are to be negotiations for a cease-fire, it is evident that they cannot deal with the ultimate issues. We cannot expect Pelping to sign any kind of truce which implies the surrender of her claims to Formosa. Nor should we at this time confuse the juridical issues by recognizing in a formal treaty Chiang's claims to Formosa. The only sound and the only safe position is to treat the ultimate disposition of Formosa as a matter which cannot be settled now even by negotiations, much less by force.

The world's best hope is to play for time, recognizing that a final settlement cannot be contemplated until the Chinese civil war comes to its final end. There are now two Chinas. But it is a great question whether we should treat that fact as the permanent historical nature of things. Neither China will accept the two-China view, and therefore we must in fact treat the two Chinas as provisional. Nobody knows what 10 years will do to either or both of the Chinas.

What is certain is that the issue of the civil war cannot now be decided by military force. The mainland Chinese cannot conquer Formosa. Chiang is unable, and the United States will not attempt to conquer the Chinese mainland. Except for a few unimportant offshore islands, which are negotiable, there is a military deadlock in the Formosa Strait. Let us hope that it can be maintained.

Bank Merger

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following press release issued on January 15, 1955, by my good friend George J. Burger, vice president of the National Federation of Independent Business, Inc., upon the announcement of the Manhattan and Chase National Banks proposed merger:

The announcement of the Manhattan and Chase banks merging, which the report discloses will result in the second biggest banking institution in the United States, and which the press reports is a record merger, appears to be following in the footsteps of gigantic mergers both in industry and finance during the past 12 months or more, said George J. Burger, vice president, National Federation of Independent Business today, and, he continued that this merger trend should call for special attention by the administration and by the Congress as to what effect this trend will have as to the future of small business throughout the Nation.

He adds that this situation is being noted by small business throughout the Nation and they are very much concerned as to the effects it will have on their future, both at the production and distribution levels.

Burger adds that the neighborhood bank has been the lifeblood for small business in their respective localities and with finances being controlled in the hands of a few large banking institutions it doesn't offer a bright future for small-business needs. It must be self-evident that if the trend continues in larger and larger banking institutions then the responsibility must rest with the Government in giving to small business a stronger and more influential Small Business Administration which will be able to grant the needed capital loans to small business where the credit responsibility warrants such help by the Federal Government.

Burger concludes that the administration and the Congress cannot delay immediately investigating the effects of these mergers.

Surplus Disposal Program

EXTENSION OF REMARKS

HON, FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 2, 1955

Mr. BOW. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include the text of a statement by the Secretary of Agriculture, Hon. Ezra Taft Benson.

Mr. Speaker, I have been disturbed in recent days by statements on the disposal of surplus agricultural commodities that give a completely erroneous impression of the program and the achievements of Secretary Benson. I refer to a news-paper article on Monday quoting the gentleman from North Carolina COOLEY | as being highly critical of the Secretary, and to an address at the an-nual meeting of the National Agricultural Limestone Producers by the gentleman from Mississippi [Mr. WHITTEN]. This address has now been inserted in the RECORD, where it appeared on pages A467-A470, and I feel that it is unjustly critical of the Department of Agriculture. Many members who attended the annual meeting of the limestone association will recall the following statements by the gentleman from Missis-

What was not in the President's speech is the fact that his administration is trying to give these commodities away under Public Law 480 without even offering them for sale for dollars, under the general authority of the law. The administration's approach would continue to hold an umbrella over world prices.

Representatives of the United States Government are going around the world trying to give away to foreign countries that which they will not offer for sale, commodities which they have the authority to sell but which they will not sell, all to add to foreign aid.

In another part of this talk Mr. WHITTEN says:

The prices of farm products have declined about 25 percent since February 1951. The cost of farming continues to increase. The net farm income in 1954 was down about 30 percent from 1951.

And the outlook is for still further declines in net farm income in 1955 because of the reduction in acreage of controlled crops and the low prices of nearly all farm products.

In reading these remarks and others in Mr. Whitten's speech, a totally erroneous impression of the efforts of the Department of Agriculture and of the condition of the American farmer would be gained.

On January 19 the Secretary of Agriculture. Mr. Benson, appeared before the Senate Committee on Agriculture, and I am sure that if Mr. WHITTEN had heard the testimony of the Secretary at that time he would not have made some of the remarks found in his address. I am not going to burden you today with all the testimony, but I do want to place in the RECORD portions of Secretary Benson's presentation before the Senate Agriculture Committee so that you may have a clear and accurate understanding of the handling of surplus farm commodities and the financial condition of the American farmer.

Mr. Benson had this to say:

GENERAL ECONOMIC SITUATION IS GOOD

At no time since the end of the Korean war has business optimism concerning the future of the American economy generally been stronger or more widespread than now, The longtime outlook for America is good.

Our country has been enjoying a period of relative economic stability during the past year. The widely advertised business readjustment of 1954 evidently reached its bottom about last July. The slow erosion of prices and business activity which had been in progress since shortly after Korean boom halted then, and has turned up modestly. The upward course has been fairly steady, although not spectacular, for the past several months. Our economy is growing at a healthy rate, production is increasing absolutely and on a per worker basis, consumer incomes are rising, and higher average standards of living are in prospect.

Nineteen hundred and fifty-four was the second biggest economic year in the history of America. This was accomplished without war, with Federal Government expenditures down \$11 billion and Federal taxes reduced over \$7 billion. During 1954, for the first time in several years, American soldiers were not being shot at anywhere around the world. And yet we achieved a stable economy at a high level. The transition from post-Korean inflation to semipeace condi-tions was made with the least disturbance to our economy of any post-war economic adjustment in our history.

Truly the economic health of America is good.

Gross national production in 1955 will equal, probably exceed the 1954 level of \$357 billion. It could even equal the record of \$365 billion in 1953. It is reliably predicted that our gross production will reach \$500 billion by 1965. This will mean an average increase of 20 percent for each of us, above our present living standards.

American agriculture will share in the growth and prosperity ahead of us, to the extent it continues to apply science and technology to its production and merchandising. Continued high levels of employment and growing consumer incomes in this country will provide a continued strong domestic demand for the products of our farms. Moreover, we expect export outlets for farm products to be significantly larger than last year. This should also add strength to our domestic farm economy.

1954 PRODUCTION

Total agricultural production last year was substantially the same as the 1953 alltime high, despite widespread drought. With average growing conditions, another record or near-record output is expected in 1955. Some further reduction in wheat acreage is likely to be offset at least partially by increases in other crops, principally feed crops, since restrictions on the use of diverted acres have been relaxed.

Total output from agriculture in 1954 was 14 percent greater than in 1947, the year when net realized income from agriculture was at an all-time high. This output was produced by 18 percent fewer workers than we had on farms in 1947. This means that output per man was about 40 percent above the 1947 level and nearly double 1939, when World War II began. These comparisons give eloquent proof of the continuing technological revolution that has made American agriculture the most efficient in all the world.

FARM FINANCIAL SITUATION HAS STABILIZED

In this overall environment of a stable to strong general economy, American agriculture may also look forward to economic stability and continued growth. Although farm income has declined slightly more in the last year than has that of the general economy, it is significant that its decline has been very markedly slowed from the rapid drop of 2 years ago. The most rapid drop in farm prices and income occurred in 1951 and 1952 following the Korean inflation.

The price-parity ratio has been remarkably stable during the past year. last month at 86, only 8 points below the figure for 23 months earlier when this administration assumed office. In the 23 months before January 1953, the price-parity ratio had dropped a total of 19 points.

Realized net income of farmers last year was approximately \$12.5 billion. The United States farm income has about stopped its postwar decline. Net farm income in 1955 should approach that of 1954. Prices received by farmers may be expected to average close to the levels prevailing at the present time, and cost rates or prices paid by farmers probably will not change much in the year ahead. This means that the parity ratio, likewise, will remain fairly stable in the year ahead.

The small changes in farm income and farm prices between 1953 and 1954 suggest that most of the postwar adjustment has been completed, and that we are in a period of comparative stability. The adjustment agriculture has undergone the last few years has been difficult. However, statistics alone don't tell the full story.

While our total farm income was declining

from 1947 to 1954 by some 25 percent, our farm population was also declining about 20 percent. This means, therefore, that per capita income in agriculture has declined markedly less than has total income. In the last 7 years, per capita income from agriculture has declined only about 5 percent. If we take account of the income that farm people receive from nonfarm sources, the realized per capita income of farm people from all sources actually increased 6 percent from 1947 to 1954.

It is essential that we maintain fluidity in our agricultural population. As we increase efficiency of our production of food and fiber, it is possible to do our production job with fewer workers on farms. This results in a higher living standard for our farmers as well as for our urban people.

PRODUCTION CONTROLS AND DIVERTED ACRES

Marketing quotas approved for wheat and cotton, along with the impending rice referendum, call for a reduction of about 91/4 million acres in 1955 from the acreage planted to these crops in 1954. Most of this reduction is in wheat. The 1955 acreage allotment for the commercial corn producing area may be larger than the 1954 allotment, however,

This is the second consecutive year in which wheat and cotton acreages have been curtailed, and likewise the second successive year in which quotas for these crops have been established. In the absence of any minimums, the national wheat acreage allotment for 1955 would have been about 19 million acres instead of the 55 million acres proclaimed, and the cotton national acreage allotment about 15 million acres instead of the 18.1 million acres proclaimed.

This situation points up the fact that in 1955 we again face the question of how best to use acreage taken out of production of the basic commodities. In 1954 feed-grain plantings increased by 13 million acres over 1953 and flaxseed and soybeans increased by 4 million acres.

The sole purpose of production controls is to balance production with markets-actual prospective. New market imbalances created by crops produced on diverted acres can offset in considerable measure the purpose of the original controls.

In 1955 we will be operating for the first year under our new farm program. In sub-mitting that program we expressed the hope would increase both domestic consumption and exports to the point where controls would be reduced to a minimum. However, we must recognize that achievement of this objective will take time for some crops, such as wheat, where there are exceedingly large surpluses. In addition, it will depend upon the extent to which the acreage reduction is offset by higher per-acre

SURPLUS DISPOSALS

The primary authority of the Department of Agriculture in the disposal of stocks acquired in price-support operations is contained in the Commodity Credit Corporation Charter Act and the amendments acted by Congress from time to time. Under this authority, sales have been made from Commodity Credit Corporation stocks to the private United States trade totaling approximately \$940 million during 1954. About \$500 million of this total have been sold for export. The total value of all dispositions of Commodity Credit Corporation stocks during 1954 have totaled about \$1,400,000,000.

Public Law 480 enacted by the 83d Congress broadened the existing authority for the disposal of price-support stocks. sales for foreign currency were authorized in addition to that provided in the mutualsecurity program administered by the Foreign Operations Administration. Second, the authority of the President to provide emergency relief abroad was broadened and made effective for a period of 3 years. Third, existing authority to make donations of price-support stocks to meet domestic and foreign relief needs was liberalized. Fourth. new impetus was given to the Commodity Credit Corporation's existing barter authoritv.

Since there has been so much interest expressed in the sales for foreign currency under title I of Public Law 480, I would like to give you a fairly complete report on this operation.

TITLE I, PUBLIC LAW 480

We are making real progress in the implementation of this authority. Agreements have already been signed with Turkey and Yugoslavia. We expect to be in position to issue purchase authorizations under the \$85 million Japanese program by the end of January or early February. Some of the negotiations with other countries are now being concluded, and we believe we will be able to sign agreements with 2 or 3 of them by the end of this month. Programs negotiated or under negotiation total approximately \$453 million against the \$700 million authorized by the law. Therefore, present programs will utilize about two-thirds of the total funds authorized for a 3-year period. Finally, purchase authorizations have already been issued totaling about \$60 million at export market value, including ocean transportation for wheat, barley, oats, and cotton under the Turkish and Yugoslav programs. Six cargoes of wheat have already been sold for prompt shipment by the private trade under the latter program.

This is concrete progress.

I know there has been some comment that there was delay in getting this program

In this connection, I want to emphasize that the safeguards and requirements contained in the statute necessitated careful planning of integrated country programs. This careful planning had to be implemented by painstaking and extended negotiations with the governments of the countries involved, in order to assure achievement of the purposes of the act, before agree-ments could be signed and sales made.

I said this is a new law. It is also a complex law affecting the interests of other agen-cies of the Government in addition to the Department of Agriculture. The law provides that agreements must be negotiated with foreign governments covering necessary standards and safeguards prior to sales for foreign currency. In addition to these matters directly affecting the sale and utilization of the agricultural commodities, it is necessary in negotiating agreements under the act to make provision for:

- The protection of our usual marketings. 2. The uses of the foreign currency payments among the eight categories permitted
- under the law. 3. Appropriate exchange rates governing
- initial payments and exchange rate guar anties.
- 4. The terms, and method of administration and supervision of, any economic or multilateral trade development loans.
- The deposit of foreign currency payments to special United States accounts.
- 6. United States cargo preference requirements.

It has been said that title I programs may endanger our normal marketings. certainly a possibility unless programs are carefully developed and carried out. We believe we are taking the necessary steps to prevent such interference. For example, in the Japanese program, we have obtained firm assurances from that government that purchases of about 175,000 bales of cotton yen will be in addition to 775,000 bales which they will purchase with dollars. I think you will find general agreement in the cotton trade that this usual marketing figure is realistic in view of Japan's balance of payments situation.

The statement has been made that title I is a "give-away" program. Let's analyze this statement. The test of this point is the use to which the foreign currencies are put, Analysis of the programs within the \$453 million target show that about 25 percent of the foreign currencies will be used to meet United States obligations. These obligations would otherwise be paid with appropriated funds. These are in effect dollar sales. About 5 percent of the currencies will be used to expand markets for United States agricultural commodities-about 12 percent to purchase strategic materials for the supplemental stockpile and 7 percent for other uses beneficial to the United States, authorized under the law. All of the above United States uses which total 49 percent are for the primary benefit of the United States.

About 38 percent of the foreign currencies will be loaned to foreign governments for economic development and multilateral trade purposes. These are not grants. They are purposes. These are not grants. They are loans which are to be repaid with interest, either in dollars or in foreign currency which can be used for any purpose of the United States. I can assure you that foreign governments do not consider the terms of those loans as "give-aways."

About 13 percent of the proceeds are scheduled to be used to strengthen the armed forces of friendly countries. While this use results in no return of materials to the United States, it will further the common defense effort of the free world.

We have been asked on several occasions for our estimates of the different commodities that will be included in the first year's program. It is not possible at this early date to give a clean-cut answer to this question because several of the negotiations are still underway. However, based on our experience to date, it appears that about 43 percent of the export market value of programs will be spent for grains, about 28 percent for cotton, 14 percent for tobacco, 7 percent for other commodities, and 8 percent for ocean transportation. These percentages are based on export market values rather than on CCC costs since the purchase authorizations to foreign governments will reflect export market values.

It is possible to indicate a tentative breakdown of the \$453 million target by geo-graphical areas. This breakdown is as follows:

1	Millions
Western Europe	\$205.5
South America	44.0
Middle East (Turkey)	30.3
Southeast Asia	173, 0

Total ____

Title I is one of the immediate tools that we have for moving our surpluses abroad in constructive manner. It is particularly helpful in assisting us to overcome the obstacles that have been confronting American agriculture in seeking markets abroad under the prevailing conditions which have resulted from foreign-exchange problems and restrictions on imports from the dollar area. But we must not lose sight of the fact that in the longer run our primary emphasis must be directed to sales for dollars based on our ability to deliver quality merchandise at prices competitive in world markets.

Under Title II of Public Law 480, surplus agricultural commodities may be furnished, out of CCC stocks and on a grant basis. to friendly governments or friendly peoples to assist in meeting famine or other urgent relief requirements. Of the \$300 million authorized for 3 years, on the basis of CCC investment in the commodities, programs already authorized or under active considera-tion in the first half of this year approximate \$125 million. It has been estimated that additional commitments of \$25 million be required during the remainder of the first fiscal year under the program. Shipments authorized up to this time total \$68 milion of which \$52 million is grain, \$10 million is fats and oils, and \$6 million in other categories.

SECTION 416 DONATIONS

Title III of Public Law 480 amends and liberalizes the provisions of the Agricultural Act of 1949 providing for the donation of price support commodities under Section 416. The new legislation authorizes CCC to pay reprocessing, packaging, handling, and distribution charges of commodities donated up to the time of delivery to a designated agency for domestic distribution or to shipside in case of distribution abroad.

The broadened authority has been extremely helpful in expanding the distribu-tion of surplus foods to eligible groups in this country and abroad. During the July through December 1954 period, foods donated under this authority totaled million pounds compared with 602 million pounds during the entire previous fiscal year. Donations to groups in this country totaled 244 million pounds in the last 6 months of 1954 compared with 418 million pounds during the previous fiscal year. Donations to welfare agencies for distribution abroad totaled 198 million pounds in the last half of 1954 compared with 184 million pounds during the entire 1953-54 fiscal year.

BARTER

No new legal authority for barter was added by section 303 of Public Law 480, but this legislation established a policy of encouraging the barter of surplus commodities for strategic materials or for goods required in the foreign assistance program or off-shore

construction. Prior to the enactment of this legislation, the Department generally limited its barter activities under the CCC Charter Act to those materials which could be immediately transferred to the stockpile or to other agencies with full reimbursement to CCC. Under this policy, during the first 5 years of the barter program through last July 1, about \$110 million in surplus agricultural commodities were exported under the program.

After Public Law 480 was enacted, the Office of Defense Mobilization established long term stockpile goals and agreed that it would request appropriations for strategic materials acquired by CCO within these long term goals. Under this arrangement, the CCC broadened its policies and is now accepting strategic materials for its own account within these goals for transfer at an appropriate time to the national stockpile.

As a result of the broadened program, barter activity has about doubled over the amount of barter previously being carried out. Over the last 6 months, barter commitments have been made for about \$93 million, an amount almost equal to the value of total barter activity during the 5 years up to July 1, 1954. We expect that the barter program will reach a total of \$200 million during the current fiscal year.

All operations are conducted through private United States trade. The materials acquired are accepted by CCC at prices not in excess of fair market values. CCC arranges to release from its own inventories against the barter contracts an equivalent value of agricultural commodities based on the export market prices established for sales within friendly nations of the world.

SECTION 402 OF THE MUTUAL SECURITY ACT OF 1954, PUBLIC LAW 665

In addition to the sale of surplus agricultural commodities for foreign currencies authorized by Public Law 480, section 402 of the Mutual Security Act of 1954, Public Law 665, also provides for sales for foreign currencies. It requires that \$350 million of the funds appropriated for FOA programs must be used for the sale of surplus agricultural commodities for foreign currencies. Nearly one-third of this minimum, \$103 million, had been authorized by the end of December. The Foreign Operations Administra-tion has estimated that about 50 percent of these funds will be used for cotton, 30 percent for grains, 15 percent for fats and oils and the remaining 5 percent for other agricultural commodities.

COTTON

Cotton exports this year are expected to be about 20 percent above those of a year ago. Excessive foreign stocks had been reduced at the beginning of the season and demand has been good. In addition, the private cotton trade in this country is doing an excellent selling job. I know that many people within the trade are firmly convinced that the way to build world markets for the long pull is through aggressive and competitive selling, rather than through outright dumping or other Government action which would adversely affect trade.

American cotton today is being offered for sale upon a competition basis which reflects generally better quality.

Prices received by American farmers for cotton have been at or above the 90-percent support level since last April. They will be supported at the same level next year.

Disposition commitments of CCC commodities, Jan. 1 through Dec. 31, 1954

sitions_____ 1, 403, 942, 992

By way of conclusion, let me assure you that we see a great decade ahead for American farmers. American agriculture is still a good stable industry and it always will be. Those who are actively engaged in it must never lose confidence in its future.

The basic philosophy underlying the Agricultural Act of 1954 will encourage individual farmers who are efficient and ambitious to participate profitably in the thrilling opportunities immediately ahead of us in the

growing science of agriculture.

Agriculture offers equally as good an opportunity over the next generation as any other comparable vocation for the young man or young woman who desires a factory living standard, an opportunity to live and rear a family in a wholesome environment, and the ability to provide one's own security for his declining years.

Our constant objective in the United States Department of Agriculture is to do all in our power to promote a stable, prosperous and free agriculture.

Mr. Speaker, for further light on this subject, I would like to refer to the hearings on the Urgent Deficiency Appropriation bill for 1955 in the Committee on Appropriations of the Senate. On page 21 of the printed hearings, Senator Dirk-SEN asked Undersecretary True D. Morse to explain the operations. Under leave to extend my remarks, I include as a part of my remarks the pertinent sections of the Senate hearing:

HOUSE REPORT

Senator Dirksen. Mr. Morse, what I am getting to, and I don't want to belabor this, Mr. Chairman, but doubtless you have seen the House report, and they write on page 1, and they are speaking now about a majority of the members of the committee over there on appropriations who heard your testimony:

They believe that this difficulty is due to the failure of the Corporation to discharge its responsibility under its charter to sell its commodities competitively in world markets. Testimony before the committee shows that none of the large stocks of cotton, cheese, corn, rice, seeds, naval stores, tobacco, and wool have been or are being offered for sale on a competitive basis, despite basic authority in law to do so."

Now, if that is not correct, I would not let that stand, if I were sitting over on your side of the table. That can be considered as something of an impeachment of your operations unless you have got an answer for it, and I am just trying to find out what the answer is.

SALES UNDER INTERNATIONAL WHEAT AGREEMENT

Mr. Morse. I believe, sir, that the reading of the total hearing will develop the answer. I would like to further state here that the largest single item that we own is wheat.

As the committee well knows, and the Senate well understands, under the International Wheat Agreement, we are selling wheat at a subsidized price, and outside of the wheat agreements we are meeting world markets by selling wheat competitively. That is being done right along. Corn is not much of an export item, and that is an item on that list.

When you take our holdings of wheat and corn and add to it the commodities which CCC holds which are being sold competitively, it leaves a total for the group that is named of \$661 million against an inventory of \$3,779 million.

One item named is naval stores. Because of the drought supplies of naval stores are quite low, the market is about at the support price, and we might run the risk of domestic shortages if we were trying to push naval stores out into export.

Also, I would like to call the attention of the committee to the fact that in the case of cottonseed oil, for instance, we reached a peak inventory of 1,035,000,000 pounds, but primarily through export sales, our present inventory as of January 5 is down to about 314 million pounds. That is about a third of the peak amount.

We are aggressively making efforts to sell, and we have had success in selling. Furthermore, may I call the committee's attention to the fact that this Public Law 480 authority is used in a way which will not disturb regular marketings. After we have gone as far as we can in moving these products to market and if it then appears there can be disposal in a constructive way to help in our own development of future markets. military uses and technical assistance, and so on, then we utilize the authority under Public Law 480.

CLARIFICATION OF HOUSE REPORT

Senator DIRKSEN. May I make this suggestion? I do believe because of the tremendous interest in this matter that Mr. Morse ought to submit perhaps a 1-page memorandum that is responsive to this item in the House report.

I would not care to let that stand. If that is not a correct estimate, I think that should be done. And do it in ordinary lan-guage so that we have a pretty clear picture of what you are doing in the competitive field and in this assistance field.

I do not want to fool anybody on this. If half of this is grant and it is turned over for administration to FOA, or to the Department of Defense, I just want to know what additions these are getting. just like providing them the money.

You say, "All right, money comes from another source," but you are going to manage the money and the supplies over there.

This gives point to what Senator ELLENDER said, that actually without the knowledge of Congress you could be building up a fund that is going to require a good many people in all countries where foreign aid goes on to continue this long after that agency may have been liquidated.

Senator Ellender. As I pointed out, I came across at least a dozen countries in which I obtained from our FOA representatives, information to the effect that they expected to get money from that source in order to keep themselves in the picture.

Senator Dirksen. I would just like to know.

Senator ELLENDER. Certainly.

Senator DIRKSEN. Mr. Chairman, if you are amenable to that suggestion-Chairman HAYDEN. I think we would be

glad to have Mr. Morse do that.

Mr. Morse. We will do that, and I would call attention to this report which gives on page 98, at the end of 1954, this greater utilization of surplus foods will give you the donations domestically and abroad. bears on this, and we would be very happy

to provide the other, and we would be very happy to sit down with congressional committees and explore this whole thing. It is a new program. We are getting started in it and we would like to discuss it with the appropriate committee of the Senate.

(The statement referred to follows:)

"EXPORT SALES AT COMPETITIVE WORLD PRICES

"The Department is keenly aware of the effect large Government stocks can have on the domestic market and of the need for effective action to dispose of these surpluses

in an orderly manner.
"We also recognize that exports are an important outlet for our agricultural commodities and that a policy of encouraging exports should be followed. In line with this policy, we now are offering a large number of commodities now in inventory for export on a competitive-bid basis.

"At the same time we must recognize that use of our authority to reduce prices for export sales must be resolved on a commodity-by-commodity basis in which major consideration is given to the effect of such action on farmers and the farm program.

"There are many factors that must be con-sidered in determining whether such reduced sales prices have advantages to farmers and the farm program. For example, we must consider the cost to the whole farm program, the effects upon other farm commodities, the extent to which exports will be increased, the genuine longtime benefits. if any, to the commodity, the world commercial demand for the commodity, and the likelihood that other exporting countries may match or shade any price we may establish

'It might be injurious to the interests of farmers to adopt a blanket policy under which all our stocks not required for reserve purposes would be offered for export sales at world price levels. We must constantly consider whether such action would greatly weaken world commodity markets whether other producing countries would have no alternative except to lower prices still further. If buying countries delayed purchases as long as possible, with repercus-sions on our regular commercial sales, we might have no alternative except to follow prices down.

"As pointed out in the committee report, at present the Department is not offering for export sale on a competitive bid basis its stocks of these commodities: Cotton, naval stores, tobacco, cheese, corn, rice, seeds, and wool. The reasons why we are not doing this are as follows:

"COTTON

"The Commodity Credit Corporation has in its inventory approximately 1.8 million bales of cotton.

"The Department's policy has been to not sell its inventory stocks in competition with producer cotton during the heavy marketing season since whenever the available supply of producer's cotton exceeds the demand the surplus will go into the pricesupport program. At present CCC has loans on approximately 7 million bales of cotton in which the individual producer still has an equity. A policy of offering cotton for sale on a basis competitive with world prices would result in all export sales of cotton first moving through the loan program into the stocks of the Corporation and back out to the trade rather than through normal trade channels. Such a program would result in materially larger administrative costs to the Corporation and in our opinion find little, if any, support from any segment of the cotton trade, including the cotton producer. It also would tend to depress the world price, widening the spread between domestic and world prices and increase CCC's losses, because we export such a high percentage of cotton sold in world trade. In the 1953-54 marketing year cotton exports totaled 3.2 million bales.

The estimate for the 1954-55 marketing year is 4.5 million bales.

"NAVAL STORES

"Commodity Credit Corporation stocks of rosin and turpentine represent the bulk of these commodities available both in the United States and abroad. CCC turpentine stocks represent less than 1 month's supply and its rosin is equal approximately to 3 months' supply. There is no surplus in naval stores.

"CCC is offering its turpentine and rosin available for sale at stated weekly prices in line with market prices. In view of domestic and foreign short supply position, which has been gradually building up for the past year as evidenced by an increase in rosin exports of 27 percent in the 1954 crop year, there would be no justification in pricing export shipments at less than prices for domestic sales.

"TOBACCO

"The small lot in CCC inventory is cigartype tobacco of qualities normally used domestically for chewing tobacco and is available for sale on a list-price basis by the grower cooperative association along other tobaccos still pledged for loan by these associations. Practically all tobacco under price support still is under loan through grower cooperative associations which receive, pack, store, and sell the loan tobacco. These tobacco grower organizations, as well as the industry, have consistently opposed the sale of loan stocks at reduced prices except into new markets. Tobacco pledged for loan may not be redeemed. Instead, the associations apply all proceeds of sales to reduce the indebtedness to CCC until the loan is fully repaid or the tobacco is all sold. The associations offer the tobacco on a catalog list-price basis, and the sales price is the same without regard to whether the tobacco is to be used domestically or exported.

"CHEESE

"Our current inventory consists of Cheddar cheese. World trade in Cheddar cheese is limited almost entirely to imports by the United Kingdom, which generally buys on the basis of long-time contracts from Commonwealth countries. CCC has offered Cheddar cheese for export sale at 25.5 cents per pound for grade A and 24.5 cents per pound for grade B, since May 1954. These prices were established at levels in line with world market prices. Despite the fact that these prices are close to 10 cents a pound below domestic prices, we have sold only a very small quantity. We have recently of-fered limited quantities of butter on a competitive bid basis and intend to utilize our experience under these butter operations in connection with future disposals of cheese and other dairy products.

"WOOL

"CCC stocks of wool have never been offered on a competitive bid basis for export. For many years, the United States has imported from 2 to 3 times more wool than has been produced in this country. Wool imports are subject to a fairly high duty, and domestic prices of wool are usually substantially higher than prices in foreign markets. Under such conditions sales of CCC wool can be made much more advantageously in the domestic market to replace imports than they can be made in foreign markets. Under the provisions of the National Wool Act of 1954. an incentive program for expanding wool production was recently announced. program provides for price support at 106 percent of parity with payments being made to producers for the amount by which average prices of wool fall below the support level. Thus after CCC takes over defaulted loans under 1954 wool program, no more wool will be acquired by CCC. The Secretary announced on October 12, 1954, that through May 1955 no CCC stocks of wool would be

sold for less than 103 percent of the 1954 loan rate plus sales commission. This was done to protect farmers in selling the balance of the 1954 wool clip at prices at or above 1954 loan rates. At the same time the Secretary also announced that after May 1955, CCC would proceed in an orderly manner to liquidate its wool holdings over a 2-year period.

"CORN

"The United States has never been a large seller of corn for export. It is probable that the United States will export a normal quantity without CCC selling its corn at less than the market price. Last summer CCC had a 15-cent per bushel export subsidy on corn. Sales under that program were small. subsidy on corn exports was suspended at the beginning of the heavy marketing season for corn because it was felt that CCC sales for export at reduced prices should not be made at a time when farmers were making large sales of corn. Sales are now made at the market price. Because corn is widely used for feed in the United States, feeders might object if CCC corn were sold for export at substantially less than it is available to them.

"RICE

"CCC rice inventories are small relative to the total carryover, but loans are at record levels, in excess of 15 million 100-pound bags. Rice producers have repeatedly requested that CCC not offer rice for export because of the large 1954 crop, which caused the domestic price to be below support and because CCC sales for export would interfere with commercial export sales,

"SEEDS

"CCC stocks of seed have been reduced sharply in the past year. Some of the seeds were sold for export on a competitive bid basis. There is no current support program for seeds. In view of the 1954 drought and other factors increasing domestic seed requirements, it is expected that most of the remaining stocks can be moved in domestic channels.

'In addition to the above comments on the commodities mentioned in the House committee report, the following information is pertinent in the case of wheat, tung oil, and cotton linters:

"WHEAT

"CCC has sold substantial quantities of wheat, about 130 million bushels from July 1954 through December 1954, from all three coasts under both IWA and non-IWA. Additional quantities are under negotiation under Public Law 480 and will move in the immediate future. Wheat sales are made at the market price less the IWA subsidy in effect at the time of sales. This gives exporters an opportunity to compete at world prices. Such sales, because of the futures market, do not lend themselves to competitive bids.

"TUNG OIL

The United States usually imports substantial quantities of tung oil, and large foreign supplies of this oil are available. Sales of tung oil by CCC for export would simply result in United States tung oil replacing foreign tung oil in normal foreign markets, which in turn probably would result in larger imports of tung oil into the Sult in included States.

United States.

"COTTON LINTERS

"CCC has not offered its stocks of cotton linters for export sale primarily because such sales would interfere with commercial ex-port sales of linters or products made therefrom. So long as the present cottonseed price support is in effect, any export sales of price support is in effect, any export sales of linters by CCC would result in an equivalent quantity of linters being acquired by CCC under the support program. In its current support program, CCC has attempted to value linters at a level low enough so that little, if any, linters would be acquired by CCC, but no sales are currently being made from CCC stocks,"

Wiretapping

EXTENSION OF REMARKS OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the Rec-ORD. I include an important decision and opinion in the supreme court, New York County, by Mr. Justice Hofstadter, one of the most respected members of that bench.

Judge Hofstadter's searching observations about the difficult and delicate subject of tapping telephone wires in search of evidence in criminal proceedings are well worth the attention of every Member of Congress and citizen. His comments are of particular interest to me, because the statute under which the decision was rendered, requiring a court order to authorize such tapping of wires, was enacted under my sponsorship while a member of the New York State Senate: SUPREME COURT, NEW YORK COUNTY—TELE-PHONE COMMUNICATIONS—INTERCEPTIONS

TO OBTAIN EVIDENCE OF GAMBLING

The interception of telephone communications by court order entered pursuant to article I, section 12, of the State constitution and section 813a of the code of criminal procedure is a direct invasion of the right of privacy and the court's discretion granting such an order should be carefully and sparingly exercised. An application for such an order for the purpose of obtaining possible evidence of gambling should be denied in the absence of a showing of circumstances justifying the exercise of discretion.

IN THE MATTER OF AN APPLICATION FOR AN ORDER PERMITTING THE INTERCEPTION OF TELEPHONE COMMUNICATIONS OF ANONY-MOUS-DECIDED JANUARY 10, 1955

Hofstadter, Judge: Application is made to me for an order permitting the interception of telephone communications over a line specified in the proposed order submitted for my signature. The purpose of the requested interception, as stated in the papers in support of the application, is to secure evidence of the commission of the crime of bookmaking. The application now made follows the general pattern of like applications heretofore made to me, which also, in the main, had as their objective the detection of gambling in some form. Though I have in the past signed such orders I have done so with much misgiving. Prompted by this misgiving, I devised certain expedients as a curb on excessive or unwarranted resort to such orders.

Some years ago I instituted the requirement that every application to me for an in-terception order be supported by the endorsement of an officer of rank in the police department, and that written reports of the results obtained from any interception ordered be thereafter submitted to me. Even with these restrictions, I have granted the orders with reluctance. The reports received by me, instead of allaying my anxiety, meredeepened it. These showed some arrests and fewer convictions and then rarely, if ever, for a heinous offense. The sense of uneasiness born of this situation, as well as the current discussions of wiretapping, have led me to give the problem further study.

The application is made under a provision of the constitution of this State and a statute implementing it. After intense and pro-longed debate the constitutional convention of 1938 adopted the following provision, now part of article I, section 12, of the con-

"The right of the people to be secure against unreasonable interception of telephone and telegraph communications shall not be violated, and ex parte orders or warrants shall issue only upon oath or affirma-tion that there is reasonable ground to believe that evidence of crime may be thus obtained, and identifying the particular means of communication, and particularly describing the person or persons whose communications are to be intercepted and the purpose thereof."

The statute is section 813-a of the Code of Criminal Procedure, effective in 1942. So far as here material it reads:

"An ex parte order for the interception of telegraphic or telephonic communications may be issued by any justice of the supreme court or judge of a county court or of the court of general sessions of the county of New York upon oath or affirmation of a district attorney, or of the attorney general or of an officer above the rank of sergeant of any police department of the State or of any political subdivision thereof, that there is reasonable ground to believe that evidence of crime may be thus obtained and identifying the particular telephone line or means of communication and particularly describing the person or persons whose communications are to be intercepted and the purpose thereof. In connection with the issuance of such an order the justice or judge may examine on oath the applicant and any other witness he may produce for the purpose of satisfying himself of the existence of reasonable grounds for the granting of such application. * • •"

I am not confronted with the use as evidence of the fruits of wiretapping; the sole question I am concerned with is whether the wiretapping itself should be allowed.

A review of the pertinent decisions shows that in New York there is no limitation on the use of wiretap evidence. In accordance with the weight of authority in this country the New York rule has consistently been that evidence is admissible, however tainted its source, and though obtained through violation of law. (People v. Defore (242 N. Y., 13, 126)). Nor has the prohibition of unreasonable search and seizure, introduced into the State constitution in 1938 (article I, sec. 12)-before 1938 the prohibition was to be found only in the civil rights law (sec. 8) altered this rule. An article seized in defiance of the constitutional provision may still be received in evidence. (People v. Richter's Jewelers, Inc. (291 N. Y., 161, 1943)).

Unauthorized telephone interception is a crime in this State (penal law, secs. 552, 1423, subdiv. 6). Yet unlawful wiretaps may be received in evidence. (Matter of Davis (252 App. Div., 591, 598, 1937); People v. McDonald (177 App. Dic. 806, 809-810, 1917)). Even since the adoption of the 1938 constitution it has been held that wiretap evidence is admissible, though the order authorizing the interception is void or irregular. (People

v. Katz (201 Misc., 414, 1952).

The decisions of the Federal courts in no way impair the authoritative effect of the foregoing rulings. Not alone do the fourth and fifth amendments to the United States Constitution, which proscribe unreasonable search and seizure and self-incrimination, not operate on the States (Twining v. New Jersey (211 U. S. 78, 92-93, 1908)), but the Supreme Court has held that the tapping of telephone wires and the use of the resultant wiretap evidence do not violate either of these amendments (Olmstead v. United States (277 U. S. 438, 1928)). The later cases in the Supreme Court, in some of which intercepted telephone conversations and evidence derived from them have been excluded in the Federal courts, deal mainly with the interpretation of section 605 of the Federal Communications Act (47 U. S. C.) (Nardone v. United States (302 U. S. 377, 1937); Nardone v. United States (308 U. S. 338, 1939); Weiss v. United States (308 U. S. 321, 1939); Goldstein v. United States (316 U. S. 114, 1942); Goldman v. United States, 316 U.S. 129, 1942)).

Despite the ruling in Weiss v. United States (308 U. S. 321) that section 605 of the Communications Act extends to intrastate communications our courts have uniformly held that the section does not forbid the reception in evidence by them of the fruits of

wiretaps obtained in compliance with section 813a of the Code of Criminal Procedure (Harlem Check Cashing Corp'n v. Bell (296 N. Y. 15, 1946); People v. Stemmer (298 N. Y. 728, 1948, aff'd sub nom); Stemmer v. New York, without opinion, by evenly divided court (336 U. S. 963), rehearing denied (337 U. S. 921, 1949); People v. Feld (305 N. 322, 329-330, 1953); see also Black v. Impelliteri (201 Misc. 371, 1952, aff'd 281 App. Div. 671, 1952, appeal dismissed (305 N. Y. 724, 1953)). Any inconclusive effect which might perhaps be attributed to the Supreme Court affirmance of the Stemmer decision by an evenly divided court seems to have be come academic. For, in Schwartz v. Texas (344 U. S. 199, 1952), the Court held that interceptions obtained in violation of section 605 of the Federal Communications Act may nevertheless be received in evidence in a State court. In the Court's opinion, the

It thus becomes obvious that the fruits of telephone interceptions made pursuant to an order under section 813-a of the Code of Criminal Procedure can successfully withtand legal attack and may be received in evidence in the courts of this State without let or hindrance

Federal act was not intended to impose a

rule of evidence on the State courts (344

U. S. 199, 203).

The very immunity so given to the wiretaps is alarming. The question before me now, however, is not the use which may be made of the fruits of an accomplished interception, but whether the interception itself should be authorized in the first place. Whatever the purpose of the interception, the stark fact remains that it is an intrusion on the right of privacy. Justice Holmes, in his dissent in the Olmstead case, referred to wiretapping as "dirty business" (277 U. S. 438, 469). Justice Roberts, in the first Nardone case, called it "inconsistent with ethical standards and destructive of personal lib-

erty" (302 U. S. 378, 383).

Nor can we forget the words of Justice Brandeis in his memorable dissent in the Olmstead case:

* The makers of our Constitution undertook to secure conditions favorable to the pursuit of happiness. They recognized the significance of man's spiritual nature, of his feelings and of his intellect. They knew that only a part of the pain, pleasure, and satisfactions of life are to be found in material things. They sought to protect Americans in their beliefs, their thoughts, their emotions, and their sensations. ferred, as against the Government, the right to be let alone—the most comprehensive of rights and the right most valued by civilized men * * *" (277 U. S. 438, 478).

This expression is an accurate appraisal of human values and of the things men hold dear in life. These are concepts not to be brushed aside when judicial action is invoked by which a realm, ordinarily inviolable, is exposed to official invasion and surveillance.

Though I may deplore the fact that the views of Justices Holmes and Brandeis in the Olmstead case did not prevail in the constitutional convention of 1938, I am bound in duty by the quoted provision of the State constitution (art. I, sec. 12) as the expression of the will of the people of the State that wiretapping should not be outlawed, however unsavory in character. But when

the people declared that "the right of the people to be secure against unreasonable interception of telephone and telegraph communications shall not be violated," they did not speak only hollow words. The recognition of privacy only dimly presaged in older systems of law is part of the expanding concept of the individual's right to be free from unwarranted intrusion (civil rights law, secs. 50-51). The right of privacy is the right "to be let alone"—the right of "inviolate personality." A tapped wire is the greatest invasion of privacy possible. However rationalized, its authorized use has its roots in the amoral doctrine that the end justifies the Hence, the most drastic safeguards cannot be too stringent.

The safeguards prescribed in the constitution itself reveal a clear recognition of the danger which lurks in too ready a use of the power to tap wires. The exercise of the power given by law to authorize a telephone interception is within the broad discretion of the judge to whom application for an order is made. And the real—not nominal—exercise of a true—not formal—discretion is a supremely important procedural safeguard. Dean Griswold, of the Harvard Law

School, put it:

"Liberty is preserved by the maintenance of proper procedures. It is through procedural rules that the individual is protected against arbitrary governmental action. The complaint against the Star Chamber was chiefly one of bad procedures. procedures are of the essence of due process. Mr. Justice Brandeis wrote some 30 ago, 'in the development of our liberty insistence on procedural regularities has been a large factor' (Burdeau v. McDowell (256 U. S., 465, 477, 1921)). More recently Mr. Justice Frankfurter has put the same truth in these words: 'The history of liberty largely has been the history of observance of procedural safeguards' (McNabb v. United States (318 U. S. 332, 347, 1943))."

The need for the suppression of the crime of gambling is not a consideration exclusive all other social imperatives. longer tolerate the rack and the thumbscrew

and like instruments.

The primacy of the community's right to protect itself certainly "is a postulate in-herent in the life" of social order. But we must be zealous to appraise justly the relative spheres of individual right and public interest, and maintain an exacting though delicate balance between them. The balance may become precarious at times; and when the sacrifice of privacy does not produce a commensurate advantage to the community the price is too high—to adapt the words of England's new Lord Chancellor. ons designed for the protection of law become the instruments of tryranny," he said recently, echoing Coke's classicism that "every oppression by authority is a kind of destruction * * *; and it is the worst oppression that is done by the color of

The telephone is in such general use that it is truly a part of our everyday life. It is a ready vehicle of communication for people of every station and everything of mutual human concern, whatever its nature, passes over its wires. Interference with its privacy is a direct assault on liberty, and the mainte nance of an interception differs in no substantial sense from stationing a police officer at the elbow of the person using the telephone to record what he says.

A telephone interception is a far more devastating measure than any search warrant. A search warrant is confined to a definite place and to specific items, or, at least, to items of a stated class or descrip-Those in possession of the searched premises know the search is going on and, when the officer has completed his search, whether successfully or not, he departs. Not so in the case of a telephone interception.

The interception order is obtained ex parte, and the person whose line is to be tapped is, of course, in ignorance of the fact. The tap is maintained continuously, day and night. Everything said over the line is heard, how-ever foreign to the stated objective of the law-enforcement officers. The most intimate conversations, personal, social, professional, business, or even confidential, of an unlimited number of persons may be laid bare. In effect, the line of everyone who is called from or makes a call to the tapped line at any time is being tapped during the maintenance of the tap. When a line in a public telephone booth is tapped, as has on occasion been done, the conversations of people having no relation of any kind to the operator of the place in which the booth is situated or the person whose line is tapped are overheard. It is little wonder that Justice Brandels was moved to say in the Olmstead case:

"As a means of esplonage, writs of assistance and general warrants are but puny instruments of tyranny and oppression when compared with wiretapping" (277 U. S., 438, 476).

It cannot even be said in partial extenuation of this revolting practice that it yields worthwhile results. The reports submitted to me in the past refute any such claim. As evil as an actual interception is the fear bred in the mind of the average citizen that he may at any time become the victim of one. "The freedom of private communication is a value which will not permit wiretapping except when other vitally important social values require it" (Westin, The Wiretapping Problem, 52 Col. Law Rev., 165, 201, 1952). In his thoughtful study Freedom, Loyalty, Dissent, Prof. Henry Steele Commager observes that "if in the name of security or loyalty we start hacking away at our freedom * * we will in the end forfeit security as well."

No fact appears here sufficiently compelling to justify the order sought. Indeed, beyond the formal matters prescribed by the statute, the papers disclosed little beyond the desire of the applicants for the requested order. It is unnecessary to lay down any absolutes. The court need go no further than determine the pending application, for, as Judge Cardozo said in Matter of State Industrial Commission (224 N. Y., 13, 18):

" * We deal with the particular instance, and we wait till it arises."

The constitutional right to be free from unreasonable interception of telephone communications is fundamental to ordered liberty. The right should be stoutly preserved, not frittered away. This is not a proper instance, for the exercise of the drastic power lodged in the court. The sacrifice is disproportionate to the possible gain.

What I know as a citizen I would not ignore as a judge. Our city has been the symbol of the Nation, the seat of its culture and of our commerce—the center of its influence. It is melancholy to behold her rife with violence, an admittedly lawless community, its inhabitants no longer safe by hight or day, in their persons or their homes. To be redeemed as part of the great American community, its police department needs external aid, i. e., a larger force, with more pay for the men, and a renewed spirit from within—which its valiant commissioner seems to be generating—but not more wiretaps. Application denied.

Middle East Setbacks

EXTENSION OF REMARKS

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1955

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the January 28, 1955, edition of the New York Times emphasizes a grave situation. I direct it to the attention of our colleagues.

MIDDLE EAST SETBACKS

The projects for strengthening the defenses of the Midle East have suffered at least temporary setbacks as a result of two developments caused by still unresolved rivalries and ambitions in that area.

One of these developments, which is likely to delay the construction of a "northern tier" for the Middle Eastern defense structure, took place at a meeting of the Arab League in Cairo. There Egypt, Jordan, Syria, Lebanon, and Saudi Arabia have thus far turned down invitations to join the projected defense pact between Turkey and Iraq. There are even reports that they have approved an Egyptian proposal for unifying the Arab armies under a single but independent command in a kind of Arabian NATO. Such action would mark a victory for Egypt, which has led the opposition to the Turkish-Iraqi Pact and has not only assailed Iraq for breaking Arab solidarity but has also vetoed a proposed visit to Cairo by Premier Menderes of Turkey.

The Egyptian opposition is officially based

on the contention that by alining itself with Turkey, a member of the North Atlantic and Baltic alliances, Iraq, as a member of the Arab League and the Arab collective defense pact, could easily involve the whole Arab world in hostilities should Turkey be attacked. That argument has, however, only formal validity, since all Arab leaders admit that an attack on Turkey could come only from Soviet Russia, and that in such a case every state from the Bosporus to Pakistan would be inevitably and automatically in-They even concede that Iraq is moving in the right direction by seeking at least indirect ties with the West to strengthen the barriers against such an attack.

But Egypt resents and fears an alliance between Turkey and Iraq as a threat to its claim to leadership in the Arab world. And both Egypt and Saudi Arabia strenuously oppose Iraq's ambition to federate with Jordan, Syria, and Lebanon in a Greater Syria, which the alinement with Turkey might promote. The efforts of Lebanon, and presumably Jordan and Syria, to mediate the dispute seem to be unsuccessful.

The situation is further complicated by the conviction of 8 Jewish prisoners in Cairo on charges of spying for Israel, 2 of them being sentenced to death. Israel, left out of middle eastern defense plans, strenuously opposes any western aid to the Arab States, and the execution of the prisoners could easily aggravate existing animosities, from which only the Communists can gain. It might be wise as well as humane if Egypt would temper justice with mercy, and thereby ease the tensions that now afflict the Middle East.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Door-keeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which I shall be delivered at his residence, I at his office, and 1 at the Capitol.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Resolutions Adopted by the American Coalition of Patriotic Societies at Its Annual Convention, January 13, 1955

> EXTENSION OF REMARKS OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1955

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following resolutions adopted by the American Coalition of Patriotic Societies at its annual convention January 13, 1955:

RESOLUTIONS

(Following wide consultation with our leaders in all parts of the United States, in addition to a careful review of the outstanding issues involved, the following resolutions were adopted by the American Coalition of Patriotic Societies at its annual convention in Washington, D. C., January 13, 1955. The coalition was organized in 1929 to coordinate the efforts of (currently 100) patriotic, civic, and fraternal societies (representing a membership of something over 3 million people) in the promotion of patriotism.)

DEDICATION

The American Coalition of Patriotic Societies in annual convention assembled, reaffirms its abiding and fundamental interest

1. Promoting undivided allegiance to the unique principles of the Declaration of Independence and the Constitution of the United States:

2. Combating the economic and political fallacies of socialism and communism;

3. Defending this Nation against all enemies, domestic and foreign;

4. Reaffirming Gen. George Washington's admonition in his farewell address concerning the exposure of any "innovation * * * however specious the pretext * * * that would undermine what cannot be directly overthrown":

5. Calling upon each of its participating organizations to bring the information contained herein to the attention of their members, and through them to mobilize the American people to a greater consciousness of their obligations as a free people; and

6. Reporting the results of all such actions to the national office of the coalition and through it to the next annual meeting.

PRESERVATION OF THE CONSTITUTION OF THE UNITED STATES

Whereas, the United States of America has prospered as no other nation, under a system of constitutional government; and

Whereas the use of unconfirmed agreements with foreign powers since 1933 have served to undermine the peace and security of this Republic and the continued existence of its constitutional form of government:

Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention

assembled:

1. Affirms the principle that no treaty or executive agreement shall infringe on the rights and liberties contained in the Con-stitution and Bill of Rights;

2. Declares that no treaty or agreement shall be in effect until implemented by an act of Congress following its promulgation by the President;

3. Demands that no measure be considered or adopted by any individual or agency of this Government that will affect the independence of the United States or subject any of its citizens either to the laws or decrees of a foreign or world power;

4. Requests Congress to refuse moneys for use in any form by or with any agency or government which favors or practices any-

thing foreign to the above;

5. Demands that the American flag, and it alone, be used to symbolize this fundamental statement of position; and

6. Believes that the proposed Bricker amendment in principle will implement the above and should be adopted.

NATIONAL DEFENSE AND ECONOMY

Whereas the new defense concept veers from mass armies and places principal re-liance in overwhelming air power first and primarily as a war deterrent, and second as a weapon of massive retaliation if war is forced upon the United States; and

Whereas this increased military strength justifies reduction in surface forces and the drastic curtailment of foreign aid, with a resultant balanced budget, lower taxes, and a greater measure of freedom and prosperity: Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention assembled, supports the new defense concept which is based upon the preeminence of air power as our first line of defense.

THE IMMIGRATION AND NATIONALITY LAW

Whereas the immigration and nationality law, more commonly referred to as the Mc-Carran-Walter act (Public Law 414, 82d Cong., 2d sess.) became effective on December 24, 1952, after enactment by the Congress over a Presidential veto; and

Whereas this act provides a codification and revision of our immigration and nationality laws and permits a sane and sound immigration and nationalization system with primary emphasis upon the protection of this country; and

Whereas the act is operating effectively in the best interests of the American people; especially in the denaturalization, debarment, and deportation of criminals and subversives; and

Whereas there have been a continuing series of assaults to discredit its provisions since the act became law; and

Whereas the Communist records of many of the participants in these attacks have been revealed from the House of Representatives Committee on Un-American Activities files; and

Whereas pressures have been exerted by and on behalf of certain minority groups seeking special privileges for prospective additions to their own groups: Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention assembled reaffirms its conviction of the soundness of the immigration and nationality law, and its support of that law; and be it further

Resolved, That the American Coalition calls upon all patriotic citizens to resist any weakening amendments or changes to the immigration and nationality law; and be it

Resolved. That the American Coalition earnestly requests the Committee on the Judiciary of the United States Senate and the Committee on the Judiciary of the House of Representatives to refuse the use of their committees as forums for the dissemination of propaganda under the guise of "hearings" on alleged substitute bills which would destroy our immigration and naturalization systems as presently maintained by the immigration and nationality law.

REVISION OF THE UNITED NATIONS CHARTER

Whereas the United Nations charter automatically comes up for revision in 1955 and world government proponents already have their plans in print for destroying the sovereignty of the United States under the specious title of "strengthening" the United Nations charter, in which the United States is to be divided into four unrelated zones each ruled by a commissar who cannot be a citizen or former citizen of the zone he rules: Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention assembled, urges every member of the United States Senate to refuse to ratify any treaty or other international document stemming from the United Nations or other international organization which will in any degree affect the sovereignty or internal law of the United States.

UNESCO-UNITED NATIONS EDUCATIONAL, SCIEN-TIVIC, AND CULTURAL ORGANIZATION

Whereas UNESCO, or the United Nations Educational, Scientific, and Cultural Organization is a source for publications and programs that encourage world citizenship and clearly contribute to the undermining of loyalty on the part especially of young Americans for their great country; and Whereas the U. S. S. R. has become a mem-

ber of UNESCO and additional subversive propaganda of this sort can be anticipated: Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention assembled rebukes those who would foster and use such propaganda in American schools and urges the Congress to withdraw its support of UNESCO.

GATT-THE GENERAL AGREEMENT ON TARIFFS AND TRADE

Whereas GATT, or the General Agreement on Tariffs and Trade, permits the acts of Congress and policies of our Government to be reviewed, revised, and exploited by such an international organization, and places the authority for regulating American industry in the hands of foreign nations; and

Whereas the announced plan of world federalists is to divide the resources of the world among all peoples, thus impoverishing the United States: Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention assembled, urges the Congress of the United States to enact legislation that will prevent our participation in multilateral trade agreement negotiations within the framework of GATT, or any similar international organization.

REGULATION OF FOREIGN COMMERCE

Whereas the reciprocal trade agreements program represents an unwarranted encroachment of the executive branch of our Government upon the legislative responsi-bility conferred upon Congress by the Constitution of the United States; and

Whereas as a result of reduction of tariffs under the reciprocal trade agreements program various industries important to healthy economy and strong national defense have been injured or forced out of business with consequent injury and loss of jobs by the American workingman: Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention assembled, urges Congress to allow the 1934 Trade Agreements Act (Reciprocal Trade Agreements Act) to expire June 12, 1955, and upon Its expiration, the Congress should resume its constitutional responsibility of regulating foreign commerce through its agent, the Tariff Commission.

INTERNATIONAL MIGRATION

Resolved. That the American Coalition of Patriotic Societies in annual convention assembled, opposes the expenditure of any of our resources on the sending of any migrants into the Western Hemisphere who have not been thoroughly screened by our security people.

SEVERANCE OF DIPLOMATIC RELATIONS WITH THE U. S. S. R.

Whereas the Soviet Government continues its gross abuse of the immunities and privileges accorded its diplomatic representatives to our Nation, and also, through the members of the Communist Party in our midst who give allegiance alone to the Soviet Govern-ment while striving to foment strife and insecurity among our people; and

Whereas there would be no Red China, Korean War, or the present troubled conditions prevailing in Indochina and other parts of the world except for the Soviet Government;

Whereas the Soviet Government maintains its avowed purpose of destroying liberty, by whatsoever means, throughout the world and bringing all lands and people into the orbit of Communist rule: Therefore be it

Resolved, That the American Coalition of Patriotic Societies in annual convention assembled, concludes that the American Government has every right and justification for severing diplomatic ties with the Soviet Government, and that with a view to such action, final and realistic consideration should be given to this subject.

COMMENDATION OF EMPIRE STATE SOCIETY, SAR

Whereas one of the bulwarks of our liberties is our system of public education, based on preserving in our schools and col-leges the ideals and principles of the Declaration of Independence and the Constitu-tion of the United States; and

Whereas the American Coalition, a firm supporter of our public schools, has noted in recent years wide departures from these sound principles in public education, and has alcrted its members accordingly; and

Whereas the Empire State Society, SAR, under the direction of Col. Augustin G. Rudd. chairman of the educational committee, has completed a long study of the revolutionary changes which have occurred in public education during the last three decades; and

Whereas this comprehensive and welldocumented book, Bending the Twig, to be published with all rights vested in the SAR, is urgently needed to help the American people understand this complicated but extremely important problem: Therefore be it

Resolved, That the American Coalition commends the Empire State Society, SAR, for this outstanding public service and will assist in the distribution of the book, Bending the Twig, in order to get its vital message to the American people.

Address of Hon. Renah F. Camalier

EXTENSION OF REMARKS OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, February 3, 1955

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I wish to include the following address made by the Honorable Renah F. Camalier, Commissioner of the District of Columbia, before the District of Columbia Chapter, Sons of the American Revolution, on January 25, 1955:

Mr MacDonald and Sons of the American Revolution, I am deeply appreciative of the opportunity to be with you this evening.

"This is the place; stand still, my steed, Let me review the scene, And summon from the shadowy past The forms that once have been."

Henry Wadsworth Longfellow is not reminiscing, he is living again the daring and the courage of the Pilgrims who had faced the rigors of Plymouth Rock in search of peace and contentment and freedom from harassment. He is viewing the ramparts, battlements, the battlefronts; gazing at Lexington, Bunker Hill, Concord, the tea party. Old North Church; and he is recalling the redcoats as they landed in

Boston Harbor.
Tonight, we are reviewing the scene, we

are living again.

The depth and the power of the tenets underlying the Sons of the American Revolution become immediately apparent to every thinking citizen of our land, and in line with their all-embracing aim and purpose to preserve, to maintain, to perpetuate, educate, and cooperate, and with the idea that inspiration comes from deeds performed, let us bring our steed to a halt and stand on the bulwarks of past achievements, there to review the happenings of the years.

Let us counsel again with the personalities who have traveled the road ahead; but only in the light of their determination to escape the tyrannies, the inhibitions, and even the human slavery-mental and physical-im-posed by self-appointed guardians of men's consciences and intellects and their further determination to preserve national heritages.

The task is now yours and mine and those who follow, the incentive is ever-compelling.

Your speaker is proud to have been the recipient at the hands of Paul, the King of the Hellenes, of the Cross of Commander of the Royal Order of the Phoenix, the origin of which is grounded in the religion of the ancient Egyptians.

The Phoenix is a bird, portraying emergence from the ashes of the past; and its periodical resurrection was viewed as a guarantee of the resurrection of the dead-but not to die-having been consumed in fire by its own act, following a fabled life of 500 years, it rose in youthful freshness, from its own ashes to engage again in mortal combat with the inhumanities of man, the oppressions of the masses, the attempts to thwart the natural desires of humans to be free in thought and in action.

What a lesson it teaches, what a moral it holds. How comparable to the cause of America and her ideals. For out of the ashes of succession after succession of cruelties and hardships, deprivations, and tyrannical practices of the rulers of the past came this Nation of ours.

Let us think about the American scene The stage was set but a few years ago and it was a vital and moving drama, and across the footlights of time march thousands where, in brilliance, may be seen the forms of Baron Johann DeKalb, the Polish patriots, Thaddeus Kosciusko and Casimir Pulaski, and those heroic sons of France, Gen. Jean Rochambeau and the Marquis Marie Joseph Lafayette, men and soldiers responding to the urge that liberty and freedom, whereever in jeopardy, is worth fighting to pre-

The history of this Nation is replete with deeds of valor and heroism, daring and ac-complishment, but what caused these forbears of yours and mine to struggle so vallantly and unceasingly through strain and stress greater than the human mind and soul and body should ever be called upon to bear?

It was the cause of justice, freedom, and peace. What inspired them; what fired William Bradford, Patrick Henry, Benjamin Franklin, Samuel Adams (Boston Tea Party), "Light Horse" Harry Lee, Prescott, Putnam, and Stark, Morgan and his Cavalry, Sergeant William Jasper, Jefferson, Monroe, Madison, Morris (services and fortune), and their brothers, into action?

The complete disassociation from the mother country of the American colonies was not the controlling factor. It was the longing for freedom from persecution and oppression, growing out of a burning desire redress from wrongs; and failure here whipped the idea of complete independence the forefront.

Adding to the fires of discontent was the presence on our shores of those visible evidences of the domination of the King, his colors, the red ensign; the white, with the red cross of St. George; and into the history of our Nation came various emblems pro-claiming the intention of the colonists to face the problems of the new land alone.

I like the inscription "God give us men to match the mountains"; and that must have been in the minds of the colonists when they selected the pine tree as the symbol of the sturdy manhood of New England, while the colonists to the south accepted the conclusions of Benjamin Franklin that the rattlesnake distinctively represented the qualities of the hardy ploneers.

Then we see the New Bedford, the Taunton, the Bunker Hill, the Continental, the Liberty Tree; while down South the Gadsden with its awe-inspiring challenge, "Don't tread on me;" the Culpeper, the Moultrie, and others both north and south; until the inspiring Cambridge flag was holsted at Cambridge, Mass., on January 2, 1776, by the commander in chief of the colonial defenders; and from this first definitely American banner, pat-terned after the Washington family coat of arms, can be traced the real beginning of our national existence.

It floated from the mastheads of the ships of our Navy, it guided our troops on land, it made its appearance on the housetops, until the Congress adopted the Stars and Stripes on June 14, 1777.

Many are the tributes of adoration and even veneration by those who fought for this new constellation in the firmament of nations and for the cause of the Union and its perpetuity.

One is particularly thrilling and appropriate—the words of John C. Spooner, Member of the United States Senate from the

State of Wisconsin, which give added impetus to the sentiment expressed by the Sons of the American Revolution—that our people, especially the young, should be imbued with the true meaning and the glory of the Stars and Stripes and his message bears repeating and rerepeating:

"Teach the young among you to look with eyes of love and pride upon the flag, wherever they see it floating, to remember always

that-

"'For every star in its field of blue, For every stripe of stainless hue, Ten thousand of the tried and true Have laid them down and died.'

"Keep it forever floating in the midst of our people, high up where the morning sun may transfigure it. Spread it where the schoolchildren may look upon it. Let it float over the halls of justice, for liberty is the twin sister of justice and this is the flag of liberty."

History thus becomes not only interesting and entertaining, but it denotes progressive steps. The present day witnesses the building of history in its infancy. It studies the past, and from it builds the future; and those who follow will evaluate what we do, to ascertain whether what we do is progressive, to the point that the human race is better for our having passed this way.

We dare not look upon the achievements of our forefathers as something sacredsacred to the exclusion of our own contributions-for what we do is a continuation of

what they have done.

Their experience is ours, and we show profit. The generations now living and yet to be are entitled to our experience, but whether they profit depends upon the char-

acter of the deeds we perform.

We dare not neglect or submit to modern attempts to destroy the benefits of the past: to do so turns our civilization into the slums of dehabilitation, from the ashes of which

it will be difficult to rise again.

As we study those who have contributed to the upbuilding of the human race we become more and more aware that our forefathers were men of stamina and a courage filled with zeal against which the enslaughts of the rulers by hate and lust could not obtain.

But let us contemplate the more recent and more hopeful aspects of man's continuing determination to rise from the ashes of

lethargy, subjection, and slavery.

Prior to the turn of the 20th century, during the Presidency of William McKinley, a member of the Sons of the American Revolution, a mighty personality, Theodore Roosevelt-another of your outstanding workers, revered as the intrepid leader of the Rough Riders, who, by his zeal for freedom and his love of humanity and of country, forced the dictators of his time to recant or face defeat-lived within your time and mine.

Face defeat those self-seeking conquerors did, and down went the crumbling empire of Spain, possibly never to rise again to

the heights of its spent glory.

Then came the Kaiser and his coterie of allegedly superior men, super intellects, destined, in their feeble thinking, to be the

saviors of humankind.

In later array, across the horizon of the Fatherland, appeared the form of the house painter of Vienna and Berlin, the demagogue of Italy became one of the characters in the ill-fated play of the world, and other of the satellites of the Hitler regime made their burlesque entry upon the stage; and, as in the past, men, loving freedom and determined to preserve it, fully realizing the trials and tribulations of those who had gone before, came into being in the countries of Prance, Belgium, England, the Philippines, and all other allies in World Wars I and II; and, like their evil-thinking counterparts, those who would have trampled man under

foot, ended their days in ignominous defeat; and the empires of Germany, Italy, and Japan went down into oblivion.

Slowly, but definitely, across the skies of freedom comes a new threat, the Russian red bear, obsessed with the thought that his mission is to conquer the world, and today the Communist leaders stand with their backs hopelessly to the wall, with the certainty that unbending fate will again pronounce its verdict, this time on the unhappy peoples of Russia, on the subjected peoples of Red China, and the followers of all other power-crazed groups of zealots and dictators.

But the world is not dark, and from the situations now obtaining will rise the new civilization.

Into the pattern of this new life the Sons of the American Revolution find their niche, fitted with such exact nicety that the jigsaw puzzle of irregular parts which go to make of the universe one common mass will not fall clattering to the ground or scatter helter skelter to the end that man's efforts to adwill have been proved a mockery.

We have had brought to mind recently the words of an almost forgotten song, Soldiers Never Die, They Just Fade Away.

How true is the first part of this couplet, "old soldiers never die." and, by the same token, I cannot take to heart, or believe, that they just fade away.

True it is, they pass from this sphere of action; true it is, we see them no more, but can anyone feel that the spirits of George Washington, Andrew Jackson, Paul Revere. John Marshall, Benjamin Franklin, and other great soldiers, statesmen, and jurists of the have been erased from the memory and mind of us all?

Can it be said that their influence no longer exists, that their names have been stricken from the pages of American history?

Hardly, the pages of history glow with their accomplishments, their lives, their influences, and the imprint which they have made upon the progress of this great Republic.

No; these men never die, and they do not

fade away.

One is thrilled by the sight of the manly and heroic figure of an American soldier, or marine, or sailor, Air Force, or Coast Guard man, or any man who honorably wears the uniform of his country.

Witness

Washington, mighty American exponent of liberty.

who perished for the cause at Warren. Bunker Hill.

Jones, whose naval victories mark the pages of our sea supremacy.

Lafayette, whose love of liberty and of

men brought him to our shores.

Grant and Logan, who fought that all might enjoy the blessings of a free world. Reed, who cried out for freedom from pain and suffering.

Dewey and Schley, who maintained the traditions of our naval forces.

Clem, drummer boy of Shiloh.

Pershing, intrepid leader of the American Expeditionary Forces.

Sims, commanding the American fleet in World War I.

King, who launched the two-ocean navy in World War II.

Hamlet, who stopped the enemy submarines.

LeJeune, idol of the United States Marines. Marshall, soldier, statesman, and diplomat. Bradley, Ridgway, Clark, Nimitz, Van Fleet, MacArthur, Eisenhower, and other leaders of America's fighting men; and, on and on, each guaranty of American steadfastness and solidarity.

This type of American citizenship inspires leadership; and I cannot bring to my thinking that liberty-loving patriots ever die, for what they have accomplished, what they have said, what they have done, the people whose lives they have affected, stand as an everlasting monument to their capacity for leadership.

The poet has given us the immortality of this trait, or virtue of leadership, through the life and the influence of the man who has inspired millions-and I refer once more to your distinguished alumnus, President Theodore Roosevelt:

"Roosevelt is dead." Yes, our leader gone.
Today there stands his vacant chair Not in that island home alone-But by myriad firesides everywhere.

"He loved us. Swift our torches light With the bright fire his courage gives. We shall not falter in the fight

Roosevelt is dead? No, his spirit lives."

The year 1955 bids well to test the very substance of that spirit; the apprehension which seems to prevail throughout the world, born of twisted minds that sister nations shall be made subservient to the point where human liberty, human thought, and all of the finer things of life shall be no more must, itself, be destroyed lest we fall prey to the machinations of men of distorted intellects.

The descendants of those who laid the foundations of this land of freedom find here that niche where they can serve best and continuously, for fear and apprehension do not imply that we should sit supinely by allowing men with ulterior motives to govern us, to lull us into inactivity, to permit the carrying out of their designs.

These disturbing elements carry with them the obligation and the necessity for protecting our rights, supported by the brillance of the spirit of the Sons of the American Revolution, in giving renewed life to every American through the observance of Patriots' Day, the recalling of the Battles of Lexington, Concord, Valley Forge, Yorktown, Gettysburg, and the celebrating of other anniversaries of significance to the life of our Nation.

Flag Day, Constitution Day, keeping in mind Benjamin Franklin's challenge, have given you a Republic, let's see you keep it.

Bill of Rights Day, I am an American Day, inspiring and proclaiming the advantages of citizenship and of loyalty and allegiance to the cause of freedom are but a few in this category.

Aid to various agencies of the United States to combat insidious propaganda and substitute therefor a consciousness of responsibility of all to protect our public schools, our homes, our churches, and institutions of various types; to respect the basic documents of our system of living, the Constitution, the Declaration of Independence, the Bill of Rights, and all other laws designed to safeguard our interests represent another step by this magnificent organization in its chosen guardianship of things American.

The pursuit of peace, to which the Sons of the American Revolution also glady dedicates itself insofar as it does not, in any sense, yield our sovereignties as a nation and as a people, is like unto the pursuit of happiness in that it is to be found only in the hearts and the thinking of men.
